sponsible parties planned to offer to build the road, without any use whatever of city funds, under a franchise for thirty-five years only—the shortest time permitted by law—at the end of this term the road, in good order, to become the absolute property of the city—with fares, meanwhile, limited to a maximum of 3 cents, and option to the Belmont subway or any future city line of mutual transfer at not to exceed 2 cents additional. But their zeal was cooled on finding that the plans were for such limited capacity, and they abandoned the project when advised that the Commission would not so alter the plans as to permit them at their own expense to accommodate more passengers, and also that certain powerful interests would "resent their interference" should they insist. The "extension" with the Brooklyn switch was thereupon awarded to the Belmont syndicate.

It is safe to say that in the shape now authorized it will be little if ever used for Brooklyn traffic. Whether some deal was then in such shape that a *coup de grace* could not then be given "B. R. T."—by relieving it of passengers and the bridge entrance of the crush there; whether the inadequacy of this "far-cical" "Brooklyn extension" is to be the excuse for giving the Belmont interests an additional Brooklyn route (perhaps one of the bridges); whether, rival bids having been shut out, a popular demand will now be stirred by the Belmont interest to "force" it to make the road a four-track one, and thus a dividend diamond mine; or whether this was simply a hasty grab for "position" time alone can tell. The last was the first direction in which it was used.

In 1901 Seth Low, by the Act of 1894 named one of the Chamber of Commerce Commissioners, was elected Mayor. Taking office January 1st, 1902, he appointed as his Corporation Counsel, Mr. Rives, a member of the Commission, who resigned therefrom to take the office. Thereupon, first the Pennsylvania Railroad and then the New York Central applied for other terminal facilities on Manhattan. In the case of the New York Central a bill, agreed upon by it with Mr. Rives, was introduced as a city measure, but at once exposed as so gro-

tesque a surrender of the city's rights that the city's assent was withdrawn and the bill killed in favor of a new measure much fairer to the city. In comparison with the Corporation Counsel's office, the Rapid Transit Commission now shone as a champion of public rights and easily secured an amendment to section 32 of the Rapid Transit act, since known as the "Pennsylvania Railroad Amendment of 1902." By this, in cases of general, or interstate, etc. (as distinguished from local) railroads, it was empowered, subject to Aldermanic approval, to grant rights in perpetuity, on rental, to be re-adjusted at fixed periods. This legislation was a decided step backward and has since been stretched to cover cases never contemplated; but it is fair to say that it was openly procured and not generally opposed by public opinion. How satisfactory it was to the Pennsylvania Railroad interest was indicated when Mr. Boardman, of counsel to the Commission, announcing his retainer by that corporation, was allowed to remain in its employ with relief from duty to the city in matters where needed by that railroad, and when, later, his colleague, Mr. Shepard, resigned from the service of the Commission on accepting a like retainer.

In 1903 the Legislature was overwhelmingly Republican, Mr. Low was still Mayor, with Mr. Rives Corporation Counsel, and time seemed ripe for getting whatever law the Commission wanted. This time, Mayor Low, *ex-officio* a member of the Commission, took the laboring oar. In a letter of March 12th, 1903, to Mr. Orr, he explained:

"My dear Sir.—Referring to . . . legislation necessary to make possible further extensions of the subway system. . . .

. . . "The original subway contract was entered into in February, 1900, and the contractor, Mr. John McDonald, undertook to operate the road to be constructed. . . .

. . . "It is also rumored, altho it is not definitely known, that the contractor's profit upon the construction of the subway, as distinguished from the operation of the railroad, will be approximately \$6,000,000.

"The second contract entered into under the Rapid Transit law was made last summer for the subway connecting the Manhattan end

of the East River Bridge with the Battery, and by tunnel under the East River with Flatbush and Atlantic avenues, in Brooklyn. The estimated cost of this extension, including stations, as estimated by the chief engineer of the Rapid Transit Commission, was \$9,000,000. . . . The contract was let, nevertheless, for \$3,000,000 upon a lease of the franchise for thirty-five years instead of fifty years, as in the first instance, with the same privilege of a further extension of twenty-five years. . . . These figures, apparently, have but one interpretation, viz.: that the estimated profit from operation of the railroad is great enough to justify the contractor in bidding something like \$6,000,000 below cost." . . .

"It may as well be taken for granted that the only bidder who is in a position to give to the city a uniform rate of fare over the entire system to be built with the city's credit is the Interborough Rapid Transit Company, which already controls the original subway and the first Brooklyn tunnel. *I think amendments to the law may as well frankly recognize this fact and give to the city an option, by an amendment of section 32, to make contracts with this company, from time to time, for the extension of the subway system upon the best obtainable terms.*"

During the month previous, the Citizens' Union, after extended inquiry and full discussion, had resolved:

"There is every reason why the city should have cheaper and better transportation, and it is high time that some comprehensive plan be devised for furnishing it, both for the near and the distant future. . . .

"The question is not whether we shall adopt the policy of municipal ownership in respect of additional street railroads, for that is the policy to which we are already bound by the Rapid Transit act, but rather whether we are going to have control over them when built."

and had introduced the measure since known as the Elsberg bill, providing for:

(a) *New lines to be laid out for successful operation independently of those now contracted for;*

(b) *The separation of contracts for construction from those of operation, and limiting the latter to a maximum term of twenty years;*

(c) *Adequately providing, in connection with subway construction, for conduits, pipes, etc., to accommodate other public services;*

(d) *For repeal as to future cases of the tax exemption now enjoyed by the present subway contractors;*

(e) *For reduced fares in certain contin-*

*gencies, first to school children and then to others;*

*(f) For approval by our local authority (the Board of Estimate and Apportionment) of any contract for operation.*

In support of which the labor unions of the city promptly acted, appointing a committee that urged the bill at Albany.

While this measure was pending, apparently with approval of all concerned, it leaked out that the Commission had provided a measure, drafted by Mr. Rives, to effectuate Mayor Low's suggestion. A copy being secured it was found to be a batch of counter-proposals to those of the Elsberg bill, and to provide:

(a) That contracts for operation should be made at *or before* contracts for construction.

(b) That the *operator* should be taxed only on the sum at which the *construction* contract had been let.

(c) That while all other would-be contractors must compete by sealed proposals in answer to full advertisement for construction or operation of new roads, the Commission might *in its discretion* contract for new roads with any party then actually constructing or operating a subway already contracted for (that is, *the Belmont syndicate*) *without competitive bids or advertisement.*

The Citizens' Union denounced the measure and the press gave out interviews of Mr. Rives, from which it was inferred that it had been dropped.

Mayor Low's course was masterful to say the least. He invited to luncheon with himself Mr. Orr, Mr. Grout, the Comptroller, and Mr. Cutting, Chairman of the Citizens' Union (tho not of its Franchise Committee); after coffee gave out that a bill had been agreed upon, sent it to Albany by Dr. E. R. L. Gould, Treasurer of the Citizens' Union (whom he had made City Chamberlain), and "stood pat" on a measure practically the same as that denounced by the Citizens' Union, except one amendment, which made it worse, providing as it did that if any other than the Belmont syndicate dare to bid for new roads,

"The total length of the terms of any lease and of all rentals thereof shall not exceed fifty years,"

but that in case of lease to the Belmont syndicate (described as a party "already

operating a railroad constructed at public expense under contract prior to January 1st, 1903") the board might "at its option" give such party a lease with renewals for the 75-year term it had.

The Citizens' Union Franchise Committee got wind of this and so promptly warned Senator Elsberg and denounced the tactics used that no Senator could be found to father it, and Mr. Bostwick, of the Assembly, who, in respect for its source, had introduced the bill, so promptly repudiated it that it died still-born. Not, however, until the last ditch was reached did attempt to misrepresent the Citizens' Union position cease. Day after day interviews were given out from the press, of the shorter of which the following from the *Times* of April 7th, 1903, is a good example:

"Corporation Counsel Geo. L. Rives was asked yesterday to explain the pending Rapid Transit bill, which has been criticised severely at Albany on the ground that it is designed to give undue privileges to the Belmont underground railroad syndicate.

"The Mayor asked me to put his ideas into shape in the form of a bill. I did so. Later Messrs. Grout, Cutting and Orr consulted with Mr. Low, and finally a bill was drawn up to satisfy all of them. It is this measure that is now before the Legislature. It satisfies the Commission, I believe, and also the Citizens' Union."

"The bill was taken up to Albany last week for the city administration by City Chamberlain E. R. L. Gould."

The dilemma of the Citizens' Union was serious. Plans for its renomination of Mayor Low were already well matured. Those who should first have denounced such tactics were dumb, while the Union's Franchise Committee spared neither the bill nor its authors; the city press scored the "Mayor's bill," and at mass meetings prompted by the Mayor to denounce other bills it was pilloried as the worst grab of all.

The Elsberg bill passed the Senate. Bowing to the storm, Mayor Low instructed the city's representative at Albany to withdraw opposition to its passage in the Assembly.

The situation was critical. Not merely had the Commission's own bill been killed, but the Elsberg bill—opening future routes to fair competition and forestalling Belmont monopoly—seemed

likely to become law. The Mayor had been driven from the field. Governor Odell would not stand for it in the open, and the Assembly Committee on Rules had promised to report the bill for a vote, when on the evening before adjournment "Dry Dollar" Sullivan (then the Tammany Boss) arrived and went at work. When the bill was reported the next morning a combine of up-State Republicans and Tammany Democrats referred it back without roll call, and for the second time in this connection private monopoly was rescued by an alliance between the Puritan Commission and Tammany.

So much for 1903. In 1904 the Citizens' Union Franchise Committee again took up the work. The Elsberg bill (now Elsberg-Newcomb measure) was early reintroduced and pushed. The committee pressed for early action and kept alert for opposition. This finally appeared in two bills sent up by the Rapid Transit Commission—one to extend the limit of its expenditure, and the other to add the city's bridges to the highways, of which the Commission could dispose.

At public hearing the Franchise Committee told the Senate Committee on Cities that while the Citizens' Union objected to mere grants of further power to the Commission it favored such grants if properly guarded. Chairman White, of the Senate Committee, suggested consolidation. The Citizens' Union consented. The Senate Committee on Cities thereupon introduced as its own (a committee) measure a consolidation of the Union's bill with those of the Commission. This unmasked the Commission, which (first making some concessions, then withdrawing the most important one) instructed its counsel to urge that its own bills be not consolidated with the Union's measure, but separately passed at once.

This attitude was so generally appreciated and denounced that the Union gained a tactical advantage, and Senate Committee hearings closed with the intimation that the Consolidated bill would be favorably reported.

Meanwhile, the Central Federated Union had thus resolved and memorialized the Legislature:

"That unless and until—by enactment of the Elsberg-Newcomb measure, or some even more stringent law—our city is given full control of the expenditure proposed, and any such disposal of public property as is allowed by the present Rapid Transit act definitely prohibited by law, the central Federated Union protests against any enlargement of the power of the Rapid Transit Commission or increase of the amount of expenditure for which it is allowed to provide."

But such pressure was now brought to bear upon Citizens' Union leaders toward averting the indignity that lack of confidence on the Union's part would be to such "respectable" gentlemen as those of the Commission that, against the protest of its Franchise Committee—which had to be reorganized in consequence—the Union sent new representatives to Albany, headed by its president, instructed to express confidence in the Commission and willingness to leave to its *discretion* (tho its views had been shown by the Bostwick bill) the carrying out of Elsberg bill provisions for separation of contracts.

The effect was just what might have been expected. No one at Albany saw the need of enacting law that left discretion with the very ones most bitterly opposed to its aims. Therefore, "jamming through" the Commission's measure, the Assembly threw the Elsberg bill into the waste basket—the net result being that the very evil foreseen by the wage earners had come to pass—viz., that by raising the debt limit and by adding our great bridges to the property which the Commission could hand over to monopoly, our city was made more helpless than ever.

This year (1905) the Citizen's Union is still pressing the Elsberg bill, but with careful explanation of its regard for the Rapid Transit Commissioners, and willingness that it be enacted in such shape as to leave the carrying out of its more important provisions to their "discretion."

On the other hand, the labor unions while supporting the Elsberg bill—as at least depriving the Commissioners of the excuse behind which they had dodged—have had prepared and introduced a measure abolishing the present Commission, and substituting therefor one of five members—the Mayor, the Comptroller

and three others, the terms of which latter so end that upon his entering office each incoming Mayor has one appointment, which gives the administration just elected a majority of the Commission, but leaves upon it the largest possible minority of those similarly appointed by former mayors, thus insuring the greatest continuity in policy consistent with constant responsibility to the public.

Such is the legislative situation up to date.

The sharpest issue between the Elsborg and the Commission standpoint is on the former's demand for separation of construction from operation contracts. In each case construction is a *present* matter—operation one of the future—after years of construction. The normal construction unit is comparatively small, say a half mile. The operation unit is several miles. No practical construction contractor was ever known to operate—operators are not accustomed to construct. Of construction contractors there are scores competent and eager to bid. Of contractors now qualified to bid for operation in advance of construction there are but three possible ones—Interborough, Metropolitan and Brooklyn Rapid Transit—and these so related that there is practically but one for any given route. An independent route once laid out, competing operators would be plenty by the time it was constructed. To insist that the operation and construction contract be combined is therefore (a) *to exclude from bidding the only contractors competent to construct* (and who, as sub-contractors, will actually do the construction); (b) to confine bids to those who years in advance are prepared to undertake operation (that is—present franchise operators), and who would dabble in construction only to sublet on speculative profits, and (c) to deprive the city of the benefit of transit developments within the years of construction (which in each case, of late, would have saved it many millions now already pocketed by the combination bidder).

For this the Commission suggests but one excuse—fear that the city's money, however economically spent in construction, might be wasted if, when constructed, no one could be found to operate the road thus perfected. This ap-

peal ignores experience and stultifies the Commission. In both cases where it has offered to bidders routes it had laid out, bidders have appeared. In one the successful contractor has realized a bonus of \$30,000,000 upward; and in the other the same party, in order to corral the operating contract, offered to build for one-third actual cost—at what enormous speculative profit can be but imagined. Moreover, by its own Bostwick bill the Commission proposed that contracts for operating be let out at, or *before*, contracts for construction. Is it now so far in dotage that two years later it cannot lay out routes that, when actually constructed, operators will bid for? Or was it so much more competent two years ago that it could then lay out routes and more easily get operating contractors therefor years ahead (even before construction had been contracted for) than it can now lay out such as operators will bid for when they are ready for use? Or, are its present and Bostwick bill suggestions alike mere shams to fool gudgeons, the inconsistency of which is immaterial so long as they serve their purpose?

The real fear of those who speak through the Commission against separation of construction from operation contracts is not that when the roads are ready for operation the city will get no bidders therefor, but that, on the contrary, there will be too many bidders, thus breaking the present monopoly.

In the matter of a general plan, the Commission has been equally consistent. In 1894 the average citizen assumed that such a plan would be outlined, and its items carried out as might prove practicable; also that "business" men needed no hints on that score. But as years passed and isolated suggestions of interested parties were gravely discussed, with no sign that the Commission had any ideas of its own, people were puzzled. By 1900 the Commission's reference to data it had collected and comprehensive studies of its engineers began to reassure us; but in 1901 it transpired that its only basis for these references to unused wealth was Mr. Orr's confidence that "of course" the engineers must have such. By 1902 he took a step ahead—in advice—and said:

"The enormously valuable property of the

city in its streets shall not be improvidently granted nor used without a farsighted regard to the future development and necessities of rapid transit and transportation within its limits."

"It is therefore clear that the public now has a right to expect from this board the preparation of a general and far-reaching system of rapid transit, covering the whole city of New York in all its five boroughs."

Mr. Parsons's compliance was an essay in monopoly, of which candor was the unusual merit. The first "far-reaching system" was a batch of "extensions" by which all parts of the greater city were "connected" at different points with the Belmont subway, and which no one else could operate, such as that which Mr. Bostwick's bill was planned to carry out. As to this, in his letter, above quoted on another point, Mayor Low said:

"The pieces of the subway proposed by Mr. Parsons for Manhattan and the Bronx are mere fragments to make complete the system created by the first (or Belmont) contract, the control of which has passed from the city for fifty (seventy-five) years."

Then Belmont bought the "elevated," and a further reaching system was produced of similar extensions of both the Belmont subway and Mr. Belmont's elevated, the routes of which were evidently laid out less for public convenience than to utilize old iron. The combine between the Belmont (now Interborough), etc., "Metropolitan" and the "Brooklyn Rapid Transit" interests then rapidly developed as differences were adjusted, and their common cause against the city operated, until we now have the farthest "reaching system" of all, such a "crazy quilt" of unrelated "extension" and so scattered over the map that they are inscrutable until one notes the equable ingenuity with which they begin and end nowhere, except (indifferently) in the hands of the one or other of the three.

Meanwhile, tho Mr. Orr—and Mr. Claffin, at least—should not have done so, they forgot Brooklyn; for example, they, *first*, let Mr. Belmont so locate his subway that they now say it prevents the natural remedy for the bridge crush; and, *second*, they gave him (so planned that no one else could take it) a "Brooklyn extension" that left Brooklyn unrelied.

Of its care for details the Commission's treatment of the advertising question is a sample. It so botched the first Belmont contract as to invite trouble and start the pending *mêlée*. In the second Belmont contract it has reserved full power of regulation. But in the McAdoo tunnel—tho in part perpetual, and as a whole not protected, as were the Belmont subways, by the fact that the latter were streets—it has left the operator full license to deface *ad libitum*.

As to present intent: Since the farce of competition for the Brooklyn extension, four years since, the Commission has allotted no routes except non-competitive ones under the so-called "Pennsylvania Railroad Clause." And its engineers have suggested none not so laid out as hopelessly to favor some one bidder. It has now given out that the Interborough is ready to take over new routes under a combined construction and operation contract, under which construction will be estimated at *nil*—thus, as Mr. Orr puts it, "relieving" the city.

The program being thus announced, it is worth while to note that, under the Rapid Transit act, this process will exclude new routes from the safeguards provided by the act in case of roads "constructed by the city." For example: In the McAdoo case the Commission allotted routes, part of them in perpetuity, without even the pretense of competition.

Only one acquainted with Mr. Belmont, the Interborough, the Commission, and the results already realized from their interaction can fully judge of the probable rate of usury—in operation profit and stripping the city of all control—on which Mr. Belmont consents thus "to relieve" the city. Meanwhile, the Commission seems again to have forgotten how often, beginning with the referendum vote of 1894, it has been ordered to lay out routes to be built by the city, instead of pledging its birthright to borrow funds of those whose credit is not as good as that of the city itself.

It is not a question of the respectability of the present members of the Commission. That is as unquestioned as is Standard Oil piety or Steel Trust philanthropy. It may be admitted, too, that an ever fresh supply of corporate securi-

ties, in which wealth can invest with confidence of large returns, is a factor in a commercial city's growth; also that the Chamber of Commerce fitly represents this interest, and that one of its members (if otherwise qualified) might be a useful factor of such a Commission.

But some of us believe that private investment interests cannot be trusted to dictate public concerns, and that the Commission, as now constituted, has been, and must be the Man Friday of franchise

grabs. It is imaginable that we are wrong. It is not imaginable that, with its Bostwick bill before us, we can properly trust to its "discretion;" or that, believing as we do, we have no duty in the premises. To leave the Commission undisturbed would raise a question of good faith—not that of the Commission, but our own.

"How can New York get rapid transit?" The first requisite is to abolish the present Commission.

NEW YORK CITY.

## The Strength of the Hills

BY MARY ALLEN

INTO my temple I climb,  
Out of the streets of the earth;  
Up through the heart of a rhyme;  
Up to the hilltop I climb.  
Set in a ring of the sky,  
With its greatness arched in, till I lie  
At Thy feet, O Most High!

Weary and worn with the needs  
That skulk in the streets of the earth;  
Tired with the stress of its deeds;  
Encompassed about with its needs,  
I hasten away to my shrine,  
That the Face of the Lord may outshine  
This despondence of mine.

I follow the sound of a bell  
That swings in the roof with the stars,  
A wonderful, glorified bell  
Of the Lord, to proclaim and to tell  
His down-reaching to me from above,  
That my weakness may lean on His love,  
O Divinest of love.

And He lifts me along the rough path,  
Where I stumble and fall in my haste.  
And His hand such a tenderness hath,  
And His smile so enlightens my path,  
That when I have reached His embrace,  
And have kindled my soul at His Face,  
I am lost in His grace.

And so to the hilltop I come,  
Weary and spent with my sins;  
And I find such a welcome at home,  
For myself and the others that roam,  
That I call you, unhappy, to flee  
Away from wayfaring with me  
To my sanctuary.

And holding the staff of my rhyme,  
Beyond, to the Mount, we will go,  
That outsoars this low summit of time;  
And enrapt in the heavenly chime  
Of the bells that call upward, will fly,  
With the singing around us, to lie  
At Thy feet, O Most High!

MARION, MASS.

# The Case of Midshipman Arrowood

BY PARK BENJAMIN

MIDSHIPMAN Milton W. Arrowood, of North Carolina, entered the United States Naval Academy in September, 1900, and was graduated in February, 1904. His class was of exceptional ability, for, in face of the fact that the average ratio of graduation is less than fifty per cent., over sixty per cent. of the initial membership of this class successfully completed the course, and its highest member achieved eighty-eight per cent. of the possible maximum. Even in these conditions of competition throughout his academic career Midshipman Arrowood maintained an excellent position, not only in studies, but in conduct and efficiency, accomplishing seventy-eight per cent. for his entire course and being graduated No. 21 in a class of sixty-two. In his senior year he was made one of the eight cadet ensigns, a much coveted position of honor, carrying with it special privileges and considerable authority over his fellows.

The senior class at the Naval Academy, following a custom existing in many colleges, publishes a class book, called the "Lucky Bag," in which the boys' estimates of one another are freely expressed, boy fashion. This is what it has about young Arrowood:

"A man may have no bad habits and have worse."—*Mark Twain.*

"An ecclesiastical youth of solemn visage and pious action, who looks upon this life as a vale of tears not to be taken frivolously. At

times allows his overstrained spirit to relax and seeks surcease of sorrow in music. Has been known to 'french' to attend stereopticon lectures, but is generally a model of propriety. Of late has become quite a society man, and is frequently seen at the hops. Teacher of a Sunday school class of young ladies and soloist of the Annapolis Presbyterian Church."

This, coupled with the circumstance that altho the book is full of juvenile jokes about other members of the class there are none referring to Arrowood, will convey to college men especially a better idea of the type to which he probably belongs than any serious characterization could afford. His fellow students seem also to have been unable to reconcile his persistent hazing of new comers after it had become a point of honor among them not to do so with his prominent membership in the Young Men's Christian Association.

Upon leaving the Academy he was ordered to the battleship "Kearsarge," flagship of the North Atlantic Squadron. It was a desirable billet (for he might have

been sent to a training ship or to a gunboat in the Philippines) and such berths are generally awarded in recognition of satisfactory work at Annapolis. He now had before him two years of service afloat and afterward promotion to the commissioned grade of ensign. The outlook for his future progress would, then, be of the fairest, for promotion is rapid at the bottom of the Navy

MILTON WALLACE ARROWOOD

list, and is certain to become more so. Indeed, it is doubtful whether in time of peace the Navy has ever offered to any one more sure and quick advancement. His future therefore in a most honorable calling was secure—nothing could mar it but ill health or his own behavior—and he had earned his place.

After about a year's duty on the "Kearsarge" he tendered his resignation; this despite the fact that on entering the Academy he had signed the following contract:

"I, Milton W. Arrowood, of the State of North Carolina, aged seventeen (17) years, having been appointed a midshipman, do hereby engage with the consent of my parents that I will serve in the navy of the United States for eight years, unless sooner discharged by competent authority."

The Secretary of the Navy accordingly declined to accept the resignation, both because his term had not expired and because it was considered that in return for the education and pay bestowed by the Government a longer service was due than had been rendered. The midshipman had been paid while a student \$500 per year, and \$950 per year subsequently, and considering the expense of maintaining the Naval Academy it is safe to say that he had cost the people over \$10,000 to bring him to his present state of usefulness. Furthermore, the Navy is suffering severely for lack of officers; ships are being put out of commission for this reason, and Mr. Arrowood himself was graduated four months ahead of time so as to make his services the more quickly available. Whatever laxity, therefore, may have existed in past years in insisting upon the observance of the eight years' contract, the present conditions clearly do not justify it.

Midshipman Arrowood then appears to have taken matters into his own hands. He obtained leave of absence from his ship and at its expiration did not return. Some weeks afterward he was found by secret service detectives at work as an employee in a broker's office in New York. He was arrested, confined in the Navy Yard and subsequently sent back to the North Atlantic Squadron, now in the West Indies.

The military crime of desertion is defined as "absence without leave with a manifest intention not to return." The

law governing the Navy prescribes that on conviction such punishment may be inflicted as a court martial may adjudge. It has been announced that Midshipman Arrowood will be tried by court-martial. The need of this is unquestionable, for never in the Navy has desertion among the enlisted men been more rife. Last year nearly sixteen per cent. of the entire force deserted. It needs no argument to perceive that if the idea takes root that the desertion of an officer will be visited by other than the severest condemnation, the difficulty of manning the Navy is sure to be increased. It is necessary, therefore,—if the court-martial finds Midshipman Arrowood guilty of desertion—that an example should be made.

The law further provides that whenever the punishment for conviction of an offense is left to the discretion of a court-martial, such punishment in time of peace shall not be in excess of a limit which the President of the United States may prescribe. Former Presidents have long since prescribed the limiting punishment for desertion by an officer as dismissal from the Navy.

This will strike many people as substantially no punishment at all to an individual willing to desert in order to free himself from service. But there is something more. "Every person," says the law, "who deserts from the Naval service of the United States is deemed to have relinquished and forfeited his rights of citizenship; . . . such deserters shall be forever incapable of holding any office of trust or profit under the United States or of exercising any rights of citizens thereof."

That is the most severe part of the penalty, and it is intended to meet not merely the act of desertion, but the violation of the solemn oath of service and allegiance which must be taken on entering the Navy. This young man swore as follows:

"And I, Milton W. Arrowood, do solemnly swear that I will bear true faith and allegiance to the United States of America; that I will serve them honestly and faithfully against all their enemies whomsoever; and that I will obey the orders of the President of the United States, and the orders of the officers appointed over me according to the rules and articles for the government of the United States Navy; so help me God."

For breaking that oath the law casts the convict out. The flag which he swore to serve becomes no longer his flag, nor his the right to its protection. Henceforward he is a man without a country.

Whatever extenuating circumstances there may be in the present case will no doubt in due time appear, but the only reason so far vouchsafed by Midshipman Arrowood himself for his course is:

"Every regulation ever made for my protection has been broken, and I thought I would do a little regulation breaking myself."

This on its face is absurd. Means of redress are always and certainly available to every one in the Navy. The young man knew what they were and he had only to invoke them. That he should not have done so, and that, with his previous training and discipline, he should have taken the step he has, suggests either wilful disregard of his obligations or else some abnormal conditions in his ship life. The latter will of course be inquired into by the court-martial.

Much mistaken public comment has been caused by intemperate letters written to the Navy Department and to a newspaper by Mr. Arrowood, Senior. This gentleman, who is understood to be a clergyman, has an imaginary grievance of some four or five years' standing—from which the *odium theologicum* is by no means wanting—against the discipline of the Naval Academy. It did not lead him to withdraw his son from the baleful influence of that institution before all benefits thereof were fully secured; but now, after the event, he seems to find in it justification for heaping abuse upon the school and the Navy generally. That the Rev. Mr. Arrowood through his somewhat original views concerning moral obligations has himself contributed to the present predicament of his son seems altogether probable.

No graduate of the Naval Academy nor any officer of the regular Navy has ever been convicted of desertion, so far as the present writer is aware. Officers have unaccountably disappeared and their names in consequence have been dropped from the Navy list. In one instance only a Naval Academy graduate has been directly charged with the offense, since he is called a deserter in the Navy Register of 1891; but there does

not appear to have been any trial. The youth of Midshipman Arrowood—he is but twenty-two—will plead for him; but, if he be adjudged guilty, justice plainly requires a punishment which will be certainly deterrent to others. Such a penalty is a much more effective warning when it is kept before those whom it is designed to influence, and this the dismissal of the culprit will obviously not accomplish.

The solution of the problem—assuming always that the court convicts—already exists in a law which is in full force. Article 9 of the Articles for the Better Government of the Navy provides:

"Any officer who absents himself from his command without leave may by the sentence of a court-martial be reduced to the rating of an ordinary seaman."

This has never been covered up or buried in masses of other legislation. On the contrary, it has been read and must be read constantly and publicly before the midshipmen at the Academy and before the crews of all ships in commission. Reduction to the ranks under this article was inflicted on two midshipmen who deserted from the Naval Academy in 1866. One of them was the son of a prominent New York lawyer and politician. The boy was arrested in New York, and despite all the influence exerted to save him was reduced to the rating of an apprentice and sent to duty in the "Rhode Island." So, also, during the Civil War, two engineer officers were reduced to firemen. It is a penalty which seems to fit the present circumstances. As all seamen in the Navy must be American citizens it appears also to avoid the loss of citizenship, but strips from the young officer the rights and privileges which he has shown himself unfit to retain. It compels him to carry out his contract of service in the humbler position and in sight of all men serving in the Navy for a period long enough to bring the lesson well home to them as well as to him. For a time he would be a marked man and the disgrace would be hard to bear. A repetition of the offense, under the new conditions, would mean a term of imprisonment.

As the law now stands no more "excessive" punishment than dismissal can

SIR WILLIAM RAMSAY,  
Chemistry

ments of the New? Has our national modesty deterred us from pushing our claims? Are our scientific achievements commensurate with the equipment of our laboratories? Are our authors as great as our readers are numerous? Are we leading the world in international arbitration? These are a few of the questions

which arise in the mind of the American as he looks over this list of blue ribbon men. When he takes out his pencil and prepares his ballot for the five Americans who ought to get the prizes next December he finds answers to some of them.

Whatever may be our deserts in this matter it does not appear that sufficient effort has been made in this country to see that proper nominations were made with the necessary backing. Our apathy in the matter is in marked contrast with the interest taken in European countries. Nomination blanks have been

circulated here in a casual and desultory manner, but it is necessary to make a united effort in order that the indorsements may have due effect. In this the American Academy of Science should, like the corresponding bodies of France, Sweden and Spain, take the lead. Owing to a peculiar ruling, however, against which the

French Academy has protested in vain, all nominations for the scientific prizes must be sent in by individuals, not by the body as a whole. Candidates for the peace prize, on the contrary, are to be presented by legislative assemblies. The peace prizes have been really awarded, not so much to individuals, as the founder wished, as to societies and institutions promoting international arbitration. The United States Senate, if otherwise qualified, would apparently be eligible under their ruling. Nominations have to be sent to Stockholm before February 1st. In this

connection it is well to quote the exact words of Nobel's will:

"With the residue of my convertible estate I hereby direct my executors to proceed as follows: They shall convert my said residue of property into money, which they shall then invest in safe securities; the capital thus secured shall constitute a fund, the interest accruing from which shall be annually awarded in prizes to those persons who shall have contributed most materially to benefit mankind during the year immediately preceding. The said interest shall be divided into five equal amounts, to be apportioned as follows: One share to the person who shall have made the most important discovery or invention in the domain of physics; one share to the person who shall have made the most important chemical discovery or improvement; one share to the person who shall have made the most important discovery in the domain of physiology or medicine; one share to the person who shall have produced in the field of literature the most distinguished work of an idealistic tendency; and, finally, one share to the person who shall have most or best promoted the fraternity of nations and the abolishment or diminution of standing armies and the formation and increase of peace congresses. The prizes for physics and chemistry shall be awarded by the Swedish Academy of Science (Svenska Vetenskapsakademien) in Stockholm, the one for physiology or medicine by the Caroline Medical Institute (Karolinska Institutet) in Stockholm, the prize for literature by the Academy in Stockholm (*i. e.*, Svenska Akademien), and that for peace by a committee of five persons to be elected by the Norwegian Storting. I declare it to be my express desire that, in the awarding of prizes, no consideration whatever be paid to the nationality of the candidates—that is to say, that the most deserving be awarded the prize, whether of Scandinavian origin or not."

In one respect the administrators of the Nobel Foundation have entirely disregarded the terms of the will, and in such a way as to largely prevent it from its purpose. It was obviously Nobel's intention to aid progress in scientific and other lines by giving immediately to a man who had accomplished something a few thousand dollars to spend as he pleased free of all limitations and conditions. This was on the supposition, doubtless, that one who had devoted himself to science or idealistic literature or the cause of peace must have made some pecuniary sacrifices and a timely fund placed in his hands would help to free

him from care and assist him in carrying on the work he had successfully begun. Besides this, the public recognition of his achievements from so authoritative a source would give the prophet some honor in his own country. For this reason the founder expressly requested that the rewards should be given to those who *during the preceding year* had rendered the greatest services to humanity.

These instructions have been apparently ignored, and so far little if any of the Nobel money has gone as the founder intended it all to go, to reward contemporary achievement. The prizes have been mostly given for work before the Nobel Fund was instituted, and some of it a generation ago. Six out of the twenty-four men were over 70 at the time of the award; to three men death followed the prize within a year or two. The prizes have added a glow to the sunset instead of a brightness to the dawn. The following examples illustrate this point:

| Name.                | Achievement.                          | Age of achievement. | Age of award. | Years of delay. |
|----------------------|---------------------------------------|---------------------|---------------|-----------------|
| Dunant.....          | Geneva Convention.....                | 36                  | 73            | 37              |
| Sully-Prudhomme..... | "Justice".....                        | 39                  | 62            | 23              |
| Mommsen.....         | "History of Rome".....                | 37                  | 85            | 48              |

| M. Curie.....        | Radium.....                           | 39                  | 44            | 5               |
| Madame Curie.....    | Radium.....                           | 31                  | 36            | 5               |
| Röntgen.....         | X rays.....                           | 50                  | 56            | 6               |
| Ross.....            | Malaria parasite.....                 | 40                  | 45            | 5               |

In view of the discussion raised by the sensational remarks of Dr. Osler to the effect that a man's creative work is usually done before the age of forty, it is interesting to note that the average age at which those Nobel prizemen first won their laurels is 38 years. It is

necessary, however, to call attention to the further fact that the later career of many of them shows that if they had died at the age of 60 or even 70 the loss to the world would have been very great. It often requires a long life of arduous labor to develop and prove and apply an idea which was first conceived almost as an inspiration. It is one thing to sketch an edifice and quite another to build it, brick by brick. But the cases under consideration are too few and casual to make further generalization profitable.

What is here indicated as the "age of achievement" is, if not the best work done in the lifetime, at least an intellectual triumph of a distinct and easily recognizable character, such as Nobel intended should receive immediate recognition and reward for the encouragement of future effort. The original work of the world is largely done by young men, often under conditions of great discouragement and privation. Poetry and peacemaking and abstract science are slow to bring in returns in either fame or wealth. Often a genius is not appreciated until he is gone. The world is better at supplying tombstones than stepping-stones. Nobel intended his dynamite to be used in blasting away the obstacles that impede the march of the idealist in science, letters and politics. It cannot be called much encouragement to a young man, out of breath from hard running, to tell him that "if you keep this up for twenty or thirty years longer you may get \$40,000."

There is no evidence that the Nobel bequest was intended to be retroactive, and that all the great men of the last half century were to be first rewarded before the judges caught up with the present. It is on account of this method of administering the trust that the list con-

tains so large a proportion of well-known men; most of the names are familiar not only to specialists, but to any well informed persons. But it was not Nobel's intention to limit his benefactions to the men in the cyclopedias or even in "Who's Who." It is the object of the Nobel Institution, as it is of the Carnegie Institution, "to discover the exceptional man." A quarter of the total income of the fund is spent in administrative expenses, about \$13,000 for every \$40,000 prize, and one of the specified uses of this is the examination of claims and testing of discoveries. The Nobel Fund is to furnish a telescope by which fixed stars may be distinguished from the meteors liable to be confused with them by the naked eye. No doubt it is impossible to tell exactly which are the greatest of contemporary discoveries, but for that matter the lapse of a hundred years would not insure a correct valuation. It is not every year perhaps that a discovery or advance of primary importance is made in all five departments, but Nobel provides for that by saying that the interest may be accumulated for a period of not more than five years in the case of intellectual dearth. Evidently he did not want the judges to be as timid as our own Academy of Science, to which Count Rumford gave \$5,000 to provide an annual medal for a discovery or invention in the domain of light and heat. For 53 years, during which the foundations of thermal science were being laid and our modern stoves and lamps coming into use, the Academy found nothing worth giving a medal to, and finally used the money for other purposes. It is not well to keep a philanthropic fund too tightly clutched in dead hands, but at least it would be well to try to carry out the intentions of the founder for the first few years.

NEW YORK CITY.

# London at the Opening of Parliament

BY JUSTIN McCARTHY

THE opening of Parliament for this Session took place with all the old-fashioned and picturesque splendor of ceremonial to which we are growing accustomed under the reign of King Edward VII, and to which we were becoming quite unaccustomed during the later years of Queen Victoria's reign. The present Session is regarded on all sides as one destined to be eventful in our political history. It seems to be taken for granted that the fate of the Conservative Government must be decided during this Session, and the only question appears to be as to when and how the event is to be brought about. One set of men, who profess to have good reason for their belief, insist that the Government will be defeated at a very early period, and that we shall have a dissolution of Parliament and the General Election before the springtime of the year shall have passed away. Another set of men, who insist that they have the best possible reasons for their belief, tell you that the Government will hold on to the very last and that we cannot have a dissolution and a General Election before the coming on of autumn. There are others again, but these are only a very small minority, who assure you that the Government will hold on as long as ever they can and that they will be found still in their places when this existing Parliament opens another Session next year.

I shall not venture to enter into much speculation on the subject, and for the very sufficient reason that the question may possibly be settled before the exposition of my views could have crossed the Atlantic and could appear in the pages of *THE INDEPENDENT*. The Government have beyond all possible doubt or dispute some most serious difficulties and dangers to encounter. They have still a large nominal majority at their back, but then we know that the majority is divided into thorough supporters and what may be described as conditional supporters.

The Conservative party is, in fact, in

a state of doubt, and even of distraction, just at present. Some of those who were until lately leading members of the Administration have withdrawn from it because it yielded too much to the dictation of Mr. Chamberlain, while Mr. Chamberlain himself has fallen away and is forming a party of his own, because he believes that Mr. Arthur Balfour and Mr. Balfour's colleagues did not yield nearly enough to his dictation. If Mr. Chamberlain were to have reason to believe that an early General Election would be of service to him he would probably do his best to hasten the event, but if, on the other hand, he believed that the longer the present Government lasted the more it would get itself into trouble, he might regard it as his best policy to give them a fuller opportunity of rendering their return to power impossible. The Irish Nationalist members are assembling in great strength and are understood to be fully resolved to turn out the present Administration at the earliest possible opportunity. This is with them a just and a rightful policy. They enter the House of Commons as champions of their own national cause and they are bound to support whatever party, whether it call itself Liberal or Conservative, from which a recognition of Ireland's claim to Home Rule is to be expected. An occasion might easily arise at any moment during this Session when the votes of the Irish party would be enough to decide the fate of the Government. There has not been during my recollection any Parliamentary Session during which the votes of the Irish National party could have been counted on as an element of anything like the public importance which they may come to have at any time within the coming months. Some of the Liberal leaders are, however, rather wavering and uncertain in their support of Home Rule and the Irish Nationalists will wait their opportunity with absolute impartiality as between Liberal and Conservative.

A picturesque figure which for some

time had seemed to be almost wholly withdrawn from political life has suddenly come into distinct view once more. This is the figure of Earl Spencer, who at one period occupied a commanding position in the Irish policy of the Liberal party. Indeed, the career of Lord Spencer may be said in itself to illustrate the modern development of England's policy toward Ireland. When Lord Spencer was first made Viceroy of Ireland that island was still governed on the traditional principles of suppression

LORD SPENCER

and domination, and the Lord-Lieutenant in Dublin Castle was merely the official head of the forces, military and police, employed even by Liberal governments to keep Irish agitators from troubling their rulers too much about Home Rule and the condition of the Irish tenantry. Lord Spencer became converted to Home Rule as Mr. Gladstone did, and proved himself equally sincere, energetic, and unchanging in his conversion. When he was appointed for the second time, after an interval of several years, to the Irish Viceroyalty, he arrived in Dublin on the very day when the late Lord Frederick Cavendish and Mr. Burke, both

officials of the Irish Government, were stabbed to death in the Phoenix Park. Lord Spencer's spirit never quailed even under such a shock as this, and he knew well that the Irish political leaders, men like Charles Stewart Parnell, had no more sympathy with such deeds of blood than he had himself. Lord Spencer made himself thoroughly popular in Ireland during his later years of administration. I can well remember being present at a great dinner given by a Liberal association in London, at which Lord Spencer and Mr. Parnell were both present, and at which they were introduced to each other and shook hands as friends for the first time. Of late years Lord Spencer has but seldom taken any part in public affairs, and his life was much darkened by the death of his beloved wife. Just at present public attention has been suddenly directed toward him in an unexpected way. It was well known that he always remained faithful to his advanced Liberal principles, and a more or less vague impression began to prevail in some circles that whenever the Liberal party comes again into power, an event which cannot be far distant, Lord Spencer is likely to be put at the head of the Liberal Administration. This impression received all at once what seemed at first to be an authoritative confirmation. A letter from Lord Spencer appeared a few days ago in some of the London newspapers, which was understood to be a manifesto of Lord Spencer's views on the great public questions of the day, and as every one assumed a manifesto also of the Liberal party's program. It appeared, however, that this supposed manifesto was nothing more than a letter written by Lord Spencer in reply to an invitation to attend a great Liberal meeting, a letter in which, after expressing his regret that he was unable to accept the invitation, he set forth those views on public questions which he would have made known in his speech if it were possible for him to take part in the public demonstration. The supposed manifesto on behalf of the Liberal party gave an opportunity to some leading Liberals to express themselves in a manner anything but encouraging to the idea of Lord Spencer's being put at the head of the party. We only learned thereby more

clearly than ever that there is anything but unanimity of opinion among those who are recognized as the front rank men of the present Liberty party. I do not believe that that party could possibly have a better leader in the House of Lords than Lord Spencer would be, but at the same time it is of course an evident fact that the real leader of the Liberal party must now have a seat in the House of Commons. The whole incident is full of interest if only because it makes Lord Spencer once again a living figure in English political life. As the years of statesmen are reckoned in our times of prolonged vitality, Lord Spencer cannot yet be considered too old to reopen an active political career. His seventieth birthday comes in next October.

I have been reading with great but certainly not unexpected pleasure the volume on Thomas Moore by Mr. Stephen Gwynn in that very attractive series, "English Men of Letters," published by Messrs. Macmillan, of London and New York. Mr. Gwynn's volume is at once a biography and a criticism. It gives a concise but at the same time a very complete account of Moore's life, a loving but impartial study of Moore's character, and a careful, judicious analysis of Moore's claims as a poet. I do not know that I have ever met with a fairer and at the same time more sympathetic study of Moore himself as boy and man, with all his generous and noble qualities, his occasional weaknesses and faults, his abiding affections, his sudden unreasoning impulses, his moods of contradiction and self-contradiction and throughout the whole his genuine devotion to truth, liberty and justice. Mr. Gwynn is not a hero-worshiper in the ordinary sense of the word—that is to say, he does not strive to endow or pretend to endow the subject of his biography with all the heroic qualities combined and with all the heroic qualities never weakened, disturbed or defaced by any temporary interruption. But for that very reason his portrait of Moore is only all the more charming, because every one who studies it is made to feel that he has a genuine picture before him and that Mr. Gwynn has brought him to a thorough knowledge of the poet Thomas Moore. Mr. Gwynn has ren-

dered a genuine service to literature and to political history as well by doing his best to revive the study of Moore's political satires, satires which were recognized in their day as creating a new and a powerful influence in public affairs, but which have since passed almost into very oblivion because we have ceased to concern ourselves much about the party struggles of the time, about George the Prince Regent and his worshipers and his enemies, and about those who having been his worshipers at first became his enemies at last. I think any reader who is induced by Mr. Gwynn to study or to restudy the satirical poems of Moore in the light which they throw on the political history and the political figures of their period will feel very grateful to the author of this volume for having allured him so far out of the ways of the present time. Mr. Gwynn seems to appreciate thoroughly Moore's marvelous gift as a lyric poet and he appreciates, too, all that is best and really enduring in Moore's longer poems, such for instance, as "Lalla Rookh," while he does not profess to regard these poems as the truest expression of Moore's poetic genius or as the noblest monument to his fame.

Mr. Percy White has just given us, through the publishing house of Messrs. Methuen, another of his spirited and sparkling novels. This latest of his productions is called "The System," and it tells the story of one who starts in active life with the heroic purpose of reforming all the political and social institutions which he finds settled and accepted around him. I shall not make any attempt to tell the story, for the good reason that even if I had space enough for such an attempt I should only spoil it for the reader, inasmuch as nobody can do justice to one of Mr. Percy White's stories but their author himself. The charm does not lie in the narrative of what happened, but in the clever drawing of character, in the author's capacity for making even oddities seem natural, in his rare gift of humor and in his artistic style. Mr. White is especially fortunate in the fact that he can be thoroughly amusing and even comical without indulging in any extravagance and without ever sinking into the merely farcical.

We always feel while reading him that he has an earnest purpose in mind and that he is not striving to be humorous or straining after originality or endeavoring to impress the public with the belief that in his writings satire is a sermon. This latest of Mr. White's novels will, like its predecessors, be read without pause and remembered without effort.

Many American readers will, I am sure, hear with much regret the news of Dr. Robson Roose's death. Dr. Roose was a very distinguished physician and was also for many years a brilliant figure in London society. He was a charming host and at his house one was sure to meet distinguished strangers from all parts of the world. I have met many American friends in that most genial home. It was always a pleasure to Roose to meet interesting and distinguished

men and women and he was himself a brilliant talker, who could throw the light of his many and varied experiences over any subject of conversation. His career came to what must be called a premature close, for he was only in his fifty-seventh year when he was stricken down by the illness which proved to be his death-blow. He was a man of generous nature and in his dealings with the poorer class of his patients he always showed himself a most liberal friend as well as a most careful physician. I have known many instances in which he devoted his time unsparingly to the care of some patients from whom because of their limited means he would never accept any payment whatever. Of late he had lived in comparative retirement. He will long be remembered by his friends among the rich as well as among the poor.

LONDON, ENGLAND.

## Life's Common Way

BY CLARICE W. RILEY

### I.

I HAVE wandered forth to-day  
On life's mighty common way.  
Not a note of Triumph's song  
Reached me as I walked along;  
Not a stone my vision met  
To proclaim how men forget.  
Only Love her radiance flings  
In the vale of common things.

### II.

But I saw—oh, wondrous sight!—  
Gold rejected for the Right,  
And a sweet, brave smile remain  
On the pallid lips of Pain  
That its fear might hidden be,  
Lest the eye of Love should see.  
All this have I seen to-day  
Walking in life's common way.

### III.

As this common way I trod  
I beheld the face of God.  
Yea, in simple human guise—  
In the patient, hopeful eyes—  
In the face with purpose set—  
In the eyes grown dim and wet;  
And I bared my head to-day  
In life's common, royal way.

### IV.

Thus my heritage I trace  
In the upturned human face.  
Through its sorrow and its sin  
Shines its kingly origin,  
And the sun of love beams out  
Through the mists of wrong and doubt.  
Knowing this my glad heart sings  
In the vale of common things.

## Women on the Farm

[The Illinois Farmer's Wife whose article appeared in THE INDEPENDENT of February 9th seems to have created something of a sensation among our readers, judging by the large number of letters we have received and are receiving every day. Some of these letters express pity or sympathy for the author, some disgust, and some are moved thereby to tell the story of their own lives. We select herewith a few of these letters for publication, feeling sure they will interest our readers as much as they have us. Of the substantial correctness of the statements made in the first letter we have knowledge from personal observation.—EDITOR.]

Shortly after my graduation from a "fresh-water" college for women, five years ago, I found myself in the following circumstances: Through changes in family affairs I was left with myself and an invalid sister to support. My assets were as follows: A farm of two hundred acres, with an average amount of stock and farming tools, and a farmhouse that had been enlarged and remodeled and used for the past few years as a summer boarding house. This property was situated in southern Massachusetts, two miles from a village, and was genuine, simon-pure country. The farm was adorned with a \$5000 mortgage, bearing 5 per cent. interest; the whole plant under a forced sale would not have realized more than \$10,000, which would have supplied a possible \$250 a year income for the support of two persons. So much for the farm situation.

I had offered me an assistant teacher's position at my *Alma Mater* with a \$600 salary, but this made no provision for my sister. Also I had a great prejudice against teaching for women, having seen numerous nervous wrecks after five years at this work.

Matrimony seemed unavailable for the moment, from lack of inclination on my part, or on that of any one else, for that matter; so this was dismissed.

A possible position as bookkeeper or in any of the allied occupations would have entailed a course at a business college, and I had only a few hundred dollars as capital.

Considering all things, I decided on the farm. So, with many misgivings, I began

active operation there March 1st, 1900. The place had been in charge of the owner of the adjoining property for a year. He had worked it on the share arrangement and the house had been closed. My first act was to hire as foreman an Irishman, thirty years old, who, with his family, was installed in a small cottage on the place. His wages are \$30 a month, rent free, and he takes his meals at the house. He hired his own assistants, two young men of the same nationality. These men get \$23 a month and their board. They have proved honest and trustworthy servants. I have never had to change them. I go on the principle that a little nagging goes a long way, and my experience with farm help proves it a good one.

At the beginning of my enterprise there was a herd of twenty grade cows on the farm, and the milk was sold to a man who peddled it in a manufacturing town five miles away. He called for the milk once a day and paid 3 cents per quart for it. This arrangement was continued for six months, when a sanitarium being opened in the village, where fifty patients were cared for, I secured the contract to supply this institution with milk at 5¼ cents a quart, the milk to be delivered twice a day. The sanitarium was two miles from the farm. This contract is still in force, the sanitarium has grown until it now has a hundred patients, and the milk bills for the past year foot \$2,558.04. Gradually I have worked up a retail milk trade along the way to the sanitarium and in this way sell about thirty quarts of milk a day at 6 cents a quart. One man regularly delivers the milk, keeping account of it on a

milk sheet, which he hands in to me the first of every month and from which I make the bills. The milkman also has entire care of his cans and wagon.

I have put up two of the Williams Company's silos, one eighteen feet and one sixteen feet in diameter. The ensilage gives excellent satisfaction, bringing the cows through the winter in good condition. This ensilage food is balanced with a ration of hay, wheat midlings and gluten or cotton-seed meal. This winter the herd numbers thirty nice cows.

To return to the beginning of my work: I decided to take boarders, since the house was arranged for that purpose and much too large for ordinary use with its accommodations for twenty guests. I first hired a Nova Scotia woman as cook and her daughter as general assistant at \$18 and \$12 a month. With their help I put the house in order, papering ten rooms myself. The place was entirely furnished, and I made only some minor repairs that spring. In filling my house the first year a great deal of help was received from persons engaged in the same business in the village already mentioned, which is quite a summer resort. They were kind enough to turn their overflow in my direction, and since getting fairly established my patrons have done my advertising. People come into the country nowadays earlier than they used to and stay later. The house is usually well filled from the middle of May until late in October. I charge from \$9 to \$12 a week for board, the average price being about \$10. I have always done everything possible to encourage people to bring children here. The farm life is just the thing for them and, of course, my place entirely lacks the "resort" attractions which appeal to young people. Special attention has always been paid to the table to make the fare, tho simple, abundant and the best of its kind. The foreman is an excellent gardener and I am able to serve my guests with fresh vegetables of all kinds, raising also quantities of delicious strawberries, raspberries and currants. People are very appreciative of these things. Milk and cream are had in plenty from the farm herd. No butter is made on the place, but is furnished by a nearby dairyman. The farm is fortunate in being supplied by an unfailing spring of pure water, which runs to the house of its own power and in quantities sufficient for all uses. Marketing is done in the usual country system of carts driving about and the service is good; groceries are bought chiefly at a New York wholesale house.

I make it a practice to be on the place all the morning. In summer I am up and dressed by half-past six. By this time the early breakfast for the men and maids has been served and eaten, and I go out with the foreman to plan the work for the day, leaving him to give the

orders to his assistants. I look over the barn and stable often to see that all the animals look well and contented. Six horses are kept to do the farm work and to rent to the guests in the house for driving. Some of these horses are excellent roadsters, and all help cheerfully about the farm work. They are well fed and nothing unreasonable is asked of them, kindness to all the animals being one of the first rules of the place.

But I am staying too long out of doors; even if the lovely summer morning is tempting I must go in and superintend the eight o'clock breakfast for my guests. When this is over the other meals for the day are planned; a regular weekly bill of fare is never used. Having acquired, by inheritance and study, considerable knack as a cook, I always prepare certain dishes myself, such as desserts, salads and made meat dishes. Through the summer two extra women servants are hired in addition to the two employed the year around. I find no trouble in keeping busy about the house until the one o'clock dinner. In the afternoon there are often errands to do or a trip to be made to the town five miles away, where shopping is done. Walking is a great pleasure and few days in the year pass without my spending an hour or two in this recreation. Most women living in the country do not walk enough; nothing horrifies them more than a suggestion of walking three or four miles. I go often in the fields, partly to avoid constant offers of "a ride" from kindly neighbors, whose greeting usually is, "What's the matter with all your horses?" as tho no one would ever walk who could possibly avoid it. I am devoted to the life of the fields and woods and am a keen botanist.

I am often asked what there can be for the three men to do on the farm all winter. The care of the cows takes much more time during this season, when they are in the stable, than when they are at pasture in summer. Then there are thirty cords of wood to be chopped and worked up, for we use nothing else for fuel, burning great four-foot logs in the furnace, cooking with wood, and supplying the six open fireplaces with plenty of birch and hickory logs. This work, considering the short and often stormy days, seems to keep all busy.

As for boasting of having grown rich in the past five years, I am afraid that is impossible. I have kept up the place in good order and made some permanent repairs at a cost of about \$500 a year, supported my sister and myself, paid all bills and wages promptly, and have put \$500 in a savings bank in case of a wet day. If I were like the people who write their experiences for the *Ladies' Home Journal*, the mortgage on the farm would doubtless have been paid off before this time. I am willing and, being perfectly well, am able to

work hard, but I do not propose to deny myself the rational pleasures of life. Our home is made pleasant and comfortable, I buy books and subscribe to magazines and a New York daily paper. We subscribe to the library which the village boasts and which for \$3 a year allows subscribers four books a week; also to the Tabard Inn Station in the town. The telephone connects us with the neighboring farmhouses and is a great help both in pleasure and business. In winter I mean to make two or three short trips to New York and an occasional one to Boston, and to dress well enough so that my friends in these places need not feel ashamed to see me come in. I am so much in love with country life that I feel out of place in the city, and after a short stay am thankful to get back to my own "neck of the woods."

I keep an accurate cash account of all receipts and disbursements, and in glancing through this for the past year I see that my receipts from boarders were \$3,157. All the productiveness of the farm goes to maintain the dairy, for besides the \$2,900 received for milk and cream I see only \$150 for potatoes and \$120 for pork sold. The expenses are necessarily heavy. The wage item runs over \$100 a month, and other items I notice are \$135 for commercial fertilizer and seed; taxes, \$106; interest on mortgage, \$250; oats and feed, \$500; fire insurance, \$90. These, with daily running expenses, take the money about as fast as it comes in.

On the whole, mine seems a sane and pleasant course of life and I have never regretted the school teaching or other alternatives. It is some satisfaction to be "the boss," even if the domain is small.

A NEW ENGLAND WOMAN FARMER.

Permit me to express to you my warm appreciation of the article in your issue of February 9th entitled "One Farmer's Wife," as also of your editorial in reference to it. I have not read anything upon matrimonial science that seemed so pertinent, sane, satisfactory, sensible, as your comment on that remarkable and excellent article.

HIRAM F. WHITE.

WELLPINIT, WASH.

My heart was touched by the tale of woe told by the farmer's wife "Illinois" in your issue of February 9th, and fearing your readers might think that a majority or even many of the farmers' wives suffer like her I will give you my experience as a farmer's wife for the last 22 years. To begin, I am the daughter of Irish emigrants, who came to America as poor as English persecution could make them, and God knows that was poor enough,

and settled in one of the valleys of the Alleghanies. I was not there, then, but came later. I did the usual chores about a farmhouse and went to the district school till I was fifteen years, when I was sent to school to a convent, from whence I came able to teach in the common schools. I taught in several counties, and every place I taught "Willie went a-wooing," but I seemed proof against Cupid's arrows. Even when the man who is now my husband wrote me an introductory letter I rejected him. He was almost a stranger to me and things went along as usual for two years when I accidentally met "John" again. I could not but admire "the man" in him and the candor and boldness with which he practiced his religion. I had read Burns:

"Conceal yoursel' as weel's ye can,

Frae critical dissection,

But keek through every other man

Wi' sharpen'd sly inspection."

I never thought it well for a young lady to let love get the better of judgment. My young lady friends said to me, "Give that fellow a wide berth. He is too much of a buckwheat for you," but I listened to John, and you know when a woman listens what she will do. John "led me to the altar," and then led me to his home, over one hundred miles from "my native heath." When I arrived at his home I found he possessed a large farm, with many buildings and much stock, and work enough for a small army; and, like the husband of "Illinois," "he was a hustler." He had a strong will, and his word was law about the whole place. My heart sank. Everything was out of my line. I said to myself, "What can I do here?" But my husband's kindness came to the rescue. I found him not miserly or stingy, but right the opposite, caring not for money only as a means with which to accomplish his object. He laid all his plans before me, asked my opinion in everything he was about to do, and when I told him I knew nothing about it, he said it would teach me if he were called "off to yonder." I found such knowledge very useful at times when he was away from home. I would sally forth to see that things were aright. I found he had a good library, was a lover of books, from which I often had to take him at the midnight hour, and that when we "locked horns" on a literary subject I was often vanquished. I had some money from teaching with which I bought some new things for the house, and gave the balance to my husband to use in the improvements he was making. He put a wind mill over a well and pumped the water into a tank high in one of the barns. From there he piped it into the kitchen, bathroom, stock troughs, etc. He bought a new piano, as I had been taught to play some. I had learned to milk when at home, and often on Sunday evenings when the hired men would

"play hookey" I would go to the barn and help John milk thirty cows, come to the house and play "Garry Owen" in a manner that would make a Rough Rider think of Cuba. When I ask John for money he doesn't lean back in his chair and say, "What did you do with the last fifty cents I gave you?" but gives me what I say I need, and never yet asked me what I did with it. I have never asked for a horse to go any place but it was ready, with a driver if I wanted one. We keep several horses, and John's motto is, "I keep the horses well fed and shod, and when we want to go they must." In all these years I have worked hard, but ever with a good will, always kept a house girl when we could get one, and was never asked to do anything I did not wish to do. When we were two years married a baby boy came to add his mite to the confusion, and they kept coming occasionally until we had five. We raised them tenderly; looked after the better part. When John hired a man he always put this in: "If I know of you being profane or obscene your time is up." As they grew older we sent them to the common school, thence to a high school and thence to a university, and altho they are the sons of a "farmer's bond servant," they have always distinguished themselves on the forum and gridiron. They were raised away from the allurements of city life, have no bad habits and have never brought a blush to my cheek. I know always just where my husband is. He is never at a "club house" and his wife pining at home. When he goes to any entertainment he takes his wife along. We don't believe in the wife raising chickens for pin money. We have no separate acts. Everything is in common, both in earning and spending. John thinks or says, at least, that the wife is "the whole thing" at the home, and so has always treated me as the principal partner in the business. I have tried to act my part along these lines, and therefore there is no hitch. Now if I had the power and the will to be other than a farmer's wife, where could I better myself?

A PENNSYLVANIA WOMAN.

It seems to me that you have put us farmer folks in a wrong light in your last week's issue, and the belief that you had no intention of so doing gives birth to this protest. While you commented editorially in your usual broad-minded way and helped matters out very largely, there was still a bad taste in my mouth and I felt like begging you to make it just a little stronger.

It seems to me "One Farmer's Wife" is not only unfortunate in her husband, but also in her place of residence. The husband you disposed of satisfactorily, but having been a farmer's daughter 30 years, a farmer's wife 6

years, and having a varied experience from residence in Ohio, Colorado and Iowa, the article referred to reads, for the most part, like 20 years ago.

I did not suppose there was a farmer's wife in the United States to-day doing the family knitting. The most of us have learned that it is not economy to do this, or to make our husbands' clothes or launder their "biled" linen.

Some of my neighbors eat in their kitchens, but I could almost say that every wife has a cream separator, a patent churn and other labor-saving devices. Some of them "do not have time" for solid reading, but most homes (particularly since having R. F. D.) have the daily paper and several good magazines. And, yes, we have some gossips. Don't you have them in town, too?

We *do* work hard and long (but so do our husbands), and I am honestly grateful for your sympathy. I smiled a trifle bitterly the other day as I wondered if Mrs. Ashby-Macfadyen didn't know that "housekeeping is genuinely hard work" for thousands of her American sisters, too. I have never feared that I should rust out. I am busy, busy, and must be quick and methodical or be swamped. But when I am wofully tired from the dairy work, the pickling, the canning, etc., cannot you see that it is some compensation to know that my husband and babies will have pure cream and butter, that my pickles are not crisp because of the use of alum, that boric acid does not enter into my chicken salad and boned turkey, and that the latter are really chicken and turkey? Besides, our hobbies and dream castles lighten the monotony wonderfully. I have three friends who are quite proud of their blooded poultry. Must they be condemned as lacking in ambition and having no craving for the "higher life" simply because they "made chickens take them to St. Louis last year?"

We are perhaps overworked often and become despondent and nervous, but do not some city wives go to Palm Beach for rest and some husbands to Europe for a stomach? If it is a question of bondage, personally I would rather be a slave to the fresh, sweet soil and my babies than to a pug dog and a social rule that obliges me to leave my dress waist at home and to "do" the "high-up handshake" into the wee sma' hours. Pardon me, I do not wish to be rude. But you are independent and will credit this to my different bringing up, will you not?

As to this farmer sister of mine, her story is the most pitifully tragic thing that has come to my notice for many a day. It has been my observation that modern martyrs' crowns are usually uncomfortable and profitless, and if I

knew her I should beg her to follow your plan of campaign to the letter. But you forgot to tell her to eat breakfast with her family—and my husband builds the morning fires.

MRS. F. A. NISEWANGER.

BLENCOE, IOWA.

You may be interested to know that I was requested to read the article, "One Farmer's Wife" in the last issue of *THE INDEPENDENT* to the Clinton County Farmers' Institute. Probably 250 people listened with marked interest to the reading of the paper.

No public discussion was attempted, but in many private discussions it was variously estimated from pure fiction to cold facts, and apparently awakened a good deal of thought.

(Rev.) J. J. MITCHELL.

DE WITT, IOWA.

My husband and I read the article on "One Farmer's Wife" in last week's *INDEPENDENT*. We have taken your magazine for over 20 years. We have always loved its pages, and read it with deep respect and interest. The article spoken of was a shock to our family. I would like to send you a *sunnier* picture of a farmer's wife and her *life* in *Illinois* than that poor lady has depicted. I do not wish money for it, but I would like to have the Eastern people know of the handsome homes, the culture and higher life of farmers 30 miles west of Peoria. We live on a beautiful farm of 200 acres, worth \$150 an acre; have a house in town and 160 acres in Canada. My husband and I have been members many years of the First Congregational Church of C—. I am a member of the Woman's Club in town, composed of ladies of wide culture and who have traveled in Europe. My daughter is a student at the Chicago Musical College and will graduate this year.

I was married in '76, went to the Centennial on my wedding trip, have one child, the daughter. Have never made garden or done a washing without help. Perhaps I have milked a cow two or three times in 28 years. Have kept a good girl many years and paid \$2.50 a week. We take \$30 worth of daily papers and magazines and weeklies. Last summer we took five dailies. We have a carriage, buggy, sleigh, fur robes, etc. Nearly all the farmers here have handsome carriage robes and *everything* comfortable.

When I was a young married woman I had all the cares and busy times that go with farm life, and kept it up for 19 years. When I could not get help we hired our washing and ironing done out of the house. Some years I made \$90 worth of butter, often sold \$60 worth of chickens, and that was *my money*. I bought

lovely china, nearly furnished all my house handsomely with that money. When Sabbath morning came we always went to church in town; attended concerts that were good in town evenings. My husband is fond of travel, loves good music dearly, is an inveterate reader and well posted on the topics of the day. He usually spends three or four hours a day reading the magazines, besides the reading in the evening.

My husband has his carriage team of black Morgans and a Jersey cow to look after and makes his garden, the land being rented out. For twenty years there has been a good tenant house, where one or two men boarded, taking that much work out of the house. At the present time we both take life quietly, travel when we wish to, go to Chicago occasionally to enjoy the music and advantages there for a few days.

ANOTHER ILLINOIS FARMER'S WIFE.

As I was reading the piece entitled "The Farmer's Wife" it came to me that I could write another side of that sister's life, as I am standing in almost the same position as she is, if you think it worth printing. I was not born on a farm, but in a small English village in the south part of old England, and when I was a mere baby my parents brought me over the seas to New York State, and there my father lived on a rented farm. We lived thus for eleven years, from one place to another. It was most of the time too far for us children to go to school, so our mother taught us to read some at home. When I was twelve years old father came to Michigan to get a new home for his family. He bought a new piece of land and then came back for us, and we moved on to it the next spring.

Oh, there is so much to write in here between the lines of childhood times that we had in a new country of woods and wilderness! How happy we children were! But the work came into our lives as well, and hard every day work, too, for there was a large family of us; and the four oldest being girls, we had to take the place of boys in the work in the new home. Father felled the large trees and then we would help him split them up into logs, and then we would take the team to draw them up into large heaps to burn them to ashes. We could not sell timber as now to clear the land of it so that we could raise corn and potatoes among the stumps. We girls and mother helped do all this work. After the land was cleared of the wood there were the fences to be built around the fields. We laid the rails as father split them from the logs into fences. Then the land had to be got ready for crops to be planted, and it then had to be hoed and cared for, and there was the harvesting of all

the crops, and so it went from one year to another; but we did not get weary of it, for the little word of *love* was in all we did. Father didn't have any education, but he sent us to school winters. But I would not have you think that he was a selfish man thus to keep his wife and daughters at work out all day and then come into the house and there help to get work in there done for the next day. When I was sixteen we had a Sunday school and meetings started in our school house. We went every Sunday to the school and meeting. Such you see was my life as a farmer's daughter.

Now I must pass on to that of a farmer's wife. That came when I was nineteen years old. My husband was a man of no education at all, and was brought up not to go to church or Sunday school; to dance was his pleasure, and to such places he went. But he loved me, and I did not attend such places; so he gave it up for my sake. We commenced to go to church when we were married. Sometimes he did not feel like going, but I would ask him if we were not going to church, in a kind of loving way, and he would get ready to go. I believe it lies in every woman's power to lead her husband in right or wrong ways if she will go in the right way to do it. She must love and respect her husband, if she expects him to do the same for her. There is no man in his right mind who will not do anything for the loved one.

I am a great lover of reading. As my husband cannot read in the evening we would sit and I would read aloud to him, so he could get the good of it as well as I did. In this way he came to like to say at home evenings to listen to the readings. He came to like books as well as I did, in his way, for he did not know how good it is to have education, which his

parents neglected to give him. My work as a farmer's wife has been very much as the sister said hers has been, only I have eight children to bring up. They may not have the polish of some children, but I can say, if I am their mother, that they are a credit to the community they live in and I am proud of them. And do you think they would respect me if I did not respect their father? Oh, no, for a child is a close imitator of his mother in such things. I do not think my husband is selfish because he wanted me to help him out in the field and let my work in the house go till his was done. And I did not work while he ate his meals, for that was one very wrong thing for the sister to do. Why did she not sit down with him and talk to him about his work and his business? and then when she wants to make her wishes known they would know each other better and he would understand her desires better. We must keep in close touch with our loved ones, and not get the idea in our heads that we are better than they; for what is life without love in it? I have worked hard all my life, but I always find time to eat at table with my husband and children.

My oldest child is married and keeping her own home now with her little daughter. The others are at home yet, and we are a happy family. My husband has been a church member for a long time, and so are three of my children, and we go to church and Sunday school almost every Sunday. Oh, there is much to write on this theme, but it must come to a close, for I can hear some one say "She is a goody-good." But, dear sisters, I am no better than any of you are, only for God who has given this holy love through himself if we accept it for ourselves and to give to others we meet in this great world.

A MICHIGAN FARMER'S WIFE.

# Literature .

## The Historians' History of the World

THE appearance of these volumes,\* the extent of the work, the famous names that appear upon the page list of contributors and editorial advisers, and, finally, the far greater list of eminent historians, living or dead, from whose writings the thousand pieces of the mosaic are taken—all these first impressions create a favorable attitude toward this vast undertaking. Why is it not possible, we ask ourselves, to select the best passages from the many great historians and thus construct a whole which will be better than the work of any one man from whose writings a part is taken? Different historians of the same period of history have different interests. If an editor with great breadth of view could select from the several writers on the same subject just those portions of their work for which their studies or aptitudes best fitted them, the mosaic might have a value greater than the more unified work of a single writer with narrow interests. A careful study of the volume which treats the reviewer's own special field, American history, shows that this not only has not been done, but by a curious fatality the portions of an historian's work upon which he was least fitted to write are chosen as bits of the mosaic suited for those particular parts of the history. Why John Frost's account of the events leading to the Declaration of Independence should have been chosen instead of Fiske's, Bancroft's, or Chamberlain's we cannot conceive. Why the choice of Samuel Eliot's brief and wholly inadequate account of the "Organization of the State Governments"? Why not Hildreth's or Bancroft's? But this sort of query we might carry on indefinitely.

There is also a questionable use of well-known names as editorial advisers. Take Volume XXIII for an example.

\* THE HISTORIANS' HISTORY OF THE WORLD. By Henry Smith Williams. In 25 volumes. New York: The Outlook Company. \$72 to \$135, with installment privileges.

Prof. A. C. McLaughlin's name is given in the list of "Editorial Revisers." At the beginning of the book is an essay by him on "Some Important Aspects of the American Revolution." It is the most masterly essay that has been written on that subject, showing the most fundamental and searching study of the whole field. It ought to be read by every student and by every writer on the American Revolution. If he had a hand in the choice of materials to be used in presenting the Revolution period—as common sense would dictate he should have, since he better than any other could choose well for that subject—the treatment would tend to follow his masterly conception, but in truth it violates his conception at every step. The natural conclusion is that he had nothing to do with the selection. Professor Hart's able and scholarly survey of the field of American Diplomacy is also violated in the subsequent treatment of that subject. Hence he did not guide the choice of matter for his subject. After eliminating those two scholars there is left in the list of "Contributors and Editorial Advisers" no scholar of standing who is competent to choose wisely for the American History mosaic. Whether this is true of the twenty-four other volumes we do not know, but we hope not, for this monumental work seems to promise a real service to the general reader. Of course it could not have the philosophic unity of thought which a single writer might give, but since not one person in ten thousand reads history with any sense of its unity, or ability to grasp that unity when pointed out by an able writer, the desirable end is, perhaps, an accurate, entertaining relation of the small sections of history. This end seems, on the whole, to have been attained, tho, as we have said, it might have been far better had the editor been more fitted, or the co-operation of his advisers been more active. One part of the work of the editor he has done with remarkable skill and that is the fitting of the parts

so closely and skillfully that the reader rarely feels that there is any break. Also he has very fairly judged the amount of space properly assigned to each country and age. Two volumes dispose of Egypt, Mesopotamia, Israel, Persia, India, Phœnicia and Asia Minor. Five more care for Greece and Rome. One treats the Arabs, the Crusades and the Papacy, and the next two are taken up with Italy, Spain and Portugal. Three are devoted to France, two to Netherlands and Germany and two more to Scandinavia, Switzerland and Russia. England, Scotland and Ireland are allotted four, the United States and the rest of America two. Volume XXIV treats Turkey, Eastern States, China and Japan. Taken as a whole, it is a magnificent undertaking and serves a great and useful purpose.

### The Negro from a Southern Standpoint

THE literary fame of Mr. Thomas Nelson Page rests chiefly upon his fascinating portrayal of the traditional chivalry of the South and of the patriarchal side of slavery, both in dialect and in straight prose. In the volume under review\* he undertakes to handle the vital and pressing questions of the present South. Mr. Page represents the old-fashioned, manorial aristocracy of Virginia that regarded slavery as an institution of "dependence and affection." When, therefore, he tells us that "no man can entirely disassociate himself from the conditions amid which he grew up," we may regard the utterance in the nature of expert testimony. The frequent occurrence of such expressions as "the generation to whom the Baptist cried in the wilderness," "misguided fanatics," "sentimental philanthropists," "cock-sure theorists," "Pharasaical critics," "enthusiasts" and "doctrinaires" (this last designation occurs an even dozen times), indicates the survival of the traditional intolerance of his class. Under the old *régime* it was "a word and a blow" in dealing with adverse

thought; the blow has been supplanted by an epithet.

The book is made up of papers which had previously appeared in different magazines, altho, strangely enough, there is no such prefatory acknowledgment. A lack of continuity, occasional repetition and inconsistency of attitude are the natural outcome of such a fortuitous collection. The several papers are so at variance with one another in temper of treatment and breadth of view that they make strange bed-fellows when bound under the same cover. It is especially to be regretted that the least liberal chapters, written at an earlier stage in the author's experience, are so set at the end of the book as to give color and conclusion to the whole volume. The clearest internal evidence convicts the writer of carelessness and inaccuracy of statement and of an inexcusable lack of information. Speaking of slaves who remained faithful to their masters during the Civil War, he says:

"Doubtless there were many—possibly the most of them—remained from sheer inertia or fear to leave. But a far larger number identified themselves with their masters."

This mathematical twist does violence to Euclid's axiom. Again, we are told that the crime of rape is "well nigh confined to the negro race." The police reports of our large cities and the Census of the United States show the utter baselessness of this statement. When a writer knows that his utterance will be accepted as accurate and authoritative by a wide circle of readers he should not indulge in such serious assertions, unless based upon the fullest inquiry. But what can be said of an author of world wide fame who bases the most damaging charges against his fellow citizens upon the authority of W. Hannibal Thomas, whose foul mouthings against his race several years ago fell beneath the weight of their own nastiness?

Disputed assumptions are asseverated with as much assurance as if they were self-evident truths. The omniscience of the South on the race question is only equaled by the nescience of the North. The Southern white man gratuitously taxes himself to educate the negro (no intimation of the indirect burden of taxa-

\* THE NEGRO: THE SOUTHERNER'S PROBLEM. By Thomas Nelson Page. New York: Charles Scribner's Sons. \$1.25

tion or of civic equity). The education of the negro has been a failure, and all the substance and service of Northern philanthropy have been wasted under the spell of a misguided fanaticism and a doctrinaire philosophy.

The whole fabric of Mr. Page's political and social code is based upon the inferiority of the negro as a part of the unchanging and unchangeable order of things. This alleged inferiority is set forth with a vim and vengeance rarely met with in current discussion. The author posits as the first principle of his social philosophy:

"The absolute and unchangeable superiority of the white race, a superiority it appears to me [Mr. Page] not due to any mere adventitious circumstances, such as superior educational and other advantages during some centuries, but an inherent and essential superiority. . . . He [Mr. Page] does not believe that the negro is the equal of the white man, or ever could be the equal."

The claim to race superiority is certainly set forth with greater fervency of feeling and passionate outburst than would seem necessary in describing an ordinary and fixed relation of nature. This belief is what the author calls one of the South's most "passionate dogmas," about which, however unreasonable in itself, it is plainly a waste of while to reason with one who confesses himself a devotee.

The book shows neither depth of thought nor thoroughness of research, but is chiefly notable as the portrayal of the well-known views of the less liberal leaders of the South with high authority and great literary skill. The distinctive contribution of the volume is the recognition of the emergence of a superior class among the negroes, which is especially significant because of the author's point of view, and the suggestion of a conference between members of both races to devise a *modus vivendi*.

### Nostromo\*

CONRAD is one of those authors who, like Browning and Whitman in poetry and Meredith and James in prose, fascinate a certain elect circle of

admirers, while others find them difficult to understand and tiresome to read. Each successive volume widens the chasm between the Conrad lovers and the Conrad haters. Of his previous books "Typhoon" is perhaps the best known—a wonderful study of the sea. "Lord Jim" is his great psychological study, a book with tremendous force and understanding. There is a moral and psychical uplift with Conrad that is at once cheerfully mundane in the healthfulness of its nature and broadening as the roadsteads of his ships as they gird the globe in wealth of summer seas.

*Nostromo* is not so much the study of the character, a Genoese sailor, for whom the book is named as it is an exposition of the South American Republics, their people, their institutions and revolutions; but there is also a great sociological and moral question at stake that will apply as well to North America or Europe.

The hero first, if *Nostromo* is the hero; the story of his success and his temptation. It is rarely that a character is so well set forth with so very little writing about him. The chapters are about a silver mine and its development, then about a railroad and a government. *Nostromo* is in the background, almost forgotten, with but here and there a hasty glance or vivid picture. A score of other people are described, each one tellingly, analytically, picturesquely: an English administrator of mines and his pretty wife in her leadership of the provincial society; a Parisian dilettante much in love and swept therefor into the leadership of the revolution; an English doctor with a tragedy to live down; a garrulous, self-important old sea captain; an old-time Spanish-American gentleman and his modernized, emancipated daughter; a fanatical priest, who becomes a cardinal; a brigand chief and a veteran of Garibaldi—all these play their parts in the republic toward making it, or breaking up the old one. *Nostromo* is in the background, however active, and yet he is the hero unforgotten. Toward the end, where the narrative is given more to him, we realize the effectiveness of these suggestions, these dramatic pictures between long intervals of silence. The book is too great a book to be the history of one man, tho that man may

\* NOSTROMO: A TALE OF THE SEABOARD. By Joseph Conrad. New York: Harper & Bros. \$1.50.

hold the key to the situation. It is a province, a revolution, we are discussing, and this leads us to the real body of the novel.

As a study of a South American revolution the book is a monument of realism. No history could give it so well, for a generalizing composite has been taken. Moreover, there is behind it the observation of a great man on the case, a mind that will not confine itself to facts when truths are so much more worthy of expression. The elements combine, the phenomena follow, greed, avarice, vanity, love of power, against generosity, righteousness, affection and pity; the game moves with inevitable conclusion, the mannikins dance for their creator. But the breeziness and health of the sea keep all of Conrad's books from being morbid. His villains, in spite of their villainy, are always of the companionable sort; not that one would wish to meet them in life, they are much more acceptable in novels; what we mean is they do not keep us awake nights as we puzzle over their psychologic intricacies. They play their parts and then lie quiet in their graves—no nonsense of modern ghost walkings afterward.

Notwithstanding, there is ever present a psychologic question, a moral issue that is as modern as Ibsen. In *Nostramo* it is the corrupting influence of massed wealth, the treasure that is symbolized in the first chapter—money massed unneeded and unearned, that smirches even the fair cheek of a great lady and ruins the one man who was believed to be incorruptible.

**Crowell's Library of Illustrated Biographies.** Boswell's Life of Johnson. Harrison's Life of Poe. Mrs. Gaskell's Life of Charlotte Brontë. Irving's Life of Mahomet. Lockhart's Life of Scott. Cross's Life of George Eliot. Farrar's Life of Christ. Irving's Life of Columbus. New York: T. Y. Crowell & Co. \$1.50 each.

For those who agree with the dictum "there is no history, only biography," this edition of standard lives will be especially welcome on account of its cheapness and convenience. The word "cheap" as used in connection with these books means "good value for the money," not, as it often does, poor and

GEORGE ELIOT

From *Cross's Life*, Published by Crowell & Co., N. Y.

shabby. Biographies usually published in several volumes are brought into one, and that well bound and clearly printed. There are seventeen illustrations, varying in quality, in each volume. The edition is particularly well suited to public libraries.

**The Life of Saint Mary Magdalen.** Translated from the Italian of an unknown fourteenth century writer by Valentine Hawtrey, with an introduction by Vernon Lee. New York: John Lane. \$1.50.

If this book were recently written it would be advertised as "an historical novel of the time of Christ" and its publishers would send out cunningly worded slips calling attention to the fact that it is a vindication of the reputation of an unjustly condemned woman. For the worst that the gentle minded author can find to say of Mary Magdalen is that she was not modest in demeanor but too fond of dress and unseemly merriment in public places. Such behavior the ladies

of the author's day would think nothing of, but in Gospel times, when morals were purer and chaperonage stricter, it was sufficient to give her a bad name and to provide material for a proper repentance. "It is quite enough that she had sin in her desires, and would have consented thereto, if it had not been for this restraint put upon her." She was espoused to John the Evangelist at Cana, or, so the author likes to think, "not affirming it, but finding pleasure in the thought that the world used to be thus. I am glad and blythe that St. Jerome should say so. And St. John, that most fair and beloved saint, so much delights me that I think so beautiful and lovely a maiden was only meet for him; and we must suppose that she was not yet a sinner, or that betrothal would not have been made."

And equally naïve and pleasant are all things the author likes to think about Martha, and Lazarus and "Messer Jesus," for, like Fra Angelico, he uses no burnt umber.

**The Secret Woman.** By Eden Phillpotts. New York: The Macmillan Co. \$1.50.

Last year Eden Phillpotts achieved a pure romance in his novel, "The American Prisoner"; this year he has published a tragedy, grim and relentless. And yet he is not relentless toward, however criminal, his characters; he sees with their eyes, feels with their fierce hearts, and lets each plead his cause in his own way and words. The psychology of a weak man and a strong woman is etched with the hand of a master. The somber story has a fitting background in the wild wastes of Dartmoor, a landscape so steeped with fiction as to have an appeal of its own to readers of Blackmore and Hardy. One would hardly dare to see the actual place, peopled with imaginary figures as it has been now for years. Mr. Phillpotts's rustics who gather at the "Hearty Welcome" to discuss crops and theology are a perennial delight, as a fragment of one of their conversations will show:

"I drew a blank at birth."

"Josh be in a rage along of that dreadful sharp weather three nights agone," explained Mr. Toby Hannaford, the landlord.

"They late frosts have ruined his potatoes."

"Ess" burst out Bloom, "an' well I may be. It makes me dance to hear you men so trustful an' contented wi' everything. Look at my earlies—all scorched black by that — frost—an' then say whether I ban't in reason to be vexed."

"God's got something better to do than fuss after your earlies, Joshua Bloom."

"Then He's not the God I took Him for," answered the quarryman defiantly.

"He did *ought* to have looked after my earlies. I've done my part for half a century, an' nobody knows it better than Him. An' then to have my patch, as I count on, to give my old sisters their little bit of comfort, ruined that shameful."

"At your old game," said Tapp, "bookkeeping with the Lord, an' making out all the loss be your side, all the profit His. There's a lot like you in the world, Joshua."

**The Life of Michelagnolo Buonarrati.** Collected by Ascanio Condivi. Done into English by Herbert P. Horne. Boston: Merrymount Press. \$7.50.

Condivi wrote a great biography, though no longer than a Plutarch. It puts Michael Angelo before us a genius yet a man. It is rich in choice anecdote, it describes the rivalries and reverses, the successes and triumphs incident to one of power and resource and ambition, and over all its style and treatment give the time as Castiglione describes it. The work itself and Addington Symonds's praise should have before this prompted a popular English edition. Mr. Horne's translation is close and *con amore*, but the book is published in a very limited edition. The format is less notable than the biography or the translation. Mr. Horne designed the type, which is here first used. It is chaste and clearly cut, yet the page is not clear. A heavier lead and narrower print page would have been better. The letters usually have grace and character. We can except but three: the "s," which is too narrow; the "g," which has the lower line of the lower loop slanted to the right, and the "a," which, tho it stands for alderman, should not have a corporation like one. Mr. Horne has avoided the barb serif or prong that besets the follower of the Renner or Jensen types and the sloping hyphen and the interlocking "w." The initials are appropriately Italian in design. The title-page quite disappoints.

It is arranged as in inscription and in uniform small capitals, save for the "T" in the first line "The." This would be questionable in an inscription setting of any sort, and is distinctly wrong as here rising above the line. The paper is a fine and strong hand-made linen and of good tint, but not quite opaque. And still, even one with a liking for "limited editions" comes back to the regret that less than two hundred can own this book.

### Literary Notes

WE are impelled to call the attention of our readers to the very remarkable achievement in photography and printing in the March *Scribner's Magazine*. It is a series of Indian portraits by E. S. Curtis, described by one who also knows Indians well, George B. Grinnell.

....A very useful handbook for settlement workers in regard to the management of boys' clubs appears in the little book by Charles Stelze, entitled "Boys of the Street" (Revell, 50 cents). That the writer has had experience is very evident, and also success, which is much more important, is read between the lines of all its pages. It is full of good suggestion and common sense and is written with directness and precision.

....Thomas Dixon, in his efforts to give respectability to the Ku Klux clan, implicates a Northern clergyman in a letter to the *New York Times*:

"One of the best preachers in Boston, a man of the sweetest Christian character, a leader of Evangelical Christianity, whose sermons the *Transcript* prints on Mondays, was a Ku Klux clansman, and at this writing is still unchanged, and very popular in Boston."

His older brother, Rev. A. C. Dixon, is one of the best preachers in Boston.

....Public libraries are very wisely buying more old books than they used to, and it is becoming more generally realized that the latest book on a given subject is not always, or, indeed, usually, the best book. The careful librarian finds out from observation, with the help of readers, what are the gaps in his book shelves and then selects the best works to fill them, instead of buying at haphazard or in obedience to the insistent suggestions of publishers. For this purpose the United States Book Catalog and its supplements, the Monthly Cumulative Book Index, published by the H. W. Wilson Company, Minneapolis, is practically indispensable. It is more comprehensive than the Publishers' Weekly, and more convenient than the Publishers' Trade List Annual, and more timely than Sonnenschein.

### Pebbles

It has been some time since women and children were shot down in the streets of heathen Tokyo.—*The Philadelphia North American*.

....Under the President's order, the commissioner of corporations will proceed to find out what everybody else knows about Standard Oil.—*The Detroit News*.

....By having its criminals work in the State oil refinery Kansas feels that it will be in a better position to compete with Standard Oil.—*The Detroit Free Press*.

....If Russia had an army of soldiers who were as accurate marksmen as her bomb throwers the war with Japan might terminate differently.—*The Detroit Free Press*.

....The following note was received by a teacher: "Please, sir, Johnnie was kept home to-day. I have had twins. It shant occur again. Yours, truly, Mrs. Smith."—*The School Journal*.

....The Czar might have acknowledged the right of the people to petition for redress of grievances without paying any more attention to the grievances than the United States Senate does.—*The Detroit Free Press*.

....It is reported that one of our newly married ladies kneads bread with her gloves on. The incident may be peculiar, but there are others. The editor of this paper needs bread with his shoes on; he needs bread with his shirt on; he needs bread with his pants on, and unless some of the delinquent subscribers of this paper pay up before long he will need bread without so much as anything on, and this is no Garden of Eden, either, in the winter time.—*Enid (Oklahoma) Daily Wave*.

....Doesn't it make you weary to read the rot of those rattle-brained idiots of the Chicago press who are repeatedly ridiculing the country papers on their locals? These two by four lunch counter fiends think it awful funny when some country newspaper says: "Hiram Slocum has sold his Holstein cow to Ed. Childress." But, of course, it is just the proper caper when they say: "Mrs. Franklin Oliver Lowden has just returned from the Epsom Lorimer kennels." Oh, that's great! That bull pup would bring about thirty cents in the dog pound, while Slocum's cow would sell for \$50 in the dark. Because Gussie Davis was over at Guard's Point Sunday to see his best girl they throw a shoe, but if William Henry Harrison Pook, the society leader, was in Milwaukee last Saturday to see Miss Gertie Pabst they would slobber over a half column and have three pictures of Gertie and William Henry on the front page.—*Gallatin, Ill., Democrat*.

## The Responsibility for Monopolistic Extortion

THE story of the handing over of Rapid Transit in New York City to a private monopoly which Mr. John De Witt Warner contributes to *THE INDEPENDENT* this week is, all in all, the most remarkable chapter yet written in the history of capitalistic greed, moral paralysis and political corruption in America. The exposure of the Tweed ring by the *New York Times* a generation ago revealed the possibilities of a purely criminal exploitation of a city. Charles Francis Adams's "Story of Erie" foreshadowed Miss Tarbell's history of the Standard Oil Monopoly as an exposition of the methods by which unscrupulous finance controls corporation politics, State legislation and the courts. Mr. Warner's article renders the far more important service of turning the searchlight upon a supposedly moral, respectable, substantial element in the community, and exposing its full responsibility for a shameful betrayal of the people.

No men in New York city are held, and deservedly held, in higher honor by the public than the men who compose the Chamber of Commerce. There are no men against whose fair name the breath of suspicion could more idly blow than the gentlemen that have served on the Rapid Transit Commission. There is no one man whose character is more unhesitatingly conceded by political friends and political foes alike to be of unimpeachable integrity than the honorable Seth Low. Yet these men, when it was absolutely within their power to give to New York City a system of rapid transit that should be successful as a means of expeditiously transporting a vast population at reasonable prices, and at the same time a source of vast revenue to the city, deliberately handed it over to

private interests and saddled upon the public an extortionate monopoly, which will coin untold millions of dollars from the people's necessity and which has already assumed the attitude of opposition to any further extension of subway traffic until the people are made to stand and deliver. Mr. Warner does not advance this proposition as an item of "information and belief," leaving the public to guess whether he knows any more about the matter than those whose interest it would be to deny his assertions. He gives to the reading public the documentary proofs of his charges.

The article is remarkable also for another reason: By further documentary evidence Mr. Warner establishes his assertion that the element in the community which, from first to last, has clearly seen the true public interest, has formulated it in unequivocal language and has battled for it in the forum of public opinion and in the Legislature, has been the despised and maligned labor unions.

If these revelations applied to New York City only they would be serious enough. Unhappily they are but examples of conduct and conditions that prevail in all the great cities of this republic, and probably in most of the towns and villages. A gigantic struggle is on between capitalism, bent upon the utmost extortion that can be practiced, and a people that is becoming thoroughly aroused and wrathful with a sense of outraged right. In this struggle the "respectable" business men, whose duty it is to take broad and sound views of the public welfare, and to stand firmly by the principles of justice and honor, have thus far with comparatively few exceptions allowed themselves through prejudice, narrow-mindedness and selfishness to play into the hands of the most unscrupulous manipulators of economic forces that the world has ever seen.

We do not propose to waste breath or ink in mere preaching on this theme. We shall merely point out to these estimable gentlemen, these "conservative" individuals, these champions of "safe and cautious" progress, who utter words of solemn warning against agitators and inveigh against the dangerous activity of labor organizations, that *they*, the respectable, substantial citizenship of the nation, are the men who are undermining the foundations of American society, endangering the republican scheme of government and storing up for themselves wrath against the day of wrath.

The avidity with which the people have devoured the recent exposures of corporation politics and finance should be to men who can read the signs of the times an all sufficient warning that the day of reckoning is at hand. Happily we have in America the universal manhood suffrage, and the people can do what they will with the business system, for the business system has come to rest upon corporate powers and privileges created by the State. What the people will do with their power is purely a question of what the people happen to think or believe about conditions that affect the general welfare. So far as the political outcome is concerned it matters not at all whether a story like Lawson's "Frenzied Finance" is in the main true or in the main false if the people happen to believe that it is true. A few documents like those that Mr. Warner contributes to popular enlightenment will convince some tens of thousands of voters that, whether true in detail or not, the writings of Lawson, Miss Tarbell, Lincoln Steffens and others have not told the half about the real greed and corruption that have been ruling with a high hand in American business and political activity. When this conviction is once established in the popular mind no fear of free silver or of populism will deter the people from throwing in their lot with the Bryan type of democracy. They will not stop at "safe" or conservative restrictions of corporate power. They will feel that the positions taken by labor organizations,

Populists and even Socialists more truly express the real interests of the people than do the leadership and "practical judgment" of the business classes.

If the business classes wish to retain their leadership and influence they will have to reform their "views" and their ways radically and promptly, and the sooner they set about it the better they will fare. When popular revolt gets under way it will not stop with the "governmental regulation" of corporate activity. It will proceed through schemes of taxation and otherwise to bring about a redistribution of wealth by a confiscation of property.

### Who Are Our Great Men?

THE article in this issue on the Nobel prize winners raises the interesting questions whether we have in the United States any men worthy to rank with the twenty-four there named, and, if so, who they are. The popular discussion of these questions would be very profitable in any case. If we find that we have men of the first rank in creative ability, it will be the first step toward securing to them a rightful honor. If we find we have not, it will tend to moderate our national self-conceit. Besides, the consideration of the subject will help us to settle in our own minds what is the international standard of greatness and teach us to appreciate those among us who are doing most for the benefit of mankind in these five lines of endeavor. It is much more important that our geniuses should be recognized by their own neighbors than by the Swedish academies.

We do not know how much pleasure a man gets from his posthumous fame. He may be in the enjoyment of such complete happiness that our eulogies cannot add to it, or he may have such insight into our minds and motives that our praise appears to him contemptible. But we all know what pleasure we derive in this life from the grateful appreciation of our work, and it is not so liable to spoil us as some are apt to think.

The country needs to have its greatest

benefactors introduced to it. Let us find out who they are from those among us who have best reason to know. The administrators of the Nobel Fund are not infallible, and we do not share Dr. Slosson's confidence in the practicability of a choice by our National Academy of Sciences. Nor will a plebiscite settle the matter. A man cannot be elected *genius* by popular vote. But it is quite as important for the public to know who is doing the best work in physics or physiology as it is to know who is the fastest sprinter or champion bruiser.

Who would you name as the five Americans most worthy to receive the Nobel prizes next year? Prepare your nominating ballot and send it to us. We will keep the record of the votes and report results. Then ask your friends the question and get them to send us their opinions. Instead of talking about the great criminals of the country, as our daily papers would have you do, talk about our great leaders of thought. Posit the question for the discussion of debating societies. Use it at evening social gatherings as a cure for dumbness by mental suggestion. In sending in your ballots all that is necessary is to give the names of the five men you would recommend for the Nobel prizes for discoveries in physics, chemistry and medicine, for idealistic literature and the promotion of peace, indicating, if you like, by a few words, the particular achievement for which the award should be given. If you do not feel competent to name all five, give one or more. Add your own name unless you have already included it among the candidates for the Nobel prizes. The conditions of the founder are given in full in his own words in the article referred to. Since it is evident that the Nobel committees do not propose to consider the one year limit, any living Americans may be included, regardless of the date of their most important work.

As a start in this inquiry we have asked several friends for nominations and we present them here without attempting to supplement, eliminate or select. The names may serve to incite others to make similar suggestions, but we certainly do not want the votes to be restricted to these nominations:

"To the person who has made the most important discovery or invention in the domain of physics": Barus, Bauer, Bell, Edison, Langley, Michelson, Nichols, Pupin, Tesla, Trowbridge.

"To the person who has made the most important chemical discovery or improvement": Baskerville, Gibbs, Gooch, Mallet, Morley, Nif, Noyes, Remsen.

"To the person who has made the most important discovery in the domain of physiology or medicine": Abbott, Atwater, Billings, Bowditch, Clittenden, Donaldson, Flexner, Loeb, Mathews, Meltzer, Osler, Prudden, Senn, Welch.

"To the person who has produced in the field of literature the most distinguished work of an idealistic tendency": Allen, Burroughs, Cable, Carman, Clemens, Mrs. Freeman, Hale, Howells, James, London, Stedman, Mrs. Ward, Mrs. Wharton.

"To the person who has most or best promoted the fraternity of nations and the abolishment or diminution of standing armies and the formation and increase of peace congresses" (by decision of the committee a society is also eligible to this prize): Bartholdt, Carnegie, Foster, Hay, Roosevelt, Smiley, Trueblood, White.

## The Russian Crisis

THE Russian crisis is very near, if it has not already come. In the East the determined little men, who can die but cannot fail, are driving and dividing the largest army that Russia can supply. There the decisive struggle of the war is at the point of disastrous conclusion for the blind insolence which, with the contempt bred of valor and vodka, thought to crush the absurd impertinence of the yellow islanders. How bravely they marched to war! With what assurance they told of peace terms settled at Tokyo! Now Oyama leaves their captured fortress behind him and sweeps them back from Mukden in hopeless defeat, and Kuropatkin sends despairing messages to the Czar.

And the Czar scarce stops to think of his army in flight and defeat, while he trembles before his own subjects at home.

What shall he do? Shall he remain the Autocrat, and appeal to his dear children to stand by their Father and uphold his throne against those who demand new rights, unknown to their ancestors? Or shall he yield to the spirit of the age, acknowledge that the old manner has passed away, and admit the claims of the people, who cry so tumultuously for the liberty which all the rest of Europe has achieved?

Distracted, weak-willed, pulled both ways by the mutual jealousy of his advisers, he has done both things in the same day, or tried, or seemed, to do them. He has first issued a piteous appeal to his obedient and loyal subjects to protect his throne against the violence of revolution. Then, within twenty-four hours, he has sent out a new rescript, which declares that he intends to grant, in a way, what the revolutionists ask. He will summon representatives of the people, who shall give him advice, yes, advice, as to how he shall rule the land. He does not say when or how, only that some uncertain thing of that sort shall be done. Thus he sends out the two messages, one as if written by Pobiedonostev, the other as if haltingly dictated by de Witte, and the two perplexing the populace which reads it. Does the old Absolutism, they ask, still rule the counsels of the throne; or has the new spirit of the new age begun to gain control? They cannot tell; they do not know. They only know that promises are cheap, and have been often uttered easily by kings in times of stress, to be forgotten when the peril is past. Little reason have they to trust the Grand Dukes and the Procurator of the Holy Synod. They will not accept valueless words; they want deeds; they want what the revolution of 1849 gave to the peoples to the west of them.

But meanwhile Kuropatkin and a half million fleeing, frozen soldiers are forgotten. Let them flee, let them freeze, for other, greater perils are menacing in St. Petersburg and Warsaw, in Finland, in Poland, in the Crimea, in the Caucasus. Reinforcements and military supplies have ceased to flow along the Siberian railway. Kuropatkin calls for help, but no help can come. Kuroki and

Oku and Nogi press upon him relentlessly, and he can only cry and flee. The end of the war, so proudly accepted, has nearly come, in utter defeat and disgrace. When can Russia again lift up her head? Only when she admits the rights of the people to control their own destiny. Liberty must be the watchword for Russia as for all the rest of the civilized world. Then Russia, grand, great nation, land of the future, will achieve her manifest destiny, not of brutal conquest, but of internal growth and prosperity; no more knout, no more Siberian exile, no more famine, but release to the exiles, and peace for the world. It is for such a victory of peace that all the world prays, and those most who most love Russia and have highest hopes of her future greatness, sure to grow out of her present defeat abroad and collapse at home.

### Convalescence and the Strenuous Life

NOT long since Sir William Broadbent, the distinguished English physician, acknowledged as one of the best living authorities in medicine, suggested, at an annual meeting of the British Medical Association, that entirely too little time is given to convalescence after serious illness in our strenuous age. He insisted that, for instance, after typhoid fever at least a year to a year and a half should be devoted as far as possible entirely to the regaining of the strength and health sure to have been undermined to some degree at least by the serious illness just gone through. His expression did not meet with any very cordial agreement on the part of his medical colleagues, and there were some even who did not hesitate to consider the opinion as almost radical in its ultra conservatism. It is very curious, however, to observe that there has been a gradual change of sentiment in this matter in the medical profession, and that there are many prominent American physicians who now emphasize the necessity for a much longer period of convalescence after serious

illness than has been the rule heretofore.

At the last meeting of the American Medical Association the principal subject of discussion was arteriosclerosis, or the degeneration of arteries. The expression, "A man is as old as his arteries," is a universally accepted axiom. The reason for this is not far to seek. The arteries are not mere tubes which convey the blood from the heart to the head and the extremities, but they form a very important part of the circulatory system. When the heart pumps blood into the arteries the energy of propulsion causes a distention of the muscular walls of the arteries. When the heart's energy ceases to act the elasticity of the arteries reacts to force the blood further and further through the arterial system. The muscular coat of the arteries then is nearly as important a dynamic principle for the continuance of the circulation as is the heart muscle itself. When arteries lose their elasticity the circulation fails almost as inevitably as it would if there were diseases of the heart muscle.

A number of those who took part in the discussion on arteriosclerosis called attention to the fact that the arteries seem to degenerate, especially as the result of various infectious diseases. With regard to the early degeneration of arteries, which constitutes the most important factor in premature senility, special stress was laid upon the observation that it is particularly after severe cases of typhoid fever that this premature aging of the arteries seems to be of most frequent occurrence. Other infectious diseases, as rheumatism, for instance, are almost as important, and some of the minor infectious ailments seem to play a definite role. The most important suggestion, however, was that further increase in the average length of life could only be made by more careful attention to convalescence after these ailments and insistence on a complete return to health and strength before permission is given for the resumption of the ordinary duties of life.

With regard to rheumatism, of

course, this observation has often been made before, tho not so much because of the tendency of the disease to affect the arteries as because of its well known and very marked liability to produce affections of the heart. The only hope of anything like a complete restoration to health in these cases depends upon prolonged and careful convalescence. It has been pointed out, over and over again, that one of the reasons why there are many more refusals on the part of life insurance companies at the present time is that the modern treatment of rheumatism by allaying the pain early often tempts patients suffering from this disease to get around on their feet much sooner than is advisable. The newer coal tar remedies which produce this happy anodyne effect for the moment are in themselves depressing and tend to make recovery even less complete than it might otherwise be. Indeed, it is a question in the minds of many physicians whether the drugs that cure pain have not done more harm than good. Pain is a very precious warning on nature's part, which emphasizes the necessity for rest and care. When it is stilled by artificial means which act upon the nervous system and not directly upon the source of the pain evils are likely to follow, some of which are to be seen in the shortened lives of apparently healthy individuals with a good heritage as regards length of life.

In nothing, perhaps, is the tendency to abbreviate convalescence more noticeable than in childhood. Physicians are constantly urged by parents to allow them to send their children back to school after the so-called ordinary diseases of childhood. The physician is often apt to think that this is done not quite so much out of regard for the child's education as for the desire to be through with the bother of caring for them at home. After all, school hours represent a time of relief for the home from whatever annoyance there may be in the care of children. It is unfortunate, however, that the little ones should, before they have completely regained their strength, be placed in

situations where they are tempted to take just as violent physical exercise as before, while at the same time they are encouraged to take up their mental work and try to make up for the time lost during their illness. No one of the so-called ordinary diseases of childhood can be considered trivial. Human life will be much longer, and there will be less liability for disease in after life, when the ordinary diseases of childhood have by care and prophylaxis been wiped out.

In the midst of the modern strenuous life, then, it will at least have to be remembered that due time for convalescence from serious disease is not time wasted, but, on the contrary, usually time gained, because of the length of life that may be assured by proper restoration of all important organs and functions to their normal health. The lesson would seem to be especially needed here in America, and the fact that American physicians should be so ready to express an opinion thought not so long since to be overconservative shows how necessary they consider this view of the matter. A few months saved for the pursuit of business now may mean the loss of many precious years a little later in life, or may mean a lowered state of vitality that leaves the individual likely to be carried away by any recurrent disease, such as pneumonia, that happens to come along. Indeed, there are not a few who consider the increased mortality from pneumonia to be due to the lack of vital resistance consequent upon inadequate convalescence from previous serious disease.

The lesson must be learned that nature will at times allow drafts on future strength, but she inexorably demands their payment when due, and the rate of interest is high. In early middle age, then, a man who has abused his congenital store of vitality, which is always limited, may find that any emergency in life will come upon him with exhausted resources. A feature of the simple, natural life that is to be long and happy must consist in a husbanding of vital resources during and after times of critical strain

## Professor Jenks on Christianity in China

PROFESSOR JENKS, of Cornell University, was invited to China especially to advise its Government as to its financial policy. But shortly before his return he was asked by one of the leading Governors to draw up a memorandum as to the "Missionary Problem," which he did, with the proviso that it should not see the light until some time after he had left the country. It has now been published in *The North China Herald*, and is of no little interest.

It was proper that Professor Jenks should assume the attitude of a scientific observer, indifferent to the religious superiority of any one religion over any other and concerned only with their political and social influence and relations.

He recognizes that Christian missions bring both advantages and difficulties, and he attempts to distinguish them. The difficulties come from three sources: (1) The interference in the courts sometimes by missionaries in favor of their converts, to the miscarriage of justice; (2) the substitution in some cases of loyalty to the Church for loyalty to the Government; (3) the use of the Churches by local clans to further their own quarrels. Doubtless there is some justice in these criticisms, and much has been said on the subject. By a recent treaty official status was given to French missionaries, so that they might demand audience of the officials at any time. This is wrong, and much complaint has often been made of Spanish and Italian missionaries that they try to control in behalf of their converts the decisions of the officials; and occasionally English and American missionaries have been charged with the same interference, altho this is sternly condemned in their missionary conferences and seldom occurs.

Of course Professor Jenks is right in advising that the Chinese Government refuse to allow missionaries to interfere in behalf of their converts with the regular course of justice. He says—and we fully agree:

"I think it would usually be the case, certainly as regards English and American missionaries, that Ministers and Consuls would not

uphold such interference, and the Chinese Government should insist upon preventing any such interference on the part of any missionaries."

But whatever the difficulties Professor Jenks sees, on the whole, great advantages. They are (1) The medical work; (2) the educational work; (3) the religious teaching so far as it tends to break down the superstition which opposes progress and add the valuable elements of independent thought and personal responsibility and love of all human beings. Yet some teachings, he believes, may be harmful, so far as they oppose Chinese religions on the mere ground that they are non-Christian and interfere with Christian worship.

Accordingly Professor Jenks suggests that Christianity has some things to teach China which may properly be added to its Confucianism. Such are: (1) Its doctrine of personal responsibility, as against responsibility put upon parents, priests or teachers; (2) the consequent independence in one's judgment; (3) obedience through one's individual conscience to the law of right and justice; (4) the doctrine of charity and love to one's neighbors. He tells the Chinese Governor that any religion which imposes on its members implicit subjection to ecclesiastical authorities in matters of faith or morals, and which thus sets aside personal responsibility, is wrong, inasmuch as it encourages despotism and strict obedience to superiors rather than to principles. The bearing of this principle extends, of course, beyond its religious scope, and this was evidently in Professor Jenks's mind. He says:

"It would perhaps be well for the Chinese Government to consider this question, so as to see how far, as a political measure, it might be advisable to encourage certain phases of the religious teachings of Christ as an addition to the teachings of Confucius; and how far it might be wise to check the teaching of other doctrines, both Chinese and foreign, in order to secure the best political and social results."

This report offered no room for defense of Christianity; but, however scientifically and impartially he might try to speak, he could not fail to recognize the superiority of what we call the Christian conscience and Christian civilization, and the benefit done to the country by Christian missionaries. Japan knows what it

has gained in that way from Dr. Verbeck and his successors, and China is recognizing these same benefits, by which good men are trying to atone for some of the wrongs which certain Christian nations have done to that country.

#### Gala Clothes

It was a grand day, a grand procession, a grand ceremony, a grand ball, in Washington last Saturday. Great was the grandeur of the gala clothes of Ministers and Ambassadors. There were pounds of gold lace; there were hundreds of decorations. A certain boy who used to play football in dirty drab at Andover Academy was brilliant in Chinese yellow and blue. The Mexican Minister was a blaze of color. The soldiers were in their bravest array, long lines of blue and gold, but they could not achieve the magnificence of the bands and bandmasters. Still there were exceptions. Mr. Roosevelt and Mr. Fairbanks, the two men in whose honor was all this polychrome glory, were dressed in ordinary civilians plain black. So were ninety Senators of forty-five States. So were three hundred and fifty chosen by the people in the House of Representatives. The great men, the men who rule over us, put on no toggery or display of superiority, but were plain American citizens, just like other people, to the common eye. They needed no special livery of their rank. Possibly here is a lesson to would-be aristocrats of profession or learning.

#### The President's Inaugural Address

The President's Inaugural Address was short, as the blustering weather demanded. Nor was there need for elaboration; his Annual Message was long and not far back. But a single most important subject was opened in a general way. He tells us that the serious questions before us concern internal and not external administration; that our complex civilization, wide as the Continent, presents difficulties that never could have met our fathers; that great corporate wealth in industrial centers threatens new dangers; that we have a new problem in administering the affairs of a Continent under the form of a democratic republic. This indicates what Mr.

Roosevelt feels to be the task of his new Administration. Our Philippine rule is settled; so also is our control over the Panama Canal; the question of Santo Domingo is interesting, but not large; the great questions will concern the control of great corporations, so that they shall not gather unjust wealth at the expense of the people. But it is evident that Mr. Roosevelt would utter no note of despair. We have as a nation met our issues in the past with courage and success, and so we may expect to in the future. What our fathers did in their time their not degenerate children will do in our time, meeting the new problems with the "unflinching purpose to solve them aright."

**Railroad Rate Legislation** With the adjournment of Congress the Railroad Rate bill died. Taking up the subject again in December (or October), the House will have gained something by the inquiry and debate that preceded the recent passage of its bill; the Senate will have then the results of the investigation which is to be made in the recess by Mr. Elkins's committee. Delay will be beneficial if it shall promote agreement upon a bill aimed directly at the evils for the suppression of which legislation is required in the interests of justice. These evils are secret rebates and discrimination practiced by means of various devices. Such injustice as may be found in a general published rate should not be classed with them. And yet it is with the general published rates that the House bill is almost exclusively concerned, and it was prepared under the direction of Attorney-General Moody. Existing laws against rebates and all discrimination should be perfected, and the penalties for violation of them should be made more severe. Then a way to detect unlawful discrimination compacts should be found. This is the most difficult and the most important part of the problem—to ascertain where and for whom there is that favoritism in freight charges that is designed to enrich one shipper at the expense of the ruin of others. What powers ought the Commission to have, in order that it may get evidence of these

crimes, which sometimes are now brought to light by mere chance? This is a much more important question than the one whether the Commission should have power to change a general published rate as to which complaint is made. Secretary Morton well knows how true this is.

#### A Report on the Beef Companies

After reading that part of the report on the Beef Companies which was sent to Congress on the 3d inst., many will wonder how there could have been in the part withheld anything to justify the extensive preparations of about the same date for the indictment and criminal prosecution of the companies' officers. Evidently the published and the unpublished portions are not in agreement. It will be observed that all the statements as to prices, profits, etc., were (as the Bureau explains) taken from the companies' books and other records. It would have been well to test the accuracy of these by outside inquiry. The report says that the companies' average profit has been about 2 per cent. It should be noticed, however, that the 2 per cent. is on gross sales, not on stock or capital invested. We have heard these gross sales estimated at \$800,000,000; 2 per cent. would be \$16,000,000. From the car lines, upon the Bureau's estimate of the cost of a car, the annual profit at 17 per cent. would be \$9,000,000. This, we ought to say, assumes that there are 5,400 cars. Critics in Chicago assert that the Bureau's figures for cost of cars are much too high. Allowance is still to be made for railroad rebates. We have heard of such things in connection with the beef business. If there were rebates the Bureau could not expect to find them entered on the books. Some think they have amounted to millions every year. Without them the profits, as calculated by the Bureau, have been a very comfortable percentage on capital stock which, according to the Chicago press, is about \$100,000,000. In view of the Bureau's statement that 98 per cent. of the cattle slaughtered in the eight leading packing centers are handled by the six companies, the Bureau's assertion that "the existence of active competition by other concerns is clearly indicated" must

have been the result of considerable effort. Of course, the Government is not asking for indictments upon that part of the report with which the public is now familiar.

#### Trade with the Philippines

The Filipinos need a market for the surplus of their agricultural products, and for this market they have a right to look to the States. These products should be admitted at our ports free of duty, as are the sugar and tobacco and coffee of Porto Rico. Congress is unwilling, and has virtually refused, even to cut down the present duties on Philippine products to 25 per cent. of those which we impose on goods from foreign lands. At the same time Congress has decided that after a date now not far distant all imports from the islands must be brought in American ships. This will increase the cost of transportation and will be equivalent to an increase of the tariff. If the sale of Philippine sugar and tobacco in the States is to be burdened or prevented by tariff taxes, the act applying our coastwise navigation laws to trade between the islands and the States should be repealed.

#### A Philippine Association

The Filipino Progress Association has a good name and many good officers and members, altho a large number of them were all wrong in their Anti-Imperialism. Their announced object is to disseminate information as to the conditions in the Islands—which is excellent; to promote legislation favorable to the Philippines—also excellent; and “to promote the fulfillment of the hope expressed by President Roosevelt in his Message that the Philippine Islands shall stand ‘in some such relation to the United States as Cuba now stands’”—as to which we are not so sure. That is a long way ahead, and may turn out to be very inadvisable. But the immediate effort of the Association is to advance legislation to exclude opium from the Philippines, after the model of Japan’s rule for Formosa, and that has the approval of the Philippines Commission and should be enacted by Congress.

#### Professor Loeb’s Discoveries

Professor Loeb’s latest discoveries are of great scientific interest, but too much must not be made of them. They have nothing to do with the creation of living out of dead matter, but simply with the development of unfertilized eggs by chemical applications. These sea-urchin eggs he develops are not dead, but alive; as truly alive as the full-grown creature. An egg is a bud, a live bud, that can drop from the parent as a black tiger-lily bulb drops from the axil of the leaf and remains alive ready to sprout. Professor Loeb has never yet made a sea-urchin egg, or a single living cell. He had two or three years ago found that by putting these eggs, still unfertilized, in certain salt solutions he could cause them to develop in an imperfect way, a few of them, but no membrane was formed, and they had little vitality. It was evident that certain elements supplied in fertilization were lacking. Now, by combining ethylacetate with his previous solution he finds that the characteristic membrane is formed and nearly all the eggs are developed as if naturally fertilized. All this is extremely interesting and opens new fields for study, but is not quite revolutionary; for many cases were known in which several generations of the lower forms of life are produced by parthenogenesis. Professor Loeb’s method does artificially what nature herself does in certain lower forms of life.

#### From Congregational to Episcopal

It is such an unheard of thing that a church of the old Congregational Established Church in New England should turn Episcopal that the case of the Union Church in North Brookfield, Mass., deserves attention. This church was organized fifty years ago by a split from the First Church on a question of salary. A dozen years ago a woman gave the church a handsome stone building. It has never been a strong church, and the closing of the shoe factories a few years ago, with the loss of about three thousand in the population, has reduced the church to about forty resident members. The late pastor joined the Episcopal Church a year ago.

As there was no Episcopal church in the neighborhood and two Congregational churches, and missionary support was needed for its continuance, it seemed best to the members of the church, some of whom had Episcopal leanings, to join that denomination, and this was offered and accepted in the kindest spirit. The congregational council called by the church will doubtless approve cordially this week, and perhaps thirty members will remain as communicants. It is pleasant to know that everything has been done above-board and with no dissension. Changes of denomination, for the benefit of a community, ought to be made easy. We are glad that no legal question of property has been raised.

**Mrs. Stanford** It is amazing that after such circumstantial reports that Mrs. Stanford had been killed by poison in Hawaii, after an unsuccessful attempt to poison her in San Francisco, the chemists should now tell us they can find no evidence of the asserted strychnine. President Jordan has all along said that he did not believe she had been poisoned. It seems to have been a case of colic and cramp following indigestion. Mrs. Stanford was a peculiar and yet a noble woman, intensely loyal to her husband and to the memory of her son. She and her husband have made the most magnificent gifts to education that any institution has yet received. If she had her idiosyncrasies it was worth while to allow them in recognition of her good services. It may not be improper now to repeat the current story of the visit made by Senator and Mrs. Stanford to Harvard University when they were privately considering their intention. President Eliot, so the tale goes, had been showing them all over the grounds, when the Senator suddenly asked, "What has this whole plant cost?" Dr. Eliot hesitated and said that it would not be easy to put it all in terms of dollars and cents, but Mr. Stanford insisted on learning how much money the investment represented. "Perhaps," replied the President, "ten or twelve million dollars." Mrs. Stanford turned to her husband and said with a sort of exultation: "We can do it, Leland!" It sounded naïve, but they did it.

The House was determined that from the Indian trust funds no appropriations whatever should be made for denominational schools. The Senate added an amendment allowing Indians to assign their share of the income of their funds for such education as they chose, and a very proper amendment it was. But the House would not agree to it, and so the entire prohibition went over and was lost. But it will make no practical difference, for the wish of both Houses of Congress is so clear that the Indian Bureau will be careful of what it does in the future. It will allow no further appropriations except under strict legal conditions, as after a public council, and proper signatures, and appropriations proportioned to the number wishing them. It is only just that the wish of the Indians in the matter of the education of their children should be gratified, and that they should not be compelled to send their children to a Government school when they prefer different religious education.

Many of our readers will enjoy the sheaf of letters called forth by the article by an Illinois Farmer's Wife; but not one of these letters has a finer spirit or a sounder judgment than the last of them, by an unlettered woman, who frankly tells us that neither her father nor her husband can read, and that she picked up her slender education at her mother's knee, and whose further culture has been gained in a backwoods prayer meeting. If we have corrected her spelling, and here and there her grammar, we have not changed the language nor could we improve her thought or heart.

In this city a man failed to pass a civil service examination to take care of the bees in the Bronx Parks. A woman passed the examination with high honor, but the Commissioner held that a woman was not competent to take care of bees, and so gave the place to the man who failed. Possibly a woman should not take care of the elephants and camels in the parks, but why not of bees?

# Insurance

## National Versus State Supervision

THE bill introduced in the United States Senate February 27 by Senator Dryden, of New Jersey, providing for the supervision of insurance companies by the national Government, may fairly be regarded as the first serious effort to bring this business under the control of the Federal authorities. This is not saying that the attempt has not been made before. The question has been under discussion for a generation and several bills have been introduced in Congress. But only within five or six years past has the proposition received the support of prominent underwriters, nearly all of whom are engaged in the life branch of the business. Their interest in the matter, we apprehend, has been quickened by the increasing exactions of the State insurance departments. As Senator Dryden is the president of a very large life insurance company, transacting business throughout the country generally, and his bill is in seeming response to and accord with a recommendation in the President's last annual message, its distance from the academical essays heretofore made along this line is appreciated. Vital interests are behind it and its enactment into law is quite probable.

If the Supreme Court of the United States finds it to be in harmony with the Constitution, the wisdom of such a law may well be questioned if for no other reason than that it puts within the reach of a few men in control of nearly two billions of trust funds too much purchasable power. One of the strong and reassuring features of our justly criticised system of State supervision is the constantly changing character of its heads. The terms of office of forty-five State commissioners are terminating every year, or every two or four years, and collusion becomes easy of detection.

If centralized wealth were devoid of power, and public officials could not be blinded by its glitter to forget the pathway along which lies the conscientious discharge of duty, such an institution as that which Senator Dryden's bill proposes to create might be fraught with a reasonable measure of benefit to the people who pay premiums on insurance.

But these would be ideal conditions, which, in their turn, would render unnecessary supervision of any kind.

It is well understood in insurance circles that the stumbling block in the way of national supervision consists of that constitutional prerogative reserved by the States under which they exercise supervision over everything within their borders. Broadly expressed, this is to be found in the Ninth and Tenth Amendments, which read, respectively: "The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people"; and "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." Under these reservations we have the decision in the now celebrated case of *Paul vs. Virginia*, denying to insurance the character of commerce. In Mr. Dryden's bill an effort is made to override this by a Congressional fiat which declares interstate transactions in insurance "interstate commerce insurance." It remains to be seen what the Supreme Court will do with this Congressional declaration if the law is enacted, for there can be no doubt its constitutionality will be attacked by all the States because of the encroachments made on their prerogatives. This court has continuously recognized the right of the States to set up any conditions, however unreasonable, under which corporations domiciled elsewhere may cross their borders and traffic with their citizens.

The proposition as outlined by Mr. Dryden demands, and will receive, careful and serious consideration, not only by members of Congress but by the people. It is a suggestion that cannot be hastily acted on. There are strong objections to be overcome before the people will consent to the supersession of their State departments by one controlled by the Federal Government. They will be slow at consenting to a measure which compels them to admit to their territory any company that can secure a license from the Federal supervisor or that denies them authority to expel companies that may become offensive to them. National supervision is not appreciably imminent.

# Financial

## Germany's New Tariff and Our Exports

By the recent ratification, in the Reichstag, of the new treaties of commercial reciprocity with Russia, Austria, Italy, Switzerland, Belgium, Roumania and Servia, the new German tariff has been completed. There will be a general tariff, as in this country, and a lower (or conventional) one consisting of the reciprocal rates made in these agreements. Both will go into effect in the first half of next year, and will be in force for ten years, because this is the stipulation so far as the treaties are concerned.

The United States has a very considerable interest in this legislation, altho it appears to have excited no interest in the Senate. Up to the present time our exports to Germany have been admitted under the lower rates, these having been established by treaties made with European countries about ten years ago, which are now to be displaced by the treaties recently ratified. We gained this privilege under the "most favored nation" clause of an old general treaty, and it was confirmed by a commercial agreement in 1900. But Germany is empowered to terminate this agreement at any time by giving three months' notice.

Some expect that Germany will take this course within the coming twelve months, and subject imports from the United States to the new general duties, which (upon the bulk of our exports to that country) are very much higher than either the general or the conventional duties of the present time. Germany's new tariff has been made in the interest of her agriculturists. Therefore the duties on grain, flour, lard and meats have been greatly increased. In the general tariff (which was authorized two years ago, but is not yet in force) the new duties on such imports show an extraordinary advance over the old ones. Even if we should continue to enjoy the advantages of the lower or treaty rates, these will be higher under the new treaties than they have been under the old ones, especially on wheat, corn, flour, beef, leather and shoes. Still, we should be on even terms with the seven or more treaty countries.

If, on the other hand, our exports should be subjected to the new general rates, the greater part of them would be excluded, because the treaty countries would enjoy a great advantage.

Because of the fate of the McKinley-Kasson treaties of reciprocity, and the recent virtual rejection of a similar treaty with Newfoundland, the State Department justly feels that it will be useless to negotiate such agreements until the attitude of the Senate toward them shall have been changed. If we should lose half or three-quarters of our export trade with Germany, the Senate might admit that the expediency of commercial reciprocity deserves at least to be considered.

THE Baltimore & Ohio road has ordered 250 locomotives and 10,000 freight cars. These will cost \$12,000,000.

....Wages in the Pennsylvania coke district for 30,000 men have been increased 10 per cent. The prices of bar iron and pipe have been advanced.

....Improvements that will cost \$90,000,000 have been planned for the Long Island Railroad, including the substitution of electric force for steam power on the greater part of the system.

....Experts in the Department of Agriculture believe that by improvement of seed the yield of corn in this country can be doubled without increase of the planted area.

....The assets of the Pennsylvania Railroad Company now include 10,000 shares of the New York, New Haven & Hartford Company, in whose board they have been represented for some months past by President Cassatt.

....Our imports of coffee in 1904 were 1,117,000,000 pounds, valued at \$88,000,000, and only 2,391,000 pounds came from Porto Rico. The United States consumes practically one-half of the coffee produced in the world, the consumption per capita here having risen from 3 pounds in 1830 to 6 in 1870, 10 in 1897 and 13½ in 1904.

....Dividends announced:

Am. Chicle Co., 1 per cent., payable March 20th.

NEW YORK, THURSDAY, MARCH 16, 1905

No. 2937

## Survey of the World

### The President's Appointments

The Senate was called to meet in extra session immediately after the inauguration, as usual, in order to confirm the nomination of his Cabinet and of other officers. The members of the old Cabinet were renominated, with the exception of Mr. Cortelyou, who becomes Postmaster-General, taking the place of Robert J. Wynne, who becomes Consul-General at London. Mr. Whitelaw Reid is made Ambassador to England, taking the place of Hon. Joseph H. Choate, who resigns. Mr. Reid's own important place as editor of *The Tribune* is taken by a member of the staff, Mr. Hart Lyman. Mr. Reid is a man of wealth and can afford to maintain the dignity, and he has had previous diplomatic experience as Minister to France. Mr. W. W. Rockhill, a well-known Orientalist and diplomat, will be Minister to China, taking the place of Mr. Conger, who is transferred to be Ambassador to Mexico. Mr. Rockhill is a native of Philadelphia, was graduated from the military school of St. Cyr, Paris, then served in Algeria for three years, was later in diplomatic service in Peking and Korea, traveled in Mongolia and Tibet, was then for four years in our Department of State in Washington and later Minister to Roumania and Servia. He has since been sent by our Government to Peking as its Plenipotentiary and his experience is such as few men can equal. The Hon. Henry White is nominated as Ambassador to Italy. He has had long experience in European capitals and has been Secretary of the Embassy in London for eight years. He has earned his promotion. The new

Minister to Spain is William M. Collier, of the New York Civil Service Commission. He has had no diplomatic experience. He takes the place of the Hon. Arthur S. Hardy. Thomas J. O'Brien, of Grand Rapids, Mich., goes to Denmark as the successor of the Hon. L. S. Swenson. Brutus J. Clay, son of Cassius M. Clay, of Kentucky, is nominated Minister to Switzerland; John G. Jackson, of Newark, N. J., as Minister to Greece; Col. Charles H. Graves, of Minnesota, as Minister to Norway and Sweden. Of the principal Consuls-General may be mentioned Frank H. Mason to Paris, Alexander M. Thackara to Berlin, Hoffman Philip to Tangier, Henry W. Miller to Yokohama, and George W. Roosevelt to Brussels. All of these are promotions for successful service abroad.

### The Protocol Controversy

Secretary Hay in an interview with newspaper men has corrected the very general and natural misapprehensions as to the purpose of the first protocol with Santo Domingo:

"It has been asserted and persistently repeated that the Department of State had knowledge of the existence of the agreement of January 21st prior to the announcement in the public press that such an instrument had been signed at Santo Domingo City.

"It has been further asserted that there was an intention and a purpose on the part of the President and the Department of State which looked to the hasty carrying into effect of some important arrangement with the Dominican Government, without duly submitting to the Senate for its advice and consent any instrument in the nature of a treaty or protocol.

"Neither the President nor any of the officers

of the State Department ever had any such intent or purpose. Nothing was known of the agreement of January 21st until it was learned, through the medium of the public press, that such an instrument had been signed in Santo Domingo City.

"No purpose of putting either the agreement of January 20th or the protocol now before the Senate into practical operation without submitting it to the Senate for approval was ever entertained, considered or discussed."

Nevertheless, as the protocol of January 20th was drawn up, it was to go into effect before there would be time for it to be seen and acted on by the Senate, but this is thus explained: A year ago a Minister of the Dominican Government asked our Government to give its aid, but we declined. The case was, however, kept under investigation and finally a telegram was sent to Commander Dillingham stating the basis for an agreement. On this basis the Dillingham-Sanchez protocol was signed, Commander Dillingham going beyond his instructions because insurrection was ripe, and it was insisted upon that a decision be reached for the purpose of quieting disturbances in the island. This was the result, but meanwhile our Department of State was drafting a treaty to present in the regular way to the Senate, and was surprised that such a protocol had been signed. It had no thought, however, of censuring Commander Dillingham, who did the best he could, and what others might have done in the peculiar circumstance.

**The Dominican Treaty** While the Senate met in extra session on Monday of last week and received from the President the text of the proposed treaty, with a message, it was not until Wednesday that the message was given to the press. The President urges speedy action and calls the attention of the Senate to the following facts: (1) That the treaty was entered into on the request of Santo Domingo, and offers the method most likely to secure peace and good order on the island. (2) It will be of benefit to the United States to secure stability and to provide an honest way of paying honest debts. (3) It will provide a way to distinguish honest from fraudulent claims. (4) It provides a

way to secure payment of American claims. (5) In settling claims Americans will have a fair show, while otherwise other nations will have the preference. (6) It is distinctly provided that under no circumstances do we desire to acquire the territory either of Santo Domingo or Haiti. (7) Santo Domingo grievously needs the help of a strong foreign nation. The draft of the treaty received was sent to the Committee on Foreign Relations and was there amended and sent to the Senate for ratification by a strict party vote. The general purpose of the amendments is to reduce the obligations assumed by this country, and to disconnect this proposed act as far as possible from its relation to the Monroe Doctrine. These words are omitted from the preamble:

"Viewing any attempt on the part of the governments outside of this hemisphere to oppress or control the destiny of the Dominican Republic as a manifestation of an unfriendly disposition toward the United States."

This is, of course, a reference to the Monroe Doctrine and the only one in the treaty. All the other excisions are for the purpose of conciser phraseology. The additions are of some importance. The first Article provides that the United States will attempt to adjust all obligations of Santo Domingo, foreign as well as domestic, determining the validity of claims, whether liquidated or not. It provides by an amendment that the President of the United States shall appoint all commissions for adjustment, the Dominican Government being represented. In the second Article, which provides that the United States shall take charge of the custom houses, the amendment provides that the agents collecting these customs and the receipts themselves shall not be subject to the processes or jurisdiction of Dominican courts. The third, fourth, fifth and sixth Articles have been but slightly changed. They provide for the expenditure of the receipts by the customs for the support of the Dominican Government and for the payment of the debts determined, and that no change in tariff laws shall be made without consent of the United States while this treaty is being carried out. Article seven is new and allows the

United States to preserve order so as to accomplish the purpose of the treaty, if necessary. Article eight provides that the treaty shall continue in force till the debts are paid. Article nine is new and provides that the decisions of the American agents shall be binding on the Dominican Government, and that these agents and the United States shall not be liable for errors or for decisions challenged. The tenth Article is also new and declares that the United States is not bound to decide any claim until the Government of which the claimant is a citizen has given its consent to decision by the United States, and that our Government shall not be bound to make any payment until the money has been received. It is expected that the treaty will be voted on some day this week.

#### Cuba and Porto Rico

President Palma has formed a new Cabinet, representing the Moderate party, with which he recently became associated. Only one member of the old Cabinet—Señor Yero, now Secretary of Public Instruction—is retained in the new one. The new Secretary of State and Justice, Juan Francisco O'Farrill, is a leading lawyer of Havana and was counsel for General Ludlow during the military occupation. General Ruis Rivera becomes Secretary of the Treasury; General Rafael Montalvo succeeds Señor Diaz as Secretary of Public Works.—A bill giving the Cuba Company (which made the new railroad from Havana to Santiago) an annual subsidy of \$266,000 for three years has been sharply attacked in the House, where Señor Manaferrer declared that the company was illegally formed when the Government of intervention had no power to grant concessions, and that it has trampled upon the rights of the people.—Señora O'Reilly, Countess of Buena Vista, is suing Major-General Brooke for \$250,000. At the time of the military occupation she was the owner of a slaughter-house monopoly in Havana. This had been the property of her family since 1728, when it was obtained from the Crown. The privilege was annulled by General Ludlow, whose action was approved by General Brooke. Her suit is pending in New York, where

our Government's demurrer was overruled last week by Judge Holt, of the District Court, who expressed the opinion that the annulment of the privilege was a confiscation of the plaintiff's property and was wholly unlawful.—In Porto Rico, the House by unanimous vote has passed the bill for a loan of \$4,000,000, which will become a law. The proceeds are to be used primarily for roads, bridges and other public improvements, but a part will be loaned to agriculturists. The six labor union members of the House have published an appeal to the people in support of legislative projects for an employers' liability act, the exemption of houses of the poor from taxation, a Labor Bureau, a Labor Institute, the regulation of the employment of children, and the sanitary improvement of sugar mills.

#### The New York Subway Strike

At three o'clock last Tuesday morning a strike was declared on all the New York Elevated and Subway railroads. The forces opposed were the Interborough Railroad Company, of which Mr. August Belmont is President, Mr. Bryan, Vice-President, and Mr. Hedley, General Manager, and the notorious Farley and his strike breakers on the one hand, and on the other leaders Jencks, of the Brotherhood of Locomotive Engineers, and Pepper, of the Amalgamated Association of Street and Electric Railway Employees of America, and 2,000 motormen and 3,000 agents, ticket choppers, guards and yard and track men. Seldom has a big strike been called in which the points in dispute were less irreconcilable. Each side charges the other with breaking the contract which was to be in force between the Interborough Company and the labor union for the next three years, but apparently the full facts are not given. The men's published side of the case is, first, that the treatment accorded to them for infraction of rules, of which they have not been guilty, have been such that scant satisfaction was made on protest; second, that the schedules of the trains, runs of which were to be made in a given time, have not been lived up to

and, third, that members of the union have been dismissed, against whom there has been no complaint except that they were of more or less prominence in the unions. The company says that the men demand that the present physical examination now in force for motormen and other employees should be eliminated, and that nine hours, or less, constitute a day's work, and that motormen's mileage should not exceed 100 miles per day; all of which agreements are in direct violation of the agreement between the Interborough Company and the unions. Moreover, the men's demands are in effect destructive to good discipline and the safety of operation. The vastness of the strike can be fully seen when it is recalled that the number of passengers involved, who would be forced to travel on the surface cars, were 700,000 from the "L" and 400,000 from the Subway, and as each one of these passengers paid 5 cents a trip, the loss to the company can be readily computed, while the amount involved in wages to men is said to be over \$12,000 a day. Before the strike was declared, however, the Interborough Company had foreseen events and was hiring all the strike breakers it could get. During Tuesday, altho the whole service was crippled, the trains were running after a fashion. There was one accident on that day. A strike-breaker motorman ran his train into another discharging passengers at the Fourth Avenue and Twenty-third Street Subway station. Broken legs and fractured skulls were some of the injuries. During the day the company announced that they had 5,000 men at work, among whom were students of Columbia College. Apparently there was little difficulty in filling positions. There was no serious violence committed by the strikers or their sympathizers, however, partly owing to the presence of 3,500 policemen stationed along points of danger and partly from the order from union headquarters to refrain from all violence. In the meanwhile the surface cars were taxed to their utmost, being obliged to carry practically double their number. Fenders were removed so that passengers might cling to the front and rear ends of the cars, and some passengers even rode on the roofs. Mayor McClel-

lan made an offer to each side to act as mediator, or appoint mediators, and the National Civic Federation, of which August Belmont is President, was working night and day to get both sides to submit to arbitration. The unions accepted Mayor McClellan's offer, but the Interborough Company declined in a long letter, the substance of which was the old familiar statement, "Nothing to arbitrate." The second day of the strike showed that the men were bound to lose. The trains in the Subway, both local and express, were now run on headways varying from six to fifteen minutes, and the "L" trains pretty nearly as well. The company issued a notice that those strikers who could prove that they had not been engaged in any violence would be re-employed as individuals, but they would have to take their turn. The strike breakers still continued to pour into the city, but the greater part of the traveling public kept to the surface lines. Hoodlumism was manifested along the Elevated lines, but the strikers themselves, as far as is known, committed no acts of violence. The third day practically ended the strike, for the Interborough Company ran trains on nearly normal schedule, tho not at full speed, and Grand Chief Stone, of the Brotherhood of the Locomotive Engineers, ordered the striking motormen to return to work. He declared that the strike was not authorized by the national body, and that on the motormen's part it was a violation of the agreement entered into with the Interborough Company. As the strike leaders were defiant to this order the strikers' union was expelled from the parent body. Altho the leaders of the strike, Jencks and Pepper, still declared that the men were not beaten and the strike would continue, the men, as a whole, began to apply for their old places. The company has been disposed to treat them generously and has not been vindictive in taking them back. By Saturday over 80 per cent. of the strikers were seeking their former positions. And it was a pitiful spectacle in many cases to see them, for there were many who had grown gray in the service and who are now probably too old to get other jobs if they are turned down by the company. The strike breakers and

the new men are now getting about ten per cent. higher wages than the rate before the strike. The scale is as follows: Conductors, \$2.10, \$2.25, \$2.40; guards, \$1.55, \$1.70, \$1.85, \$1.95; agents, \$1.75, \$2, \$2.25; switchmen, \$2, \$2.35; tower-men, \$2.45, \$2.50; porters, \$1.40; ticket choppers, \$1.40, \$1.55.

**Venezuela** The situation at Venezuela is still tense. The Supreme Court of the republic has confirmed President Castro's claims and ordered the sequestration of the property of the Asphalt Company. The United States is investigating the justice of this act, but the report of Mr. Russell, of the State Department, has not yet been made public, tho it is believed that the court's finding will not be sustained. President Castro wants a general treaty of arbitration to settle diplomatic questions in accordance with the rules of international law. While this sounds well enough, it is pointed out that if we agreed to it no case of ours would get to arbitration, for Castro would hold that no question could be considered diplomatic that is before the courts of Venezuela until the courts have rendered a final decision and a decision amounts to a denial of justice. Of course he would keep our case in his courts year after year, and, as he controls the courts absolutely, they are not courts of justice at all. President Castro will never submit to any honest kind of arbitration if he can help it. The State Department is much interested in the situation, and important developments in this connection; both at Washington and Venezuela, may take place at any moment.

**Gifts to Colleges** This has been a great week for the universities. The will of the late William F. Milton, of Pittsfield, Mass., it is announced, will ultimately yield one million dollars to Harvard University. Mr. Milton was a retired tea merchant and had for twenty-five years made his home in Pittsfield, being much devoted to the raising of choice cattle. He was a graduate of Harvard in 1858, and left no children. Harvard University will come into possession of this property on the decease of Mr. Mil-

ton's widow. But the will of the late famous New York lawyer, James C. Carter, gives with no great delay \$200,000 to Harvard. There are no binding requirements, but Mr. Carter expresses the hope that it may seem well to devote half of this amount to the establishment and maintenance of a scholarship in the Law School, of a professorship for the especial cultivation and teaching of the distinction between the province of the written and the unwritten law.—By a decision in the case of a suit contesting the will of Mrs. Josephine L. Newcomb the property left by her, amounting to more than \$2,250,000, will go to the H. Sophie Newcomb Memorial College for Women in New Orleans. This institution was founded by Mrs. Newcomb as a memorial for her daughter, and to it she gave a million dollars during her life.—To Columbia University Mr. Jacob H. Schiff has given \$100,000 to endow a chair of Social Work, of which Dr. Edward T. Devine, Secretary of the Charity Organization Society, will be the first incumbent. Other gifts of \$46,000 are announced, but the estimated income of the university for the year, \$1,198,009, leaves an estimated deficit of more than \$81,000.

**The French in Morocco**

The French Mission, headed by M. Saint-René Taillandier, has now for a month been in Fez in consultation with the Sultan of Morocco and his advisers. He was favorably received with great ceremony by the Sultan, who expressed his pleasure in the letter which was delivered to him from President Loubet, and said that he hoped some time to pay a visit to Paris. After a formal exchange of visits and a series of reviews and religious festivals, which were attended by the French Mission, the consultations in regard to the future relations of the two countries were begun, and have continued to the present without any definite result so far as known to the world. There are no signs of hostility on the part of the populace to the French residents. The propositions of the French to the Sultan have not been officially made public, but according to a correspond-

ent of *The Daily Telegraph* they are as follows:

- "1. The military occupation of Ujdja.
- "2. The authorization of the road between Tangier and Fez, with bridges across the water courses.
- "3. The construction of a telegraph line between Tangier and Fez.
- "4. The Europeans shall be granted the right to purchase goods in all parts of the empire, including Fez.
- "5. The establishment of legations at Fez.
- "6. An electric light franchise for the city of Fez.
- "7. The establishment of a bank for coining Franco-Moroccan money."

#### Peasant Riots in Russia

The spirit of revolution has spread from the cities to the country, and the peasants in many of the provinces, particularly in Orel and Kursk, are attacking the large estates and looting their buildings as the French peasants did at the beginning of the Revolution. Mobs of peasants visit the managers of the estates, and say, "We have come to take back our land." If the owner does not resist he is sent away in a cart; if he does, his property is destroyed. A mob of 3,000 peasants are marching through the Kiev Province, burning and looting as they go. Eighteen estates have been devastated. The peasants carry away what plunder they can in carts, and sell it for what they can get. Several sugar refineries and distilleries, which are Government property, have been burned. Granaries are plundered and forests cut down. The Minister of the Interior has been appealed to for troops to protect property, but only a few soldiers are available for such duty, and it is impossible for them to keep order over such an extent of territory.—Anti-Semite riots have broken out in 45 places in South Russia, and the Government and Church authorities are accused of systematically inciting them for the purpose of rousing opposition to the revolutionary movement fomented by the Jewish Socialists. In Minsk a mob of 3,000 burned and plundered the houses and shops of the Jews. At Duenaburg, in similar riots, 200 Jews were injured.—Strikes still continue in all the industrial centers.

Three state and 52 private factories in St. Petersburg employing about 60,000 men, have struck again. At the Putilof Iron Works two boilers were blown up by the strikers, causing some loss of life, and terrorizing the workmen into joining the strike. The delegates elected by the employees of the Baird Works to serve on the Shidlovsky Commission for investigating the condition of the working class have been arrested, and 500 other workmen have been sent back to their native villages. The workmen suspect that the Commission is a ruse devised by the Government to find out who the labor leaders are.—One of the terrorists was blown to pieces in St. Petersburg by a bomb similar to those with which Dr. Plehve and Sergius were killed, in his room in the Hotel Bristol, by some unknown accident in making or handling the explosive. He was registered under the name of Alfred Henry McCullough, and had a fictitious English passport. In the room were found revolutionary literature and drawings of infernal machines. The explosion killed the wife of an officer and injured other lodgers in adjoining rooms.—The Czar and Dowager Czarina remain at Tsarkoë-Selo. The Grand Duke Alexis has left the country, and the Grand Duke Vladimir remains in his palace in St. Petersburg under a double guard of soldiers.

#### The Capture of Mukden

The greatest battle of the world's history was fought to a finish during the past week, and resulted in the capture of Mukden, the capital of Manchuria, by the Japanese under Field Marshal Oyama, and the retreat of the Russians under General Kuropatkin to Tie-Ling, 42 miles further north along the Chinese Eastern Railroad. The Russian army engaged is estimated to have comprised 300,800 infantry, 26,700 cavalry and 1,368 guns. The number of Japanese troops engaged is not known to the outside world, least of all to Kuropatkin, but it is supposed that the Russians were outnumbered two to one. The fighting was almost continuous from February 20th to March 10th, and the expenditure of ammunition by the large siege guns brought up from Port Arthur and by the

field artillery on both sides was unprecedented. The lines on both sides extended a distance of nearly 100 miles, and the movements were directed in detail by the commandants through telephones. The strategy of the battle consisted in three great movements by the three Japanese armies of right, left and center. The right wing under General Kuroki drove the Russians from the mountains in the vicinity of Ta Pass to Fushun on the Hun River. While Kuropatkin was giving his personal attention to the defense of this point on his left flank, General Nogi with his Port Arthur veterans

west and had sent small bodies of troops across it at several points. Here in the neighborhood of the tombs of the Manchu dynasty, which were scrupulously avoided by both parties, the Japanese advance was checked, but while Kuropatkin's attention was thus engaged on his right wing General Oku succeeded in breaking the Russian center and in driving a wedge into the southern side of the triangle. This he accomplished by crossing the Hun River between Fushun and Mukden on the ice in the midst of a dust storm which concealed the movement. Kuropatkin was

The Tombs of the Manchu Emperors Near Mukden, Where the Fighting of the Past Week Has Centered

turned the Russian right flank, occupied Sin-Min-Tun, followed up the Pu River, captured Tashi-Chao and attacked Mukden and threatened the railroad from the westward. The Russian position was then a triangle of which the south side was the Hun River and the railroad connecting Mukden and Fushun, and the other two sides were the roads from these two points to Tie-Ling or Tie Pass. Leaving General Linevitch to hold the Japanese in check at Fushun, Kuropatkin went in person with all his available troops to defend the railroad north of Mukden from the attack of Nogi, who was bombarding it from the

therefore attacked on both flanks, from the east as well as the west, and in great danger of being cut off from retreat to Tie-Ling and being compelled to surrender his whole army. Accordingly at seven o'clock A. M. on March 9 he gave the order to retire. The bridge across the Hun was blown up, most of the military stores destroyed, and Mukden was evacuated. The troops in great confusion retreated along the railroad and the old mandarin road to Tie-Ling steadily and without stampeding, in spite of the fact that they were shelled with shrapnel from both sides and the rear by the pursuing Japanese. The first soldiers reached

Tie-Ling 30 hours after leaving Mukden. General Kuropatkin himself was in command of the rear guard, and kept the enemy at bay by hard fighting, in which he exposed his person without hesitation. General Linevitch's army, on the east of the wedge which split the Russian front, is thought to have been cut off from Tie-Ling and to be attempting to escape in the hills to the northeast. Another Japanese army, under General Kawamura, is reported to be northeast of Mukden, but its whereabouts is not definitely stated. According to correspondents from Tokyo only 50,000 Russians of the force on the Hun escaped to Tie-Ling. A preliminary report from the Japanese headquarters on the Sha River Sunday morning gives the following statement of the results of the victory:

"Prisoners, over 40,000, including Major-

General Nashimoff; Russian corpses afield, 26,500; other Russian casualties, 90,000. Trophies: Two ensigns, 60 guns, 60,000 rifles, 150 ammunition wagons, 1,000 army wagons, 200,000 shells, 25,000,000 rifle shots, 74,000 bushels of grains, material for light railway of forty-six miles; 300 light railway wagons, 2,000 horses, 23 Chinese carts full of maps, over 1,000 carts full of clothing, 1,000,000 portions of bread, 150,000,000 pounds of fuel; horse allowance, 223,000 bushels; hay, 125,000 pounds."

This does not include the rear guard action on the road to Tie-Ling, which was the most disastrous part of the battle to the Russians, and their total loss is estimated at over 155,000 men and 500 guns. General Kuropatkin in his report to the Czar assumed entire responsibility for the defeat, and asked to be relieved of the command. The total casualties of the Japanese from February 26th to March 11th are reported as 41,222.

Map Showing the Positions of the Armies at the Beginning and End of the Battle of Mukden

# Opening the Door

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "OLD FARM DAYS," ETC.

NATURE opens the door very peepingly—just a crack in January, but a generous handbreadth in February, and by March we sit down to a six o'clock dinner by daylight. Ah, this is fine! we do not hurry now. There is something to see as well as taste, and we enjoy the sun across the eastern hills as much as we do the viands. Mem.: Always have lots of windows for your dining-room. It is awful to live in a house that shuts you in from your best property—that is, the landscapes, the sunsets, the bird nesting and the swing of the big limbs in the wind.

The snow does not go off altogether at once, but at first there are spots down by the meadow brook that show green, and, if you watch, you will find yellow coltsfoot in blossom. This is a chilly-looking flower, with clothes that look as if taken out of last year's chest; but then it is yellow, and that is the color of life and growth. Little short-stemmed dandelions follow, under the lea of hedges, fences and stone walls. Mem.: If Nature did not sow dandelions everywhere, I would; they are the cheerfulest flowers of the season—besides, being yellow, they are "good for jaundice."

A robin came to-day—the first of the season. He may have been a left-over from last year. There are almost always a few that don't get off South with the rest of the family. They hide mostly in evergreens during the cold days, and then turn up smart in the spring. I think they are members of the Behind Hand family, and were not packed up when the train started in October. Mem.: There is a good place, after all, for those folk who can't get started easily. They are at home before the rest get back—probably bragging about their smartness.

On the lawn the huge barberry bushes have been charming all winter. They

are now just full of birds, who do not prefer them to worms, but do take them cheerfully while snow squalls are still the order of the season. It is a fine provision of Nature that leaves the most beautiful things to be used first for beauty and then serves them up for food. Almost everything achieves in this way a double purpose in the world. I have got through with those barberries and now the birds want them. Another good thing about it is that they like the seeds. The world would be run over with one or two sorts of plants if it were not for these seed-eating economists. Nature never intended a thousandth part of her seeds to grow. As it is there is elbowing enough. Mem.: Among folk elbows are important—just as much as hands are. They keep down the fecund. Our morals are in our fingers; our instincts are in our elbows.

Crows are passing away. They used to be here at this season, and almost all other seasons, by the tens of thousands. All winter they cawed through the frosty air, and all summer they broke up birds' nests and ate young robins. The incarnation of thieving, they at least put on no pretension in the way of beautiful coats to cloak rascality. The devil is said to be black—at least, outside of Africa—and crows have the same color and disposition. The simile is good otherwise, for the crow is an interesting creature; cunning, inquisitive, imitative and tidy. They never roost where they nest, but every night go in successive flocks to the north, and every morning back to the south, where their nests rest on the tops of hemlocks, pines and oaks. They specially like a tree that has been blasted by lightning, for it gives a good outlook. A crow congress at this season of the year used to be held in Harding's orchard. Several acres became as black as—a crow. What they were about no man

could guess, but evidently it was a consultation—a regular Parliament of the People. There were leaders, too, nominated, perhaps in a caucus. Mem.: Did we get the caucus from the crows? If so, have we improved on our feathered neighbors?

The door is opened a little wider, and this morning I got up by daylight, at half-past five o'clock, and went out and picked a bunch of bloodroots. The Daphne is also pinking its buds and will soon peep open. The air of these spring mornings is superb, clear, stimulating, resonant. I stood on the knoll of Root's farm and heard the valley wake up. Cocks crowed their silly bragging from farmyard to farmyard. A few smart hens cackled for reasons they should have kept still about. The milk train whistled down the valley and somewhere in the hamleted orchards I heard a jolly whistle. The whistler was over fifty years old, for some of his teeth were gone. A bluebird's note rang out as clear as the whistle across the upper air and then died away in the steel blue of the north. The sun came up and I began to smell my breakfast. Mem.: The smell of buckwheat cakes and fried potatoes of a spring morning does marvelously arouse our social instincts.

Bees come out at the first provocation, but these early flights are strangely indirect and make you think of boys just let loose from school. They fly in all directions indifferently—just for the joy of getting out. After a bit of rollicking exercise, however, you can see they are investigating. Some one reports a maple sugar camp near by; another tells of a soft, wet hollow where they can get a good drink. The curious thing is that they so forget to be cautious. In summer, before a shower, they are sure to start for home with a rush; but in this spring flight hundreds are caught by the cooling air of the afternoon or a change of wind and, falling, melt a little burial place in the snow. I have collected them in pans, warmed them in the house and carried them back to the hives. It makes me feel a little more comfortable when I take away their honey later in the season. Burroughs says that bees are never civilized, but belong to wild life. Mem.: So do all of us. We make most of our blun-

ders from the mistaken estimates of our civilizing processes.

The day is twenty minutes longer—or wider—and now we must prepare our hotbeds. Early lettuce and pie plant I think go into the classification of poems. They are hardly foods, but they rejoice and refresh us marvelously. I have found a lettuce that is near perfection. It makes a little round head in about thirty days, and is as tender as it is pretty. I think it well named Mignonette. Pie plant is hardly fairly named. To call it rhubarb is worse. It is a vile old medicinal plant, associated with castor oil, developed, elevated, exalted to be one of the most delicious delicacies that the world serves us. It is a great scavenger with its roots, revels in decayed stuff, transforms everything into rich, succulent juice and actually helps to digest itself. Mem.: Send bunches of pie plant and baskets of lettuce to my friends.

But the hotbed! yes. It is a way we have of defying the frost and gaining a whole month of summer—for some things more than that. There are some fruits and vegetables we could not grow in any other way. It is well to have melons, tomatoes and lima beans started in small pots under the sash. Here, too, one should have plenty of room for flower seeds. It saves the housewife and daughters from a lot of hard work. A hotbed is a pile of manure brought to a state of fermentation until the ferment is uniform. The wall around it can be either plank or brick. On top of the manure place a layer of leaf mold, and the finest garden soil. Sprinkle your frame at night, cover it by drawing the top sash down, and then enjoy yourself by seeing the tender little plants coming along as if you lived in Florida. I am sorry to say, however, that, even in suburban homes, the hotbed is still a luxury. I will suggest a pretty good substitute. Spade a place behind your barnyard, where the soil is full of rich juices; make it very smooth, and sow your seed in a top dressing of the very finest dirt. Board up the sides and bank the boards with turf. Then fasten a good thick canvas, daubed with paint, to the barn above, in such a way that you can draw it over the hotbed when there is danger of frost. A thick oilcloth will do just as well, or

better. Mem.: In order to make our two hands suffice us, one must use his brains in such a way as to be forehanded.

A south wind came up the valley last night; a long, low down, earth-hugging wind. It brought pollen all the way from the Carolinas and left it in yellow patches, like sulphur, on the snows. This morning the icicles are loose and drop with a crackling and crashing sound. There is a warm smell in the air. The hens, which have been shut in for four months, leave the barn cluckingly and follow the road to the house. They come slowly, enjoying every step of the way, and picking bits of grass and other droppings that have accumulated through the winter. They are talking hen Volapük. Mem.: Evolution has not done as well by us as it has by the fowls. They can all talk together, whether from Asia or Africa or the United States. We cannot understand each other unless we use the same dictionary. Do not individualize too much.

At the door "White Lady" comes at once to me, and as I stoop down with a handful of corn she deftly eats it without pecking my flesh. Then she jumps on my knee and examines my pockets. She allows no other hen to come near. "Brownny" steps inside of the kitchen door and stands with her feet confidently planted on the threshold. She does not ask for anything, but she looks in, this way and that, at the folk, not quite patiently. What! Do you not see me? I am "Brownny"! I have raised four broods of chickens for this family! I did it well! I lost none! I have spurs like a rooster, and dogs, cats, hawks are all alike to me. I have done my duty, and I look for my compensation. She gets it. Mem.: You can trust folk, if you are worthy of it. I put this down for politicians who have no faith except in machines. Just do right, appeal to the people, and they will stand by you.

There is a warm smell in the air this morning. Arbor vitæ, which has a yellowish-brown look all winter, is turning green, while the red-barked dogwood is losing its winter red. The snow is running down hill with a chuckling sound. Look out for blockades in the brooks. There will be a flood in the valley before to-morrow. The bees are at work in the

willows and soft maples. These trees do not wait for warm weather, but defy the frosts. Hyacinths are also coming into bloom, but most of the trees and plants are governed by caution and will wait till the spring is established. This is cleaning up time. Everybody is raking or hoeing or sweeping. Bonfires are kindled every night. To say that I quite enjoy house-cleaning would slip the truth a bit. But there is a lusty liberty about these days. Boys and girls swing their legs in the best chairs and bounce on Davenportes that load up the porches. Mem.: Why does every one like to kick up a dust? Is it because we have too much system and order and rule and much method about everyday life? Only this is old dust, and nowadays we hear so much about germs and bacteria that one can't be quite happy if anything tickles his nose.

A good apple cellar is necessary until June. It is a shame for a countryman to put apples in a dirty dugout where they will soon taste of old grease and mildew. A good cellar is moist, but it is not wet. It is cold—only not to freezing. It is dark and it needs no ventilation in the winter. Just now the first trip of every member of the family in the morning is to the Pippin bin or the Russet bin. In May those apples that were tough and hard in midwinter get soft, juicy and full of rich flavor. The Swaar grows mellow, the Greening has a fine golden flesh, and the Albemarle Pippin melts in the mouth. The Belle Bonnes are like pots of honey. Mem.: There are some people who are never sweet till they are old, but then they surpass all standards. Boys and girls should be allowed a good deal of practice on the Golden Rule, but an old person should be the Golden Rule itself.

And now for the vegetable garden. This is not a common or cheap affair, but may be a thing of beauty as well as utility. I do not know anything prettier than the rows of my hybrid beans, hanging in festoons of silver white pods, eight inches long and three in circumference. An old-fashioned garden took in the nasturtiums and the herbs, but these we have transferred to the flower garden and the kitchen border. Even in potatoes there is poetry, and not a little sentiment in beets and carrots. The Egyptians asso-

ciated the onion with the hope of immortality. The first seed that we sow must be the peas, for they will not mind a few frosty nights; and the lettuce will only be the sweeter. You cannot get your beets, salsify and parsnip seed in the ground too quickly. Parsley is already growing, and marsh marigolds and cabbage plants are ready to be transplanted. We are cutting dandelions for greens—most delicious of all foods in spring. Squeeze over them a little lemon juice, sprinkle just a touch of sugar and pour on some genuine California olive oil—the Ehmann brand or something equally good—and you will have a dish that could not have been surpassed by Roman gourmands. Mem.: Yankees must learn to use more olive oil; see St. James to that effect.

All over the lawns a little white sweet violet is in blossom. A delicious pet of a posy, too delicate for seasons when the grass is high, it almost carpets the lawns while the grass is a mere furze. I think it came from England; it certainly is hardy as a primrose, and it blossoms in astonishing profusion. You can pick bunches of it and basketfuls for three

weeks. The first plant came up in an old lady's garden forty years ago, but now it is all about the roadside and in the shrubberies and orchards. Mem.: Don't forget this little violet. I should like to send a plant to everybody in the United States, but clearly cannot. You must get it of Mr. Vick, of Rochester.

And now the door is wide open. The hinges will creak no more this spring. We have planted our beans, and that we never do till there is no more danger of frost. The cotyledons are already cracking the soil. Press your lima beans down not more than half an inch or they will not be able to lift the dirt. The lawns and the meadows have grass high enough for the wind to play in, and the cows are in their pastures. Under the orchard trees the big blue violets are as thick as the dandelions will be in their turn. Our cold frames are full of spinach and the sweet peas are running up the trellises. The new year is under way. We have five hens set for early chickens, thirteen eggs to each. Mem.: You should always count your chickens before they hatch, or you probably will have none to count after they hatch.

CLINTON, N. Y.

## Philadelphia's Machine in Action

BY LOUIS SEABER

[Mr. Seaber is one of the editors of the *Philadelphia North American*. His article explains the recent astounding election in Philadelphia, which has for some inexplicable reason not attracted the attention it deserves throughout the land.—EDITOR.]

PHILADELPHIA, machine-bound and complacent, on February 21st had a typical election—that is, an election typical of Philadelphia. In methods the expression of the will of “the sovereign people” differed not a whit from the ways in other elections; the ends sought by the machine—defeat of the latest reform movement—were the feature of the contest.

Altho there was fraud, and plenty of it, the fact was emphasized that Philadelphia received precisely what it deserved and with which it is satisfied. In truth, what Philadelphia seems most to need is reform in its belief that it is “getting its money's worth.”

By “orders,” conceived by Durham, the boss, and given openly to the place-holders and party workers days before election, the Republican machine deliberately transferred 55,000 votes to the Democratic ticket. That number represented one-fourth of all the votes actually polled!

Satisfied? Philadelphia is more than satisfied; it is delighted. When a political machine, represented virtually by one man, can deliver the ballots of one-fourth the city's active citizens to any cause which will best serve his own selfish interests, its perfection and its power are beyond dispute. When it can accomplish that result in spite of abuse

and a sturdy reform movement there can be no reasonable doubt that the conservative citizens of the city of Penn are "for it," either actively or passively.

Perhaps the men of other municipalities and of other communities find it difficult to understand the situation in Philadelphia. For years the city has borne the taunts and strangers have come to speak of "Philadelphia conservatism" as a brand unknown outside its acres.

Durham, the boss, the man of keen discernment, is right. After hearing the returns on election night the boss remarked:

"Well, it does not look as if the people of Philadelphia were dissatisfied with the administration of affairs in this city. Our lines are unbroken and the new party hasn't captured a single magistrate."

Philadelphia's eminent respectability is sentimentally Republican; its political machine is practically so. Men and methods, not measures, win. In few of the campaigns of recent years has there not been a reform movement. Sometimes it was founded on a demand for better government; again, it was inspired by the men who have tasted of the political wine, acquired the "habit" and seek a place at the spigot.

In the recent campaign there was the reform movement. Aroused by knowledge of public plunder and the criticism of other communities, a portion of Philadelphia's well-meaning citizenship organized for battle. Led by men eminent in financial and commercial affairs, the opponents of the machine formed a "Committee of Seventy," the primary object of which was to labor for "better government," if it required three years.

They determined that ample funds should be provided; that the public careers of the official agents of the machine should be investigated that all Philadelphia might know their conduct; that a political party should be placed in the field as an evidence of good faith.

In the beginning of its crusade the "Committee of Seventy" was led to the mountaintop and its blinking eyes beheld an opportunity in the municipal contest, then five weeks distant. There was organized the "City party," and it

raised the banner of "reform" aloft.

Certainly it was an important election. There were to be chosen fifteen Police Magistrates, being more than half the entire minor judiciary; sixteen Select Councilmen, being more than a third of the representation in the upper branch of the municipal legislature; seventy-two Common Councilmen, being more than half the number of members of the lower branch.

Meetings were held by the reformers. Machine candidates for re-election were denounced as "hirelings." The megaphone and the automobile were utilized to attract citizens to the cause. Every newspaper in the city, with one exception, was in sympathy with it.

Clergymen, representing most of the churches, were assembled and they "resolved." They denounced the partnership of the political official machine with the promoters of crime. They demanded the removal of the head of the police department, the Director of Public Safety; they went farther and proposed the impeachment of the Mayor.

Under pressure of public sentiment the Mayor, John Weaver, blundered. He talked. He refused to remove the Director of Public Safety, and he proclaimed it. He denied the collusion of the political machine which placed him in authority and the keepers of dives. He challenged the reformers by asserting that the city was morally clean.

In reply the Law and Order Society, a private organization, represented by one of the most courageous men in the city, D. Clarence Gibboney, raided some of the notorious dens. He produced evidence which drove Mayor Weaver into a corner.

After a raid on a notorious den, in which was found the photograph of a policeman, Mr. Gibboney offered to prove to Mayor Weaver a month ago that the place had been "protected." When the provisions of the offer—that five prominent citizens be present as witnesses—were rejected by Mayor Weaver, Mr. Gibboney, addressing a meeting of prominent clergymen, defined the alliance of the political machine with the traffic in vice and specified by name policemen involved.

Here is a comparison of results obtained

by the Law and Order Society, a private organization, and the \$3,000,000 Police Bureau:

From March, 1904, to February, 1905, the police arrested 244 alleged keepers of white slave and other resorts. The Grand Jury returned 189 true bills and ignored 55 indictments. Of those indicted a large number of defendants were acquitted.

In the same time the Law and Order Society arrested 102 keepers of white slave dens and houses of ill-fame. The Grand Jury indicted 102 of the defendants, and convictions were obtained in every case so far tried.

Men who have watched reform movements grow to seed prophesied that Philadelphia was about to be redeemed, but they reckoned without their boss.

Durham, baptized Israel, but known as "Is," was in Florida when the reform movement sprouted. He arrived home a week prior to election, stiffened the Mayor's backbone, issued the orders which were to defeat the City party, waited for results, and returned to the Southland.

This is what happened:

Under the law the citizens voted for only two-thirds of the number of Magistrates to be elected. It has been the unwritten rule, based on a working alliance of the Republican machine and the Democratic organization, that the Republicans nominate two-thirds and the Democrats the remainder. As the places pay \$3,000 a year for five years they are worth a fight.

So well intrenched had become the Republican machine that it had nothing to gain by continuing the relations with the Democrats, and, noting the danger in the reform movement, the Democratic leaders sought to protect their minority interests by affiliating with the City party. Instead, the reformers, having been to the mountaintop, planned to abandon a fight directly against the Republican machine and to concentrate their efforts on the five minority Magistrates. That developed a three-cornered contest.

Then Durham acted. He figured that the best way to rid the city of another reform crusade would be to humiliate it by throwing a tremendous number of ballots to the Democratic candidates.

There are forty-two wards, comprising

eleven hundred-odd election precincts, in Philadelphia. Each has its machine committee, composed of seekers after place and others. On the night before election day every committee met and received these "orders":

"Give the Democrats twenty-five votes in each division. Get your men to 'split' the ticket. Tell them to vote for five Republican candidates and five Democratic nominees."

In some cases the ballots were marked by trusted men the same night. In certain precincts the ballots actually were placed in the secret ballot box in bundles of ten and twenty, without the formality of having them voted. In other instances repeaters did the work, voting "early and often." In precincts where the leaders failed to have the orders obeyed the count of votes after the polls closed was amended. But, withal, the great bulk of the votes "delivered" to the Democrats were the gifts of men who live under the American flag, who assert that they think and that they believe in independence and justice.

According to the returns, the "straight" Republican machine tickets numbered 180,000; the Democratic vote was 24,000; the others (Socialist and an independent party) polled 7,000. "Straight" votes were figured on the candidate for the City Solicitorship, an important office for which no fight was made. All Republicans, those voting for Democratic Magisterial candidates and those voting entirely for Republicans, cast a ballot for the party nominee for City Solicitor. All Democrats voted in the same way. The City party named no candidate for the City Solicitorship.

Ten machine candidates for Magistrate received 131,000 to 151,000 votes. Five Democratic nominees were credited with 74,000 to 80,000. The reformers' City party polled 29,000 to 36,000 for its candidates. Two of the Democratic nominees, who had been indorsed and placed on the City party ticket by the reformers, received only 5,000 and 8,000 votes more than their Democratic associates, having been "slaughtered" as a rebuke to them for accepting aid of "the enemy."

Comparison of the "straight" party votes with the returns in the cases of the

Magistrates proves conclusively the Republican machine's work, if that were necessary in view of the "orders" and the candid admission of the machine's leaders.

In the following paragraphs are set forth the best evidence of machine domination. It will indicate the nicety with which the political organization works:

In the Third Ward, which was a Democratic stronghold some years ago, the present machine leader having been a Democratic worker, the "straight" machine ticket received 4,376 votes; the Republican candidates for Magistrate, 2,038 to 2,897. The "straight" Democratic vote was 208, yet its nominees for Magistrate were credited with 4,057 to 4,113. The highest City party vote was 34. That same ward five years ago reversed the recent order of things to aid the Republicans.

In the Fourth Ward, another bailiwick which formerly was a Democratic center and in which fraud is a conspicuous feature of the elections in these days, the "straight" machine vote was 3,197; for Magistrates, 2,101 to 2,407. The "straight" Democratic ballots numbered 127, but their Magisterial candidates polled 1,927 to 2,236 votes. The City party received 72 votes.

In every other ward the "orders" were obeyed so implicitly that instead of 30,000 votes, 25 from each division, which, it was calculated, would give a "safe" majority to the Democratic ticket, the number was nearly doubled.

There was no way of "going behind the returns," for Philadelphia has a secret ballot.

"Sam" Maloney, the machine leader of the Fifth Ward, a man who appreciates a joke, was asked how he accounted for the plurality given to the Democratic candidates for Magistrate in his ward.

"Well," said he, "everybody down in my ward is Republican. They voted for Roosevelt in November, but the vote this time showed that they won't stand for this railroad agitation and the fight on 'Standard Oil.' The vote this time was a vote of protest. I guess that explains it."

Yet, it was not altogether in such

wards as Maloney's that the Democrats obtained their unearned victory. Citizens of some of the "cleanest" bailiwicks helped to swell the total Democratic poll out of all proportion to the actual party vote. Therefore, the fact is emphasized that the great majority actually desires the very kind of government, or machine domination, which the boss provides.

Only a fool would pretend to deny that fraud is practiced, openly and extensively, in Philadelphia, but the power of the machine is not sufficient to keep it intact if the majority of the citizens, either actively or passively, did not maintain it.

Personal registration, which the present Legislature has been asked to provide, has been suggested as a remedy for political evils. Whether it would improve a condition caused by an absolute refusal of many citizens to display active interest in the municipal government is a question disputed by those interested.

Clinton Rogers Woodruff, one of the most practical-minded advocates of a personal registration law, gave this opinion:

"In the 'river front' wards, where the Republican machine controls the vote by means of the system of registration, it would reduce the fraud to a great extent. It will not reach the 'stay-at-home' voter.

"Two things are needed: First, protection from the fraudulent vote; second, a revival of interest on the part of the 'stay-at-home' voter and his participation in affairs."

In my own opinion, the greater need is the revival of interest. According to the returns, one-fourth the total number of active citizens permitted themselves to be the tools of the machine. The purpose of this article is to demonstrate how pliable are many of the active men of Philadelphia.

In the municipal election less than a month ago 212,000 votes were polled, if the official returns be accepted as true. There were registered for that election 385,000 voters. It is the fact that the lists were "padded," but, allowing 50,000 bogus names, there remained nearly 125,000 qualified voters unblessed with the "revival of interest!"

PHILADELPHIA, PA.

## Whitelaw Reid

Mr. Whitelaw Reid is by profession and choice a journalist, and when occasion requires a diplomatist. He began his literary life as a War Correspondent, then joined the staff of *The Tribune*, where he succeeded Horace Greeley as editor and chief proprietor. He has been Minister to France, Republican nominee as Vice-President, and Special Representative of our Government at Queen Victoria's Jubilee, and at King Edward's coronation. He now succeeds Joseph H. Choate as Ambassador to England.

# The Man and the Movement

BY HAYNE DAVIS

[The great political movement of the world is for the perfecting of a system of international arbitration so that judicial decisions may be substituted for war between nations. Having given our readers some prophetic articles on the coming events in this movement, we wish now to give an appreciation of the man who has led in the accomplishment of the anticipated results. On the wide horizon of world politics we can see no man who has done more during the past year to promote the cause of peace and narrow the area of war than Richard Bartholdt. He has determined the conduct of nations, he has profoundly influenced public sentiment, and has brought into practical politics the idea that will ultimately do away with war.—EDITOR.]

ONE night during the year 1874 two young men were occupants of a front third-story room on Noble Street, Philadelphia. Henry Hildebrand had retired before his companion came in and was half asleep when he heard the words, "See this!" It was the last five cents which Richard Bartholdt, aged nineteen years, possessed. And having shown it to his companion, he threw it out of the window and went to bed.

While he is asleep we can go back to Schleiz, in Germany, the capital of Reus, a principality of Thuringia, which lies just west of Saxony. Here on November 2d, 1855, Richard Bartholdt was born. His father, Gottlob A. Bartholdt, was involved in the Revolution of 1848, which endeavored to establish American political principles in Germany. He fled to the United States in 1849, but returned in 1851 and made peace with the Government. Four years later Richard was born. He was given the usual German education, and as soon as he was through college he came to America, for the ambition of his youth was to become "an American citizen."

On the house in which he was born there is now a tablet, placed there by order of the City Council of Schleiz, which bears this inscription: "House in which Richard Bartholdt, American Parliamentarian, was born."

He is more than an *American* Parliamentarian, however deserving of this recognition by the place of his birth. For, since the events of 1904, he was elected President of the *International* Parliament, composed of members of national legislatures of the world, and has caused that body to declare for the con-

vening of a conference of nations to consider the creation of a permanent Parliament of Nations, for the preservation of peace and the establishment of justice among nations.

He is a man of quick decision and action, with great power of penetration and of clear and convincing statement of the truth. He is hopeful, generous, large-minded in all his dealings and rises high above party politics. He imparts good feeling wherever he goes and is noted for his willingness at all times to serve others. He is a man of faith in the right, courageous, cannot be driven forward nor held back by others, but moves and acts freely as prompted from within. And for these reasons his career has been a continually advancing one. For years he was the only Republican Congressman from Missouri. His first entry into politics was in 1885, when he was defeated for the Republican nomination by two votes in the convention. He was immediately afterward elected a member of the School Board of St. Louis, the fourth city in the United States. In 1887 he was again defeated for the nomination by only one vote and was at once elected President of the School Board. The third time he won the nomination by a two-thirds majority and appeared at Washington for the first time in 1892, just twenty years after his arrival in America. He has just entered upon his seventh term. His nomination has been by acclamation and he has won at the polls by an increased majority at every intervening election. This year his majority was unprecedented, being 2,000 in excess of the vote cast for Roosevelt, and he is the only Congressman who received more

WILLIAM RANDAL CREMER

Member British Parliament. Originator of the Interparliamentary Union as a weapon for waging war on war. Recipient in 1903 of the Nobel Prize for the most effectual work in the cause of peace

votes than were given to Roosevelt in his district. And yet while other Congressmen were fighting for their seats, ignorant of the great event about to occur or indifferent to it, Mr. Bartholdt was spending one of the two months just before the election in this work for the world's welfare, and went to his constituency fresh from the performance of the greatest piece of political work ever done in one year by one man in promoting the peace of the world.

Between this achievement and the peniless night in Philadelphia there were thirty years of continual victory over obstacles. In addition to what has been said it ought to be mentioned that he began the exercise of his American citizenship as a typesetter for the Brooklyn *Free Press*. And his rise was

through all the stages of newspaper work to editor-in-chief.

One event in this ascent deserves a passing notice. In 1883 the hour came for connecting the Atlantic and Pacific oceans by rail. The tracks of the Northern Pacific Railroad were creeping toward each other, one advancing from the East; the other from the West. So the great Villard excursion was prepared in order that a party of distinguished men could be present to see the golden nail driven which would bind the eastern and western sections together. Mr. Ottendorfer, editor of the *Staats-Zeitung*, was invited to go. He sent Mr. Bartholdt in his place. So that it was the privilege of this German "American citizen" to report to the world from the heights of the Rocky Mountains that this continent was spanned and the two oceans united by steam. He came down from this material mountain to conceive the idea which would inspire him to do and dare that the nations may rise, as he expressed it in Congress on the 19th day of January last, "to the intellectual height of the twentieth century, where the imperative demand is justice and good will among men," and may institute the political machinery necessary. While foreign editor of the *Staats-Zeitung*, with his eyes on the events in all parts of the world, the idea came to him that peace between all nations is essential to the welfare of every nation. This idea, coupled with his experience in practical politics, prepared him for leadership in the Peace movement at the critical moment. In the year that Mr. Bartholdt entered American politics Mr. William Randal Cremer began his agitation in world politics for treaties of arbitration. The men were acting in ignorance of each other, but were preparing to be of supreme value to the same cause.

By 1889 many members of European Parliaments had rallied around the idea suggested by Mr. Cremer and formed the Interparliamentary Union, which now contains more than two thousand members, all of whom have won seats in a National Parliament. While this organization was growing to a position of power in world politics Mr. Bartholdt was being prepared in the school of practical politics

to take command of it, and through it to point the nations to the way that leads to Peace.

In 1899 when the Interparliamentary Union met at Christiania Mr. Bartholdt was present, because his abhorrence of war has grown in proportion to the growth of his intelligence, because this has enabled him to recognize in the Interparliamentary Union an effectual instrument for waging a victorious war on war.

It was in this year (1899) that The Hague Court had come into being. As constituted, however, that Court was without authority, every nation remaining free to fight out every controversy if it should prefer war to trial by this Court. And there being no Congress to declare the law which The Hague Court must apply, Mr. Bartholdt was quick to see the next step forward—namely, a Congress to supplement this Court.

At this meeting in Christiania he was impressed also with the fact that nations were unrepresented in the Interparliamentary Union if they have no Parliament for their national affairs. He realized then that Peace can come only after the creation of a Parliament for International Affairs in which all nations have representatives irrespective of the form of their Government.

The Louisiana Purchase Exposition having been organized at his suggestion, Mr. Bartholdt determined to make the decisive move in international politics. He was the only American Congressman in the Interparliamentary Union at that time. Having held all its sessions in Europe, the Union was practically unknown on this side of the Atlantic. The idea which he desired to have it stand for was far above the ordinary vision of the ordinary politician. But undaunted, he proceeded to Vienna, where the 1903 session was to be held. The United States Ambassador was absent, so he was absolutely alone. For some years the Union has met only at a National Capital and under an appropriation for defraying the costs of the meeting. The delegates from Denmark were bearers of an official invitation and a guarantee of an appropriation. By the exhibition of a courage worthy of the representative of a great nation, Mr. Bartholdt stood

valiantly and successfully for the United States as the proper place for the next session. After his eloquent address, delivered in French, English and German, the delegation from Denmark withdrew their invitation, and the invitation of Mr. Bartholdt was unanimously accepted by the Six Hundred European Lawmakers assembled at this memorable session of the Union.

The same thing which made the boy lie down and sleep in peace, with no provision for the coming day, enabled the man to bring this body of national lawmakers to the United States without provision for their entertainment. Having taken this bold stand for the good of humanity, he returned to the United States, secured an appropriation for the entertainment of the Union more royally than they had ever been entertained before, and gathered around him a group

RICHARD BARTHOLDT

Member U. S. Congress. Organizer and President of the Arbitration Group in the U. S. Congress. President of the Interparliamentary Union. Author of "The Revolution of St. Louis," which laid down the plan of campaign for this union, on which it can win in the war on war, and according to which the coming Conference of Nations was called

Group Showing the Interparliamentary Union in Session in the Hall of Congresses Immediately After the Passage of the Resolution of St. Louis

of Congressmen to stand for arbitration and to become members of the Interparliamentary Union. This group contains now about one hundred members, both political parties being represented.

These things were not accomplished, however, without courage and effort. There were voices within and without whispering that it was too much to expect, but to all these suggestions Mr. Bartholdt gave a prompt reply that Congress was bound to make the appropriation and aid in this great move, that the United States and its legislators could not be so small as to shrink from the steps which must now be taken by the United States in fulfilling its twentieth century mission in the great political movement of the times. When his bill for \$50,000 to entertain the Union came up not one voice was raised against it.

This being accomplished, he appeared at the Lake Mohonk Arbitration Conference in June, 1904. This Conference was presided over by Hon. George Gray, one of the American members of The Hague Court. It was attended by over 300 persons, among whom were a Justice of the Supreme Court of the United States, a number of jurists and lawmakers of high repute, Federal and State; eminent professional and business men, educators and ministers. Mr. Bartholdt was one of those who decided the action of this body, and it declared, without a dissenting voice, for the creation of a Permanent Congress of Nations.

When the Parliamentarians from Eu-

rope reached New York in September Mr. Bartholdt was ready to receive them and to conduct them to the great work to be done at St. Louis and Washington.

On the night of September 12th Mr. Francis, President of the Exposition, entertained the Interparliamentary party at dinner. Rising after dinner to address his guests, Mr. Francis alluded to their aim—the substitution of judicial decisions for war, to the vast territory of Louisiana, in which they were assembled to discuss practical plans for furthering this aim, to the cost of Louisiana a century ago, no more than had been spent for the Exposition. He then declared that, if nothing else were accomplished by the Exposition than to render them substantial assistance in this great movement for the peace of the world, this vast expenditure of treasure and toil would have been well made.

On the following day at 12.30, in the Hall of Congresses the now famous Resolution of St. Louis, drawn by Mr. Bartholdt, was unanimously adopted by this World's Parliament, of which he had been chosen President.

Declaring as it did for the convening of a conference of nations to consider the universal execution of treaties of arbitration and the creation of a Congress of Nations in which every nation shall have representatives, this resolution is now, and will some day be universally recognized as, the greatest international instrument yet brought forth. In addressing the United States Congress on

January 19th, 1905, Mr. Bartholdt called it the Magna Charta of Nations.

Was Mr. Bartholdt's connection with this event accidental or superficial? There is no accident. Leadership in such a movement cannot be accidental or superficial.

Why was it that Mr. Bartholdt should be the *first to see and to stand in a National Parliament for the idea that will perpetuate peace, which alone can accomplish this?* Why was it that he drafted the resolution which was unanimously adopted by this great body of ideal national lawmakers, thus bringing into our national politics and into world politics, in a practical way, the idea which in time will substitute for war a duly constituted International Congress, with suitable courts and other governmental machinery for the administration of justice among nations? Mr. Bartholdt was ready and able to stand for this, to lead the thought of national lawmakers to this high.

Much is said for peace and against war, but seldom does any idea come forth

that has not been as well or better expressed before. But Mr. Bartholdt has contributed to the literature of the Peace Movement as well as led in the conduct of action. I can cite only one instance in the limits of an article like this.

At St. Louis he said:

"We meet here to-day, not as individuals riding a hobby to please our fancy, but as lawmakers clothed with authority by the votes of the people, and while we have not been expressly delegated by the people to serve the specific purpose which has brought us together, we feel that no grander service could be rendered any constituency anywhere under the sun than the service which would result in lessening the possibilities of war. We are pledged to render such service by creating a public sentiment and by using whatever influence we may possess in the several legislative bodies to which we have been elected in favor of law and justice in international relations as against brute force; in favor of right as against might. In other words, we ask, aye we demand, that differences between nations shall be adjudicated in the same manner as differences between individuals are adjudicated—namely, by arbitration, by the arbitrament of courts in accordance with recognized prin-

Members of the Interparliamentary Party at Mt. Vernon, the Home of Washington. Taken the Day Before They Called on the President and Invited Him to Take the Lead in Causing the Universal Adoption of the Political Principles for Which Washington Fought  
Copyrighted by F. R. Rhodes, October 6, 1904.

ciples of law, rather than by war. Are we right?" . . . "Our skeptical friends know we are right—enlightened public opinion admits it—the cause of humanity is outraged by any other view. The goal of good government, after all, is the welfare and prosperity of the people, and it is because we know that peace surely promotes, and war surely destroys, that which statesmanship is supposed to strive for, the friends of international arbitration, it seems to me, are furthering the very objects of efficient statecraft."

The thing which Abraham Lincoln held up as the ideal of statesmanship was striving to "achieve and cherish a just and lasting peace among ourselves and with all nations."

Mr. Bartholdt has done more during the past year toward the accomplishment of this than any other man in the United States, both by creating public sentiment and by causing nations to take a forward step in the path that leads to Peace.

Mr. Bartholdt has been equal to initiating this movement in its practical form as a part of American, of world, politics. Will he be able to lead the Peace Forces to final triumph by actual execution of the plan proposed by the Resolution of St. Louis, so as to bring all nations into one political body, with many members fitly joined together? Time alone can answer the question.

NEW YORK CITY.

## The Hamadryad

BY THEODORE ROBERTS

Was it the wind I heard, starting the leaves athrill?—  
A wind in the golden birch when the rest of the wood was still?  
Was it the wing of a bird high up in that leafy place  
That gleamed so white to my eye, like the mask of a peering face?

The round moon washed the forest an indescribable blue—  
The blue of the unfound rose—the color of dreams come true—  
And there in the elfin radiance, deep in the elfin land,  
Drunk with the elfin hour, my fingers inclosed her hand.

She led me by aisles of azure and floating ramparts of sleep  
To a castle of hammered silver set in a magic keep.  
She led me beyond remembrance of toil, and failure, and fame,  
Back to the glory of Youth and the longing that has no name.

Was it the wind I heard, starting the leaves athrill?—  
A wind in the golden birch when the rest of the wood was still?  
Was it the gleam of *her* breast, or a bird, in that leafy place,  
When I opened my eyes to the dawn and felt the dew on my face?

ST. LAWRENCE, BARBADOS.

# The Experiences of a Preacher's Wife

BY HENRY'S WIFE

AS I have already intimated, in my recent article in *THE INDEPENDENT*, "When I Was a Bride," Henry is a Methodist preacher. His father and grandfather belonged to the itineracy, and, of course, he was "called," but, what is more to the point, he was bred to it. Meanwhile, I am not one of those women whom Providence obviously designed for a preacher's wife. I have never showed any signs of "election," I was not properly "grounded" in the doctrines of any denomination, and to this day I cannot see why "grace" is considered to abound so much freer in one Church than in another. Why, therefore, with all the lights of heaven before him, Henry should have chosen me for his wife is unaccountable, except upon the theory that the best of men have irrelevant tastes in such matters. And, after all, it has not proved such a bad match. I tremble to think what would have become of him, even with his family predisposition to fast and pray, had he not married a woman equally gifted with secular instincts. It requires worldly wisdom as well as heavenly mindedness to be an effective pastor, and I have always thought Henry knew more about the Providence of God than he does about the perversities of human nature, even his own.

Our first circuit contained five churches, and the preacher actually "walked" it. He could not afford the expense of keeping a horse in addition to that of keeping a wife on a salary of \$245.00, and, altho nearly twenty years have passed, I remember as if it were yesterday the first sermon I ever heard Henry preach. It was a week after our marriage at Redwine Church, in a backwoods settlement, on a cold winter day. Several women in sunbonnets sat in the Amen Corner on one side and a score of beardy old farmers occupied the Amen Corner on the other side; I was the only person in the body of the church. Henry preached on the beatitudes, all of them!

I thought it was the grandest sermon I ever heard, and wondered how the people could sit so unmoved beneath the fire of his eloquence, when suddenly one of the women arose, deposited her infant in the lap of her neighbor, laid aside her bonnet, stepped out in front of the chancel and begun a sort of fantastic circular dance, going faster and faster, and shrieking a mad cadence of words which I afterward learned was her "experience." As she danced she drew nearer and nearer the altar rail, behind which Henry stood patiently waiting for her ecstasy to pass. We did not know it, but she was in the habit of embracing the pastor as a grand climax to her emotion, and as she reached out her long, red arms to grasp him my gallant husband skipped back behind the pulpit stand. No one regarded this incident as humorous except the lone lady in the body of the church, who was so convulsed with laughter that she was unable to conceal the fact.

After services each housewife present invited us to spend the night with her. I was determined not to go with the one who shouted, and we at last accepted seats in Brother and Sister Jurdon's wagon. They had four grown sons, all of whom were in the party. My sensations can be better imagined than described when after an hour's ride we alighted before the Jurdon homestead, a one-room log-cabin! There was a bed in each corner of it. And there could be no mistake as to which was the "company" bed. It was resplendent in a white counterpane and red "worked" pillow shams. The men remained outside until Sister Jurdon and I disrobed, then she blew out the candle and we got in our respective beds. The blowing out of the candle was evidently a familiar signal, for the men at once entered the darkened room and retired so hurriedly that I can never believe there was any difference between their day and night clothes. Henry took the situation non-

chalantly, I suppose he was accustomed to passing through similar ones. But I had hysterics and never slept a wink all night.

Three months later an epidemic of diphtheritic dysentery swept over this same community. It was very contagious and fatal, so many died of it that terror reigned and the sick were neglected. We went out and remained in the neighborhood until the scourge passed, going often from house to house nursing the sick and shrouding the dead. I shall never forget Sister Jurdon's boys. They all lay stricken in that same room, and I was glad enough for an hour's repose upon the company bed during the long night watches.

Our first baby was born soon after his father had received a sheepskin for marrying a young couple. And that sheepskin was the child's only luxury. We had been in the itineracy two years and could not afford a cradle. His long clothes were made of my wedding *lingerie*, his short ones were the long ones cut off; and his first pair of trousers were made from the tails of Henry's long coat. Indeed, the clothes of a Methodist preacher's family are pathetically dingy and unfashionable. We had been married fourteen years before I could afford to have a dress that cost over ten dollars. And the children's clothes were always made of our old ones.

On another circuit where we lived for three years the parsonage was built of lumber contributed by different members of the four churches. One man furnished the shingles, another the frame, another the weatherboarding from a barn he had torn down. The stones for the chimneys were collected from the fields nearby, and all hands built it. The result was a caricature in architecture, but we were delighted, because this was our first real parsonage, and here I took my first lessons in diplomacy and house-keeping. The Ladies' Parsonage Aid Society furnished a motive for both arts. A committee from this society frequently called and went through the house from bedroom closet to kitchen, "to see what is needed," they explained, and, indeed, many things were needed. I had no tray for making bread. There was only one pot, and one frying pan, I remember.

But I always trembled lest they should find an untidy corner somewhere. I never knew, for instance, when Sister Adams would appear with, say, a new tin coffee pot, and make that a pretext for going through the pantry. I have heard other women say that a person with proper spirit would not submit to such an indignity. But there are many ways of manifesting a "proper spirit," and I usually show mine according to the exigencies of the situation. I have found that one of the greatest embarrassments a Methodist preacher's family endures is the lack of privacy. But this is offset by many kindnesses. And the effect upon the housekeeping of a self-respecting woman that is produced by a female public opinion, which may be focused at any time upon the remotest unswept corner, is, to say the least of it, salutary. Every pastor's wife, indeed, must adopt and manage the various women's organizations in her husband's church, or be adopted by them. I chose the latter course, because it is the least difficult. The women wherever we go find me an amiable person to advise; and if I know more than they do upon any conceivable subject, I do not parade the indiscretion. And they usually love me as much for my docility and shortcomings as they love Henry for his gifts and virtues.

The preacher meets more perversity in Amen Corner human nature as a rule than he does in all the sinners on the back benches. The latter are shy, but they are usually amiable. Not so with a certain type to be found anchored in the Amen Corner of almost every church he serves. I remember one brother who was supposed to be "gifted in prayer," who ceased to attend church because Henry neglected upon several occasions to call on him to pray. Another asked for his letter and joined the Baptists because the stove was moved to where it made his pew uncomfortably warm. Two women once quarreled over a rag carpet which the Parsonage Aid Society had woven for our parlor floor, and because they could not agree which way the seams should run, they disbanded the society and sold the carpet at auction.

Henry has always taken his appointments "as coming from the Lord," and

that is the chief reason why he has never advanced very far in the church scale of prosperity and distinction. For I have long observed this strange phenomenon, that the poor circuits and "dead churches" are conferred upon those preachers who consider their appointments providential, while the better class of appointments fall with satanic partiality to those members of the conference who know how to "pull wires." I remember one mountain circuit where few if any of the children had ever heard of Santa Claus. And when we imported him by means of little bags of goodies mysteriously conferred on Christmas Eve, it was as if we had introduced a new and entrancingly hopeful element into their dull young lives. For months before Christmas tales of this old saint were a part of their Sabbath school instruction. And they came from far and near to hear of him. I know it is an awful heresy to say such a thing, but I think it would greatly benefit the poor if they had a few extra near and dear saints to believe in. According to their theology, God is a very long way off, and to be reached only through an exhausting spiritual ecstasy.

Henry had another charge where the "holiness" element predominated. These are singularly cheerful, purblind people. They live in a trance and commit more sins than the average person with a perfectly stainless conscience. They are gifted with a sort of spiritual unscrupulousness. I remember one man among them who mortgaged his mule, then drove it across the line into another State, sold it and pocketed the money. He told this incident with the kind of pride a man shows in a good business adventure. There was a woman in this same church who also professed "sanctification." She had nine children, all noted for their juvenile perversities; and as she passed to and fro at her household duties she often paused to administer a severe spanking to some one of them without ever changing the rapt expression of her countenance. And, strange to relate, these youngsters were firm believers in their mother's high profession. The fact that she could and did shout and sing while beating them black and blue doubtless overawed their simple minds.

Henry and I have always made it convenient to eat with the poor of his congregation in preference to the more prosperous, especially when we were sent to a new place. In a certain highly respectable neighborhood there was an unfortunate woman who lived alone with her illegitimate child. Her name was on the church roll, where it had been entered not very long after her disgrace, when she had made a last pathetic effort to re-establish some connection with her own kind. But she never came to church after the first few months of her membership. We found her cabin set high upon a stony hill in the midst of an old field. It was a blot of blackness in the bright sunshine which proclaimed her shame and desolation to the whole community. The woman was herself a tragic figure as she stood framed in the darker doorway. She had that sort of homeliness which comes from despair, hardship and loneliness.

Henry introduced himself as the pastor of the Methodist Church in that community, and explained that we had come to take dinner with her.

"Mister, yo' must 'a' made some mistake. This is whar Mary Horton lives!" she replied, incredulously.

"I know," said Henry, "that is why we came."

"But I hain't nothin' fitten fer yo'ns ter eat," she protested.

"Oh, yes you have. We will eat what you have every day for yourself."

Then she took us by the hands and began to cry as she led us into the house.

"There hain't been er single godly man or woman ercrost my doorsill afore to-day since *he* come!" she wailed, pointing to a little boy of five or six years.

During the preparation of our simple meal she alternated between tears and smiles. At last she placed the corn hoe-cake and "middling meat" upon the bare table, and would have stood up to wait on us, but Henry insisted that she was hostess and must sit at the head of her own table. And I shall never forget her delighted hospitality. Nor do I remember ever before to have felt so sensibly near to what Henry calls God.

The following Saturday was "Quarterly Meeting" day. Early in the morning Mary Horton appeared at our kitchen

door. She had walked ten miles to bring us a hen and a rooster, and to "tend church."

The price of the chickens was entered on the steward's books as "quarterage" and ever after that she was a faithful member, who paid her dues in dried fruit, home-knit socks, and "patridge aigs." It was a great strain on Henry's conscience to accept the latter, but he did rather than raise a moral issue with Mary about robbing birds' nests.

Every vocation is endowed with its own besetting sin, a temptation that fits into the very character of it like a virtue; and I think that of the Methodist itinerant is to become a sort of mendicant. The custom of giving things to them began long ago, when many of them received nothing else for their services. Now, however, a preacher, whose salary often amounts to as much as the income of the average man in his congregation, gets free tuition for his children, medical attention without charge, a discount on his groceries and all the goods he buys, besides innumerable gifts from members of his churches. And the effect is often pernicious, especially upon the children in his family. They sometimes get a foundling sense of charity inimical to essential self-respect. On the other hand, some preachers and their families are supersensitive on this point and alienate friends by resenting some natural expression of generosity. Henry once produced the impression that he had fallen out with his church in a little village where we lived because he bought his own garden tools and hired his plowing done.

Altogether, the most eventful life a good woman can live in this world, outside of being an actress, is that of a Methodist preacher's wife. There is always the gambling uncertainty of whether he will be sent back to the same place another year; if not, where will he be sent? There is the perennial excitement of meeting new people and new conditions; the stimulating quarterly anxiety as to whether the circuit will pay enough to tide the family expenses over to the next quarter. Above all, there is the continual engrossing business of walking softly before all. God will sooner pardon a natural, nervous exhibi-

tion of the carnal spirit in a preacher's wife than his congregation will. It is this self-suppression, this necessity for being supernaturally amiable under all circumstances, however trying, which makes the average preacher's wife look like the faded emblem of prayer and fasting.

And, finally, I have always thought I knew more about the effect of Henry's sermons upon the congregation than he does. For he is often so taken up with the theological or heavenly view of his subject that he misses the humanistic way of looking at it. And after all it is the way the man in the pew looks at the text which counts. For this reason I have sometimes wished that I could exchange places with Henry. I would not in that case dwell with so much sentimental effulgence as he does upon David's Psalm-singing characteristics, but I would note them simply as the poetic manifestations of a person who was really very wicked sometimes, and I would exhort the people not to emulate his example in most things, but to do vastly better. In short, I would make a point of convincing the people that the characters mentioned in the Bible were not demigods, as most of us are taught to believe, but a very trying lot of human beings, whom God has greatly improved upon since then. This would be very encouraging to many a sinner, who does not know how bad the very elect have been before him. Also, I would not insist, as Henry does, upon "infant baptism"; because, however "sound" the parents may be upon that doctrine, nobody can tell whether the baby is or not. And it is unfair to take advantage of his infantile imbecility in theological matters to thrust a rite upon him which his dignity or conscience may repudiate later on. And I never have been able to understand the presumption in a really modest man, such as Henry is, in praying so fervently that Our Father will look after the nations, the missionaries, the Governments and the various enterprises of creation, as if these things might otherwise be neglected. However, I have already confessed that I lack a cubit in spirit of being a proper-minded preacher's wife.

# MUSIC

## ART AND DRAMA

### The Philharmonic and Its "Star" Conductors

IN the course of the month since the last review of current musical doings was printed in *THE INDEPENDENT* the New York Philharmonic Society has given three concerts. Two of these were conducted by Felix Weingartner, of Munich. The other was presided over by Karl Panzner, of Bremen. With the possible exception of Mr. Safonoff, his immediate predecessor this season, Mr. Weingartner made the deepest impression of all the "star" conductors imported by the Philharmonic Society. He lacks, perhaps, something of the breadth of sympathy that is necessary to entitle any man to the proud distinction of being the greatest of living conductors, and he has not yet learned the rare art of program building, but in all the essentials of actual orchestral leadership—in the marshaling of the forces at his command, and in the interpretation of the music he chooses, of most of which he thinks so highly that he memorizes the whole score—he stands among the foremost of our day. It is perhaps better, all things considered, that the Philharmonic should continue for another year its policy of engaging several eminent conductors than that it should employ Mr. Weingartner for a whole season. But it is good news that the effort making to secure him for a series of eight concerts and eight matinee rehearsals next year with Walter Damrosch's New York Symphony Orchestra is likely to meet with success. Good progress is reported in raising the guarantee fund of \$25,000 necessary to carry out that project.

At the first of the concerts conducted by him Mr. Weingartner made his appeal as a composer also by placing on the program his Second Symphony (in E flat major, opus 29). It was interesting to hear this work under the bâton of its creator. There is some excellent music

in it, some effective writing, and considerable display of technical skill; but, as a whole, it does not give the impression of the composer's abilities created by the symphonic poems he brought to our hearing last year. It sounds for the most part as if its composer had not yet quite found himself. Some of its themes are highly pleasing, and the orchestration of the whole is gorgeous and pompous. It shows that Mr. Weingartner has sat at the feet of Beethoven, of Mendelssohn, of Berlioz, of Wagner, of Liszt, and that he has even taken a lesson from Richard Strauss.

In the Philharmonic's present list Mr. Panzner was the only conductor who had never been heard here before. The orchestra was slower to understand his desires, or to execute them, than in the case of the other leaders of the year, and the wood-wind and brass choirs at times played horribly out of tune; but in spite of these drawbacks the concert he directed was one of the most enjoyable of the season. Mr. Panzner showed that the reports which had reached these shores of his modernity and emotionality had not been exaggerated. He is an able conductor and one worth bringing here again.

### Boston Symphony Orchestra

THE February evening concert of the Boston Symphony Orchestra was by far the best it has yet given here this season, and another vote of thanks to Mr. Gericke must be recorded for again giving us some new music worth hearing and also for placing on his program the only one of Richard Strauss's tone-poems that has been played in New York this winter. This was the early "Don Juan," which came as the climax of a program of splendid music, notwithstanding the restraint of his players' enthusiasm that invariably makes Mr. Gericke's readings of

the works of Dr. Strauss present that Titan among contemporary composers as a Samson shorn. The novelties of the program were an overture, "In Italy," by the veteran Carl Goldmark, and a new serenade for violin and orchestra by the almost equally venerable Max Bruch. The Bruch serenade, which is in four movements and has the proportions of a concerto, is a decidedly pleasing composition, tho not among its author's greatest. It was played acceptably by Miss Marie Nichols, a promising young violinist from New England, and it also provided the occasion for the first appearance here of Prof. Willy Hess as a conductor.

The afternoon concert of the Boston players was made a notable treat by a well-nigh perfect performance of Rimsky-Korsakoff's beautiful and fascinating "Scheherazade" Symphonic Suite, wherein some of the glories of "The Thousand Nights and a Night" and its spirit of old romance are delineated in music, and by the first playing in New York of Eugen d'Albert's Second Concerto, with the composer at the piano. This is an effective show piece, built for his own robust and vigorous style. He played its solo parts with aggressiveness and great virtuosity.

### Music of Other Days

THE third and last for the season of Mr. Sam Franko's concerts of old music served to bring forward, among other ancient worthy pieces, a set of old-fashioned dances by Gretry (1781-1813) having a charming lilt and swing, a Mozart piano concerto—played clearly, daintily, gracefully by Mr. Jose Vianna da Motta—and Beethoven's Choral Fantasia for piano, chorus and orchestra, the precursor of the great Choral Symphony, which had not been heard here in twenty years. This Beethoven fantasia is not a work that is likely to be performed often anywhere nowadays, but it was extremely interesting to hear in so close juxtaposition with the Ninth Symphony, which had been played only a few days earlier by the Philharmonic Society under Mr. Weingartner. Mr. Franko is doing an excellent work. There is no series of metropolitan concerts more thorough-

ly artistic in design and performance or more thoroughly enjoyable than his. More success to him.

### The Russian Orchestra

WITH every concert of the Russian Symphony Society it becomes more evident that in its energetic and scholarly conductor, Mr. Modest Altschuler, New York has a young musician to reckon with. For his fourth concert Mr. Altschuler provided a program made up entirely of Russian compositions that were new to this part of the world. The best of these was a group of three short pieces by Musorgsky—a Turkish March and two excerpts, the introduction and a Dance of Persian Women, from the opera "Khovanshchina"—delightful and successful delineative music of a fascinating exotic quality. Worth hearing also was the First Symphony of Kalinnikoff, a young composer whose death four years ago at the age of thirty-five cut short a very promising career. He was not of the modern Russian school, but harked back in his music to the older classic models. His symphony contained some individual melodies and many interesting details, but its orchestration suffered by comparison with the brilliant work of Musorgsky.

### A New String Quartet

A WELCOME addition to our chamber music organizations of serious aim and commensurate capabilities is the Boston Symphony Quartet, which gave its first concert in New York on the evening of March 1st. As its name indicates, it is made up of four of the leading members of the Boston Symphony Orchestra. They are Willy Hess, first violin; Otto Roth, second violin; Emile Ferir, viola; Rudolf Krasselt, violoncello. In quartets by Tschaikowsky and Beethoven the new body showed itself possessed of fine intelligence and an abundance of vigor and tonal power. Indeed its playing was, if anything, too strenuous. But a good string quartet is not made in one season, and finish and balance will doubtless be added with time.

Two Views of the Aphrodite

### The New Aphrodite

WHEN one considers that of all the Greek masters in sculpture up to the present time only one piece, the Hermes of Praxiteles, has come down to us authenticated as an "original," it seems rash and presumptuous to suppose that we have in New York a second masterpiece from Praxiteles's own hand. But it is now claimed that the statue of Aphrodite which has recently come forth from the Manhattan Storage Rooms is none other than the original Aphrodite of Knidos wrought by the hand of Praxiteles. Can this be true?

On being confronted by such a claim one naturally takes a skeptical attitude and waits to be conquered by the evidence, remembering old frauds and new, and how Phædrus, a freedman of Augustus Cæsar, justified his imitation of the fables of Æsop:

"As certain sculptors of the age,  
The more attention to engage,  
(And raise the price) vain buyers please  
By forging of Praxiteles."—"Fables," vi.

Now that the statue has been set up to good advantage in the rooms of the National Arts Club it is clear that we have before us an excellent work of art. It is practically entire with the exception of a broken finger. It is in general exquisitely carved. The lines of the back with the sloping shoulders are perfect. The front of the body is almost equally excellent. The legs, especially the thighs, elicit praise. The feet are an exception in this array of beauty.

The owner may well feel that he has a choice possession. Even a good museum might covet it. The Florence Museum quite properly prizes its Venus dei Medici, which is hardly superior to this new comer.

But the new statue, with all its excellences, falls short of proving that it is the original of the Aphrodite of Knidos. The coins of Knidos indicate adequately that the goddess was there represented with her garment hanging from her left hand, just as she appears in the Aphrodite in the Vatican, starting back at the

thought of her own loveliness being unveiled. The entire absence of coquetry such as appears in the Medici figure stamps her as the divine one, exalted above human infirmities.

The Venus dei Medici, in whose class the New York statue belongs, as is indicated by the dolphin in the place of the drapery, is represented in an attitude of affected modesty, a feature probably introduced by a successor of Praxiteles, which shows consciousness of the presence of spectators, a feature far removed from the august creation of Praxiteles. Some might prefer the Medici type, altho it is certainly less august. The question of taste here comes in.

Suppose now that the statue in question was made as late as 100 A. D., or even as late as ten years ago, it is still fine. The dealer and the purchaser are often confronted with this possibility. Terra cottas, those fascinating products of Greek art, are in modern times so cleverly reproduced as almost to deceive even the very elect. The same may be true to a less degree of a statue. Some of the cleverest experts of the day have been deceived and led to accept a forgery as genuine, to the great delight of their rivals. The deft-handed guild has not entirely passed away. One success is enough to tempt to greater attempts. If a really good thing is produced the fact that its value is increased a thousand fold by its being supposed to have been made in ancient times is sure to lead to the finest shifts to hide its real date and performance. Before the New York Aphrodite can take its place as a product of the fourth century B. C. these two points must be settled by diligent inquiry: Where did it come from? and, What is its material?

The first question will probably be met by all the turns and devices in the repertoire of Homer's Old Man of the Sea. The answer to the second question will be easy for an expert, provided that he may be allowed to use his hammer. The material *appears* to be neither Pentelic marble nor Parian—certainly not Parian from the old well-known quarry. Praxiteles can hardly have worked in any other material than this. It must be conceded, however, that a sculptor who attempted to palm off a modern statue as

ancient would have been very unlikely to choose a material that would at once raise suspicion as to its antiquity. The peculiar finish of the surface does remind one of the toning which Praxiteles gave to his statues. But it is quite possible for a modern sculptor to do something like that.

RUFUS B. RICHARDSON.

## Architectural League's Exhibition

ALTHO the twentieth annual exhibition of the Architects' Society was as varied as ever in the works shown, yet the arrangement of the galleries was not as attractive as in most other years. Less was done with sculpture and plants than usual and the first sight of the galleries was disappointing.

The works themselves, however, included many of great interest. At this exhibition the American architects show each year an ever increasing breadth in the scope of their work, and few are the plans now which narrowly consider only the plot on which a building is to stand. Gardens, environment, details for every imaginable outdoor and indoor need, are composed with a view to unity of effect in the ensemble. This year we were made particularly to feel the civic interests of the architects, for the plans for the improvement of New York, submitted by the commission formed for that purpose, formed a group by themselves. These included new river front plans; ways of solving the problem of crowd-distribution at the terminals of the new East River bridges; the plan for a change of grade at Forty-second Street and Fifth Avenue; the continuation of Madison Avenue below Twenty-third Street to Broadway; improvements of Delancey Street, Fifty-ninth Street, Seventy-second Street and Riverside and One Hundred and Eighty-first Street; the erection of a reviewing stand on Fifth Avenue in Madison Square, and the creation of a park on Blackwell's Island.

Plans more certain to be carried out are those by Carrère and Hastings for the ferry terminals in Staten Island; by Kenneth Murchison for the D., L. & W. R.R. terminal at Hoboken, and the pre-

liminary study by Warren and Wetmore and Reed and Stem for the new Grand Central station.

A beautiful little building for the free public baths was designed by Aiken and Brunner. No very startling new skyscrapers appeared. A design by Renwick, Aspinwall and Tucker for a massive twenty-two-story structure is moderate, but unless well treated as to materials will be bleak.

The steady growth of the colleges is shown by interesting new plans for buildings at many of them, including Rich's plans for an expanded Barnard.

English styles predominate for schools and the smaller churches, and generally the pseudo-classic of France for small banks and libraries. The cathedral for Denver is Perpendicular Gothic, with the small English portals and great window in the west front and tower over the crossing after the manner of York. A more interesting design is that by Maginnis, Walsh and Sullivan for St. John's Church, Cambridge, which is a kind of Romanesque, with a square tower at the end of one transept.

An impressive mausoleum was submitted by Casey and Dillon, in competition with others for the McKinley memorial at Canton; also MacNeil's McKinley monument for Columbus was shown in a small model.

Landscape gardening takes cognizance now of everything as in the plan shown of "Conyer's Manor," near Greenwich, by Donn Barber, and in the treatment of the water tower as a point of interest in the garden for Colonel Harvey's place at Deal. The art of model-making in pasteboard allows houses with their gardens to be shown "in the full round" most delightfully.

E. H. Blashfield's large lunettes for the State Capitol at St. Paul must be among the finest of American wall decorations of a symbolic character. The small sketches and photographs only of the finished works were shown. "The Discoverers and Civilizers Led to the Source of the Mississippi," and its companion, "Minnesota," are the dignified and beautiful themes.

Kenyon Cox, too, was at his best in a formally composed lunette for the same building, which was shown by the

photograph to be well fitted to the classic details of its surroundings. His working drawings are always admirable feats of draftsmanship.

Howard Pyle's "Genius of Art" was a notable canvas, disproving most of his pet theories and suffering through a certain lack of taste in types often noticeable in his work. Fred Dana Marsh had two of his strong "modern occupation" pictures—one, the "Rivettors," a thrilling enough night scene.

Among the younger men Hugo Ballin's work has a fineness of color feeling and no unpleasant mannerism. Guy Gaylor Clarke showed a delightful panel called "The Rising Moon," in which maidens in a soft landscape moved gracefully but with a certain personal expression. Lichtenauer is experimental, but attains only the commonplace in color.

Daingerfield has painted a decoration for St. Mary the Virgin's which showed serious study. Turner's "Burning of the Peggy Stewart" for the Naval Academy is frankly realistic.

Of the lesser arts, some panels in Grueby Faience, by Lee Boutellier, one showing a white peacock on a soft, green ground, and the other a yoke of oxen drawing a loaded cart, were admirable. The Rookwood pottery showed an ambitious design for a fountain. Glass mosaic mantels by O. Giannini; some interesting "peasant embroideries" by Samuel Howe hung rather incongruously near the great iron doors for George Vanderbilt's New York house; many good designs for book plates and covers, textiles, wall coverings and furniture made up the minor part of our most interesting annual exhibition.

## Portraits by James J. Shannon

At Knoedler's were shown for a short time at the beginning of the month six of the most interesting portraits New York has seen this winter. At Royal Academy exhibitions for several seasons every portrait that held attention generally proved to be by Shannon if not by Sargent. This is not to say that Shannon is like Sargent. He is less brilliant in nearly every case, but never less strong

and nearly always more sympathetic. Sargent painting Phil May in a "pink" coat would have given us a brutal *tour de force*. Shannon has his man looking out of kindly eyes that make you know and like and understand him at once and accept red nose and all because you know he could and did do fine things. Then to paint a beautiful golden-haired, eager-faced child like "Lady Diana Manners," and escape making her merely pretty and pink, is to be capable of handling subtleties of beauty as few can. "Marjorie" was as rhythmically composed as ever the angles of a frame allowed, but yet without any strain for effect. Shannon's color is pure and he uses it with judgment and enjoyment and just the right amount of restraint to give force to his freer passages.

### Frances E. Willard

THE day of February the 17th marked an epoch in the history of the Capitol of the United States: the admission of a woman, not to the floor of the House or Senate, but as a statuesque figure in our small American Pantheon, Statuary Hall. It is more than forty years since the new hall of the House of Representatives was built, and the question came what to do with the old one. The Senate Chamber was just about big enough for the Supreme Court; the old House of Representatives seemed unfit for any legislative or executive business, unless it were cut up into committee rooms. It was Senator Morrill who first made the suggestion that it be set apart as a national statuary hall, and that each State be invited to provide two statues of its illustrious citizens to be placed therein. Twenty States have responded, some with one and some with two statues, until now there are thirty-four. Thirty-three of them are statues of men, and the thirty-fourth is the statue of a woman. Illinois had already presented one of her statues and Gen. James Shields had received the honor. There were many statesmen to choose from for the second—Grant, Lincoln, Douglass, Logan, Trumbull and others; but the legislature of Illinois, February 28th, 1889, passed an act appropriating money and providing com-

missioners to secure a statue for Frances E. Willard. The sum named was nine thousand dollars. The commissioners chose Helen Farnsworth Mears as the sculptor, so that the statue of Miss Willard is the statue of an American woman by an American woman.

Miss Willard's statue has been placed on the right of that of George Washington. Her fellow citizen, Gen. James Shields, the other representative of the State, is on the opposite side of the hall. There are already enough modern statues in the hall to furnish a contrast in the way of garb to the early Revolutionary or Colonial figures, and there are enough jurists in their robes and there is Father Marquette in his priestly gown, so that a woman in modern attire does not seem such a startling innovation; it even furnishes a gentle relief and contrast to the startling military brusqueness of Ethan Allen and the picturesque costumes of the early pioneers.

The Frances E. Willard Statue.—From Photograph by Bell. Copyright, 1905, by Miss Anna A. Gordon, Evanston, Ill.

## The Independent's New Covers

EVER since THE INDEPENDENT changed its size to the magazine form the question of getting satisfactory cover designs has been one of the editorial vexations. We have felt that our varied and timely "Table of Contents" was the most attractive thing about THE INDEPENDENT, and, accordingly, that it should be set in the most prominent place in the paper, which, of course, is the cover. Moreover, as the table of contents must of necessity be the last "copy" to go to the printer, we have had no time to print the cover in more than one color.

The design we are using now in our

regular numbers was drawn by Ernest Haskell, and we hope it pleases our subscribers as much as it does us.

In order to secure a great variety of covers for our special monthly numbers this year we recently offered a prize for the most suitable drawing submitted to us. Many independent artists and several of the art schools of the country took a great interest in the contest, in some cases giving out the specifications as class exercise. Altogether 79 designs were submitted, and from these we have selected as most appropriate and artistic

the large design by Miss Anna Lent, of Metuchen, N. J. The other ten designs herewith reproduced were considered the next best among those submitted, and all of these we expect to use during the year.

The suggestion having been made that the competitors in the city and nearby should have an opportunity of viewing the designs, the drawings were accordingly numbered and arranged by a hanging committee, which encountered the usual difficulty of placing each picture "on the line." Compromises resulted in the "skying" of certain designs, just as it happens at the Academy. However, when the first annual exhibition of THE INDEPENDENT cover designs reached a stage corresponding to the "varnishing day" over one hundred artists, young and old, gathered to see and to criticise. Next year we hope to repeat the competition and to invite all our readers—may their tribe increase—to compete, view and criticise.

## The School of Design Exhibition

An instructive exhibition, which began on March 6th, was given at 576 Fifth Avenue by the New York School of Design for Women. Designs for wall paper, silk, book covers, stained glass, metal work, book plates and lace were on view. Most of the included work was highly meritorious.

## The Drama

THE most interesting dramatic events would be missed by one who followed the advertisements and went with the crowd. It is the limitation of the theater that a play to be successful must be immediately and continuously popular. This is why, as Bernard Shaw says, the stage is the most conservative and conventional of all our social institutions. Any decided novelty is unpopular at first and must win its way slowly and insidiously into favor. Dramatic experimentation is costly and an unpromising way of spending money. Therefore plays of originality and promise for the future have to be sought for in out of the way theaters or at matinees on odd afternoons. It is a

very encouraging sign of possible advance in this most sluggish of the arts that several such independent ventures into the unusual have been attempted in New York recently. The presentation of new plays by Gorky, Yeats and Ibsen is enough to make the past month noteworthy. These, together with Forbes Robertson's society drama, "Love and the Man," are the plays we would call our readers' especial attention to.

The German theater at Irving Place has the double advantage of a more intelligent company and a more intelligent audience than the American theaters; therefore we often find successfully given here plays which would be impossible elsewhere. An example of this is Maxim Gorky's "Nachtsyl," which was forced off the stage in London, and even in St. Petersburg was not a success. Since we published recently an analysis of the play by Prince Kropotkin (Vol. 57, p. 1381), it will not be necessary to discuss it fully here. At the Irving Place the stage setting was so realistic and the acting so natural that one seemed to be admitted not merely into the cheap Russian lodging house, which is the only scene of the four acts, but into the very souls of the degenerate and brutal men and women who refuge there. These besotted wretches, victims alike of social conditions and their own vices, spend their lives in quarrels and in making each other miserable. Into this morbid and depressing atmosphere comes the Pilgrim, an old man of Tolstoyan appearance and philosophy, one of themselves in social status, but differing from them in possessing the inspiration of hope and brotherly love, which he imparts to all the lodgers of the dosshouse in so far as they are capable of receiving it. To the wife dying of consumption he talks of a heaven where people will be friendly to her; in the actor, fallen through drink, he inspires a belief in his own will power till he rejects the brandy pressed to his lips; he listens sympathetically to the hysterical girl as she retails the plots of silly novels, the reading of which is her only outlet into an ideal world; he persuades the thief to go to the frontier in Siberia, where he can lead a new life away from the temptations of the city. The last act of the play, after the Pilgrim has left, is most

interesting, for it shows how each one has received in his own way some inspiration from him, altho each has distorted and perverted the simple philosophy of life he taught.

Three of the plays of William Butler Yeats, one of the leaders of the new movement to give Ireland a national literature and drama, as presented by Margaret Wycherly and her company, were more favorably received in New York than in Boston. Miss Wycherly takes three very different parts with remarkable intelligence, but her articulation is so indistinct that she often cannot be heard at any distance from the stage. The first play, "The Land of Heart's Desire," is a fairy tale of no especial interest, but the other two, teaching respectively patriotism and faith, are interesting revivals of the symbolic drama. In "Cathleen Ni Houlihan" Ireland appears as a poor old woman in a peasant's cottage. The father gives her a penny and the mother a sup of milk, but the son leaves his home and bride to follow her at the peril of his life, for to him she seems a radiant maiden who walks like a queen. The last play is a morality after the manner of "Everyman." A wise man, who by his arguments has destroyed the faith of his family, his students and his neighbors in hell, purgatory and heaven, "the three fires, the fire that destroys, the fire that purifies and the fire that glorifies," is granted by the angel of death a respite of an hour in which to save himself from destruction by finding some one who still has faith. It is Teigue, the fool, who rescues him; he knows there are angels, because he has seen them.

Ibsen's final play, "When We Dead Awake," was presented for the first time in America at a matinee at the Knickerbocker Theater March 7th. In this epilog to his works Ibsen has included and combined, like Wagner in his overtures, all the dramatic motives of his series of problem plays. It is overloaded with symbolism and it requires more study than this company has given it to bring out its full meaning, which in several places was missed entirely. Miss Florence Kahn was moderately successful in the exceedingly difficult part of Irene, once the artist's model, but since dead, and Miss Dorothy Donnelly did much

better work in this play than she did last winter in "Candida." The two male characters were poorly given; the bear-hunter, Ulfheim, especially was altogether too stagey for Ibsen. In this play Ibsen has departed from his later custom of preserving the unity of place. The first act is on the seacoast, the second in the highlands and the third in the mountaintop. In this last act of his last play Ibsen gives the stage carpenter and stereopticon man their only chance to show what they can do, and they have improved their unique opportunity to give a beautiful mountain view, storm and avalanche. The thesis of the play is Ibsen's old one, that art for art's sake is nonsense. Fullness of life is the greatest thing in the world, and the way to attain it is through the freedom of the individual. Irene demanded of Rubek abstract adoration instead of love, and because he acquiesced in her wish and thought more of his statue than of his model they both lost their souls and "died." When they meet again after many wasted years it is too late to retrieve the mistake of their youth and begin life anew. "When we dead awake we see that we have never lived." Like all of Ibsen's dramas it states a problem, but does not solve it. It is left to the audience to decide whether it is better to ascend to the sunlit mountain peak with Rubek and Irene and perish or descend and live in the valley like Maia and Ulfheim.

Another Ibsen play rarely seen is "The Enemy of the People," which has been given by the Progressive Stage Society, an association formed for the purpose of using the drama for the propagation of radical and socialistic ideas. It is somewhat surprising that a society which is so socialistic in its tendencies should have selected as one of its early efforts the most individualistic play of the most individualistic thinker of our times, a play that teaches that "the strongest man in the world is he who stands most alone." A popular movement, such as that of the Progressive Stage Society, to bring the theater into touch with real life and make it a factor in reform is to be encouraged; therefore until they secure more practiced players the less said about it from an artistic standpoint the better.

A somewhat similar effort, tho with-

out political purpose, to give good plays at low cost is the People's Institute, which is endeavoring to make arrangements to present the Shakespearean drama to school children at 25 cents a seat. It is earnestly to be hoped that Mr. Charles Sprague Smith may find it practicable to give at so low a cost so satisfactory a performance as that of "The Players" at the Carnegie Lyceum last Saturday. With a good Mercutio, a young and pretty Juliet and a presentable Romeo, what does it matter if the scenery is but little better than Shakespeare's own? A greater pleasure can hardly be imagined than to play "Romeo and Juliet" to an audience of Juliets, to 600 fourteen-year-old girls. But American high school girls are not so romantic as they should be, and handkerchiefs were more in use to choke giggles than to check sobs excited by the love and woe of Mrs. Montague, *née* Capulet.

At the Berkeley Lyceum, the scene of so many other interesting dramatic experiments, Mr. Frank Keenan is giving one-act plays after the manner of the Theater Antoine of Paris, all staged in excellent taste and well acted. In the first of these a burglar entering a front door at midnight is met "At the Threshold" by a man eloping with the mistress of the house. With the aid of a revolver and a few epigrams he forces the greater thief to give up his booty and rescues the woman from herself. The whole conversation is carried on in whispers and undertones, but every word can be heard with perfect distinctness, and the action is natural and effective in its restrained power. The second play, "Strolling Players," an adaptation of "I Pagliacci," gives an opportunity for the display of tragic acting by Mr. Keenan and Miss Filkins and of seventeenth century costumes by the rest of the company. The third is a poorly written farce taken from Poe's tale, "The System of Dr. Tarr."

"Abigail" is a sentimental drama very much like "Merely Mary Ann," but Miss Grace George, tho charmingly natural, is not the equal of Miss Robson in emotional power. The best work is done by Miss Louise Closser, who was the making of "Candida" by her fine interpretation of Prossy. Abigail is a New England girl, brought up in the

strictest and quietest manner, and thrown into a great city to make her own way, first living as a bookkeeper on the coast of Bohemia and then by an unexpected bequest of \$10,000,000 suddenly becoming a society belle. There is a pretty love story and the play is deservedly popular.

For a light and laughable comedy there is nothing in the city better than "Mrs. Temple's Telegram" at the Madison Square. It has the very unusual combination of three good actors, Messrs. Morris, Worthing and Wise, who know how to use their faces to make a point instead of depending upon their legs and arms, as do most of our fun-makers. The play is called a farce, but deserves a better name. Only at one or two points, which could easily be toned up, does it drop into what ordinarily goes for farce in this country.

A good example of the ordinary American farce is Du Souchet's "Who Goes There?" at the Princess. There are four engaged couples and four doors for them to fly out of at inopportune moments, which affords more than the usual chance for misunderstandings and general bewilderment. Mr. Perkin and Miss Swiggert are the only ones showing any dramatic ability.

The dramatization of pictures has succeeded to the dramatization of novels with dubious results. McCutcheon's "Bird Center Cartoons" was a failure, "Buster Brown" is a financial success, and now Augustus Thomas has put on the Gibson pictures of "The Education of Mr. Pipp." Except for the pleasure of seeing in three dimensions the people whose acquaintance we made when they were in two, the play is of no interest, nor are the characters any more real in the round than when they were on paper. The scenes are strung together by a very incongruous melodramatic plot and seasoned with some funny French phrases.

Mr. Forbes Robertson, one of our really great living actors, opened his American tour in New York this winter in H. V. Esmond's problem play, entitled "Love and the Man." The play itself is above the average of its kind, but is more of the type in vogue ten years ago, when the problem play was at its height of popularity. Mr. Robertson, it goes without

FORBES ROBERTSON

saying, made the most that could be made of his part. He always seemed to have great reserve power—one of the surest attributes of great acting. His cast was excellent, and, tho the play may not be absolutely sound in its philosophy or of such intrinsic merit as to be interesting if played by an inferior company, it is decidedly worth seeing by all broad-minded people. It is one of the noteworthy plays of the season.

"The Prince Consort" is one of those society plays adapted from the French which, if it isn't very good, is certainly not bad. All the characters in the play are royalty or members of the court, and the play probably draws its inspiration from the life of Queen Wilhelmina and her subject husband, while the old father

of the Prince Consort is evidently an imitation of the old reprobate, the ex-King of Servia. Miss Ellis Jeffreys, the star of the play, is an English woman of typical British beauty and histrionic capacity. She is a good actress and almost a great one. The play is worth seeing.

Last month we noticed the revival of Shakespeare's "The Taming of the Shrew." This month Miss Ada Rehan appeared in the revival of "The School for Scandal," and, altho she is considered a better Katherine than Lady Teazle, the presentation of "The School for Scandal," as a whole, was better than "The Taming of the Shrew." Miss Rehan looks more her part in the first named play, and the cast find Sheridan more to their capacity than Shakespeare. The scenery, however, was still execrable.

Henri Dumay's modern society comedy-drama, "Mademoiselle Marni," in which Amelia Bingham is starring, is not so happily named as was Miss Bingham's former play, "The Climbers." It affords, however, a vehicle for some more than ordinarily beautiful stage settings. The action is well conceived and works pleasingly up to the climax, wherein is pictured some heroic forgiveness for wrongs with which Acts II and III are concerned, and which easily hold the attention without flagging. Max Freeman's portrayal of the stock speculator who supposed himself ruined, but who discovers that he is a winner after all, lends a pleasing comedy touch to the tragic element in the play.

"Richter's Wife," by Julie Herne, is the first essay in play writing by a young girl. As produced at the Manhattan Theater the play was well received and attracted favorable comment. "Richter's Wife" is lacking in humor, tho it is strong emotionally.

# The Return of the Hosts

BY ARTHUR LLOYD

[The subjoined poem was suggested to me by the perusal of a short poem by Baron Takasaki on the death of his son in action before Port Arthur. This little poem (which I have included in my volume of "Imperial Songs," just published) was written after the Baron had been to the station to receive the mortal remains of his son, and runs as follows:

"This day I went to meet his poor remains,  
An empty shell, mere ashes, for his soul  
Stays by our ships until the Rising Sun  
Has marked Port Arthur's Fortress for our own."

It is the constant belief of the Japanese, in spite of all their outward covering of materialism, that the soul of man is immortal. The life after death is a continuation of the life on earth, and the predominant features of a man's character reproduce themselves in his hereafter, so that he who has been a warrior upon earth remains a warrior in the spirit world and delights not only in witnessing but in taking a part in the battles of his countrymen whom he has left behind. The Japanese warrior, therefore, finds himself in the hour of battle surrounded, as Elisha and his servant were, by chariots, horses and warriors. The heroes of yesterday become the "gods" of to-day, and the Japanese gets as much strength from this conviction as the most fervent of Christians can derive from his realization of the great truth of the communion of saints. The central shrine of this worship is the shrine of the *Shokonsha* or *Yasukunijinja*, which crowns the Kudan Hill in Tokyo. Here the souls of the departed assemble from time to time to receive the worship and adoration of their fellow countrymen, who seek to give them pleasure by exhibitions of wrestling, fencing, racing and other martial sports given as it were in the divine Presence. I have assumed in the following poem that the fall of Port Arthur has set the spirits free from their warlike cares to return for a while to the Patriot's Shrine.]

Sounds like the tread of martial feet  
Marching along the silent street  
That leads to Kudan's Patriot Shrine,  
With ordered ranks and leveled line,  
With ghost-like tramp and hollow cheer—  
What are these sounds that greet my ear?

"We fought," they say, "we fought and died,  
By cold Liautung's frozen tide,  
On hot Liautung's burning plain,  
Some on land, some on the main,  
Some in blocking the mouth of the Port,  
Some by the Three Hundred Meter Fort,  
Some in the trench knee-deep in blood  
Where Russians at bay with their muskets  
stood;—  
We fought, we fell, we would not retire—  
And at eve the lurid Funeral Pyre,  
Blazing sullenly through the night,  
Effaced the traces of each day's fight.

"We fought, we fell, our bones were burned,  
Our spirits to their posts returned,  
Kept ghostly guard on Arthur's hight,  
Drew ghostly swords in ghostly fight,  
And helped our comrades maintain the right.

"But now that the Flag of the Rising Sun  
Flies o'er the Fort, our work is done;  
We've come to the Patriot's Shrine to rest  
In the midst of the Heroes ever blest.

"We fought, we died, the life God lent  
We returned to God, we're well content.  
Not Hideyoshi's self can boast  
Of doughtier deeds than Nogi's host,  
Or Togo's sailors. We take our place  
Among the foremost of our race.  
At Duty's call our lives we spent,  
We have our rank, we're well content.

"Content to leave home, child and wife,  
And parents dear to us as life?  
Content. God rules in Heaven above,  
Our Sovereign's heart is a heart of love,  
And though the present hour be black,  
We mean to watch by hearth and home  
To see that no misfortune come,  
And with the help of the Power that reigns  
On earth, and on the heavenly plains,  
We'll see to it that none shall lack  
That walk in the ways of true Japan,  
Duty to Emperor, God and Man."

IMPERIAL UNIVERSITY, TOKYO, JAPAN.

# Literature

## Thwaites's Early Western Travels

THE last five volumes of *The Early Western Travels*\* are quite as valuable as the first three. Cuming's book was the work of a cultured and refined Englishman, who was enough of a man of the world to take things as he found them and to omit the superficial criticism common to travelers' books of that day, viewing the West as "a country in its infancy, which from its rapid improvement in a very few years will form a wonderful contrast to its present state." The disadvantages are not slurred, nor the crudeness and vulgarity condoned, but there is charity in his prophetic vision of its future. His picture is of a backwoods life not in its first stages; the land is cleared and there is rude abundance and plenty, social intercourse and some of life's amenities. Still there are the inherited traits of pioneer days—the coarse and rude manner of living, the heavy drinking and boisterous play of the younger men, the fighting, uncivil and boorish bucks of the frontier. Cuming sees not only these unpleasant things, but also the democratic spirit and love of fair play, the hospitality for new ideas and the almost fanatic zeal for schools and churches. The virulent nature of political life is frankly drawn and particular note is taken of the political leadership assumed by the lawyers. We are, on the whole, much indebted to this frank observer for seeing the whole picture with unprejudiced view.

Bradbury, the Scotch naturalist and traveler, is less interesting to the student of history, but has more for the ethnologist and nature student. His observations were taken near St. Louis, along the Mississippi, and upon a long expedi-

tion up the Missouri with the Astorian expedition. The principal portion of his book deals with a region which at his time was beyond the pale of American settlement. In one part, however, he gives a fine summary of conditions in the Middle West, couched in an admirable spirit and of especial value as a picture of conditions at the close of the War of 1812, noting the rush of immigration thence at the close of hostilities. Next in value is the author's descriptions of Western Indians of this time, their dwellings, farming methods, implements and weapons, games and dances, and tribal relations.

Brackenridge was an American, born and educated in Pittsburg. He attained some distinction as a traveler, statesman and jurist, writing several books besides his *Journal*. His observations were made in much the same region and about the same time as Bradbury's. He had more of the artist's and less of the scientist's temperament, and his descriptions of the great Western plain are striking pictures of their appearance before the coming of the white settlers.

The narrative of Franchère has a charm of style which the editor thinks second only to that of Irving's, who used Franchère's account freely in his *Astoria*. In a "De Foe-like" style he tells of his observations while on the expedition organized by John Jacob Astor to found a fur trading post at the mouth of the Columbia. Franchère was a Canadian, well born and of a simple, charming character, who, after returning from his adventures, delighted his companions with a verbal recital until he was persuaded to write down his story of "moving accidents by flood and field"—at first merely for the perusal of his family circle. There is much interesting historical information concerning the War of 1812, but the main interest centers in descriptions of the Columbia region.

Alexander Ross, whose *Adventures* are reprinted in the seventh volume, was another member of the Astorian expedition. He was a Scotchman tempted to

\* EARLY WESTERN TRAVELS, 1748-1844. Edited by Reuben G. Thwaites. Vol. IV. Cuming's Tour to the Western Country (1804-1809). Vol. V. Bradbury's Travels in the Interior of America (1809-1811). Vol. VI. Brackenridge's Journal up the Missouri (1811) and Franchère's Voyage to the Northwest Coast (1811-1814). Vol. VII. Ross's Adventures of the First Settlers on the Oregon or Columbia River (1810-1813). Vol. VIII. Buttrick's Voyages (1812-1819). Evans's Pedestrious Tour (1818). Cleveland: The Arthur H. Clark Company. \$4.00 per volume.

America and then drawn into the Astor enterprise. When Astor sold out to the British company in 1813 Ross went into their service and later ranged the region now occupied by the States of Montana and Idaho. When he afterward returned to Canada he had leisure to write out the story of his life in the Northwest. It is graphically told. The treachery of the Indians, the perils of forest ranging, all the contrasts between civilized and wild environment are vividly drawn.

The next volume, with Buttrick's voyages and Evans's tour, takes us back to the Middle West in 1818-19. Western New York, Ohio, Kentucky and the lower Mississippi are seen in a new stage of progress. Buttrick's own adventures are the chief interest, but as these are typical of frontier experiences at that time, they have real historical value. Evans, the second author, gives us one of the best pictures we have of early Michigan Territory, Indiana and Illinois. Both of the narratives seem wisely chosen, as well because of their rarity as their real worth. Thus far the whole series of *Early Western Travels* is worthy of hearty commendation.

### An Artist's Love Story

THIS love story\* is told in the letters of Sir Thomas Lawrence, Mrs. Siddons and her daughters to their mutual friends. The volume is handsomely illustrated with lithographs and *fac-similes* taken from the drawings and portraits painted by the great artist himself. But its peculiar value consists in the light it casts upon an age when people cultivated and enjoyed their emotions more than they did wisdom or intelligence.

A hundred years ago Mrs. Siddons was the greatest actress in England and Lawrence was the most popular portrait painter. He was intimate with the Kemble family, and in the earlier part of his career a *protégé* of Mrs. Siddons, who, indeed, retained to the last an affection and admiration for him that seems inexplicable when we consider his treatment of her daughters.

He was first in love with Sally, the

eldest daughter. This courtship, however, did not progress to the point where passion reached definition in the plainness of speech; but it was still in that initial stage where lovers approach one another ethereally, so to speak, through the tender telepathy of a glance or a symbolic smile, when Maria, the younger sister, appeared upon the horizon of Lawrence's fickle fancy. Sally faded from the scene like the little ghost of love who failed of confirmation, and his engagement to Maria was announced. But at the end of a year, to the amazement of Mrs. Siddons and at least one of her daughters, he made a tragic declaration of the return of his affection for Sally, and vowed that if he were not released from the other he would commit suicide.

Maria died of consumption soon after, but not until she had extorted a promise from Sally that she would never marry Lawrence. This vow was kept more through the intervention of Mrs. Siddons than through her daughter's determination. She died a few years later of the same malady which had proved fatal to her sister. Lawrence never married, and was known to the end of his days as "an old flirt."

Types of young femininity do not vary much from age to age, and it is not difficult to account for the Siddons girls. Maria was one of those exotic creatures whom the very fever of approaching decay thrust quickly into bloom. Nature hurried her demand for the fulfilment of her destiny in love like the first frail spring flowers that blossom and die in a day. Such people can have no compassion, no restraint. Their time is too short for patience or consideration. They do not know it, but nature knows it, and they instinctively hasten through the seasons of love and life which lie between them and the grave. It was some such occult force as this which caused Maria to blossom with hectic radiance in the path of her sister's lover. And here we come upon the second psychic phenomenon in the tale. Lawrence's desertion of Maria is usually explained on the score of his natural inconstancy. But this too general characteristic of both sexes is not a sufficient explanation. Lawrence and Maria had reckoned too far without Sally. Some people have a

\* AN ARTIST'S LOVE STORY. Edited by Oswald Knapp. New York: Longmans, Green & Co. \$3.50.

way of being blameless that is diabolical in its effects upon others. Sally belonged to this class. She made her sacrifice and set into motion a moral law which must bring the truant lover back to her feet. And as such a law acts more quickly upon a sensitive, inconstant nature than one better poised, she did not have long to wait. She exemplified that gentle, virtuous feebleness which is stronger in its claims upon a man than any affection. She had been right and helpless in the face of his ignoble desertion. She was gifted with a kind of honorable weakness which cried to him. She endured his desertion apparently without a protest. She submitted to parental surveillance without resentment, and remained feebly constant to a man who was proving himself inconstant to half the women in London society. The effect upon him was almost hypnotic. And this proves what few understand, but many have observed, that it is the women who have "no spirit" who win most from men, and are least admired by men.

The morbid sensitiveness, egotism and selfishness exhibited by Lawrence in his twin-courtship is disgusting, and we are amazed at Mrs. Siddons's patience with a man who made her own daughters the victims of his vanity. But we should remember that people did not comprehend the biology of love as they do now. It was still a romantic passion, which entitled men, at least, to a certain pose and to the license of a limited madness. Besides, Mrs. Siddons had acted tragedy with so much sincerity upon the stage that doubtless she believed Lawrence when he threatened to commit suicide, first at the feet of one daughter, then at those of the other. And so the artist is not so much to blame for being a cad, ready to ogle or bully a woman. The fashion of the times has much to do with the fashion of the man.

### Japanese Imperial Songs

We have published several of Mr. Lloyd's translations of poems of the Emperor,\* not merely because of the prominence of the author and the special inter-

est of the public in things Japanese, but because they seemed to us to demand attention from their literary merit. When we consider how much of its real essence all poetry loses in translation and, further, how utterly unlike ours are the Japanese poetical forms and how foreign to us are their symbols and allusions on which poetical effectiveness is based, it is remarkable that these poems preserve so much of their spirit as to enable us to feel their power and appreciate their artistic merit. Japanese drawing, which at first appeared to the rest of the world so uncouth and insignificant, has profoundly modified our ideas of design, and it is quite possible that the study of Japanese poetry will exert as important and as beneficial an influence upon our own. The Japanese artist, in either words or pictures, places more confidence in the reader or observer than we do. He suggests by a few seemingly careless lines or words what a Western artist thinks he must explain and delineate.

The classic form of the Japanese poem contains 31 syllables and presents a single simile or simple thought. In his translations Mr. Lloyd has kept as far as possible the compactness and delicate sketchiness of the originals, as the following examples show:

Those peaceful battleships,  
Riding at anchor on the silent waves,  
Without a thought of foemen, seem to shew  
A year of peaceful progress.  
—By the Empress, *New Year's Day*, 1903.

Importunate mosquitoes, light of wing,  
With trivial song and sting disturb my rest  
This sleepless night.—  
—On what dark lonesome field,  
'Midst what great hardships, lie my soldiers brave?  
—By the Emperor, *Summer of 1904*.

There is no second way whereby to show  
The love of Fatherland.  
Whether one stand,  
A soldier under arms, before the foe,  
Or stay at home, a peaceful citizen,  
The way of loyalty is still the same.  
—By the Emperor.

The foe that strikes thee, for thy country's sake,  
Strike him with all thy might.  
But while thou strik'st,  
Forget not still to love him.  
—By the Emperor.

\* IMPERIAL SONGS. *Poems by their Majesties the Emperor and Empress of Japan, and Other Imperial and Exalted Personages, Done Into English by Arthur Lloyd, M.A., Imperial University of Japan.* Tokyo: Kinkodo Publishing Co. Yen 10 (\$5.00).

*Three Poems by Baron Takasaki, Poet Laureate of the Court.*

THE PLUM BLOSSOMS (1904).

Our hardy plums this year have dared to bloom  
Amidst the snow. Our hardy regiments  
Bloom valiantly amidst Manchurian snows.

THE PEASANTS VOLUNTEER.

Now will the patient ox think of the time  
When he, too, was a warrior and with horns  
Blazing wrought havoc in the foemen's  
tents.

ON MEETING HIS SON'S REMAINS.

This day I went to meet his poor remains,  
An empty shell—mere ashes; for his soul  
Lingers behind the body, till our flag  
Has marked Port Arthur's fortress as our  
own.

The book contains the original and translation on opposite pages and is artistically bound in purple silk brocade in the Japanese style, a form which makes the volume a very suitable and attractive gift book. A few specially bound and fac-simile copies are for sale by the author (13 Igura Rokuchome, Tokyo). The profits from their sale will be given to the Empress for the Red Cross work.

## The Encyclopedia of Missions

THE revised edition of the "Encyclopedia of Missions"\* has been eagerly anticipated by a large circle of students of foreign missions. In the place of the two-volume edition of thirteen years ago, with a total of 1,340 pages, the new edition of one volume contains 851 pages of about the same size. This gives to the new encyclopedia less than two-thirds of the amount of matter contained in the first edition. An encyclopedia of foreign missions is of inestimable value, and increasingly so as missions come to the front and are the object of study in a widening circle of students and friends of the cause. This new substantial compendium of accurate facts of missions will fill a place of well recognized need.

We commend the general appearance of the work, its clear typography and

evidence of careful editing. Data relating to some 5,000 cities and towns and villages which are of present importance to the missionary enterprise are here given. Many of these places are not mentioned in general encyclopedias, nor are they found in general atlases. There is also a number of special articles of unusual value, prepared by experts upon such topics as "Apostolic and Early Christian Missions," "Confucianism," "Buddhism," "International Science of Missions," "Industrial Training," "Home Missions," "Geography of the Expansion of Christianity," "Motive of the Missionary Enterprise," "Contributions of Missions to Science," "Medical Missions," "Relief Work of Missions," "Organization of Missionary Work," "Objections and Criticisms," etc.

Another excellent feature is the bibliography that follows special articles upon countries, mission boards, religion and races, as well as some other subjects. These show careful preparation, and are brought down to date. The frequent use of cross references, even in the body of the text, is to be commended and adds value to the work as a book of reference. There is much in this new and admirable encyclopedia to commend. The appendix contains a directory of Foreign Missionary Societies, chronological tables, Bible versions, statistical tables, etc. The reduced cost, owing to its reduced size, will make it more available for popular use.

We must say, however, that in the face of the marvelous missionary expansion of the last twelve years, it is disappointing to review the latest and only modern missionary encyclopedia which contains so much less material than its predecessor and is issued without maps and without an index. No one felt that the edition of thirteen years ago contained more than it should. The intervening years of unusual activity ought to have added much. We know that mission maps are expensive, but still they are of the utmost importance to the full comprehension of mission facts and operations. The preface says maps were omitted because Dr. Beach's "Geography and Atlas of Protestant Missions" has had such wide circulation. There would be little call for encyclopedias of any kind did they contain only what cannot be

\* THE ENCYCLOPEDIA OF MISSIONS, DESCRIPTIVE, HISTORICAL, BIOGRAPHICAL, STATISTICAL. *Second Edition.* By Rev. Henry Otis Dwight, LL.D., Rev. H. Allen Tupper, Jr., D.D., and Rev. Edwin Munsell Bliss, D.D. New York: Funk & Wagnalls Co. \$6.00.

found elsewhere. The absence of an index is inexcusable. Better to have delayed the issue six months than to have the book come out in a form that must greatly reduce its actual working value. The most ordinary book to-day is regarded as incomplete without an index; how much more so a special book of reference upon a subject so many sided as Missions!

We cannot but call attention to a few instances, by way of illustration, that seem to point to lack of judgment or of proper editorial care. It is hard to understand why an obscure, unimportant people like the Yezidees should be given nearly as much space as the Armenians, who have been prominent in political and missionary circles for nearly a century. We wonder if it was by design that the Boxer uprising in China and the Armenian massacres in Turkey are not mentioned, both of them events of momentous interest to missions in those two countries. We do not know why the Industrial Missions Aid Society, which is yet in an uncertain state of organization, should have place, while the National Armenian and Indian Relief Association has no recognition, altho of many years' standing and possessing a charter from the State of New York. It would have added much to the popular value of the work if a key to the pronunciation of the foreign names, and especially to the names of mission stations, had been added.

**Pam.** By Bettina von Hutten. New York: Dodd, Mead & Co. \$1.50.

After finishing a most charming story, "Our Lady of the Beeches," the Baroness von Hutten appears to have thought it her duty to preach two very unpleasant sermons from the text: "Visiting the iniquity of the fathers upon the children." In "Violet" the son suffers for the worst sin a man can commit, and the fact that his father was hanged for murder blasts the boy's whole life. In the new novel, *Pam*, the daughter suffers for the greatest sin a woman can commit, deliberately stealing another woman's husband. Poor Pam, the little nameless girl, with her great tragic eyes, and a weird monkey called Caliban perched

on her shoulder, is a pathetic figure present to our eyes long after the book has been closed. The child with so unhappy a heritage, with such an unconventional upbringing, turning all natural and right relations topsy-turvy in her bright and avid brain, is so much better than her careless parents or her faulty education or even her own crude theories warped by her small experience of life that we long to make her happy in spite of fate, and the reader sighs for the speedy return of a young man from Australia, who is faulty enough, but who is not the unspeakable cad to take advantage of a young girl's ignorance and wrong-headed theories of marriage, while her nature is essentially good, pure and loving. And we hope the hero who would do so will die of the heart-disease which makes him interesting to sympathetic girlhood just as speedily as possible. Several characters in the book do die whom we could spare less easily than Mr. Peele, "brilliant statesman" tho he may be. As the author did not see fit to kill him off the reviewer has a vicious longing to attend to this manifest oversight.

**William Hickling Prescott.** By Rollo Ogden. Boston: Houghton, Mifflin & Co. \$1.10

This contribution of Mr. Ogden's to the "American Men of Letters Series" consists rather of a topical discussion than a strict chronological biography of the historian. After relating comprehensively the capital incidents of Prescott's youth the writer proceeds to consider the condition of his eyesight during life, his laborious and conscientious preparation for authorship, his minor writings as a whole, and individually the production and effect of his more considerable writings, and so on. In fact, the volume is essentially a characterization. For his materials Mr. Ogden has had access to Prescott's papers, and, drawing largely upon the man himself, has succeeded in illuminating a side of his character which Ticknor preferred to obscure and in drawing, in brief compass, a very lifelike and engaging portrait of the simple gentlemanly scholar, who delighted to play "puss in the corner" and wept over sentimental songs.

**The Right Life.** By Henry A. Stimson. New York: A. S. Barnes & Co. \$1.20.

Dr. William H. Maxwell, Superintendent of New York City schools, in an appreciative introduction to Dr. Stimson's book, urges its fitness to meet the needs of those who teach and those who would learn of the life of the spirit. A careful reading leaves the same impression. Not intended as a text-book of ethics, it might well be made one. It is clear, which all text-books are not; its tone is distinctly hopeful, wholesome and manly. To the boy or girl who reads it life will seem a serious business, perhaps, but far from being an uninteresting or an unprofitable one. The "joy of life" has its share of exposition, and ethics becomes, as it should be, the least dismal of the social sciences. Dr. Stimson makes Duty a lovable lady, whose companionship is an inspiration to healthy-minded youth. Dr. Stimson is to use the work in an advanced class in the Sunday school of the New York Manhattan Church, of which he is pastor. Other teachers of Bible classes would find it suggestive and helpful in their effort to teach ethics to the larger boys and girls, who have grown tired of perfunctory Sunday school lessons.

**Selections from the Literature of Theism.** Edited, with Introductory and Explanatory Notes, by Alfred Caldecott, M.A., D.D., and H. R. Mackintosh, M.A., D.Phil. New York: Imported by Charles Scribner's Sons. \$2.50 net.

This treatise in the Philosophy of Religion consists of selections from the writings of fifteen philosophers and theologians, from Anselm to Ritschl, including Spinoza, Berkeley, Kent and Schleiermacher. The design is to present the classic passages of the leaders in the formation of theistic belief and give the arguments and counter-arguments as to the existence and nature of God in the form in which they were given to the world's thought by their originators. The treatises of masters are often clearer than the explanations of their expositors, and every aid and stimulus to first-hand acquaintance with leaders in thought is to be encouraged. The plan of this book, therefore, is excellent, and the careful notes and intro-

ductions show that it has been well carried out. It gives one ready reference to the passages he sees most often quoted in discussions of the doctrine of God.

## Pebbles

MISS HELEN GOULD offers a liberal reward to every man who stays in the navy five years without being tattooed.—*The Woman's Journal*.

...It would almost seem that Chairman Cortelyou failed to furnish President Roosevelt with a list of all those trusts who contributed to the recent campaign fund.—*The Augusta (Ga.) Chronicle*.

...Possibly Mr. J. P. Morgan decided to transfer his attention to railroad building in China because American steel rails cost so much less over there than at home.—*The Ohio State Journal*.

Baby ate nine angle worms,  
Several million fever germs,  
A caterpillar, and a fat,  
Contented grub on top of that.  
Yes, his tastes are strange, that's sure—  
Baby's such an epicure!

—*What to Eat*.

TO DR. OSLER.

A man when born is good for naught, but to be nursed.

The first ten years of wondering,  
The second ten for blundering,  
The third for trial of his wit,  
The fourth for straightening of it;  
And then he should be worth much better than  
at first.

—*Robert L. Marsh, Burlington, Ia.*

...AN ACCEPTANCE CARD.—The editor takes pleasure in stating that your story, entitled "The Buzz of the Buzzard," is accepted for the *Surething Magazine*. The acceptance of an article, however, does not necessarily imply that it possesses merit. Any one of a number of reasons may lead to its acceptance—such, for instance, as a specious timeliness, the fact that it will exactly fit an empty space, any kind of notoriety attached to the writer's name, the possession by the magazine of a useless illustration, purchased by mistake, which, in an emergency, can be made to misillustrate some of its incidents, or even temporary aberration on the part of the editor. The absence of criticism is kindly asked to be excused, owing to the vast number of manuscripts which the editor daily returns without reading at all. Check in payment for your story will, in all probability, be sent you some day; meantime the editor would counsel the beautiful virtue of patience.—*Life*.

## The Cost of Life

STILL the carnage grows, more than a hundred thousand men killed and wounded, in the one battle of Mukden, perhaps twice as many! What are we to think of it? Is it worth the cost?

What is the cost? It is so many lives cut off suddenly in the freshness of youth and strength. We will not count the wounded who will recover—they will go home to their families, they will continue their daily toil of production. Nor will we count the loss of equipments and armaments and property—they can be replaced, by hard work. We think only of the enormous number, Russian and Japanese, buried in trenches, blown to pieces by grenades, forgotten to the world, fed to the soil. What is the cost of such a loss?

Well, it costs the few moments of suffering before they died. That is not so much as those suffered who were wounded and recover; that we need not value too highly. It costs also the service they would have done if they had lived, twenty or thirty years, on an average; that they might have cultivated rice or wheat and baited fish and made gunpowder. That is much, yet it is not such an unspeakable, irremediable loss. If we wait a while there will be food and powder a plenty supplied whether to feed or to kill. It costs also the acute and the dull pangs of all the hearts which will grieve but will not break for those whom they will never see again and over whose graves they can never weep. That is sad, very sad; but death is the lot of all. The time would have come for each when his friends should mourn for him. It is only hurried a few years, and certain ones mourn now in place of those who would have mourned later. That is all, all the cost that is worth reckoning.

And what is the gain? What is it for Russia in return for all these lives? They went compelled, unwilling, yet obedient to their Czar, in stolid bravery sacrificing their lives in answer to what was the de-

mand of feudal duty. There is left their example, in a measure an example of encouragement to duty performed to death. That is a real gain. But there looks to be another gain, for their death is the evidence of the utter failure of the feudal system which they served and for which they perished. Their death, it now seems, will gain the freedom of their sons. "With a great price," their children will say, "we bought this freedom, the price of our fathers' lives." For it will come, and come out of the failure of this war, that the people shall begin to rule. How jauntily were they led to war! How airily were they told that they should see peace settled in the palace at Tokyo! Great was to be the gain and the loot when Japan should bend her knees and become serf to Muscovy and China should become a Russian province. Quite other will be the gain. The gain will be to the Russian people, to those who, in payment for blood spilt, shall make loot of the prerogatives of the Czar and his Grand Dukes, and take the authority and the liberty to themselves. And this shall be a gain to Russia not for the lifetime of the children of these slain, but for the untold generations to come; uncounted millions free, and dating their freedom from the death of these fallen soldiers of Russia. Say not that their death was a waste of life!

And for Japan? Otherwise those soldiers went to the battle, stern, devoted, ready to die if their death might serve their country and enable it to maintain its liberty and achieve its destiny. They valued their life little in comparison with their sense of duty to their Empire and its Mikado. They thought there was a great future for Japan fresh awakened from its sleep of ages, and they would not have it denied. So they died for the land and for its idea, and they left behind them an example of faith and courage which through all time will be the inspiration of their descendants. Their victorious death will be the glory of Japan. The pangs of wives and chil-

dren, the desolation of childless parents, will be tempered with pride in the glory of those who paid all they had for a pearl of matchless price. Their example will not die, it will grow brighter and stronger as the centuries pass, an unfailing incentive, even as we tell the virtues of those who gained our independence.

And think what their death has purchased for their country. It will not be a Russian province. It will develop its own civilization. There will be no repression of its liberties. Its marvelous progress in all that makes enlightened comfort and happiness will still advance. The benefit of their death will not end with what would have been the natural term of their lives, but will continue so long as children's children shall value those virtues and liberties for which they died. The gain will be progressive and cumulative age after age. Their loss was short; their country's gain will be long. Against their twenty or thirty or forty years cut off from working and caring and providing will be set the total, the ideal, the actual Japan of all its unchecked future history. The cost is not too great. The gain is worth the sad expense.

For we price life too high when we make it the chief of all values. Far beyond life is the sentiment for which one would die. The life of an evil man is of no value. We send him to the gallows. It is only the goodness in a man that gives his life apparent worth. Perhaps the Japanese have as true a notion of the value, or valuelessness, of life as we have. Never have soldiers thrown it away so recklessly or so nobly. Life is worth holding only as it helps sentiments of honor, of truth, of freedom, of patriotism, of domestic affection, of the courage and self-sacrifice of love. To stick to the truth is better than to stick to one's body. The martyr for country or faith does not die, for that which is closest to him he keeps; he loses nothing but his blood.

So we may grieve over the terrible slaughter, but we must think more, as they do, of its gain. The ravages will be repaired. Grain will grow richer over the soaked battle fields. The rancor of defeat will not much outlast a generation. The animosities of our own Civil War are nearly past. France ceases to

cry for revenge on Prussia. So the humiliation of Russia will be left behind, and Stoessel's children will not call for a new reprisal at Port Arthur. For the world moves on and each generation has its own task, and a greater Russia and a nobler Japan will be nourished out of the victories and defeats of this terrible war.

### The Waste of Niagara

IN 1893, when Lord Kelvin stood on the brink of Niagara, he was not so much impressed by its grandeur as he was saddened by the sight of such an enormous waste of power, and he expressed the hope that he would live to see it all utilized, an observation which was much ridiculed at the time by hard-hearted sentimentalists and unimaginative poets. To them Niagara was a mere spectacle, but to the great scientist, who had devoted his life to the study and exposition of the law of the conservation of energy, it was much more. His prophetic eye could see the poor who might be enriched, the homes that could be made happy, the hungry who might be fed, the naked who might be clothed, and the toiling millions who might be relieved of their burdens by the water dashing upon the rocks below for the amusement of a few idle tourists.

Energy is a common factor of the universe. The work and the wealth of the world can be better measured by horsepower than by dollars. The ordinary man does not realize the meaning of Niagara, for his physics is as far away from his practical life thoughts as the Greek mythology he learned in the same school. If he stood on the banks of the Mississippi at the time of the spring freshet, when the stream was carrying down to the Gulf fences, pigs, chickens, furniture and, occasionally, a house, he would be seriously concerned over the loss of the property of those who had so little to lose, and perhaps exert himself to save some of it; but the continuous calamity of Niagara arouses in him no feelings of a nature to mar his enjoyment. He shows the same esthetic appreciation of a sublime and beautiful spectacle and the same indifference to its cost as Nero at the burning of Rome.

It is easier to comprehend the waste of

Niagara if it is expressed in concrete symbols. The total available energy is estimated at from six to ten million horse-power, depending upon the water level and the extent of the fall utilized; 7,500,000 horse-power is a reasonable mean. This is more than the power used in all the manufacturing establishments of the United States in 1890 and nearly half of that in use to-day. In one of the large power houses of New York the average cost is six-tenths of a cent per horse-power hour. Potential wealth is therefore being annihilated at Niagara at the rate of \$45,000 an hour.

We are told that there are some millions of people in poverty and poorly nourished in this country, yet here is wasted the equivalent of 15,000 loaves of bread a minute. There are some 37,500 nice fresh eggs dropping over the precipice every minute and making a gigantic omelet in the whirlpool. If calico were continuously pouring from the looms in a stream 4,000 feet wide like Niagara River it would represent the same destruction of property. If Andrew Carnegie held his library buildings under the spout he could fill one or two of them with good books every hour. Or we can imagine a big department store floating down from Lake Erie every day and smashing its varied contents on the rocks 160 feet below. That would be an exceedingly interesting and diverting spectacle, quite as attractive to the crowd as the present, and no more expensive to maintain. Yet some people might object to that on the ground of extravagance who now object to the utilization of the power of the falling water.

Let us consider it in another way: According to the census of 1900 there was used in twelve of the most important of our industries, such as the manufacture of boots and shoes, cotton and woollen goods, paper and flour, an average of 3.8 horse-power per wage earner, and it required 1.3 horse-power to produce during the year \$1,000 worth of goods. Therefore a properly harnessed Niagara would furnish the motive power for manufacturing \$5,700,000,000 worth of useful articles a year, some \$70 worth apiece for each one of us, and give employment to 2,000,000 wage-earners. This would mean the release of thou-

sands of men from working in the coal mines and the relief of the working classes from the dirt, disease and danger necessarily accompanying the use of coal as fuel. In the place of noisy, ill-smelling and jarring engines, with their rigging of pulleys and belts to catch the hair and clothing, there would be the purring dynamos and silent motors. Power could be distributed electrically as needed for any industry in households, small shops or large factories, whenever our sociologists make up their minds which is the best system.

The electrical current will also serve for illumination and transportation; it will heat or cool the house; it will bake bread and make ice. It would light up the streets and dwelling rooms of the dark parts of our cities. It would move the poor from the tenements into the suburbs by reducing the time and expense of the trolley trip. The waters of Niagara properly used would wash away the slums of any city in its vicinity.

It must not be supposed that we are insensible to the beauties of nature or ignore their esthetic and cultural value. On the contrary, we wish to enhance the interest and impressiveness of Niagara Falls by making it a rarer spectacle. The reason why people fail to appreciate the beauty of the clouds, of the sunset and of the landscape from their windows is because these are so common. If a bouquet of fireworks were shot off at eight o'clock every night we would not care to look at them. Of course the Falls would be turned on for all legal holidays and at other times as often as there was sufficient demand for it. On such occasions those who wished to go down the current in barrels could enjoy their favorite sport. Weddings would naturally be arranged to come off at a time when the Falls fell. At the hours when the water was prohibited from making a run on the banks, rambles over the eroded rocks and worn channels would be of great interest to the geologist and the tourist. Couples and groups could be photographed then, as they are now by posing them in front of a painted screen.

Many more people would see Niagara and their enjoyment of it would be much greater if it could be seen only on *fête* days. Thinking they could see it any

time, thousands of people have neglected it in favor of some passing show.

Of course there is something impressive in the thought that the flood pours thundering into the abyss all of the time regardless of sight-seers. But if one has not sufficient imagination to find an equal emotional value in the contemplation of the varied life and industry it supports as it pours through the penstocks and spins the turbines he can dwell with satisfaction on the thought of the millions of years when it was of no use to anybody. But that brings in the old question raised by some introspective philosopher as to whether the waters of Niagara did thunder when there was no one to hear them, and, going a step further in the same direction, whether Niagara really worked at all when there was no one watching it; questions which have never been answered to the complete satisfaction of the logical faculties. But into such misty metaphysics we cannot venture.

The objection may be raised that by shutting off the water of Niagara Falls geologists would be deprived of one of their favorite diversions—that of calculating the age of the earth by the rate of erosion of the rocks there. This, however, is not valid, for a record would of course be kept of the time and amount of the intermittent flow and the problem would thus be made more complicated and interesting without being any more uncertain than it is now.

There is one more objection conceivable, that of the ownership and control of the water power. It would not do to have all the waters of Niagara pour into the pocket of a plutocrat. It is a natural monopoly if there ever was one, and as such it must be managed in the interests of the people by the national Government, which alone has the power to treat with Canada, our partner in the property, and to determine the rights of individual States, such as New York and Illinois, to the water power to be developed from the Great Lakes.

### Mothers

SOME literalist would object, of course, but if such a thing were possible as a Mothers' Congress where all the dele-

gates were men we should receive new and larger sighted views of the maternal relationship. Men lack the delicate interpretative faculty which women have with children, but they are excellent critics of the relationship, because they are disposed to figure out the results of a policy, while the mother is usually concerned with meeting the conditions of the present moment. And they have the advantage of a better perspective, because women are too much involved in the actual experiences of motherhood to take an entirely disinterested view of their own efforts. Meanwhile the regular female Mothers' Congress is now in session at Washington City. And the time has passed when sensible people regard these yearly meetings humorously. The usual jokes will be made, of course, at the expense of maiden delegates; but these are the mere *gaucheries* of masculine wit. Every mature woman, whether married or single, has or should have a certain compassionate sense of motherhood, and doubtless the spinsters in this present congress will make as good contribution to the subjects under discussion as the married women do. For, if the mother knows her little Lord Fauntleroy at home in his tender, scraph moods, the maiden teacher knows him a sight better in his diabolical ones as a member of the primary class, or in the kindergarten school, and she is much more likely to tell the truth about what she knows. A real mother could no more tell the uninspired, didactic truth about her own child than a real poet could write botanical verses about roses—a fact which implies one of the beauties of motherhood and one of the limitations of a Mothers' Congress. If it's a real mothers' congress some important details of wayward childhood are sure to be obscured by a too sentimental interpretation.

And naturally the Mothers' Congress will discuss the care of their own children; for the most part, how to diet them, to train them physically and morally, how to exercise an intelligent maternal influence over their childhood and adolescence, and so on. Now, women upon whom the habits of motherhood have been fixed by half a dozen children are not likely to be affected much one

way or the other by such discussions. But the conscientious young mother should be careful not to practice all the wisdom she hears upon her first baby. It is easier to make a trained animal of a child than to make a man of him. And in their zeal to do the right thing by their children there is the other danger that the young woman may develop into a veritable stepmother to her own darling offspring. Now, a stepmother is not the woman who happens to be a child's stepmother; she is *any* mother who maintains an attitude of relentless authority and unimpeachable righteousness toward one. Probably nothing is more distasteful to normal children than this adult assumption of tedious righteousness, and so soon as they are strong enough they often outgrow it in the wrong direction.

So much for the thrice blessed children who are under the direct influence of the Mothers' Congress! But it will be interesting to learn how much time and attention they have bestowed upon those children who are nobody's children. Women, the very best of them, are often queer about this. They hope, plan and pray for their own, and they can discuss with startling impartiality the young of their neighbors, but when it comes to the "settlement home" brand of childhood the maternal note changes into a calmly impersonal one. They are ready to do their duty by them, of course, but let none forget that there is more sense of caste among mothers than any other people in this world. They take a humane but not a maternal interest in orphans. They will work indefatigably making long sleeved blue checked aprons for the inmates of an orphan asylum, but at best this is only a sewing-society manifestation of female charity. They will give a street urchin a copper or the roses from their reception-dress corsages, but this is simply a pretty show of feminine sentimentality. As a rule there is *nothing* maternal in anything that women do for this class of children.

We hear much of the "brotherhood of man" these days, and it would be sooner coming if we could provide better for the early motherhood of man. If every street gamin in the city of New York knew where he could be properly loved and kissed he might resent it at

first as a stray ash cat resents a bath, but in the end he would be domesticated. And by the time this custom of tolerant motherhood was firmly established there would not remain a sufficient number of waifs to sell the daily papers. We should have several hundred thousand of them adopted and mothered instead. And why should they not be adopted? Many women in this city expend more time and money upon their poodles than would be required to make a useful citizen of a homeless child. We are the only animals in this creation who prefer to adopt and pet those of another rather than their own species. And, of course, the explanation in part is the moral fear of the greater responsibility. But when the motherhood of women is more intelligently and ethically developed they will be more generous and more courageous about taking such risks. And if the Mothers' Congress accomplishes all that it should accomplish we may hope for the abolishment of orphan asylums. They are better than nothing, but at last they are not so much the evidence of our common humanity as they are of our common inhumanity.

There is one class of children which the Mothers' Congress may have overlooked altogether, and in mentioning them we venture to call the attention of elderly women in particular to them. For the older a sensible, kind woman gets to be the better, wiser mother she becomes. It is a business in which she never reaches her dotage. Women outgrow their childhood because they in turn become the mothers of children, but there remains forever something of the child in every man's relation to good women, as there lives the maternal heart for him in every one of them. This is a blessed dispensation of Providence. Not all the prodigal sons are young men who have wandered off and squandered their substance in far countries. Some of them are middle-aged sinners in our midst. A man at forty is often as much in need of a mother's counsel and attention as he was when a boy of ten. Here again it is different with women; when they lose their way they suffer a moral blindness, which no other woman can heal, and for which they will scarcely accept forgiveness from God, much less

from another woman. Maternal love is the one thing to which they are most alien because that is what they have most sinned against. But in this singular maternal relation to men, the peculiar vocation of women is to love, hope and have patience. They are the only people in this world who have the capacity to forgive seventy times seven. The Church has certain theological limits to its pardoning power, but a mother can be divinely irreverent in the exercise of her compassion. A wife frequently makes a martyr's crown of the business, and a man's children are not in a position to grant absolution, and God is far away in heaven; but his mother, any real honest mother woman can forgive him his trespasses so thoroughly that he can get the right sense of purification necessary.

### The Fasting Season

VERY little fasting is done nowadays by Protestants, and less than of old by Catholics. There are now so many indulgences granted that no one need to go hungry, no matter how faithfully he obeys the rules of his Church.

In a famous sermon an ancient preacher rebukes a kind of Lent that is perhaps as prevalent now as it was in his day. Then employers kept their Lent by going to church and fasting from food, but still oppressing their workmen with "the fist of wickedness," and "exacting all their labors." They were told that God did not call for a fast that simply mortified their bodies while it did not improve their characters. This, said the preacher, is no fast. The acceptable fast was "to undo the bands of the yoke, and to let the oppressed go free." It was to feed the hungry—no fast required of them—to clothe the naked and to house the poor.

It is not wholly from greater lack of religion that we fast less than we did. Jesus never asked any one to fast. His disciples neglected that custom so long as they were with Him, but began it again when by themselves. Fasting is no part of religion; it is one way to get at one's religion when one has lost it. The purpose of it is to give time and thought

to repentance when one has gone astray.

There is no fasting in heaven, where there is no sinning. We can hardly imagine there a period set apart for self-examination, when saints shall withdraw from the felicities of that state and afflict their souls with some sort of special denial. So in this world, if one is living a normal life, physically and spiritually, trying honestly and fully to do his duty, not eating or drinking inordinately, for health and not for gluttony, for strength and not for drunkenness, doing his daily work well, and serving his generation faithfully in the love of God and man, there is absolutely no reason why he should fast, because he does not need to stir himself up to unusual repentance beyond the ordinary refreshment of resolve to avoid evil thoughts and words, and to fulfil his duty, which he does in his daily uplook to his God. The careful examination of one's spiritual state is a kind of self-consciousness which is not healthy, except for those who need it. One should be too busy with the service which duty has put on him to be able to give much time for introspection. "How is your soul?" "I have not thought of it," may be the best sort of answer, as it may be the worst; that depends on what kind of a soul it is.

Nevertheless, something that corresponds to fasting—call it Lent or what you will—is good for most people. We do not mean the fasting from eating, but the turning somewhat aside from ordinary cares and pleasures, and giving thought to questions of religious duty. Not too many among us, Christians though we may be, have reached the spiritual state of those whom Paul somewhat generously calls "perfect," those who are faithfully trying to live a life like the Master's, who are not "children," "babes," in the faith. For those who are immersed in cares, forgetful of God, seduced by temptation, who have come to be what we call "worldly," it is a good thing to have some set time of the year which will require them to stop and think of some higher things and some nearer duties. It may be that it is not in them to live all their life on a high plane; they are not of the class called in any sense

"perfect," only fairly decent but quite imperfect Christians. Such people—and most of us are such—are in danger of sinking lower and lower into utter selfishness if they are not once in a while called back to reascend the incline down which they have slipped. That is their only hope against sinking to the bottom. Let them stop, and consider, and resolve, and revise, for a little time, at least, their life.

But fasting, as fasting, merely for the fasting, is only fetish religion. To go without eating, if one omits the repenting, is no more religious than it is to carry a horse chestnut or a rabbit's foot in one's pocket. A fish diet piety will not a bit nourish a sick soul; that requires some sort of truer bread. It is a shocking thing to imagine that one can keep up a carnival of luxury and dissipation until the midnight that ushers in Ash Wednesday, and then purge his faults by changing his dinners. One may thus reform his digestion, but not his character. What he needs is the lesson of John the Baptist, "Exact no more than is appointed you; do violence to no man; bring forth fruits worthy of repentance;" and that is addressed to the common business man, the common society woman, yes, and the busy scholar and the ambitious preacher.

So we believe in Lent, after a fashion, whether it is called Lent, or the week of prayer, or the revival season; not for fasting, for that is gone by, mostly, but for the reviewing and revising and re-viving; for regretting and repenting and repairing and renewing; for restoring one's own religious life by doing good to other people, thus

"banqueting the poor,  
And among those his soul."

But why should there be an overdose of worldliness to be followed by an overdose of piety? Why cannot there be a continual Lent, not of "the larder lean," not of the forty days, but of the fifty-two weeks, ever

"To show a heart grief-rent;  
To starve thy sin,  
Not bin;  
And that's to keep thy Lent."

## The Adaptable Man

THE immense inconvenience that the New York public suffered for a day or two by reason of the strike on the Interborough Rapid Transit lines will not have been without certain compensations, and one of these will have been a keener appreciation of the modern demand for the adaptable man.

That an enterprise so complex as the handling of a great electric railway system could be taken in hand at an hour's notice and carried on, after a fashion, by "green men" with but few resulting accidents, is in itself an interesting fact. Its significance lies in its revelation of the astonishing extent to which industry has in recent years been so transformed as to call for mental and moral qualities different from those that sufficed a generation ago. In the building trades the qualifications peculiar to an earlier period are still in demand. Craftsmanship is acquired only through a long apprenticeship. A strike of 5,000 men in the building trades would tie up operations for many weeks at least. It has been made plain that the operation of an electric railway does not, in like manner, call for craftsmanship.

No principle of trade unionism, or of socialism, has been more vehemently denounced than its leveling doctrine of the equal value of all kinds and qualities of labor. The great exponent of this doctrine was Karl Marx, who made "labor time" the corner stone of his system. Not skill, according to Marx, but the number of hours that he works, determines the value of a man's labor. The business world has naturally pronounced this theory preposterous.

But let us see. Great men have a way of being in advance of their time, and it may be that Karl Marx, whose comprehension of the revolution that machinery was making in the industrial world was unequaled, saw more clearly than the business men what the inevitable outcome must be.

For, obviously, the labor union demand that all men in the same employment shall have the same wages, regardless of personal inequalities of skill, is only one of many practical applications of the Marxian view. Another would

be an insistence upon a plan of rotation in work. It is, in fact, not quite clear why the labor unions have not before now urged it. Undoubtedly it would be urged and put in operation under a proletarian socialism.

Suppose, for example, that the operation of the New York Subway should be turned over to a labor union instead of to a syndicate of capitalists; the union to make whatever profit it could for its members by handling the road and the traffic. Rivalry and dissensions among the different groups of operatives would take the place of the present struggle between employees and employers. Trackmen, ticket choppers and guards would demand equality of conditions with motormen and electricians, and an adjustment of differences would be attained through a rotation of occupations. Guards and motormen would exchange places, ticket choppers and trackmen would change off, and all would be paid alike. "Labor time" alone would count, differences of skill would be ignored.

All of this sounds like a grotesque abandonment of the advantages of the division of labor, which, since the days of Adam Smith, have been held as more undeniable than the axioms of Euclid. Is the world then to surrender these priceless advantages, to go back to the barbarism and starvation of those early days when every man was a jack-of-all-trades?

It is not denied, of course, that from the standpoint of the individual man himself there is something to be said for the jack-of-all-trades. When has the world seen a population of higher average intelligence and sound judgment than the American people displayed before the Civil War, when a majority of American boys enjoyed the practical education of the American farm? The American farmer's boy learned to do nearly everything. He could plow and harvest, or lay a stone wall. He could take care of cattle, or manage horses. He could turn his hand to carpentry, wagon-making or blacksmithing. He was, in short, an all-around man, and his broad equipment gave him as a man two priceless possessions. It gave him happiness and a sane view of life.

But this all-around man could not

compete with the trained craftsman. He could not build houses like the carpenter, shrink a wagon tire like the smith, or make shoes like the cobbler. Much less could he put together machinery like the machinist, or make paper like the paper-maker. Only a small part of the wealth that has been produced in 50 years past would have come into existence if "the universal Yankee genius" had been the only producer.

The division of labor, then, was necessary, and the world will not surrender the advantages that specialization has created. It is not an uncommon occurrence, however, when a great process in the natural world or in the industrial world is in theory mistakenly identified with the agencies through which it works. Railway transportation has been identified with the ponderous steam locomotive. We are now learning that the disappearance of the locomotive will not mean the end of railway transportation any more than the disappearance of the square-rigged clipper meant the end of ocean navigation. Is it not possible that we are on the eve of a great discovery that specialization in industry does not necessarily mean specialization of laborers; that the division of labor can be carried to a minuteness hitherto undreamed of without reducing the individual man to such an automaton as the pinmaker of Adam Smith's famous illustration?

Many facts bear out this surmise. Machinery can be specialized to any required extent. It can be made automatic to an extent hardly yet dreamed of, and the combination of machine with machine can be effected with marvelously little human intervention. The man more and more in demand, therefore, is not the man of specialized manual skill, but rather the intelligent and adaptable master of machines; the man who understands mechanism in general, and who can be transferred at a moment's notice from one post to another. Who can estimate the mental and moral gain to the human race when the day arrives in which all the advantages of the division of labor can be obtained from specialized machinery looked after by all-around men, no longer dwarfed and stunted by a narrowing overspecialization of mind and hand?

But when that day comes the day of new economic conditions also will have arrived. Special differences of skill will no longer count in fixing wages. Any adaptable man can be substituted for any other adaptable man. It will be a day of leveling, and of justification of the Marxian principle which the business world has decried and for which the labor unions have been contending.

## The Fuss of Four Tablets

It all started over four little Babylonian tablets, but it has filled the Philadelphia and New York papers the past week. The story is this: Dr. John P. Peters, now rector of St. Michael's Church in this city, was Professor in the University of Pennsylvania and in the Episcopal Seminary in Philadelphia. While there he secured the money for sending out the Wolfe Expedition to Babylonia in 1884-1885, and later for the University of Pennsylvania Expedition at Nippur, which he conducted for two years, and of which he was Director afterward while Dr. Haynes was in the field. For his first year he took with him Dr. Hilprecht as one of his assistants. He had known Dr. Hilprecht as a fellow student in Leipzig, and had recommended and introduced him to his position as Professor in the University of Pennsylvania. At the end of the first year of excavation at Nippur, when nothing had been found and there had been troubles and losses, Dr. Hilprecht resigned and left, declaring that nothing could be found there. Dr. Peters was not discouraged. He returned home, reorganized the expedition, took two of its members with him, Dr. Haynes and Mr. Noorian, and closed the year with large discoveries of buildings, tablets and monuments. Then he returned to his work at home, leaving Dr. Haynes in charge, and later resigned the directorship, which was given to Dr. Hilprecht. A year later Dr. Hilprecht went to Nippur, reaching there just after Dr. Haynes had gathered in a large and lucky find of tablets. There he remained some weeks closing up the expedition, after having been on the ground, in both visits, some four months. Meanwhile he had done

admirable work in deciphering and publishing the discoveries of Dr. Peters's second year.

But with his second visit to Nippur he imagined himself to be a great explorer as well as decipherer. He wrote a book on explorations in the East in which he represented Dr. Peters as incompetent in scholarship and injudicious in his excavations, and claimed for himself the credit for what had been done, and especially for the discovery of the last collection of tablets, which he identified as a "temple library," and told of the general nature of its literary contents. But during these five years he has never published a single one of its contents, until scholars have begun to doubt whether it is anything more than one of the record rooms of business transactions of which multitudes are in existence. But he did publish, in America and Germany, an account of four tablets which he represented as from this "temple library." When Dr. Peters found, however, that they were not from the "library," and three of them from other cities and had been purchased years before the "library" was found, he so informed the trustees who had published Dr. Hilprecht's statement, for their quiet examination.

But just then Dr. Hilprecht gave a lecture in Philadelphia on the subject, was questioned, and the whole scandal came out. Dr. Peters and Professor Prince testified that the tablets did not come from the "library," and Professor Haupt said he did not believe there was any library, and the managers of the Museum tried to make an investigation, and the trustees of the University objected, and then the officers of the Museum resigned, five members in all, and Dr. Hilprecht made no defense, but says he is going to Constantinople next month to carry on his work on the "library."

While scholars are concerned at the ungenerous treatment of Dr. Peters, and cannot understand by what perversity or blunder Dr. Hilprecht has claimed credit as an explorer which does not belong to him, and has represented tablets as from this "library" which never were there, they are more troubled that what is said to be a most valuable collection of literary and historical documents is kept

from the world for five years, and no one allowed to see or publish them. They remember that when de Morgan found the great column with the Code of Hammurabi at Susa, it was only a few months until Père Scheil gave it to the world. We trust there is such a library, and that Dr. Hilprecht will soon give us a taste of its contents, or let some one else do it.

#### A Strike that Failed

We give elsewhere the story of the failure of the strike of the employees on our New York Subway and Elevated Railway system. It failed for a number of reasons. One was that the Subway was easily protected by the police; the strikers or their sympathizers could not reach it with violence. Another was the careful provision made by the company to supply the places of those who left their posts. Another was the most injudicious way in which the strike was managed by those responsible for it. They broke a definite agreement with the company, and they did not wait either for arbitration or for the sanction of the national organization. Accordingly, when the strike was a day old, and it was pretty clear that it would fail, the national officers came on and forbade the strike, required the men to return to their jobs and revoked the charter of the local union. Thus they definitely condemned the haste and unfaithfulness to their contracts of those who had violated their obligation to both employers and associates. The lesson given is a noble one, greatly to the credit of the national body and will be of value in future as a precedent and a warning.

#### A New Method with Turkey

Turkey cannot be treated as one would treat a civilized Power, because it cannot be trusted either to do justice or to keep its promises. Therefore it is that we insist on extraterritoriality for our citizens in Turkey. When our Government demanded of Turkey the same rights for schools and institutions as were allowed to England and Germany and Russia no attention was paid to it until we sent a fleet to the Turkish waters, and then the promise was ready enough, only would we please send the ships away. This we did, for Minister Leishman had great faith in promises.

They were not kept, however, when the ships were gone, and now our Government is getting impatient, and has taken a new tack which would be unnecessary and unwarranted in the case of any responsible nation. Our Americans in charge of these schools, hospitals, etc., are advised to refuse to pay taxes to the Turkish Government until the promise made by it is fulfilled. Exactly how that will work is not clear, but if it fails of its effect one of our admirals with his squadron may wisely make another visit to Smyrna or Beirût.

The appointment of the Hon. White-law Reid as Ambassador at London makes it necessary for him to resign the chief editorship of *The Tribune*, which he has held for thirty-three years, and which he did not resign while United States Minister at Paris. He has during all these years nobly maintained the influence of *The Tribune* achieved by his predecessor, Mr. Greeley. His successor is Mr. Hart Lyman, a graduate of Yale and for many years a member of the *Tribune* staff. He worthily inherits what is, with hardly an exception, the most brilliant succession in the newspaper history of the country.

English is the international language. The negotiations between the Russians and Japanese for the surrender of Port Arthur were conducted, not in French, but in English. The Japanese generals who took part and their associates talk English, and one of them Russian. On the Russian side they brought a young midshipman who had to act as interpreter, because the English of the officers was imperfect. In Russia and Turkey the officials still prefer to use French, but the rest of the world, in the East as well as the West, turns to English.

We anticipated, and were in error, as to the execution of two atrocious murderers in Pennsylvania, whose case has, through the delays of the law, been running on for four years. Once more, at the last moment, their case was carried over for thirty days, in an attempt to prove one of the pair an epileptic. Thus murder is made a fine art, in another sense, the fine art of escaping punishment after conviction.

# Insurance

## Stock Control in Life Insurance

"To us it does not seem wise for any legislature to farm out to capitalists the business of collecting and managing the funds provided by the people for their widows and orphans."—ELIZUR WRIGHT, 1862.

LIFE insurance companies are conducted upon either of three plans: Stock, or proprietary, where the insured have no share in the management or profits; mixed, where the company is owned and controlled by stockholders, who may apportion a part of the profits to the policyholders; purely mutual, where the management is elected by and responsible to the policyholders, who alone share in the profits.

The name of Elizur Wright is a great and honored one in the history of American insurance. Massachusetts was the first State to undertake the supervision of insurance companies, and special weight and authority have always been given to the acts of the Massachusetts Insurance Department. Elizur Wright was the first Commissioner of Insurance of Massachusetts, and he did more to popularize insurance and place it in the position which it now occupies than any other man who has occupied a similar position. In his seventh annual report, from which the quotation at the head of this article is taken, he said:

"If we are to be governed by the authority of experts, the testimony taken by the English Parliamentary Committee of 1853 leaves no room to doubt that the only use of capital is in the incipient stage of a company, during which it may fairly be said to earn something beyond the ordinary rate of interest. But after the number of policies and the amount of reserve from premiums become large enough to remove any probability of loss that will prevent the steady annual increase of the said premium reserve, there is no longer any use for guarantee capital. When this is true the best policy for the policyholders, if at liberty under the charter to pursue it, must be to pay the capital equitably for its past services and dismiss it."

The Forty-fifth Annual Report of the Superintendent of Insurance of the State of New York contains the financial statements of forty-one level premium or "old line" life insurance

companies for the year ending December 31st, 1903. Twenty-two of these companies had capital stock ranging from \$100,000 in case of five companies to \$2,000,000 in case of three companies. One company included among the stock companies has still outstanding \$25,500 of guarantee capital, which has not been retired. In all essential respects, however, it is a mutual company. The total capital of the twenty-two companies amounts to \$11,865,500. On December 31st, 1903, they had accumulated gross assets of \$886,978,719.96, and had insurance in force amounting to \$3,390,622,207, excluding industrial insurance, or \$5,075,095,527, including industrial insurance. On December 31st, 1903, the gross assets of the nineteen purely mutual companies amounted to \$1,343,460,832.50, and these companies had insurance in force amounting to \$5,777,364,678, excluding industrial insurance, or \$5,993,740,638, including industrial insurance. It will be observed that the nineteen mutual companies had accumulated \$456,482,112.54 more assets, and had outstanding \$918,645,111 more insurance than the twenty-two stock companies. It is apparent that capital stock has not been an important factor in the development of the business.

The New York Insurance Report referred to above contains a table from which it is learned that of the companies authorized to do business in New York, fifty-six stock companies and three mutual companies have retired from business.

In 1878 it was proposed to increase the capital stock of a company from \$150,000 to \$750,000, the increase to be in the form of a stock dividend. Only \$105,000 of the original capital of \$150,000 had been paid in cash, the balance having been paid by the application of profits. The Governor of the State in which the company was located vetoed the enabling act passed by the legislature, and in his veto message said:

"I am not sorry to have the opportunity of officially denouncing this whole system of mixed insurance as bad in principle and worse in practice. The evils are in the system itself,

and bred of it. So long as the stock and mutual interests are suffered to co-exist in the same corporations and exclusive membership and management is given to the one, so long that one will continue to eat into the other and grow fat on it. . . . In my judgment the whole system is vicious clear down to the roots. It furnishes an easy opportunity to one class of men in a corporation to prey in a thousand ways, without observation, on another class in the same corporation. I cannot allow myself to assist in its perpetuation, recognition or enlargement."

In 1889 it was reported that parties who had been in control of a stock company and who had succeeded in wrecking it, to their great profit, had offered to purchase a majority of the stock of another company on a basis of \$1,000 for each share of \$100. Under the by-laws and agreement with the policyholders the stock dividends were limited to six per cent., and it was apparent that the investment would pay legitimately scarcely one per cent. It was true that by a cunningly devised scheme the guarantee capital had been increased by the transfer of \$300,000 belonging to the policyholders to the stock account, which, according to the Insurance Commissioner of Massachusetts, if not thievery, was very closely allied thereto. The stockholders of the company had as a result of this process been in receipt of dividends four times larger than the agreed limitation. The would-be purchasers were reported as stating that there were methods by which they could be increased to \$50,000. We quote from the report of the Insurance Commissioner of the State in which the company was located:

"The policyholders were alarmed and the community startled at the nature of the proposition. . . . The directors representing the minority stockholders, commendably prompted by a desire to avert a threatened calamity to the company and policyholders, applied to the legislature for such relief as would baffle and render nugatory the contemplated sale of the stock. A resolution amending the charter of the company, having for its object the retiring of the capital stock under certain conditions and making the company, in fact as well as name, a purely mutual company, was passed by the legislature on June 21st, 1889."

Under the authority granted by the

legislature the capital stock was retired, the company paying \$250.00 per share.

The Insurance Commissioner of Massachusetts said in 1897:

"The Commissioner is in full sympathy with opposition to the general principle of allowing stock to ride upon and suck the blood out of life insurance. Stock may serve a useful and proper need in the youth of a company, in steadying it until it gains stability and firmness, and should be paid and well paid for its risk and service; but when it is no longer needed, it should be absolutely severed and dismissed, and not be allowed to remain an incubus and burden upon the whole future. Services rendered to life insurance, as to anything else, should be well and properly paid for, but the institution should never be allowed to be used as a purely money-making concern by a gang of greedy stockholders, who, in violation of law or in absence of law, have contrived to foist and continue themselves upon it, and not only unrighteously squeeze it to pay enormous dividends upon the original investment, but even plunder it for more capital on which to draw added and endless dividends and rewards for left-handed services. This imposition would not be permitted an instant upon a savings bank, and the legislature should permit it on a life company no longer than it could pass an act to compel, if not a restoration of the plunder, at least a prevention of its continuance by retirement of the stock."

In 1899 the same Commissioner said:

"The history of the National Life Insurance Company of the United States shows how easily may be carried out a scheme for transferring a company into the pockets of the holders of stock. The speculators who got possession of its property and control of its affairs proceeded deliberately and remorselessly to wreck it. There were at the time 7,840 policies in force, insuring nearly \$14,000,000. The assets were \$3,891,160; liabilities, \$3,496,631; leaving surplus, \$394,529. The condition was solvent, as shown by official examination, and there is not the slightest doubt that its affairs might have been carried on successfully and the rights of every policyholder protected to maturity. But it seemed likely to yield larger and more immediate returns to the stock by closing it out.

"The process commenced by discontinuing the issue of new policies, harshly freezing out and forfeiting membership for the slightest delinquency and by every means possible discrediting the condition of its affairs, in order to alarm or disgust the policyholders; and, when it had become sufficiently unpopular,

sending out agents to buy up the policies for the smallest possible fraction of the reserve. At date of latest return now at hand, December 31st, 1887, the number of policies had been reduced to one-third the original number, and the insurance in still greater proportion; but the gain from forfeiting policies and from buying up others for less than the legal reserve had raised the surplus to \$864,579, besides paying the stockholders meantime \$945,000; an average of \$105,000, over forty per cent. a year, on the purchase price, which was less than one-fourth the par. This process will continue until the number is reduced to a handful, when the stock can readily afford to buy them up, even at a cost equal to the face of the policy; then the whole swag falls in to the operators.

"It may be true that danger from this source does not to-day confront every stock company; the control of some is in the hands of men who count honor above profit, and whose integrity is proof against even a multitude of millions. But good men die, and other men come into their estates; and the principle of stock control is wrong to-day and forever."

More recently the insurance world was startled by a proposition put forth by the management of a company with \$2,000,000 of capital stock, of which all but \$91,000 had come from stock dividends, that the controlling interest held by certain officers should be sold to a trust company in which such officers were also largely interested, and that the trust company should issue additional stock of which the insurance company was to acquire sufficient to give it a controlling interest in the trust company. The minority stockholders of the insurance company took the matter into the courts. As stated in the bill of complaint, it was proposed that

"by a tripartite arrangement of certain individuals with themselves, acting first, as individuals; second, as directors of the trust company, and, third, as directors of the insurance company, some \$5,000,000 is to be taken from the treasury of the insurance company, transferred to the treasury of the trust company and then from the treasury of the trust company into the pockets of the principal stockholders of the insurance company, of whom such individuals are the chief."

The effect of the scheme would have been that the parties in control of the insurance company would have parted with their stock interests at a high val-

uation, and would, at the same time, have retained through the trust company the control of the insurance company with all the advantages embraced in such control. The scheme was prohibited by the courts, but the same result has practically been accomplished in another way.

The Charter Oak Life Insurance Company became seriously embarrassed by reason of mismanagement, and in 1878 the Connecticut Legislature amended the charter of the company. The amended charter provided for the retirement of the existing Board of Directors and for the election by the policyholders of a new board, in whose hands the management of the company should be placed. The capital stock was to be acquired by the policyholders

"at the price of the actual cash value of such capital stock, which price shall be determined by a committee under oath, the said committee to consist of the Treasurer of this State, the Insurance Commissioner and a disinterested third person to be chosen by these two, and when the whole amount thereof shall be so received it shall be then canceled, and the entire stock and capital of said company shall thereby become extinguished. Provided, however, that no money or other thing of value shall at any time be paid for such capital stock on any agreement which shall be made for such transfer which shall in the opinion of said committee impair the policy reserve of said company, computed according to such standard of value as may be required by the laws of this State. And hereafter all of the assets now belonging to and which may hereafter be acquired by said company, and the future earnings of said company, shall be appropriated to and used only for the benefit of the policyholders of said company."

The proposition is now made that the capital stock, the par value of which is \$100,000, of one of the largest and most prominent insurance companies, should be retired, with the ultimate idea of placing the policyholders in control, and the directors of the company have appointed a committee

"to arrange the details for carrying the step into execution, and in connection therewith the settlement of the allied question of indemnification of stockholders."

This raises the question of the interest of the stockholders in the assets of the company.

In determining the premium to be charged for a policy of life insurance, it is assumed that deaths will occur in accordance with a standard table of mortality, that the company's invested funds will yield a certain rate of interest, and that the expenses of management will not exceed a certain percentage of the contract premium. The premium computed, according to the standard table of mortality and the assumed rate of interest, without any addition for expenses, is known as the "net," or mathematical premium. This premium, in level premium or old line insurance, is larger than will be required in the early policy years, and smaller in the later years. Out of the excess premium in the early years a fund is accumulated which will assist in maintaining the policy when the premium becomes less than is required to meet the yearly cost of the insurance, and which will be used in part payment of the amount insured when the policy becomes a claim. This fund, which is known as the "reserve," constitutes all but a very small portion of the assets of the several companies. The reserve funds of the forty-one companies referred to above amounted on December 31st, 1903, to \$1,871,984,076.87. The total liabilities of these companies amounted to \$1,905,295,860.32, exclusive of dividends accumulated under deferred-dividend policies. Dividends arise, first, when the mortality actually experienced is less than that called for by the table upon which premiums are based; second, when the invested funds yield a higher rate of interest than that assumed in computing premiums and reserves, and, third, when the expenses of management are less than those provided for in the contract premiums. It will be borne in mind that in determining the contract premiums to be charged, a company is under the necessity of fixing the amount somewhat higher than will actually be needed, in order that there will be no possible question of its ability to fulfil its contracts. The excess premiums denomi-

nated "surplus" in the companies' financial statements are mathematically and morally the property of the policyholders, whether the distribution be made annually or deferred for a term of years. This statement is as little open to dispute as the statement that the reserve fund is the property of the policyholders. From what then, and for what, shall the stockholders be paid for their stockholdings, and what shall they be paid? What do the stockholders relinquish when they transfer their stockholdings to the policyholders? What relation do the stockholders bear to the policyholders? To answer the last question first, it may be said that the stockholders are the trustees of the policyholders. To them is intrusted the supervision of the funds of a business of the most beneficent character. To dissipate them recklessly would be a breach of trust. To use them for their own aggrandizement would be perfidy. The answer to the second question is that all that the stockholders relinquish from a financial point of view, is the opportunity to manipulate the funds confided to their care in such a way that they will receive larger returns than they could receive from any legitimate investment. Are they to demand pay for relinquishing this opportunity? To answer in the affirmative stamps them adventurers. If it be true that they have, as stated by the Insurance Commissioner in one case, "already received enrichment beyond what avarice could have dreamed of," would it not meet the moral sense of the community more to return to the policyholders some part of their past gains rather than to demand compensation for the relinquishment of the expectation of future gains?

Mutual companies have grown and thriven without the use of capital stock. Much is said of the evil of proxy control, but experience has demonstrated that no management, however strongly it may be entrenched by holding the proxies of policyholders, can withstand the force of public opinion, but must retire when that course is demanded by the interests of the policyholders.

VOL. LVIII

NEW YORK, THURSDAY, MARCH 23, 1905

No. 2938

## Survey of the World

### Mr. Roosevelt's Visit to New York

The President was in New York for eleven busy hours on St. Patrick's Day. In the afternoon he attended the wedding of his niece, and in the evening he was the guest of honor at the banquets of the Friendly Sons of St. Patrick and the Sons of the American Revolution. At the first of these dinners he remained for several hours, and his reception furnished fresh proof of his great popularity. At the beginning of his address he read a telegram just received by the presiding officer, announcing the birth of a grandson of one of the guests. This had been handed to him, he said, "as a sop to my well-known prejudices." He proposed the health of the child's father and grandfather, and, especially, of the mother. In his address he reviewed the history of the Irish element of our population, pointing out the names of Irishmen (Barry, Montgomery, Sullivan, Andrew Jackson, Sheridan and others) who had been eminent in the army, the navy and the Government, and not forgetting the two captains in his regiment who lost their lives in the war with Spain:

"They are a masterful race, of rugged character—a race the qualities of whose womanhood have become proverbial, while its men have the elemental, the indispensable virtues of working hard in time of peace and fighting hard in time of war. In every walk of life men of this blood have stood, and now stand, pre-eminent as statesmen, as soldiers, on the bench, at the bar and in business. They are doing their full share toward the artistic and literary development of the country. . . . Let us keep our pride in the stocks from which we have sprung; but let us show that pride not by holding aloof one from another, least of all

by preserving the Old World jealousies and bitternesses, but by joining in a spirit of generous rivalry to see which can do most for our common great country."

We should so bear ourselves "that the name American shall stand as the symbol of just, generous and fearless dealing with all men and all nations." He hoped that an effort would be made to endow chairs in our universities for the study of Celtic literature and for research in Celtic antiquities. Among the following speakers was Congressman Bourke Cockran, who said that the President was an embodiment of those virtues of the Irish race which he had mentioned, and that in November last the Irish people had broken away from their leaders and elected him.—Speaking at the second banquet, at a late hour, Mr. Roosevelt urged that we should profit by the errors of the past with respect to the army and the navy. If we had had a larger fleet in 1812 "we should not have had to fight at all." We were now potent for peace because we had built up our navy. He criticised those who had opposed this up-building. "Never hit if you can help it," said he; "but never hit soft":

"I speak in the interest of peace. I ask for an efficient army and navy—this for a country that will not stop building the Panama Canal, that will not surrender its island possessions. We should take measures to make our backing of the doctrines of peace effective and not mere bluster."

### The Santo Domingo Treaty Laid Aside

After two or three days' debate upon the Santo Domingo treaty, as amended by the Senate Committee, it was seen that the needed two-thirds majority could not be ob-

tained for ratification at the special session. With three seats vacant and two Senators disabled by indictment, 57 votes were required, and the Republicans could supply only 54. It had been expected that at least three Democrats would stand by the treaty, but in the course of debate it was ascertained that the Democrats would oppose it without a break in their ranks. On the 15th the Republican leaders told Mr. Roosevelt that the treaty would be rejected if it should be pressed to a vote. He was not disposed to withdraw it, but preferred postponement until the regular session. He reluctantly agreed with his advisers that the vote should be deferred; rejection, in his judgment, would seem to give notice to European creditors that we declined to take measures for the settlement of Dominican debts and would open the way for action by them. The debate continued, but it was understood that there would be no vote before adjournment. It had become difficult to maintain a quorum; many Senators desired to go home. It was said by press correspondents that there had been from the beginning a very noticeable lack of enthusiasm on the Republican side in support of the treaty. Among the amendments proposed was one by Mr. Hale limiting the operation of the agreement to ten years. A motion to discuss the whole matter in open session was lost, 13 to 34. The leading supporters of the treaty were Senators Spooner and Foraker, who urged ratification to prevent complications with European Powers, who might take possession of the custom houses with the intention of holding them for many years. Much was said about Mr. Teller's resolution calling for the instructions given to Commander Dillingham and all the correspondence relating to the first protocol. Mr. Lodge argued earnestly against asking for this record. Other resolutions were offered, asking for a complete history of the arbitral agreement now in force. None of these was adopted. It was announced on the 17th that, if no action upon the treaty should be taken, the Government would proceed under the arbitral agreement, collecting the

revenue at the two ports (Puerto Plata and Monte Christi) now held, and that Judge Abbott, the present agent, would probably be superseded by Professor Hollander, formerly Treasurer of Porto Rico; also, that if European Powers should attempt to collect their claims, our Government would not be inclined to make a protest. The special session of the Senate ended on the 18th.

#### Projects of the Reader Family

In connection with this treaty, an interesting controversy has arisen concerning William Nelson Cromwell, formerly counsel for the Panama Canal Company, and the projects of Mr. and Mrs. A. B. Reader. Senator Morgan asserted that Mr. Cromwell was the originator of the protocol, having induced our Government to take up the matter in order that the plans of the Readers might be frustrated. They, he said, were on the point of completing a similar agreement with President Morales when the latter was induced to turn away from them. This assertion caused the publication in New York of a long statement by Mrs. Reader (formerly Miss Ella Rawls, of Alabama), who was a typewriter in Wall Street a few years ago and has since achieved considerable success as a promoter and fiscal agent. The gist of this statement was that Morales requested her to act as the fiscal agent of Santo Domingo in the United States; that she followed the advice of Mr. Cromwell and consented; that her husband went to Santo Domingo in December last to have the necessary papers signed (which gave her large concessions and empowered her to negotiate for a settlement of the republic's debts and for the sale of Samana Bay to our Government), and that Morales on January 9th was about to sign the papers when a cable message from Washington to Minister Dawson interrupted the proceedings and induced him to await the arrival of Commander Dillingham and to deal with him as the representative of the United States. Morales, the Readers say, explained that he must throw them over because he was "afraid of the Big

Stick." Dillingham arrived on the 14th, and Mr. Reader then returned to New York. The statement permits the inference that Mr. Cromwell or some one in his confidence had reported the project to our State Department. But Mr. Cromwell has published an explicit and comprehensive denial, saying that he has never been interested in anything of the kind, as counsel or otherwise, and has had nothing whatever to do with Santo Domingo affairs.—It is understood that the negotiations with Santo Domingo were in the hands of Assistant Secretary Loomis, and reports have repeatedly been published that his action and utterances were not fully approved by Secretary Hay. These reports have also been denied. Mr. Loomis has gone to California on leave of absence, and it is announced semi-officially that he will succeed Mr. Conger a few months hence as Ambassador to Mexico. Secretary Hay has for some time been disabled by illness. He sailed for the Mediterranean on Saturday last and showed great physical weakness while going on board the steamship. He is suffering from nervous exhaustion, due to overwork, influenza and bronchitis.

#### Politics and Washington Topics

The controversy over the Governorship in Colorado was closed on the 16th, when the Legislature, in joint convention, by a vote of 51 to 41, decided in favor of Governor Peabody. At the recent election there was an apparent plurality of 9,874 for Adams, Democrat. Investigation has since disclosed corruption and extensive frauds, which were not confined to either of the parties. It is understood that one-third of the 66 Republican legislators had refused to vote for Peabody. After he had promised to resign within 24 hours, 12 of these consented to support him, but 10 voted with the 31 Democrats for Adams. Governor Peabody resigned on the 17th, and Lieutenant-Governor McDonald was sworn in as his successor. Mr. Adams says that the office has been stolen and that Peabody's course is equivalent to a confession that he was not elected.—The contest in the Missouri

Legislature concerning Senator Cockrell's successor ended on the 18th with the election of William Warner, for whom Richard C. Kerens had made a brief address. It was known some weeks ago that Mr. Niedringhaus, the caucus nominee, could not be elected, owing to the opposition of a few members whom Mr. Kerens controlled. The election was marked by riotous disorder. Mr. Warner is a lawyer, 65 years old. He has been Mayor of Kansas City, United States District Attorney and a member of Congress. He is a veteran of the Civil War and has been Commander of the Grand Army.—Extensive land frauds have been discovered in Utah, where more than 300,000 acres of coal land have been taken in the interest of a corporation that controls the coal output of the State.—Senator Bate, of Tennessee, died on the 9th of pneumonia, owing to exposure on Inauguration Day. His successor is James B. Frazier, now Governor of Tennessee.—Among the nominations confirmed by the Senate on the last day of the recent session were those of C. W. Anderson (a negro) to be Collector of Internal Revenue at New York; Edwin V. Morgan, of New York (formerly Secretary of Legation at Seoul and Consul at Dalny), to be Minister to Korea, and P. V. De Graw (for many years a well-known journalist and manager of press associations), to be Fourth Assistant Postmaster-General. In Illinois, District Judge Kohlsaatt was promoted to the Circuit Court, and District Attorney Solomon Bethea (who prosecuted the Beef Companies) was made District Judge, as was also Kennesaw Mountain Landis, the brother of two members of the House from Indiana. Charles H. Aldrich, formerly Solicitor-General, had filed charges against Judge Kohlsaatt, asserting that he had appointed his private secretary to a very profitable receivership, retaining him as secretary; that he had employed his son as secretary and assigned important references to him; that he had repeatedly made his brother-in-law an appraiser, had favored certain attorneys and had appointed a young son of Senator Hopkins master in chancery. These charges were investigated by agents of the Government before the nomination was made.—Republican leaders are con-

sidering the expediency of imposing a small duty on coffee at the next session of Congress.

#### Differences in the Mormon Church

Frank J. Cannon, formerly United States Senator from Utah, has been excommunicated from the Mormon Church for "unchristianlike conduct and apostasy," on account of his attacks upon the leaders of the Church and their methods in the *Salt Lake Tribune*, of which he is editor. He had denounced President Smith and some of the Apostles for their violation of the laws, declaring that Smith was "a foe of a republican form of government," that he "was not a prophet of God" and that "his idol was Mammon." He asked the ecclesiastical court for permission to prove his charges, but this was denied. C. A. Smurthwaite, a priest of the Church and a prominent business man, has published an appeal to the members of the Church, urging them to rise and throw off "the religious and commercial tyranny exercised by President Smith." He also demands an accounting of the large sums paid into the Church treasury as tithes. Some think these incidents mark the beginning of a revolt of young Mormons against the present government of the Church.—In an address before the Congress of Mothers, Senator Dubois last week reviewed the history of Mormonism and the testimony in the Smoot case, denouncing President Smith and several of the Apostles for their admitted and defiant violation of the law against polygamy, and asserting that in Idaho, Utah and Wyoming no one could now be elected a Senator who openly opposed the methods of the Church. This is denied by the new Senator from Utah, Mr. Sutherland, who says that he did not have the support or aid of the Church, and that all the Republican Gentiles in the Legislature voted with the Mormons for him. The Congress of Mothers adopted resolutions denouncing Mormonism and calling for the expulsion of Senator Smoot.—In the Canadian Northwest, the authorities are prosecuting Mormons for polygamy.

#### The Trust Question

Commissioner Garfield's report upon the business of the great Beef Companies has been severely criticised, especially in Kansas, where the Legislature has adopted resolutions denouncing it and urging the President to appoint some "competent" person to investigate the Standard Oil Company. The Commissioner is already engaged in the oil investigation. His agents are examining the company's books in New York. Both the main company and the subsidiary organization in Kansas publish statements welcoming the inquiry and offering every facility to the investigators.—Testimony in the case of Kansas against the Atchison Railroad Company indicates that this company and other railroad companies have used their freight charges to the disadvantage of the independent oil producers. The Atchison's freight auditor testified that in 1902 the company had paid back to shippers \$1,198,352. He declined to produce the vouchers, which would show to whom the rebates were paid.—The owners of an independent refinery in Kansas recently telegraphed to Governor Hoch that under the new Maximum Freight law the charge for a carload of oil had been reduced from \$78 to \$27. This telegram was read to the Legislature. The Standard Oil Company gives notice that hereafter it will take no Kansas oil testing below 30 degrees. This excludes about two-thirds of the Kansas output. In Kentucky 200 indictments have been found against the Standard Oil Company for selling oil at retail without a license. In Illinois the construction of the company's new pipe line from Kansas to Indiana has encountered obstacles. The officers of one county will not permit the pipe to be laid in their territory; in another county restraint has been imposed by injunction.

#### To Retain the Philippines for Many Years

At Secretary Taft's invitation, about forty Senators and Representatives will accompany him on a visit to the Philippines, starting in the latter part of June and going by way of Honolulu. The party will include Speaker Cannon, the mem-

bers of the Ways and Means Committee and a majority of the members of the two Military committees and the other committees directly concerned in insular affairs. About one month will be spent in the islands, and the Secretary hopes that the visiting legislators will see the justice and expediency of the legislation he has recommended.—On the 7th inst. John N. Blair, of New York, wrote to the Secretary saying that investors hesitated about putting their money into Philippine ventures because of an impression that the Administration intended to give the islanders independence within the next four year. On the 16th the Secretary replied as follows:

“The policy of the Administration is the indefinite retention of the Philippine Islands for the purpose of developing the prosperity and the self-governing capacity of the Philippine people. The policy rests on the conviction that the people are not now capable of self-government, and will not be for a long period of time—certainly not for a generation, and probably not for a longer time than that—and that until they are ready for self-government it would be a violation of trust for the United States to abandon the islands. The question as to the future, however, is one wholly of conjecture. The important fact is the present policy, which is that of the indefinite retention of the islands. What shall be done in the future, when the people have reached a condition where they can be safely trusted with their own government, is a question which will doubtless have to be settled by another generation than the present, both of the American and of the Philippine people, to whose wisdom and generosity we may safely trust the solution of the problem. Should the Philippine people, when fit for self-government, demand independence, I should be strongly in favor of giving it to them, and I have no doubt that the American people of the next generation will be of the same opinion. I think it much more likely, however, that after the Philippine people shall have been associated with the American people for a generation or more, and shall have tasted the prosperity they will find behind the national tariff wall, they will prefer a relation to America like that of Canada or Australia to England to one of absolute independence.”

The published prediction of Mr. Hull, chairman of the House Military Committee, that after the war with Russia Japan would attempt to take the Philippines has been the subject of some

discussion in the Senate. The Japanese Minister at Washington hastened to disclaim any such purpose on the part of Japan. Our possession of the islands, he said, was beneficial to Japan, by furnishing an object lesson in civilization that assisted the Japanese in improving the condition of the Koreans and Chinese. Japan and the Philippines should be good neighbors, enjoying peaceful commercial and social relations.—In Luzon, one Toribio, justice of the peace, has been arrested for attempting to organize a conspiracy for the overthrow of the government in the province of Albay. At Malabon, the brother-in-law of ex-Governor Trias is to be prosecuted for instigating a revolt in Cavité.—D. H. Burnham, the well-known architect, has returned to Chicago with elaborate plans for the improvement of Manila, the fruit of his studies in that city for several months past, under the direction of the War Department.

**Venezuela** No one can accuse President Castro of Venezuela of being afraid of trouble. Not only has he done everything possible to prevent the settlement of the asphalt controversy with the United States in accordance with Mr. Bowen's reasonable plans, but he has now ordered his courts to render judgment annulling the contract of the French Cable Company and authorizing the seizure of the company's property, and has also ordered the Governor of the Province of Barcelona to take possession of the Italian coal mines of Guanta Nariqual. These actions bring France and Italy into the controversy, and unless the United States does something at once there may be a repetition of the coercion of two years ago, tho after that experience European governments will be careful in the future how they put pressure upon South American republics. Besides this, President Castro is at loggerheads with all the diplomatic colony at Caracas, but he apparently depends upon the United States Government through the Monroe Doctrine to get him out of any trouble, as it did once before. The asphalt question is really insignificant. The important thing is to get justice in all the

disputes that Castro has with foreign governments. Castro, however, has refused to arbitrate all pending questions. He wants his courts to decide them and his courts are absolutely under his dictation. If the United States can stand this sort of thing it is certain that the foreign governments will not, and that is where the trouble may come in. In the meantime there are reports of a revolutionary movement against Castro by General Matos, who led the former revolution, and General Hernandez (El Mocho). But as Castro is so thoroughly entrenched in Venezuela scarcely anything but assassination or pressure from foreign governments can budge him.

#### The Italian Railroads

The ingenious method of obstruction by obeying all the rules which the *ferrovieri*, or Italian railroad employees, adopted in lieu of a strike does not seem to have been such a success as to encourage its adoption elsewhere. It has caused even more irritation to the public than an ordinary strike, and in some places the passengers took things in their own hands, and fights occurred between them and the station agents and porters, in which the police had to interfere. The cause of the trouble was the bill introduced into Parliament by the Government for the avoidance of railroad difficulties by instituting special councils of conciliation, a general council elected by all the employees, and, as a final resort, compulsory arbitration. The clause in the law which was resented by the men as a dangerous limitation of the right to strike provides for special action against

"those who do not have recourse to these legal means, or who, after having had recourse to them, do not accept the legitimate consequences and agitate with the view of hampering or stopping the service."

Instead of striking, the *ferrovieri* adopted a policy of "passive resistance," or dilatory tactics, consisting in strictly enforcing all the regulations and carrying out all orders with the utmost deliberation and punctiliousness. Ticket agents required purchasers to present the exact change, all holders of signed tickets had to be iden-

tified, all baggage was weighed and measured. This resulted in practically blocking the passenger and freight traffic for several days, but the employees were forced to give way before the pressure of public opinion and the energetic efforts of the authorities to enforce punctuality, and now the trains are running on the ordinary schedule.

#### Russia's Internal Difficulties

The continued defeat of the Russians in Manchuria and the evidence of chronic disaffections and disorder in European Russia have caused the French to be very wary of further investment in the bonds of their ally, and the Russian representatives in Paris find it impossible to float a new loan there until peace is in sight. Altogether, it is estimated between \$2,500,000,000 and \$3,000,000,000 of French money is invested in Russia. The Russian Government proclaims its unalterable determination to bring the war to a victorious conclusion, at any cost of lives and money. It is announced that only seven to nine per cent. of those eligible for service have been drawn by the War Department and the gold reserve held in the State Bank is \$448,000,000 and the gold reserve held abroad is \$226,500,000. It is now proposed to raise \$100,000,000 or \$120,000,000 by an internal loan on five per cent. treasury bonds issued at 93 to 95. Peace suggestions are still ostensibly repulsed. New troops are being mobilized, and Admiral Rojestvensky has not been recalled, and is relied upon to restore Russian prestige on the sea by a victory over the Japanese fleet, of which 22 vessels passed Singapore on March 15th. Since there is known to be a strong peace feeling in Russia this show of determination may be for the purpose of securing better terms from the Japanese. The peasant riots in many provinces still continue, being incited by the circulation of millions of copies of revolutionary tracts telling the peasants that the land belongs to them and that the Czar has ordered them to take possession of it in spite of the opposition of the landlords. Acting upon this thousands of

peasants are cutting trees in the forests of Kurland. The estate of the late Grand Duke Sergius was one of those pillaged. Some of the strikers in the Government factories have returned to work under the threat that they will be considered as reservists and sent to the army in Manchuria if they continue on a strike.—It is rumored that the Council of Ministers and the Committee of Ministers are to be combined into a cabinet of the ordinary European form under the presidency of Witte.

#### Kuropatkin Removed

As a result of his disastrous defeat at Mukden General Kuropatkin has been removed from the command and has left for St. Petersburg, and General Linevitch appointed in his place Commander-in-Chief of the land and naval forces in Manchuria. The imperial order contains no word of praise for the deposed General and nothing to indicate that he had spontaneously offered his resignation. The War Council at St. Petersburg is reported to have approved of the action of General Gripenberg in taking the offensive in an attack on the Japanese left at the Sha River, a movement which Kuropatkin failed to support, but which if it had been successful would have prevented the advance of General Nogi on that side, which forced the evacuation of Mukden. General Linevitch assumes command of a force which, according to St. Petersburg dispatches, amounts to 268,000 men, but in their scattered and disorganized position he has a difficult task. He is now 66 years old and entered active service when he was at the age of 21. He took part in the war with Turkey in 1877, and was in command of the Russian troops for the relief of the Legations of Peking in 1900, where he received a wound from which he has ever since been lame. He was Governor of the Amur Territory when the war broke out and has rendered efficient service throughout the campaign in command of the First Russian Army. He owes his advancement entirely to personal ability, for he has learned the art of war in field rather than school and has never been a member of the Czar's guards. There has for many years been a feeling of jealousy

and enmity between Kuropatkin and Linevitch.

#### The Russian Retreat

The Russian army has continued its retreat northward ever since the evacuation of Mukden, closely pursued by the Japanese troops, and with almost continuous fighting in the rear and the western flank. Some of the trains continued on as far as Harbin, 300 miles north of Tie-Ling, and at the time we go to press it is reported that the principal part of the Russian force is concentrated at Kunchelung, a hundred miles north of Tie-Ling. It was expected that the stand would be made at Tie-Ling, or Tie Pass, where the railroad and the Mandarin road go through a narrow defile between the hills on the river. The situation had been well fortified after the first battle of Liao-Yang, and is the most defensible position south of Harbin. Here the greater part of the Russian army rallied from the confusion in which it had been thrown by its rapid retreat from Mukden. A force was stationed under General Linevitch at the Fan River, eight miles south of Tie-Ling, and repulsed the attack of the Japanese at this point with a loss to the assailants of about 1,000 men, but the Japanese force to the west of the railroad continued its march northward with unexampled rapidity, and here again, as at Liao-Yang and at Mukden, threatened to cut the railroad to the north and surround a large part of the Russian army. Further retreat was therefore ordered without any attempt to hold Tie-Ling, which was evacuated on March 15th. At Kaiyung, twenty-five miles north of Tie-Ling, one of the old Chinese roads branches off toward the right to Kirin, which is on the east of the Chinese Eastern Railroad. Part of the Russian troops are reported to have gone in this direction to Kirin, but most of them are on the railroad going northward in the direction of Harbin. The Russian troops have become entirely disorganized in their retreat, on account of the cold and stormy weather and the barrenness of the country through which they are

passing. Most of the wounded were carried off from Mukden, but one hospital containing 800 wounded Russians and 300 Japanese was left under the protection of the Chinese Governor-General of Mukden, and in charge of a small Russian hospital corps. At Harbin it is reported that 60 surgeons and 150 nurses have to attend to 70,000 sick and wounded. Two surgeons have become insane. An Associated Press correspondent gives this graphic description of conditions following the battle of Mukden:

"Everywhere are pale faces of corpses sleeping among dead horses, slaughtered animals and abandoned quarters of beef. There is bursting shrapnel everywhere; six horses were killed a hundred feet away. A wagon train ahead has stopped while two soldiers are quarreling plaintively about horse feed. Dead and wounded are passing, on the shoulders of soldiers, or in mule litters, carts, wagons, or Chinese vehicles. Here one Russian and one Japanese wounded side by side feed each other; there lie seven little Japanese wounded, to whom big Russians are kindly attentive. Marching soldiers increased their loads by spearing bread, vegetables, or fruit on their bayonets, at the same time discarding heavy boots, Chinese garments, knapsacks and blankets. After the initial excitement at Tava, where a few wagoners plunged without reason over impossible gulches, the entire body arrived at the steep banks of the Pu River. There heavy artillery hastened down upon the water-covered ice, which slowly gave way, and tremendous exertion was required in getting the guns out and up the further bank, the men in the little gorge getting into a white heat of excitement.

"Japanese grenades give the initial impression of shrapnel, and, with rifle fire, set the jammed mass into confusion. Daybreak disclosed the plain covered with riderless horses, horseless vehicles, fragments of harness, heaps of stores and furniture. Night found the army bravely bivouacking on bare plains swept by a cold, searching wind, with not a solitary dug-out to shelter them, but preparing a new position."

According to this correspondent the Japanese strength at the battle of Mukden was 80 battalions less than that of the Russian. Kuropatkin reports that the lack of good maps and knowledge of the country and movements of the enemy's troops were the principal

causes of the disaster. Japanese and Chinese spies kept the Japanese headquarters thoroughly informed of the disposition of the Russian troops, and therefore they were enabled to attack at the weakest points. General Nogi's force on the Japanese left outflanked the Russians to the west of Mukden by marching 30 miles on March 6th; 25 miles, March 7th; 20 miles, March 8th, and 15 miles, March 9th. The Chinese railroad running to Sin-Min-Tung was closed by order of the Chinese Government, but has again been reopened, and is supplying the Japanese army as it did the Russian when they occupied Mukden. The breaking up of the ice on the Liao and Hun rivers will enable Chinese junks laden with food and supplies to reach the Japanese far into the interior. Field Marshal Oyama made a triumphal entry into Mukden, the capital of Manchuria, and was received by the Chinese Governor of the city with great ceremony and given a banquet.

#### The Mad Mullah

The campaign against "the Mad Mullah" in Somaliland for the continuance of which the House of Commons recently voted an appropriation of \$1,400,000 has been brought to a sudden conclusion through the mediation of the Italian Government, from which he has obtained a concession of the village of Illig in Italian Somaliland, 160 miles from Obbia, with the right of access to the coast. He is prohibited from trading in arms and slaves. Hajji Mohammed Abdullah, called the Mad Mullah from his fanaticism and personal bravery, began his crusade against foreigners after his return from a pilgrimage to Mecca in 1896, and by his power over the natives and his ability to organize the tribes and inflame their religious and patriotic feelings he has conducted a predatory warfare against the English ever since. On October 5th, 1902, he ambushed a British force passing through a jungle and captured a Maxim gun and many camels. The British lost two officers and 70 men killed.

# Shall the Navy Be Increased?

BY JOHN D. LONG

[No more straightforward opinion on the question of increasing our navy has been vouchsafed by a public man than that contributed by ex-Secretary of the Navy Long, with whom President Roosevelt was associated during the Spanish War. His opinion on the naval situation, which is that of arguing against any present increase of marine armament, is in direct opposition to the expressed ideas of the President. Below is the first authorized expression of his idea of maintaining present conditions without further increase.—EDITOR.]

I REJOICE that the tendencies of our national Government and especially of our national public sentiment are toward the paths of peace. But there is always danger that in strengthening our military armament, tho only with the intent of securing better means of defense or insuring a proper international police power, we may incur the temptation to use our increased force in an offensive direction. A man with a pistol in his pocket is more likely to use that weapon than if he does not happen to have it on his person.

It seems to me, for instance, that we are pushing the Monroe Doctrine a little too far. There is grave danger that in asserting too radically what is recognized at home and abroad as an established doctrine of our country, we may place ourselves in the position of interfering too far in the affairs and with the rights of other nations. It is, of course, only another name for the doctrine that "might makes right," and that we are justified in keeping other nations away from further territorial encroachment on this hemisphere on the ground that it is not for our interests, however much it may be for theirs, to do so.

I do not like the Santo Domingo treaty, so far as we have been informed with regard to it. It seems to me impolitic, and it certainly would be prolific of embarrassing and costly entanglement for us to commit ourselves to the rôle of a debt collector for foreign Powers—collecting from various South American countries debts which they may happen to owe to countries in Europe. Such a policy is likely to lead not in the ways of peace, but to those complications arising from interference in the affairs of other nations and carrying the peril of the chance of war.

Then, too, there is no telling the extent and involvement of the obligations upon us to which this policy, however it may be defended in the particular instance of Santo Domingo, may lead. It becomes a precedent; it makes us practically a sponsor for any South American country with reference to which it is adopted—at first as to its financial liabilities and then by easy steps as to its general relations. There is something more at stake than the mere collecting and holding of Santo Domingo revenues for the payment of Santo Domingo debts. The minute we enter into this obligation we become practically responsible for these debts. Suppose a revolution or disorder or corruption or that the revenues of that island fall off so that they are unequal to meet the payments for which we collect them. May not some creditor nation in that case say that by our interference we have prevented its direct action upon Santo Domingo, and are, therefore, under obligation to make good the damage? In other words, an infinite variety of obligations suggest themselves. It is certainly a departure from the well established Washingtonian policy of non-entanglement for our country which has stood till these later days.

In this connection, I am not at all certain that the emphasis which in recent years has been laid upon our naval development may not suggest a cautionary signal. We have never had so strong and effective a navy as now. Being for the present in less demand in the Orient, our ships find employment in drill and maneuver and there is also a tendency, of course, to gather some of the small craft, including now and then a big one, at any point where the telegraph suggests that there has been a riot or an

uprising or a threat of change of government in some of the countries south of us. Naval officers feel under obligations to pursue the very proper policy of protecting American interests and so are led to take a hand. In other words, we run just now the risk of getting our finger into too many pies, with a chance of burning it, and wisdom and prudence suggest the opposite trend toward reserve and self-restraint and toward being very sure that it is our own business which we are minding.

I recognize, however, that preparedness is a vital consideration, and that with our increasing national development we cannot keep altogether within the more limited lines of the past. I have entire faith in the high mind and honest purpose of our present national administration, and I am referring rather to possible national tendencies under present leadings than to anything else. But I fancy that there is likely to be a reaction in this direction and that it is a time when it is wise, in homely phrase, "to go slow."

I share in the belief that our country ought to have a large navy. This was my view when I was in the department and I never saw occasion to change it. There is much more need for us to maintain a large navy than for us to keep a large army. We have not much to fear from any land invasion of this country by any foreign Power, protected as we are by nature and by the ocean, by the navy and by our fortifications, and by the spirit and overwhelming numbers of our people. Furthermore, a large army can be improvised in a comparatively short time and our volunteers have always made good soldiers, but it takes years to build ships of modern sort, and, of course, we ought not to fall back into the dilapidated naval condition in which we were for so many years after the Civil War.

On the other hand, I am very strongly of the opinion that the recent system of appropriating every year for large numbers of new battleships is not wise and is going too far and too fast. In the first place we have a very good navy now. There are, as I learn from Senate document No. 117, recently published, some 265 vessels fit for service, includ-

ing 14 battleships and armored cruisers, 18 protected cruisers and a variety of gunboats, torpedo boats and monitors and various other craft. There are also some 47 vessels authorized or under construction, among which are 5 protected cruisers, 10 armored cruisers and 14 first-class battleships. Battleships and cruisers are practically equally large and effective and are each from 12,000 to 16,500 tons. In other words, we have already twice as many of these great ships authorized or under construction as are now in service. This is a very rapid and expensive rate of increase.

In conversation with the Secretary of the Navy last summer I expressed the opinion, which I still have, and which I have as a very cordial advocate of a large navy, that it is time to pause. As I then said to him, I would this year refrain from appropriating for any battleship, certainly for not more than one.

There are three reasons for this.

First, there is a growing feeling in the country that we are carrying this increase too far, and the result will, as always happens, be a reaction in public sentiment, which is liable to be injurious to the navy and to delay its slower and healthier development much more than the self-restraint of not appropriating for a battleship this year would do.

Second, we are threatened with a deficit in our national treasury and with several millions less revenue than our expenditure. On good business principles, therefore, if we can, by not appropriating for three battleships this year, save some twenty millions of dollars, it would, in the absence of any crying necessity for their immediate construction, be good business sense to do so.

Third, it seems to be a fact that we have some difficulty in securing officers and men enough to properly man all the ships we now have. If we add to our present number of big ships twice as many more, we have to face the alternative of letting them rust in dock or of going to the enormous expense of additional officers and men and of their training, education and support—twice or three times as many officers and men as we now have.

The naval expenditure is approaching a very high figure. During the year

1898, when the Spanish War was going on and everything was on a war footing, actual hostilities made a great draft on the treasury, and yet the appropriations for the Navy Department were, as I gather from the same document, something like \$125,000,000; in 1899, when the quiver of the war was still on, \$62,000,000; in 1900, \$53,000,000; in 1901, \$69,000,000. Last year, 1904, they were over \$103,000,000, almost as much as during the war with Spain; this year about the same.

These expenditures for the navy in a time of peace on the basis of a time of

war are a little out of keeping with our position as a peaceful nation. Too great a navy will be regarded not in the light of protection, but of menace and of temptation to involve ourselves in the affairs of other nations and so to incur the danger of being drawn into their wars. It is not altogether easy to find occupation for the vessels we now have. We must, of course, have enough for any probable emergency, but if we get an undue number, people are going to ask "What in thunder are we going to do with them?"

HINGHAM, MASS.

## The Public Conscience

BY ARTHUR T. HADLEY, LL.D.

PRESIDENT OF YALE UNIVERSITY

**T**HIS is an age of individual freedom. We allow each man to make his own choices and his own mistakes. We claim this freedom for ourselves; we tolerate its exercise on the part of others.

This is true not only in the practical affairs of life; it is true also in our philosophy and in our religion. The men of to-day claim a right to do their thinking for themselves, and allow this right to others, in a way to which former ages have furnished no parallel. In old times most people took their standards of morals and religion ready-made. They accepted the creed of their church because it was the creed of their church. They followed the precepts of the Bible because they found them written in the Bible. They adapted their own habits of thought to the standards of right and wrong which prevailed in the community. If they wished to make any change in these standards or interpretations they tried to insist that others should make the change as well as themselves. Sometimes they succeeded; more often they failed. But they would no more have thought of assuming the right to make their own philosophy of life and

let their neighbors continue to hold a different one than they would have dreamed of assuming the right to adopt one rule of civil or criminal law for their own conduct while other people remained bound by other rules of law. To-day all this has changed. To-day, for the first time, perhaps, in the world's history, we have real liberty of thought in practice as well as in theory. We leave each man to work out his own salvation with a freedom which, even at the beginning of the last century, would have been regarded as perilous to the individual and destructive to the community.

What has been the consequence of thus allowing and encouraging each man to treat his conscience as a thing apart and his own salvation as a problem to be worked out more or less independently of those about him?

Like every other extension of individual liberty, this system has produced a mixture of good and evil. So far as it has taught people that they must work if they would be saved—that no ready-made standards of conduct could excuse them from the responsibility of making a choice, and no philosophy of life which they had accepted from others could ex-

cuse them from thinking out life's problems for themselves—its results have been good. But so far as it has caused them to do that thinking and that work for themselves alone and not for those about them its results have been bad. If the principle that each man should work out his own salvation means that he is not to throw that responsibility upon others, it is good. If it means that he is not going to take any of that responsibility for others, it is bad. Freedom is a good thing, tolerance is a good thing, but when freedom and tolerance are carried so far that a man withdraws within himself with the outworn excuse, "Am I my brother's keeper?" his own efforts at personal salvation, however well meant, are likely to come to naught.

But, in fact, no man can thus withdraw within himself. We are affected by the standards of those about us, whether we will or no; and many of those who most loudly protest that they are living their life for themselves are really just as much affected as any one else. "If the foot shall say, Because I am not the hand I am not of the body, is it therefore not of the body?" Amid the daily contact of man and man habits of thought, standards of value, subtle influences in the estimate of right and wrong, pass from man to man just as quietly and unconsciously as the blood passes from one part of the body to another, bearing seeds of life or death to the whole body, as the case may be. By this subtle contact a sort of public conscience is created—a habit of valuing things not for their effect upon the individual but for their relation to certain standards of the community, commercial or political, moral or religious. The history of any people, so far as it is worth writing, is a history of this public conscience and a record of the gradual development of these standards. The heroes of each different people and of each successive age are a sort of embodiment of these standards in flesh and blood. The careers of the men whom a people accepts for its leaders and delights to honor illustrate the motives which are swaying the morals of that people from top to bottom. The creeds of a nation show what it pretends to think; its heroes show what it really does

think. According as these ideals of heroism are high or low, base or noble, so will be the whole national career. The nation that receives a prophet because he is a prophet shall receive a prophet's reward, and the one that receives a righteous man because he is a righteous man shall receive a righteous man's reward. For the very fact that the prophets and righteous men are really held in honor shows that the conscience of that nation is truer and sounder than that of the people which cares only for the more commonplace and superficial forms of success.

The existence of such a conscience may be less prominently obtruded upon men's notice under a system of religious freedom than under an organized State Church. The agencies which give utterance to its dictates and the means by which its commands are supported may be less tangible in one case than in another. But such a conscience exists wherever society exists at all. Call it imitation, call it fashion, call it what you will; it is this habit of conformity which renders society and government possible. We cannot really hold to a line of thought without striving to impose it on others. We cannot really live among those and with those who have different lines of thought from ours without being influenced by their ways. If there is a difference between us we must change them or they must change us.

Especially dominant is the power of these public standards in what are commonly called the larger affairs of life—in influencing the conduct of business or politics, as distinct from those of friendship or of family life. A man may perhaps keep his habits of kindness or cruelty, of affection or indifference, more or less independent of the practice of his neighbors; but in the larger affairs of business or politics no such attitude of moral non-interference is possible. The man who tolerates corruption becomes himself corrupt in heart, if not in action. The man who really seeks to maintain a higher standard must become, sometimes even in spite of himself, the means of imposing that higher standard upon others. This fight for commercial and political honor is no defensive warfare, in which we can be content to possess

our individual souls, like so many fortresses in a hostile country. Such a warfare can end only in the exhaustion of the defenders. It must be a war of offense—one where we maintain and improve our own standards by bringing up those about us.

The task is a hard one. The difficulty of keeping our standards of business and of politics pure to-day is, I think, greater than it has been in any previous generation. The task of convincing people in a democracy that liberty brings duties as well as rights is harder than the corresponding task under an aristocracy. A privileged class has received so many special favors that you can appeal to the common spirit of justice among its members to show them that they should accept self-imposed obligations of duties in return for these favors. But when you make that appeal to a man who has taken his chance with every other man in the hard struggle of life, and who has had less than his share of power and privilege, you have no such basis upon which to work. Again, the selfish rule of an aristocracy means obvious perversion of the resources and enjoyments of the people for the sake of a small minority, and you can show thinking members of that minority that such perversion is unjust. But where we have free competition in business and universal suffrage in politics it is very much harder to prove the unfairness or injustice of any result that may come from the practice of selfishness under these conditions. There is a tendency at the present day among those who have benefited by the outcome of business competition to believe that this is part of the moral order of the universe, and there is a tendency among those who have secured the suffrages of a majority of the people to believe that the *vox populi* is in this instance the *vox Dei*. But any sane man, whatever his attitude toward social questions, must see that there are a great many cases where these assumptions prove erroneous. He must see that there are instances where business struggle results in the survival of the unfit instead of the survival of the fit, and where those who obtain temporary control of political power use it for purposes just as arbitrary and tyrannical as if they had

never been compelled to appeal to their fellow citizens for the form of an election. Our industrial machinery and our political machinery are both excellent in their way, but no industrial or political machinery, however good, can take the place of public spirit and self-devotion. And when the existence of such machinery is made an excuse for letting public spirit and devotion go unused, it constitutes a menace instead of a safeguard to the future of the body politic.

Here is the great vital need for the Church: not to make the American people law-abiding and intelligent—that it is already; not even to make it kindly and courteous and industrious—these virtues we have, if not in ideal measure, at any rate sufficiently for many of the practical purposes of life; but to fight with all its heart and with all its soul that dangerous spirit of selfish isolation which encourages a man to take whatever the law allows and most approves the man who has taken most. To-day, as well as two thousand years ago, we have our Pharisees and our scribes, who rest content with the law and what it brings. To-day also, as two thousand years ago, we have our false prophets, who seek to remedy the errors of a kingdom of the world by another kingdom of the world, whose powers shall simply be transferred from the hands of the conservatives to those of the radicals. It sometimes seems as tho all efforts at reform were reducing themselves to an endless struggle between those who, having more money than votes, are anxious to have the rights of property maintained by the courts and those who, having more votes than money, are anxious to have those rights impaired by the legislature or transferred to the hands of elected magistrates. From no such blind struggle can any true reform come. There must be a sense, both on the part of the business man and the politician, on the part of those who have and on the part of those who desire to have, that power is a trust and not a privilege; that life is to be valued not for what it enables us to get out of the people but for what it enables us to give to the people in the way of service. This was Christ's message nineteen centuries ago. This is the message of every true prophet. This has

been and must be the message of the Church whenever the Church is a power among the people.

Would to God that we could see the man or the Church that should do this! We are to-day as those who cry in the wilderness, "Prepare ye the way of the Lord!" The day for which we have looked has not yet broken. But there is

light enough for the work of preparation. Let us strive as clearly as we can to see the full meaning of the text that none of us liveth unto himself. Then we shall at least know in part and prophesy in part, and then may we make ourselves ready for the fulfilment of the promise that when that which is perfect is come that which is in part shall be done away.

NEW HAVEN, CONN.

## Conditions of the Southern Problem

BY ALBERT BUSHNELL HART, LL.D.

[Dr. Hart is Professor of History at Harvard and the author of numerous books and articles on American history. He is now editing "The American Nation," a co-operative history of our country by various specialists, which we have recently reviewed so favorably. We shall follow this article shortly by another which will give Dr. Hart's remedies for the negro problem.—EDITOR.]

### I.

N O Northern visitor crosses Mason and Dixon's line without realizing that there is a Southern problem, if only how many hours behind time is the limited express train; then the tourist as he passes along the Southern Railway to New Orleans wonders why there should be any problem in the midst of such prosperity and progress; then, if he strikes out of the Northern South of manufactures and pleasure resorts into the real Southern South he observes that everywhere black care sits behind the horseman. He detects a feeling of disappointment, of unwelcome responsibility, of foreboding; for, underlying political, economic and social life alike, is the consciousness of the negro problem. It is stamped on every page of the newspaper, it starts up in casual conversation, it affects every enterprise; and, by and by, if the Northerner remains, as the writer has recently done, for months together in Southern communities, he too becomes infected with this uneasy sense of a destiny unfulfilled, of a civilization anxious for its own future.

As time passes the inquirer becomes aware that he is in an unfamiliar environment; population is diffused, resources are scanty, commercial enter-

prise is sluggish, labor is uncertain; and above all, behind all and through all is an antagonism of races which broods over the whole community. Even at the risk of seeming unsympathetic it may be worth while to describe briefly the actual conditions of the South to-day and the reasons for the apprehension felt by the white race, leaving for a later article some possible remedies for the trouble.

At the beginning we must recognize the disagreeable truth that the South is still a poor community. The tourist is often deceived by the manifest well-being of the belt of country which includes the thriving cities of Richmond, Atlanta, Birmingham, Montgomery, Mobile and New Orleans—that is, almost all the prosperous and go-ahead Southern cities living from Southern trade, except Memphis. He thinks resorts like Asheville, Aiken, Augusta and Palm Beach are typical Southern towns; he overestimates the value of cotton because of the large sum realized for last year's crop; he is led astray by the phenomenal growth of Texas, a State which will be left out of account in this discussion because in climate, products, settlers and ideals it is a Southwestern rather than a Southern State. Off the main lines of railway travel and outside the coal and

iron districts one finds straggling cities and small and often decaying towns and a multitude of rural counties, many of them remote and isolated. The people in general are too poor to travel, too poor to buy books, too poor to keep up first-class schools, too poor to send their sons and daughters long distances to college.

Educationally the South is still backward; notwithstanding excellent institutions of learning like the University of Virginia, Trinity College, the University of North Carolina and Tulane University, colleges are for the most part small, ill-equipped and provincial, academies weak, city schools much inferior to those of similar Northern places, rural schools deplorably poor. The bright side of education is the astonishing growth of high schools, both boys' and girls; the development of normal training and the determination of many States to improve their lower schools. Nevertheless, there is woful ignorance; white mountaineers have been known to take their children out of school because the teacher would insist that the world is round. Of the Southern negroes above ten years old, in 1900, 48 per cent. could not write; of the Southern whites, 12 per cent., as against under 6 per cent. in several Northern States. Even where children go to school the intelligent atmosphere which backs up and enforces schools is to a great degree wanting outside the larger towns. The rural regions have few or no newspapers, and no such literary clubs, acquaintance with magazines and library privileges as in many farming communities in the North.

From two complications of Northern civilization the South is nearly free—only about one-thirtieth of its population is foreign born, and it has few factory hands; but it has a numerous low and degraded population, both colored and white. The town negroes are evidently much better off than their fathers were in slavery; they have fair housing and incomparably larger opportunities for their children and are not a noisy or unruly set. The city of Charleston, for instance, is a quieter and more peaceful place than the city of Fall River, of about the same population. The condition of the country negroes, however, is one of the things most difficult to ascertain. Most South-

ern whites assure you that they are steadily retrograding into barbarism, while the negro leaders point to the fact that nearly four million negroes are engaged in some sort of gainful industry, that many of them buy or rent land for themselves, that they have accumulated over five hundred millions of property—every dollar of it since the Civil War. On the other hand, laziness and untruthfulness are widely distributed; no white man believes that any negro woman is virtuous; in many sections, especially in remote counties, where the negroes make up one-half or three-fourths of the population, there is a black population not far above savagery; and there are some desperate and bestial negroes whose existence is a terror and a menace to the community in which they happen to be.

Many people say that there is no negro problem in the South—only a mulatto problem—and it is true that the mixed bloods are almost a third of the negro race, that they furnish most of the educated negroes and almost all the leaders, and that the lightest of them—often indistinguishable from whites to the uneducated Northern eye—feel passionately the injustice of excluding them from the society and the opportunities of the whites. Of the four negroes who have achieved literary distinction in the last decade, Washington, Du Bois, Chesnutt and Dunbar, only the last named is a pure negro.

The South is in the habit of ignoring that side by side with the eight million negroes are over ten million poor whites, a considerable proportion of whom, in the mountains, the Piedmont belt, or the lowlands alike, are as lazy, unprogressive and densely ignorant as the negroes with whom they live on terms of juxtaposition. Many of these our Anglo-Saxon brethren are also brutal, licentious, homicidal and cruel; yet they are capable of great things, for out of the poor whites have sprung three Presidents of the United States—Jackson, Lincoln and Johnson—and they furnished the greater part of the army which for four years maintained the Southern Confederacy. The South can neither appreciate nor solve the negro problem until it has disposed of the poor-white problem.

Another essential condition of the

South is the remarkable cohesion of the dominant section of the white race. The Northerner with difficulty realizes that all the families who have distinguished themselves in any particular State are acquainted with each other and have many affiliations in other States. Money or even public service admits no one to this intimate circle of five thousand friends; lack of money or decay of family character expels no one. Southern society hence shows extraordinary solidarity of sentiment; in religion, in education, in literature, in politics, in morals there is a recognized standard from which divergence marks a man or woman as a suspicious character. When it comes to such essential matters as disbelief in Darwin, or the respect due to a lady, or the proper way to pronounce n-e-g-r-o, nobody can be a part of the community if he radically disagrees with it; he must choose between Coventry and exile. There are not wanting among Southern leaders courageous and persuasive protesters against what the community holds to be the gospel, but such men take their happiness and their careers in their hands when they attack the family dragon.

These social peculiarities deeply affect the basis of political power, for the people who make up society in most States also dominate in politics. In a few communities, notably South Carolina, the poor whites have unaccountably discovered that if they will vote together they always have a majority, and they keep a man of their own type in the United States Senate. In most other States, however, politics is directed by intelligent and honorable men who have high ideals for their own State government. For that very reason they have taken the responsibility of excluding the negroes from the suffrage by recent constitutional changes.

Northern people do not always understand that there has been no such thing as universal suffrage in the South since 1874. By the Ku-Klux methods of threats, whippings and shooting, by complicated ballots, which the negro could not fathom, by "count-outs" where they were in a clear majority, by harassing requirements for the presentation of tax or registration certificates, nineteen-

twentieths of the negro voters have been excluded for years. There is not a State or a county or a city in the South where negroes are regularly allowed to vote if their vote could have turned the election; any attempt of negroes, or of a combination of negroes and white men, to get possession of a Southern State Government by showing a majority in a peaceful election would be treated as an insurrection. It must be owned that the sacred right of voting has not always been taken seriously by its black possessors. For example, in Charleston, where every voter must show his registration certificate at the polls, a few days before a certain election the circus came to town and announced that registration certificates would be accepted for admission. Next day the white men's political committee acquired a thousand of these valuable documents from the circus proprietors.

The constitutional amendments which have been adopted by six Southern States since 1890 therefore record on the statute book exclusions practically exercised for years, and now systematized by educational or tax qualifications, nominally applying to both races. Every State but one of the six now requires evidence that poll taxes have been paid, sometimes for as much as three years beforehand; all the constitutions require a voter to read and write, in several cases with an alternative of the payment of a property tax; but in some States a man who can "understand" a clause of the constitution when read to him is qualified. Hence when an educated negro appeared and was asked what clauses of the constitution of his State were derived from Magna Charta he replied: "I don't know, unless it be some clause that no negro shall vote in this State." The registrars saw the joke and admitted that he "understood" sufficiently to qualify, even tho some poor whites were not accepted. But the undoubted and avowed purpose of these changes is to exclude the negro. On the other side, the "grandfather clause" in four constitutions allows persons to qualify up to a certain fixed date and to vote thereafter as long as they live if their fathers or grandfathers were voters before the Civil War, and in two States this privilege is

explicitly conferred on ex-Confederate soldiers. To be sure, neither educational nor property qualifications are very high, and they may be acquired by many negroes in the future; but the South does not intend ever to permit negroes to over vote white men.

This ultimate conviction that the South is a white man's country is reflected also in the spirit of violence which bursts out into flame whenever there is the slightest effort to question white supremacy. Of course it is no worse to shoot a man in Georgia because he is black than to shoot him in Colorado because he is a union man or in Illinois because he is a non-union man. The point is that the predominant element in Southern society condones, if it does not approve, any act of violence which seems necessary to maintain in the mind of the negro the conviction that he is a member of an inferior, subject and defenseless race. Why should the negro expect protection when the white man is powerless against any personal white enemy who chooses to shoot him down in the street?—when not one white murderer in a hundred is punished for his crime? Why should Northern people believe that the South means well by the negro when such men as Governor Vardaman, of Mississippi, and Congressman Heffler, of Georgia, brutally threaten him and his white friends in the North? Until the South has learned the real barbarism of its social standards it can make little progress toward solving the problem either of the poor-whites or of the negro. "They that take the sword shall perish by the sword."

## II.

I have thus called attention to the visible gloom and apprehension in the South. The underlying causes are very hard to discover, first, because little race animosity is visible on the surface, and then because, tho you readily secure from any white person his surface theory of the trouble, the approach to his ultimate reasons is like taking Port Arthur; certain intellectual rifle pits and trenches have to be surmounted before you near the ring of exterior arguments; beyond is another ring of interior convictions, and inside of that a citadel of ultimate race prejudice, which, if you can pene-

trate to it, may give you the key to the situation.

The outer defense of the Southern problem is the common argument that there is danger of an actual physical contest between the two races, with a possible extermination of the whites in some States. As a matter of fact no Southern man or woman has any apprehensions for the white race as a whole; it stands shoulder to shoulder; it has all the immense power of social cohesion, the State and local governments, the arms, the military companies, the railroads and telegraphs. There is not a county in the South in which a rising of the negroes against the whites could last twenty-four hours, and of this the negroes are as well aware as the whites.

The next line of defense is a supposed fear of political domination by the negroes. This feeling is based upon the terribly extravagant and corrupt carpet-bag governments of thirty-five years ago, which gave the South an argument which will not be worn out of use for a century to come. The rejoinder is simple: If the negro domination of Reconstruction times, which was reinforced by white carpet-baggers, supported by Congress and President, bolstered up by public opinion in the North and protected by garrisons of bluecoats, was unable to keep the white people from overturning the pyramid, what power shall be able to reverse the process? Still less is it likely that the North will revive its experiment of aiding the negroes by attempting to enforce the Fourteenth Amendment, even to prevent actual aggressions on the rights of the negroes. It is better to leave to the South the self-punishment of injustice than to give opportunity again to hold the North responsible for its woes.

We are now approaching some of the real and obstinate causes of Southern unrest, and one of them is the undeniable hatred of the negroes by the lowest stratum of poor whites, who intensify, and almost create, the feeling of race hostility; for as soon as they get off their farms they become aware of negro industrial competition. Some of the best informed and most intelligent men of the South believe that the white laborer will never permit the negro to "take away

his job," especially by entering into factory labor, if he ever proves himself capable of it.

In one respect the poor whites are terrible teachers to the negroes; they are an ungovernable people and do not allow themselves to be punished for such peca-dilloes as murder. The negro, who under slavery was subject to close and unremitting discipline, is now left to follow the example of his betters. One restriction does lie on him for which there is no corresponding limitation on the whites—he may not murder or assault, or even speak saucily to a white person, on most dreadful penalties. Partly for self-protection, still more from a feeling of race supremacy, it is made a kind of *lèse majesté* for a negro to lay hands on a white man, even to defend his family or his own life—the serpent must not bite the heel of the chosen people.

This feeling is intensified beyond any degree which a Northerner can understand when it comes to crimes against womankind, for which the whole Southern community justifies any degree of lawless punishment. Nor is it in the least affected by statistical statements, however truthful, that the actual number of rapes or attempted rapes by two and a half millions of negro men in a year was twenty, while the number of lynchings was a hundred. The sanctity of womanhood (that is, of course, of *white* womanhood) is in the South an article of faith, and good people rarely make laborious distinction between the man who is guilty and the man who looks like the criminal; between shooting him in his tracks or burning him at the stake; between burning the guilty man or burning his innocent wife; between a quiet family inferno, with only two or three hundred spectators, and a first-class advertised *auto-da-fé*, with special trains and the children of the public schools in the foreground.

Beyond the more obvious reasons for the Southern problem are several inner walls of intensely felt grievances. The first is the labor difficulty, as experienced every day in the household, the field and the factory. Most Southerners tell you that the negro is retrograding and prove it off hand by comparing Sukey in the kitchen with old Mammy Phyllis, so

stately, so trustworthy, so attached to the family. Sukey is a poor creature, ignorant, stupid and indifferent, and is probably supporting an entire family from the kitchen by the method suggested by a genuine negro song, recently taken down in Mississippi:

"I doan' has to work so hard,  
I'se got a gal in the white man's yard;  
Ebery night 'bout half pas' eight  
I goes 'round to de white man's gate;  
She brings me butter and she brings me  
lard—  
I doan' has to work so hard!"

But the Southerner declines to reflect that Sukey's mother was a poor wretch, hoeing cotton under the overseer's lash, while Phyllis's grandson is an educated physician. That is, the highest among the negroes (formerly drafted for house service) now seek opportunities and callings absolutely out of their reach in slavery times, leaving to the lowest and stupidest the household tasks, which nobody covets, white or black.

In agricultural labor the conditions are similar, but more exasperating, for the son of the old field slave will not work steadily; even when a planter stands with the money in his hand begging to have his cotton picked before the frost comes, his hands may prefer to frolic or to idle; and the owner of the plantation feels a sense of wrath and bitterness and wishes for the old days when a nigger could be made to work. Part of the trouble disappears when the negro, as hundreds of thousands of them do, acquires a little piece of land or takes a tract as a tenant on shares. Nevertheless the unsteadiness of negro field labor is one of the principal causes of the exasperation of the South. So far as factory labor is concerned, there is practically none performed by negroes—every experiment has failed—and yet, both among the white operatives and the whites outside, there is a vague and unalterable apprehension that the negro will somehow get some economic advantages away from the whites.

This ultimate suspicion that the negro may after all succeed is closely akin to another paradox: side by side with the conviction that any individual white man surpasses every individual negro goes a singular fear of the eventual social equal-

ity of the negro. To the Northern observer nothing seems more impossible, for in the South, as elsewhere, the well-to-do, the cultured, the educated, the well connected, absolutely control society. The whole social organization, the seats of polite education, the fashionable circles, the *entr  e* even into official receptions, are as inaccessible to a person having a visible admixture of negro blood as if he were a resident of the moon. Yet the hysterical excitement caused by an invitation from the President of the United States to a distinguished negro, one of the greatest men in the country, to sit at his table proves that the South is not satisfied with its own defenses of the present social order. What is the working of the Southern mind on that question?

The Southern mind feels an undoubted fear of an amalgamation of races, which in slavery times was actively going on. Whether it still continues is impossible to judge; the whites say there is none; the negroes say there is a great deal. Certainly the most intelligent white people, when pinned down to it, admit that they are trying to keep the negro down, because otherwise the lowest white men will marry negro women, who may seem more desirable to them than the girls of their own color. Against such a breaking down of the race barriers the Northerner also protests, because the further growth of a mixed race would be an evil to whites and blacks and to the whole country. Yet full sympathy will be due only when the Southern people visit the severest penalties, legal and social, on all infractions by their own kind; and it is a self-condemning argument that the negro and the mulatto must forfeit the opportunity to

make the best of themselves lest some members of the superior race descend from Olympus to their level.

In the last resort, the magazine of the citadel, the Southern question is not so much one of the capacities or the performances of the negro race as of the workings of the white mind. The actual economic and social problems, the poverty, ignorance and backwardness of a large part of the South, white and black, is dangerous to both races, but it is not the phase of the subject which most occupies the minds of the Southern people. The root of the trouble is a profound dislike of and distrust of the negro race lest it somehow assume social equality.

To illustrate by a recent case: A Maryland lady had a door-boy who a few days after the luncheon of Booker Washington at the White House refused to call the son of a white neighbor of about his own age "Mr. Worden," and did speak of him as "Sam." Of what use is all the achievement of Anglo-Saxon civilization if your door-boy may unscathed call you Sam? What defense is there against such outrages? It is as tho a Southern gentleman, sitting at his window, sees passing on the sidewalk a negro, son of his father's slave, with head up, arms akimbo and a general air of self-appreciation. The white man does not believe that the negro is his equal; he is sure that the negro does not really consider himself his equal; nevertheless he says to himself: "That nigger over there is thinking in his own mind that he is as good as I am; it is monstrous, it is wicked, it is insulting, it is intolerable; he ought to be shot." Logic and even ridicule is powerless against this childish dread of "I'll send the black man after you."

CAMBRIDGE, MASS.

# The Murder of Ten German Missionaries in New Guinea

BY POULTNEY BIGELOW, M.A.

AUTHOR OF "WHITE MAN'S AFRICA," ETC.

THE German at home is not given to supporting churches—much less missionaries—but since colonization has entered into the official program as one aim of the up-to-date patriot there has arisen in Berlin a widespread desire to extend the German language and German influence by means of missionary societies.

The history of English speaking missions is a splendid record of independent pioneer work in every climate and under every flag. The rule has been to plant missions where they can do most good to the natives, irrespective of the Governments under which they may have to act.

This refers more particularly to the South Pacific, where for more than one hundred years English-speaking missionaries have been active agents in helping the natives to modify their savagery and to regard the white man as their friend.

Here and there English-speaking missionaries have had trouble with the natives and at rare intervals the hand of the Government has been invoked, but in general our missionaries have lived their own life among the Papuans and Polynesians with no other protection than the moral ascendancy they have enjoyed over a section of mankind reputed to be the most savage of any on earth.

In 1884 the German flag invaded New Guinea and since then matters have been otherwise.

The German Government has not used its powers to protect all missionaries irrespective of creed or language, but has used and is using German missionaries as a means of driving out such as are not German.

In the Pacific she has met with one or two checks that were not anticipated. In 1884 it was never dreamed that the Philippines would become subject to an English-speaking Power whose people de-

light in sending forth missionaries. After the Spanish-American War Spain ceded the Caroline Islands to Germany, and with them a large number of missionary stations under the auspices of English-speaking Protestants from Boston.

The Governor of German New Guinea told me frankly that he desired to be rid of these Yankees.

Yankees are not so numerous as British in these waters, but they are keenly alive to their interests—they are missionaries and not politicians, but they have it in their power to play an important political rôle should Germanization continue on present lines.

To the south of German Oceania is Australia and part of Australia is British New Guinea.

Australians, let me say in parenthesis, are, if possible, even more enthusiastic in the equipment of missionary parties than Yankees or Britons, and they share with us that certain impatience of far away control which is characteristic of young and optimistic communities.

This colony maintained independent missionary stations in these waters many years before the German flag was ever known by a native—she may be said to have prepared the way for the German flag by exploring the country and acquiring a knowledge of its people.

It is not my purpose here to go back and discuss the acquisition of these islands by Germany. Many of us will recall that this cession raised such a storm of indignation throughout the South Seas that had Australia been then united she would, I am convinced, have fought rather than have submitted to this indignity.

Look at the map for a moment and you will see what I mean—New Guinea, almost within sight of Australia, and under her protection so far as missionaries

and traders were concerned, suddenly handed over to Germany by a gentleman in London 12,000 miles away.

But to come back to our massacre:

It was in July of 1904—the news did not reach San Francisco until January 18th, 1905, for there is no cable to Herbertshoehe, the capital of German New Guinea, and even had there been one it would not have helped us, for the German Roman Catholic authorities had agreed with the German Governor that they would both maintain silence until such time as the authorities in Rome and Berlin had had an opportunity to compare notes and make public what they desired the public to believe.

The Roman Catholic bishop was not at Herbertshoehe on the occasion of my visit, but I had a long and interesting conversation with his second in command, Father Dicks, and several others of the mission, some priests, some "brothers" and some "sisters" and nuns.

Unfortunately their stories did not agree. Father Dicks gave me what was intended to be for publication, but in my wanderings about the island I met others of the mission who had apparently been less carefully coached and who told me of what happened in less reserved manner.

This is not saying that Father Dicks swerved from the truth; let us credit him with lapse of memory and, moreover, remember that he was acting under orders from his superiors.

When I embarked at Genoa on board the North German Lloyd steamer for Singapore—early in September—no details had reached Europe. So I determined to visit the scene of the massacre and see for myself. At Singapore I stepped aboard another, a N. D. L. mail steamer, the "Prinz Waldemar," and headed for Herbertshoehe—another three weeks of steaming.

On board were officers of the company who had been at Herbertshoehe since the massacre—there were also passengers—but the versions of these did not agree.

The nearer I came to the seat of the affair the more mystified did I become.

The North German Lloyd has by far the best steamship service in these waters.

This steamer was over 3,000 tons, equipped not only with cold storage and electric lights, but electric fans in each cabin, an excellent laundry on board and a table as good as the best on the Atlantic.

In parenthesis let me note that these luxurious necessities are not to be found on the much protected and subsidized monopoly line flying the Stars and Stripes between California and Australia via Samoa and Auckland, and rumor has it that even the P. and O. line is behind Germany in this respect.

Of course the N. D. L. is subsidized by the Imperial Government and the officers of their ships act unofficially as parts of the great administrative machine. The captain of our luxurious "Prinz Waldemar" was an officer in the German navy. He was in a position to know every one along the line of his route—to know what was going on. He was a man of much tact. In short, the reports of such an officer are more important than those of any Governor, for the simple reason that he sees more sides to any question.

It is no slight thing that the German Government maintains throughout this section of the world a staff of perambulating officials, who, in the event of war, are not merely pilots of the first order, but are well informed regarding everything which an enemy would most want to know.

In a German colony out here there is much colonization but few colonists. The Governor and his staff of officials make up one set of interests, the German missionaries make up another; between them the "Uitlaender Colonist" must cultivate patience.

Traders and planters have no voice in the administration of the country; they must go, cap in hand, to ask favors and are subject to arbitrary regulations which seem well enough on a Prussian drill ground, but are vexatious elsewhere.

In this community about Herbertshoehe (the capital of German New Guinea) the missionaries are all Roman Catholic and they are German. They are strong in numbers, they are well organized, and, what is of more importance, they have the support of the Berlin Government no less than the local officials.

To illustrate: If a Roman Catholic missionary is displeased with the behavior of natives whom he chooses to regard as his converts he may order the German police to have them arrested, and he may flog the natives himself.

This rule has not met with the unanimous approval of the New Guinea natives.

The English-speaking missionaries do not carry on their work of evangelization in this drastic style and hence it is that the German missionary is to-day in German New Guinea anything but beloved.

Only so recently as this last spring (1904) some natives who had been claimed by the Roman Catholics went over to the English Protestants, but the Roman Catholics fined them each twenty shillings, alleging that this was their regular charge for baptizing a native.

Some paid the fine, many refused. It led to a regrettable revelation which I may mention some other time.

At any rate we must understand that there was in July of 1904 and had been for some time a very deep and widespread feeling among the natives that the German missionaries were little better than German policemen dressed up to look like philanthropists. These alleged philanthropists made the natives work for them on their own terms, and when they declined to work they flogged them. So that the simple savage could see little difference between old-fashioned slavery and new-fashioned colonization on the Prussian plan.

These German missionaries were building a church in the interior about six hours' tramp from the coast at Herbertshoehe. The natives were compelled to carry up all the supplies on their shoulders, and some pressure was exerted because it was regarded as of great importance that the sacred edifice should be completed and dedicated within a certain time.

Now the simple savage has a very obscure conception regarding the mysteries of our religion, and if you present him with a bowl of rice and a string of glass beads he will readily do anything you ask of him, or promise anything. Thus many permitted the priests to pronounce certain holy words over them and then to

pour some water upon their heads. This the savages regarded as a species of necromancy by which the newly initiated shared in some of the white man's privileges. The word baptism has no meaning to a native—at least not in the neighborhood of Herbertshoehe.

However, under the technical construction of the German ordinances a native who has been baptized by the German missionaries at Herbertshoehe becomes *ipso facto* subject to missionary law, and the German police is there to assist the missionary—I mean the German missionary.

A German official on the spot told me that he found this law very irksome—nearly all the jail space is occupied by natives held on charges by missionaries.

But in Berlin the Government fears socialism more than it does clericalism, and therefore the party of the priest (Centrum) is enabled to force concessions from Protestant Prussia which sound strange to the uninitiated.

This condition of political parties in Berlin explains what we see in German New Guinea—German Governors permitting German missionaries to interfere with English missions that have been there for more than twenty years—and all for the single purpose of driving the English tongue out of the colony.

The German missionary with the German policeman at his call has an advantage over the English-speaking one, who must do as well as he can with only moral force behind him.

Here I am not drawing a comparison between Protestant and Catholic—I have visited Protestant German mission stations and Catholic German mission stations. The Protestant German is never molested by the Catholic German—the German Governor is there to prevent it. But when it is a matter of crowding out the missionaries of other speech then Protestant and Catholic Germans unite with commendable fraternity.

Now with us we think it wrong to give any individual the right to flog a native. The German view is different. Whatever the letter of the law may be, and the German law reads most excellently, in practice the German planter and the German missionary flog the natives as they see fit.

A flogging is a good thing now and then for all of us; it is inexpensive, it wastes but a small amount of time, and, when applied justly, is fraught with beneficent results. But we have found by experience that individuals sometimes lose their tempers and flog unjustly—that now and then are found men who are cruel and vindictive. At any rate in German New Guinea the natives do not take kindly to this amateur flogging, particularly where they are not conscious of having done wrong.

Throughout the territory over which the German missionaries of Herbertshoehe ruled there was smoldering a deep hatred against every German, albeit there was no corresponding desire to harm the English planters and traders of the neighborhood. This feeling was the direct result of the forced labor ordered by the mission.

While this thirst for vengeance was most keen it happened that a native belonging to the head of the mission had decided to exchange wives with a friend.

Marriage in savage countries is much affected by the thermometer. In this case both parties were acting according to their local lights—all parties were satisfied—for in such matters there is much discussion between families, and presents are exchanged as a sign of mutual agreement.

Mrs. Grundy of the New Guinea Jungle gave her consent, but the Roman Catholic missionaries thought otherwise.

The young man was arrested and flogged by the priests.

The young woman was arrested and flogged by the nuns.

The young man escaped as soon as he could and went over to the natives, who were only waiting for an excuse to rebel. He easily persuaded his friends that the German priests were in reality slave hunters—that they had already secured much of the land of the country and would soon possess all their hunting grounds if they were not checked in time.

This young man, be it noted, was one who had been ten years the servant and gun-bearer of the head of the mission—therefore a man who might be presumed to understand the missionaries and be understood by them. He led the dissatisfied natives and they killed all the Ger-

man missionaries at the station—six men and four women.

Of course there was much uproar at headquarters when the news came down, and the Roman Catholic authorities immediately took pains to spread the report that there was no provocation whatever—that these savages had repaid Christian gentleness with treachery and assassination.

In these matters the native has no advocate; he can neither read nor write, and no one on the spot cares to speak or write for him.

The Governor and the head of the mission at once commanded silence, and of course the traders and planters understood that it was to their interest to do what the Government enjoined.

Troops were at once sent up to the scene of the bloodshed and a dozen or so of alleged ringleaders were seized and brought down to the jail at Herbertshoehe. A large number was killed at the missionary station by the native police, but how many I could not learn. One official thought forty. The last one of those caught was shot the day before I landed at Herbertshoehe, November 22d, 1904.

The troops who were sent up to avenge the massacre found the place deserted, of course, for in a matter of this kind the natives take no chances—they fly for their lives, the innocent with the guilty, for by experience they have learned that when a punitive expedition is on the German troops are bound to punish some of them—they are not over-particular as to whom they arrest or shoot afterward.

The natives did no damage to the property of the mission.

My information regarding this strange massacre is of a composite character—part is from the Governor, part from the head of the German Roman Catholic Mission, but the most important portions have been furnished by men less interested in leading me astray. Perhaps I had better not mention their names. I have not consulted any Protestant missionary on this matter nor any one whose religious or political bias might lead him to exaggeration. So far as evidence goes this massacre is about as well authenticated as any similar event in history.

BOSTON, MASS.

# Why I Have No Family

BY A CHILDLESS WIFE

[President Roosevelt's lecture last week to the women of America on the duties of motherhood and its rewards makes the publication of the two following articles particularly opportune. In regard to the "Childless Wife," we wish to say that if any one is justified in following out her theories she herself is, for she is one of the most useful and able of the younger women of America in her field of social service, and her husband is equally useful in his field. Both of them are not infrequent contributors to THE INDEPENDENT under their own signatures.—EDITOR.]

MY husband and I are young, well in mind and body, comfortably situated financially, love each other devotedly and are fond of children. Yet after five years of married life we have no family and have no present intention of ever having any.

We are not selfish and pleasure loving; on the contrary, the principal aim of our lives, as well as our standard of human value, is social usefulness. Nor are we lonely and full of heart-longings, as childless people are supposed to be. We are happy—actively happy and full of the joy of living, not passively content.

Moreover, we believe that to have children would be detrimental to our usefulness as members of society, detract from the happiness of our marriage and make us lower, not nobler, people. I say "we" because this story concerns my husband almost as much as myself. He is even more opposed to our having children than I am and is more firmly convinced that it would be, in every way, the wrong thing for us to do.

I was somewhat such a girl as "The Bachelor Maid," whose article, "Why I Do Not Marry," in a recent issue of THE INDEPENDENT has been so widely noticed, only I had the good fortune to meet Mr. Right. Such women as "The Bachelor Maid" and I are the products of modern conditions. We are often called New Women, and I accept the title as appropriate. There were no such girls as she, no such young wives as I, before the Woman Movement began, fifty years ago. There were few, very few, twenty years ago. There are thousands of us to-day.

New Men are more rare than New Women, tho they exist. They are a secondary product of the Woman Movement. The old explanation of man's

misconduct, "*cherchez la femme*," is a half-truth; it applies to good as well as evil. Therefore, given the woman of new ideas and ideals, the man to meet her demands will sooner or later appear.

Not that every woman can depend upon the working of this law to obtain exactly the husband that she desires. No social law is without many exceptions. What is quite true of people in the mass may be utterly untrue of many individuals. No one would deny the recent statement of the editor of THE INDEPENDENT that "many women do not meet the man worthy of them who can seek them in marriage;" yet it remains true that men constantly endeavor to become what women wish them to be.

As long as women are willing to be submissive, self-obliterating, long-suffering and much-forgiving men will complement them by being tyrannical, all-important, selfish and offensive. When women demand independence, self-development and consideration, refusing marriage on other terms, they will get what they desire. The modern woman is establishing new standards of manhood and marriage, and men who accept those standards are appearing in increasing numbers.

I have always been one of the advocates of the new standards. From early girlhood I heard much of the inferiority of my sex, but I never took kindly to the doctrine. I knew it was legally, industrially and politically true, but that it was inherent I did not believe. In school I was always the youngest and easily one of the first in mixed classes, which left me unconvinced of the mental superiority of the male and led me to question his right to any other kind of superiority.

From childhood I was strong, self-reliant and courageous. Submission,

weakness and dependence were naturally repugnant to me. Tho very warm-hearted and affectionate, I could never imagine any amount of love atoning to me for the loss of liberty and self-respect. Yet as I grew up I constantly encountered the theory that "all for love and the world well lost" was woman's highest hope of happiness.

I observed carefully the women who had accepted that idea. I studied the history of woman in the long, black ages when she had no power and her only protection was the possessive brutality of man, called chivalry. I came to the conclusion that clinging, gentle appeal had been a decided failure. Strength, freedom, power became more valuable in my eyes.

At this time came the shock of learning, from my mother, of the double standard of morality, which condones the pollution of the majority of young men; of the degrading submission in the intimate relations of marriage expected of the average wife, and of the different judgments passed upon infidelity in husbands and in wives.

I rose in revolt. If women must live pure lives, so also should men, I declared. Never would I marry a man whose life had been sullied by unchastity. Neither was I willing to yield to a husband a shadow of my right to my absolute personal ownership.

"But," protested my mother, wise with long and bitter knowledge of life, "a wife cannot think of herself. She must keep her husband satisfied or he will go elsewhere."

"Then she should leave him," was my indignant verdict. "Men never tolerate unfaithfulness in women."

"Oh, but women are different! They have to forgive because they are helpless," she explained, patiently. "What can a woman with a family do? She has to make the best of matters and stay with her husband, no matter what he does, because he has the money."

This was unanswerable—at the time. I felt driven to bay, but I was unsubdued. The revelation of this marital *cul-de-sac* of submission yawning before me, instead of conquering my spirit, only roused me the more. I became fiercely feminine and firmly determined

never to add another to the number of the women who yield to man, either individually or collectively, on the basis of sex.

"If I cannot marry a pure man, own myself and exact the faithfulness I give, I'll stay single," I declared.

"That is the only thing you can do until you change your ideas," said my mother, smiling sadly at what she considered my impracticable, girlish ideals.

I was barely sixteen then. It may be thought I was too young to be told so much about men and marriage. But I was very mature for my age, and it must be remembered that even in this era of late marriages many girls are brides at sixteen. The facts were horrible enough in my mother's eyes; she thought the lot of woman was hard, but she knew no remedy. She thought that I should know the truth that I might not, later, meet bitter disappointment. It was well she spoke when she did, for within a year she passed away, leaving me without a near relative in the world.

Contrary to the predictions and warnings of my friends, who told me men did not like independent girls, I had the usual quota of lovers. But they made no impression on my heart and won small place in my respect. I knew they did not know the real me and would not like me if they did. They admired or fell in love with a bright, pretty girl, a favorite with her friends and the idol of her kindergarten pupils. Her caustic comments on men and marriage they considered only funny, and her scorn of matrimony merely a girlish pretense of coyness.

I made one mistake in becoming engaged at eighteen to a man to whom I was attracted by his strong emphasis on human development and the importance of constant growth. He was an enthusiastic, high-minded young man, five years my senior, with a poetic temperament and boundless faith in his future. He undertook to direct my reading and to develop my mind. After a time, however, it became clear to me that his idea of my development was that I should become, as nearly as possible, a copy of himself. He wanted me to be interested in all he cared for, but could see nothing in the subjects that to me were vital. When I grew restive under

this interpretation of our relations he was pained by my lack of womanliness and tried to reason me into a better frame of mind. His logic was quite unconvincing. I could not even wish to become the intelligent echo he desired, so the engagement terminated. I suffered a great deal over this affair, for an engagement was a serious matter to me; but I was sure I was saving both of us from much greater misery in the future. From then on I took my lovers lightly, keeping them as friends when possible, dismissing them if they became troublesome.

Meanwhile I had left teaching for newspaper work, which carried me from the small town where I had been raised to Chicago. There I climbed from a reporter to an editor and finally to a magazine position with congenial work and a good salary. Living in a great city I soon became conscious of the many social problems that distress our present civilization. Particularly was I interested by the working women less fortunate than myself. Before long my leisure was very fully occupied among the girls of a factory neighborhood.

I often reflected upon the position of the dependent wife with a family. I had discovered that my mother's picture, so revolting to me in my early girlhood, was drawn from life; that there were numberless women in a state of hateful and hated marital servitude. Whenever I learned the reason of the woman's submission it was always based upon the fact that she had children and no money, the existence of the one precluding the obtaining of the other.

I had been taught, what I still often hear, that money cannot buy happiness; that in a true marriage monetary considerations are of no importance; also that it makes men noble to provide for dependent wives and women sweet and satisfied to be provided for.

I discovered that enough of money, rightly earned, can buy freedom, independence, self-respect and the power to live one's own life, and those privileges were a satisfactory synonym for happiness to me. My economic studies showed me that we were living in a money-based civilization, therefore it was folly to talk as if marriage could be

exempt from that all-reaching influence. I was convinced, also, that holding the power of the purse tends to make men either tyrannical and selfish or condescendingly indulgent, and that dependence tends to make women either timid and sycophantic or deceitful and unscrupulous. I decided that freedom, equality and self-ownership would come to the wife with her own pocketbook. I later read Mrs. Gilman's exposition of this theory, but I worked it out for myself first.

Having such high ideals of what marriage should be and such low ideas of what it usually was, I concluded that it was not a probability for me. The maturing years between eighteen and twenty-five had made me desire more and expect less in a husband.

Then came The Man. He appeared on my horizon as a special writer, on a subject of which he was master, for the magazine of which I was one of the editors. His work I had followed for some time, but the man was a revelation. He was gentle and strong, free and pure in mind and life. His was a genuine free nature; he wanted liberty for others as well as for himself. He delighted in unconventional ideas and habits of life and was as fearless an analyst of existing conditions and customs as myself.

We were friends at once—comrades, in the fine meaning of that word as Whitman interprets it. I was utterly happy as our friendship ripened into love. The evidences of growing affection which I had noted in other men with sorrow or disdain now filled me with a deep joy. It seemed too good to be true that I should meet a man who fulfilled my ideals and that he should be heart-free and love me.

To be sure that there was no mistake, that he loved me for what I really was, I explained to him most fully my exact opinions on marriage. He labored under no false impressions in regard to the position I was willing to take as a wife. I would be his companion and comrade and wife on perfectly equal terms. My love was conditioned upon my respect, not only for him but for myself. Our relations must always be such that neither would suffer any diminution of freedom or opportunity for development.

He was not shocked. He did not think me unwomanly. On the contrary, he was delighted with every fresh declaration of independence on my part. We planned our life together. We would continue to be what we were, two active, useful members of human society, both self-supporting. We would unite our financial interests, which is a different thing from becoming benefactor and beneficiary. There would be dependence in our marriage, but it would be mutual. Each would get from the other inspiration, sympathy, appreciation and the deep and tender love which had become part of our lives.

Of children we spoke, but decided to wait until we felt the desire for them. Our happiness in finding one another was so complete that we wished no more at first. We were sure we would want little ones later, for we had always both, loved them, and we believed that in the course of nature two people who loved each other would ultimately long for children. I had never had any objection to motherhood; indeed, I had always been extremely fond of children and fully expected to have a family if I could ever solve the problem of finding a satisfactory husband. I had even read some books on heredity and prenatal influence and believed it would be an interesting and delightful experience to bear and rear children for whom I had done everything possible both before and after birth.

But when, after our marriage, we definitely considered the problem of parenthood, it presented complications. We were both deeply interested in social activities which we believed most useful to our fellow men and women, but which were not only un lucrative, but a source of expense. Our double income, however, gave to us both the opportunity of expending only part of our energies in money-making. We thus had leisure for our social interests.

The coming of children would change all this. They would take most, if not all, of my time, and destroy both my earning power and my social usefulness. My husband would have to more than double his income to make up for my lost salary and in addition allow for the increased family expenses. He would

then have to put all his energies into money-making, to the exclusion of his social work.

We know that this would occur, not only because we reasoned it out, but because we have repeatedly seen it demonstrated among our friends. A man intimately associated with my husband in his work among laboring men married, four years ago, a clever, self-supporting woman who was actively interested in nurseries for the children of the poor. They now have two children and she is entirely interested in her own nursery and in spending money instead of earning it. He is a much more absorbed business man than formerly, and even what social work he does meets with her opposition. She says: "He can't afford to do any work for nothing. If he has extra time or strength he can use it to make more money. We have a place for every dollar and more with the children. Men with families have to work for them, not for the world."

Another woman, interested in College Settlement work and giving promise of becoming the Jane Addams of one of the large Western cities, married the editor of a sociological magazine with congenial labor but a limited salary. His famous book is undoubtedly familiar to many readers of *THE INDEPENDENT*. Children came and she was tied at home. With the advent of the fourth his income became plainly, even painfully, insufficient, and he went into ordinary journalism. A fifth baby forced him to extra exertions and his mental powers broke under the strain. In a moment of despair and insanity he shot himself.

I could quote more, many more, such instances. They are a warning to us. We question whether those people do right who destroy the social usefulness of their lives to produce children who are, at best, experiments. Is the only, or always the highest, duty to society the raising of children? Some children become a social curse: some are nonentities; only some are a decided benefit. When people are positively useful to their fellow beings, contributing definitely to the progress of humanity, should they not consider seriously before handicapping themselves, even with children?

I know it will be pointed out that some

achieve both a family and a social work. But such are few; the majority, to paraphrase Goldsmith,

"Narrow the mind,  
And give to the family what was meant for  
mankind."

Nor can it be said that our children would be a sufficient compensation to society for the loss of our other activities. We do not know what kind of children we would have. We might raise a son like Tolstoy who would go into the army or a daughter who would delight in giving pink teas. More improbable things have happened. Children are frequently utterly opposed to parents in tastes, dispositions and ambitions. The laws of heredity are but slightly understood and scarcely at all to be controlled. Many people most serviceable to the world have left behind them children almost useless. Often the family of a great man or woman is the only commonplace product of his or her life, making one feel that the energy spent in bearing or rearing such mediocre children might well have been used to better advantage. Nor is this true of the great alone. Every one knows people who would be very useful were it not for the pressure of family cares, yet whose children are most ordinary, if not inferior.

Of course we might produce children far superior to ourselves, in which event we would be justified in giving up our lives to them. If, third alternative, they were as good, but no better, why should not we live out our lives and serve society now, instead of postponing such service a generation? Altogether, considering the chances, we have decided not to risk our work on such a doubtful experiment.

Then for our personal reasons. First comes the risk to my health, even life. I know it is considered cowardly and selfish to think at all of suffering or death when motherhood is in question. But frankly, I don't want to die and my husband cannot spare me. I am aware the vast majority do not die, but if I were one of the dead what comfort would my husband get out of reading statistics showing how many other women survived? Some one said to me that even if I did die I should have the satis-

faction of knowing I had done my duty. Possibly I should carry through eternity a proud sense of duty accomplished, but I cannot imagine even an angel finding much satisfaction in the thought of a helpless, motherless babe and a broken-hearted husband left alone in the world.

In the last four years six of our friends have died in childbirth, among them my husband's sister, who was married to a wealthy man, so that everything possible was done to save her. Two years ago we were guests at the wedding of a clever, beautiful girl, the only daughter of her parents and a musician of marked ability and growing fame. She was marrying a rising physician and life looked fair before her. Last June she was laid in the grave with her baby in her arms.

Aside from the dead, I know dozens of women who have never been well since they had children. I suppose this is unnatural; it ought not to be so. Yet it is true that the woman who has a child risks her life and doubly risks her health. I love my life and I enjoy my good health. I fear to risk such precious possessions.

Again, to change me from a well-paid magazine editor and an active social worker into a dependent housekeeper and nurse would affect our marriage, probably unfavorably. We are largely the creatures of environment, and to change my environment and occupation so radically would inevitably change me.

I am happy now; I am living a life that satisfies the needs of my nature. I do not believe domestic life would suit me, and I am sure I could not endure economic dependence. My husband loves me, is proud of me and finds me a most congenial companion, under present conditions. I am uncertain, and so is he, how he would like the woman I should become under the new conditions. Our marriage is now the union of two equals. We believe that makes its happiness. How can it remain the same in spirit if the relation between us change and I become not his equal but his dependent?

I believe the basis of the married servitude which so revolts "The Bachelor Maid," and against which I have always protested, is the financial helplessness of the wife. If a woman's living depends

upon pleasing a man, how is she going to deny the indulgence of his strongest appetite? Or if a man provides for a woman, and knows she can get nothing except from him, how can he help realizing that he owns her?

The woman who provides for herself owns herself. My personal freedom is my absolute right, because I earn my own living. Now I do not believe that the loss of my income would change my husband from a man of refined feelings into a sensual brute. But I do believe that I should, if dependent, have as a favor a liberty I now enjoy as a right. I should be better off than the women I pity simply because of the personality of my husband, not because of the strength and independence of my position. I should, like them, be a slave. That I had a kind master would not satisfy me; neither would it offer any solution of the problem to others.

I admit all that can be said of the disadvantages to society of childlessness among thoughtful, intelligent, conscientious people. Yet my personal problem remains as I have stated it, and I contend that, under present conditions, I am doing right. I do not believe that the price of motherhood should be freedom and the right to self-ownership; no one needs these more than the mother. But I am speaking of things as they are, not as they should be.

I hope and work for a social readjustment which will give to the woman of the future all that I have and motherhood as well. And, meanwhile, I deny the right of any one to criticise me who is not doing something to lighten the pressure of those social conditions which have forced this dilemma not only upon me, but upon thousands of American women.

## My Large Family

BY AN AMERICAN MOTHER

MY husband was of Quaker and I of Puritan birth. Forty years ago we chose to unite our destinies.

Both were members of large families; we knew what responsibilities would be likely to follow in the common course of events. It was not through ignorance of ways of escaping responsibility that the family increased. Never rich, many times in extreme poverty, after the fearful conflagration bereft of all but our children, and being sensitive to the criticism of friends, we carefully considered the suggestions of those desiring our prosperity; and yet we thought that it were better to bear the ills we had than fly to others which we knew not of.

One plan recommended by a Christian Science friend appealed to our better nature as possibly the ideal way: Our relation might be as between brother and sister—with the true exalted friendship and a mutual interest in the family we already had.

But somehow, as we had not been created in this relation, we understood each other better as husband and wife. So, without irreverence, we laid the consequences of our honest union upon our Creator and Father.

We had no promise of smooth sailing even in the channel of duty; sometimes we had our fears when we heard the cry of breakers ahead, but the difficulties we were called to meet were only those common to all our fellow mortals.

Many who were old enough to have been good counselors declared that for this day of knowledge our course was one of shame. Once when we had buried a new little baby girl our neighbors and friends came with cheerful congratulations that God had been so merciful as to relieve us of that one burden. It required more grace perhaps to endure the outside criticism than the burdens within our home.

I am just meditating upon what is left to me now after all the "shame" and

this "flying in the face of Providence," this reckless disregard of sound judgment, this never ending struggle with poverty—pinching, piecing, patching, cutting over and cutting down and all the necessary economies of time, money and energy. I find there are left to me four useful, graceful daughters, and four stalwart sons, who this year cast their votes on the winning side. In *THE INDEPENDENT* of October 13th we read of a young man who was having a hard struggle to acquire an education, a younger son of a family of nine, and a pronounced enemy of a big family, etc. My younger son, of a family of ten, writes:

But surely I can be thankful above all for such a father and mother, who have given me all—all that is good for a man; a good mind, a perfect body, a moral sense, a fair presence, education and the *necessity* of mak-

ing my own way. And the last is not the least of my blessings. Then, too, such brothers and sisters and friends! Surely, life is worth the living. Indeed, if one has right ideas and aims the struggle is fun—as much fun as any rigorous athletic contest.

But my joys and hopes are not alone in these dear ones left in the school of earth. I believe with Mrs. Browning, "He gives what he gives," and so some of mine are on that other shore with him whose memory is so precious to wife and children who remain.

And had I my life to live over again, with a full knowledge of the pain and sorrow and adversity which have been mine, together with the realizations and expectations of these declining years, I would put my hand into the hand of that same beloved one, and together, with yet more trust and confidence, we would walk in the same way.

## What Is Passing in Russia

BY ALFRED RAMBAUD

[The author of the following article is the leading authority in France on Russian history. One of his books on that subject has been translated into English and is well known both in the United States and England. M. Rambaud is a member of the Institute, Professor of Modern History at the University of Paris, an ex-Senator, and was a few years ago Minister of Public Instruction and the Fine Arts.—EDITOR.]

THE 22d of January is a day to be infinitely regretted, both on its own account and for the consequences that may follow. However, it is permissible to ask again the question which Louis XVI addressed to the Duc de Liancourt, who had come to inform him of the taking of the Bastille: "Is it a revolt, then?" But should we answer with Liancourt, "No, sire; it is a revolution"? It is the results that may follow this day which will give us the answer. If the Russian Government, after exhibiting such severity, do not show any weakness subsequently; if it profit by the advantage so dearly purchased and make an end of the insurrection once for all, then the day of the 22d will have been only a revolt. Ought a Government to lose its head because it has been compelled to put down a riot? What Gov-

ernment has ever had more riots to quell than that of Louis Philippe, most peace-loving of monarchs? We have only to recall the battles of 1832, 1834 and 1839 in the streets of Lyons and Paris, battles in which the rioters were everywhere conquered. M. Thiers and the National Assembly were compelled to besiege Paris for nearly two months, and the Commune was vanquished. What comparison can be drawn between the day of the 22d and our bloody week in May, 1871? It was only a skirmish. Is Nicholas II in more danger to-day, or is autocracy in more danger, than were Nicholas I and autocracy on the 2d of December, 1829, when that Emperor had to fight the half of the garrison in St. Petersburg on the Square of the Senate?

However, I do not care to push the comparison too closely here. Nicholas I

had to fight only some young officers who tried to force him to grant a constitution, but whose soldiers had not even the slightest idea of the meaning of this word, so novel to their ears. It was little more than a mutiny got up by a number of young nobles, and all that was required to scatter the mutineers was a few whiffs of grape shot.

On the contrary, the elements that entered on the stage on the 22d of January last were far more serious; before the constitution figured in the petition of the workmen it had been demanded by the *zemstvos* or provincial assemblies.

And other elements came to the front more dangerous still. In 1864 the Russian revolutionary party had its first apostle and its first martyr in Tchernichevski, degraded on one of the squares of the capital and banished to the mines of Nerchinsk; in 1866 it made its first attempt on the life of Alexander II, its agent being Karakásov; since that day the struggle has continued, through the most tragic incidents, between autocratic Czarism and the most advanced section of nihilism, the terrorist faction. The hand of the latter cannot be foreign to the present troubles.

It is generally believed in Europe that the Czar is sure to find in the fidelity and love of the rural masses an inflexible support against the anarchist factions and even against the far too indiscreet demands of the liberals. Undoubtedly the rural classes have a profound reverence for the Czar. But can we measure the solidity of the tie that binds the *mujik* to the Czar? We should find it difficult to

do so. Have we any warrant for saying that it can never be broken? On the eve of the French Revolution no people in the whole world seemed to be so passionately devoted to its King as the French people, and at the same time it would be almost impossible to discover another people so peaceful, mild and averse to excess of every kind. Besides, it is to be remarked that the French peasant of 1789 turned his anger not against the King but against the castles and archives of his seigneurs.

At all events something new has arisen in the deepest depths of the Russian nation—namely, the formation of a class of workmen. St. Petersburg has been invaded by crowded factories; the same can be said of the whole “industrial region” of Moscow. Still the entire number of workmen in factories and manufactories does not seem to exceed 2,000,000. Counting their families, the number would be probably about 4,000,000, a very small proportion of workmen out of a

ALFRED RAMBAUD

population of 129,000,000, especially if compared with the numbers indicated by the English, German and even French statistics. Nevertheless, Russia has ceased to be an empire almost exclusively rural. However limited this new phenomenon may appear, it entails certain consequences.

The Russian workman, partially freed from the tutelage of the *mir*, or village commune, then enrolled in the *artel* (a very ancient sort of syndicate), but still subject to the discipline of the workshop, before long begins to think, like our good La Fontaine, “Our enemy is our mas-

ter." How could he remain entirely a stranger to that socialist propaganda which has extended over all Europe and which has created a formidable international force in opposition to the idea of country? We have seen with what ease he can be carried away by conspirators and intriguers of whose real designs he never has the slightest suspicion. Then, he is always glad to return to his native village. There he finds his relatives and the friends of his childhood; his intercourse with them and his conversation are amply sufficient to affect, in a greater or less degree, the traditional mentality of the peasant.

Another fermenting element introduced into the mass consists of the students of both sexes formed by the universities. The action of the students on one another is a far more effective force than the teaching of the professors, and results in the formation of a quite peculiar turn of mind. These universities have been organized on the model and with some of the privileges of the German universities. They act, therefore, much more efficaciously on the intelligence than did our French faculties before they were grouped into universities endowed with autonomy. Now the attendance on these establishments by no means assures to all the students the means of existence. Many cannot enter the public offices or prosper in the liberal professions. They become *déclassés*, just as the workmen in the factories become *déracinés*. They form an intellectual proletariat that is infinitely dangerous for established order.

A third ferment, and quite as active as the others, is composed of the Jews. In France they number only about 70,000. In Russia, especially in the southwestern provinces (Poland and Lithuania), they are very numerous. According to the census of 1897 there are 5,188,401 Israelites in the empire. It is the largest Judea in the whole world; the Judea that acknowledged David and Solomon as its kings certainly did not contain so many subjects. Now, even more than Catholicism or Protestantism, Judaism is a refractory element in "Holy Russia." It is a disturbing factor because of the enormous figure of its population, its tradition and is cosmopolitan instinct. For orthodox Russia the Czar is at once the

sovereign and the head of religion; for the Jew he is only the *de facto* sovereign. Moreover, the Jew belongs to a nation that has long been persecuted. After the massacres of 1881 the Jews were forbidden to settle or sojourn in any part of the empire except in the twenty-five provinces of the west, forming what was called officially the *Jewish Pale*. Vast as is this sort of ghetto, they crowd one another in it, and there is a good deal of mutual competition, since they are not agriculturists and almost all follow the same trades; consequently they interfere with one another's livelihood, are exposed to the most abject misery, and at the same time rooted in their prejudices and armed with a fanaticism against their oppressors at least equal to the fanaticism of their oppressors against them. Suravski and Bobrovski, in their descriptions of the governments of Kiev and Grodno, give harrowing accounts of several families crowded together in two or three rooms and of entire families living on a pound of bread a day with a pickled herring and a few onions. The universities might have been expected to offer an opening to this gifted race, trammled by social and industrial disabilities. But the number of Jewish students was limited to 10 per cent. in the "Pale," to 5 per cent. in the other provincial universities and to 2 per cent. in those of St. Petersburg and Moscow. Then when they leave these institutions they find themselves shut out from employment in the public offices. Such is the *régime* to which they have been subjected by M. Pobiedonostsev, a Minister of Alexander III. Nicholas II has endeavored quite recently to improve their situation, but the past is not soon forgotten, and the rancor generated by oppression is very keen. Naturally the hand of the Jew is to be found in all the disturbances and in all the conspiracies. If they do not furnish conscripts voluntarily to the Russian army, on the other hand they supply nihilism with plenty of ardent recruits.

Finally, tho the Russian race belonging to the Orthodox religion forms about four-fifths of the population of the empire, or close on 90,000,000, we must not forget the foreign races which almost everywhere border the frontiers: Finns on the Baltic, Germans and Letts in Es-

thonia, Livonia and Courland; Poles, Tartars of the Crimea and of the Steppes, Finns of the Volga, Turks of Turkestan, natives of the Caucasus and of Siberia. These races have each their own religion. Besides the 5,200,000 Jews we must reckon 11,500,000 Catholics, mostly Poles; 6,200,000 Protestants belonging to Finland and the Baltic provinces; 19,000,000 Mussulmans and a number of Buddhists and Fetichists. Now, M. Pobiedonóstsev has not been satisfied with harrying the Jews; Catholics and Protestants have also their grievances.

If, as there is every reason for believing, the Government issues victorious from the crisis of the 22d of January, it will not only have to complete but to justify its victory. The longing for reforms has become too general for any one to dream of stifling it. But those who insist on reforms are too heterogeneous, their cries are too discordant, their tendencies too confused, not to render it desirable that these reforms should come from on high and not from below.

In the first place, the principle of autocracy should be maintained for several years still. Those who demand a constitution do not seem to suspect the convulsions it might lead in its train. How could such a vast empire, with so many enemies on its frontiers and so many enemies within its bosom, be governed by any form of parliamentarism whatever? It would surely lead, perhaps after a very brief duration, to the dissolution and dismemberment of the empire. Moreover, as Russia has about 89 per cent. of illiterates who have not the slightest idea of what a constitution is or of the meaning of public life, it may well be asked how they are to be provided with a place in this political organism. To admit them into it would be to engage in a venture ten times more perilous than was the abrupt intrusion of universal suffrage into French life in 1848. To exclude them, to reserve political rights for the so-called better classes, would be to sacrifice the interests of the masses.

The maintenance of the autocracy is not inconsistent with the accomplishment of all necessary reforms. The present Czar seems animated with the best intentions. The European press has received his program of reforms coldly.

But tho the form of it is a little vague, this program is not the less an excellent preface to desirable reforms. In the first place, it is necessary to insure individual liberty; the supreme power has no interest in the violation of the rights of its subjects by insolent subaltern functionaries, nor in the underhand revival of the penalties it has proscribed, nor in the disregard by the police of the verdicts rendered by the juries which it has instituted. In the second place, it is necessary to make an end of the oppressive system adopted by M. Pobiedonóstsev; the supreme power has no interest in preventing some thirty or forty millions of its subjects from praying as they wish and in rendering them thereby irreconcilable. In the third place, the freedom of the press: this is the most delicate point of all. It is only in America that freedom of the press can be practiced in its full integrity, for America is free from the prejudices, rancors and hatreds which still rend the nations of old Europe. At the present moment the journals of the two capitals of Russia, St. Petersburg and Moscow, enjoy a certain liberty, or, if you will, a certain toleration. This is not the case, however, in the provincial cities. I knew a governor who boasted that he had not only killed the liberty of the press in his province, but, by exacting certain requirements and formalities, had prevented any journal from appearing. It is in the provinces, however, where a certain degree of freedom of the press is most necessary; it is there that it is especially indispensable to denounce to public opinion—to the Czar himself, who is often kept in ignorance by his functionaries—the abuses of power, the peculations and robberies, on account of which the fair fame and the military prestige of Russia have so frequently suffered. Only a press with a fair measure of freedom can cause the light to penetrate into the darkest recesses and prevent the cruel deceptions of which Holy Russia has been thrice the victim in fifty years—Crimean War, Eastern War, 1877-1878, and the present war in the extreme East.

It is necessary to prepare the agricultural masses for that position in public life which they are to-day incapable of occupying, but which they will occupy

ultimately. The work of popular education, which has by no means been entirely abandoned, ought to be prosecuted with more energy than ever. All the primary schools founded in Russia to the number of 79,000 have only so far instructed 3,800,000 pupils, 2,950,000 boys and 890,000 girls. In France the primary schools of every class (the "maternal" schools with 729,000 children not included) teach 5,500,000 scholars. Now, the population of the Russian empire is almost quadruple that of France.

Finally, the most moderate exponents of public opinion in Russia demand that the nation should, to some extent, have a share in its own government. Nothing can be more legitimate or more reasonable. Instead of a parliamentarism which would be the scourge of Russia, as it is at present of nations much more civilized,

they have those general councils of provinces (the zemstvos), also municipal councils, a creation of Alexander II, which, however, have not rendered all the services of which they are susceptible because lacking sufficient power. In these local assemblies Russia can become initiated into the methods of self-government. Time has been lost up to now; it can be regained. Five years given seriously and sincerely to the effective practice of this decentralization will place even Russia on a level with the other European nations. On the other hand, twenty years of agitation or of strikes, in which the workmen are always duped, or of revolutionary propaganda, will fail utterly. Above all, Russians should consider the excessive part which the conscious or unconscious enemies of Russia take in these movements.

PARIS, FRANCE.

## Spring Song

By CURTIS HIDDEN PAGE

THE spell that by winter was spoken  
     Is broken!  
 Spring laughs at the winds that in revel  
     Dishevel  
 Her locks, for she cannot remember  
     December,  
 And takes, with no fear of annoyance,  
     Her joyance.

The willows, whose bough-tips were leaden.  
     Just redden;  
 The orioles, whom love-fires embolden,  
     Grow golden;  
 The woods, through the winter forsaken,  
     Awaken  
 To song, and all life feels the leaven  
     Of heaven.

My loved one, I would I could capture  
     The rapture,  
 The fervor, of Nature's apostle  
     The throstle,  
 And sing you his love-songs invasive,  
     Persuasive,  
 To win you, and crown my endeavor  
     Forever.

NEW YORK, CITY.

# A Practical Church Federation

BY PROF. ALFRED WILLIAMS ANTHONY, D.D.

[The Interdenominational Commission of Maine justifies the motto of the State, "*Dirigo*," as it is the first example in this country of practical Church Federation. In this Commission Professor Anthony, of Cobb Divinity School, represents the Free Baptists. The success in Maine is an encouragement to the meeting in this city next November of an Inter-Church Conference for a national federation.—EDITOR.]

THE Interdenominational Commission of Maine for fifteen years has been giving a practical illustration of federation between denominations and showing how churches, without becoming organically one, can yet, beyond the exchange of fraternal greetings, cordially treat each other as allies and actually work in harmony.

In some respects Maine is a particularly favorable field for such an experiment. She has comparatively few denominations. Presbyterian and Swedenborgian congregations can be numbered on the fingers; Episcopalians are few and scarcely indigenous; Adventists are in rural districts and scattered, and include at the most only about eighty congregations; until recently the Universalists were not well organized nor aggressive, and Unitarian churches are found in very few communities. The leading denominations both in numbers and influence are the Congregationalist, the Methodist, the Baptist, the Free Baptist and the Christian. It is these five denominations which have united to maintain a common federative center.

Maine's church problem is almost wholly rural. There are no large cities in the metropolitan sense, no single community in the State having more than fifty thousand people living in urban conditions. From the towns have been going to other States and to the industrial centers a steady stream of the best New England stock, leaving the country churches impoverished. It is not a facetious remark, in naming the cities of Maine, to mention among them Boston, New York, Chicago, Minneapolis and San Francisco, for Maine people in large numbers reside in all the large cities of the country. And behind this outpouring stream are left vacant places, espe-

cially in the churches; for, of the numbers annually coming into the State to run her mills, fell her trees and till her soil, comparatively few replenish the Protestant population.

An increasing foreign population, the fragments of churches in village and country, and sparse population in nearly all the towns—these characterize the acute phases of the situation. In attempting to deal with such conditions it was inevitable that denominational agents should vie with one another in unholy rivalry for meager advantages, that denominational treasuries should be taxed for the maintenance of forlorn hopes, and that sectarian rancor should be engendered where only sweet Christian charity should prevail.

A Methodist pastor was the first to suggest a practical way out. Appointed fraternal delegate to the State Congregational Conference in 1890 and unable to attend in person, he wrote a letter frankly confessing the unhappy situation and suggesting a federative movement. A Congregational College president caught up the idea. Then it spread. By the Congregationalists a committee was appointed. Representatives of other denominations were invited. In two years' time an organization, known as the Interdenominational Commission of Maine, had been perfected and formally adopted by the five denominations. It was no one man's scheme; it has not been grafted on from the outside; it starts from a ground basis and has grown firmly into the confidence of many.

The commission consists of sixteen members. As the Methodists of the State are organized in two annual Conferences, they are represented in the commission by four members, two from each Conference, one appointed each year for a term

of two years; while the other denominations are represented each by three members serving terms of three years and one appointed each year. An Executive Committee of five, one from each denomination, carries the brunt of the work, hearing and adjudicating cases between denominations.

During its fifteen years of existence the names of just fifty communities have been entered upon the records of the commission. Two are entirely new places, opened in the wilderness by the development of previously unused water powers and booming like a Western town. By agreement one denomination was first given the right of way into one of these new settlements, because it had at the outset the best prospects of immediate success. Later, when growth warranted, another denomination was permitted to step in, subsequently a third, and then the community was declared open ground for any, as its population was large enough and varied enough for all.

The other community comprised at first about two thousand nomadic workmen, without homes or families, in for the period of construction and then to be replaced by steady employees. To meet the needs of this class of men four of the denominations through their agents erected a union chapel and maintained at common expense a minister in charge for two years. When at length the population became settled it was found by a census of religious preferences that Congregationalists and Baptists predominated in the community and were in sufficient numbers to warrant the organization of two churches at once. This was agreed upon. The Congregationalists and the Baptists reimbursed the Methodists and Free Baptists for their share of the expenditures to date and began separate and independent churches.

In eleven cases the Executive Committee has given formal hearings to interested parties respecting the right or the wisdom of one denomination, rather than another, to hold services or maintain a church in a given community. As the common law on which decision in such cases should be based, the commission

has formulated the following principles of comity:

"1. No community, in which any denomination has any legitimate claim, should be entered by any other denomination through its official agencies without conference with the denomination or denominations having said claims.

"2. A feeble church should be revived, if possible, rather than a new one established to become its rival.

"3. The preferences of a community should always be regarded by denominational committees, missionary agents and individual workers.

"4. Those denominations having churches nearest at hand should, other things being equal, be recognized as in the most advantageous position to encourage and aid a new enterprise in their vicinity.

"5. In case one denomination begins Gospel work in a destitute community it should be left to develop that work without other denominational interference.

"6. Temporary suspension of Church work by any denomination occupying a field should not be deemed sufficient warrant in itself for entrance into that field by another denomination. Temporary suspension should be deemed temporary abandonment when a church has had no preaching and held no meetings for an entire year or more.

"7. All questions of interpretation of the foregoing statements, and all cases of friction between denominations, or churches of different denominations, should be referred to the Commission through its Executive Committee."

In thirty-seven instances consultation respecting the clash of interests has sufficed to relieve the strain. Many other cases, without such mention as would justify entrance on the records, have been adjusted, and in many other instances still, which would elude any system of enumeration, an intangible yet real influence has gone forth from the commission, restraining some symptoms of unwarranted aggressiveness, some acts of sectarian depredation, and maintaining an ideal of fraternal co-operation which has tended to elevate all Church work from the low level of partisan and sectarian rivalry.

At its last annual session, held in Bangor, January 24th, 1905, the commission took a decided forward step, which is best described in the resolution then adopted:

"In our State are many towns in which are two or more churches, small and weak, because the population has moved into the cities. If these weak churches could be consolidated and the religious forces of the community combined, without engendering local strife or personal estrangement, the cause of Christ would be strengthened, the problem of the churches largely solved, and the people greatly blessed.

"It is time for the Commission to do more than merely settle questions of dispute which may arise and be referred to it; it is time for it to lead with some preventive and constructive policy. Hitherto our energy has been chiefly expended in crying 'Hands off!' to those who competed in rivalry and friction. Cannot we emphasize and realize fraternal relations and cry 'Hands together!'

"To this end we recommend the following policy of reciprocity:

"1. That the denominations through their supervising representatives, such as State agents, home missionaries or presiding elders, report to the Commission the names of towns in which a union of churches may seem desirable, in order that the Commission may serve as a clearing house and bureau of reciprocity.

"2. That the Commission then shall consider the conditions in these several towns, the constituencies of the churches and the changes which would appear desirable for the best welfare of the communities; and, when the Commission finds that an equitable exchange can be made so that in one town denomination A may surrender to denomination B its church interests, and in another town denomination B can surrender an equal interest to denomination A, then the Commission shall recommend to the two denominations such an exchange.

"3. That such reciprocal exchanges shall be contemplated only between those denominations which distinctly commit themselves to the plan, and the interests of other denominations shall be in no wise molested by recommendations of the Commission.

"4. It is recognized that this plan requires great care and consideration in its execution lest the prejudices and feelings of local church members be ignored and ideal states be sought which are not practical. Particularly must all conscientious scruples be carefully safeguarded and good feeling and brotherly love be preserved.

"5. This plan distinctly confesses that so-called 'union' churches, while approved in some places, yet incur so many perils, through their lack of associational fellowship or superior ecclesiastical supervision, through having no larger missionary interests, either home or foreign, and no approved ministry from which to secure pastoral care, as to be unwise organizations to encourage. This plan aims at consolidating religious forces and leaving them within the limits of denominational fellowship."

This is ecclesiastical reciprocity. It does not aim at the impractical ideal; it does not ignore the conservatism which has been long fostered in rural districts and becomes so large a part of conscience; it does not ask denominations to surrender their own without receiving a fair equivalent. It is not a long step, but it is a step, and appears to be the next one to take. Of course the real difficulties will arise in the communities where one local church withdraws and its constituency will be asked to unite with the one which will be granted the ground. It often happens that, when surrenders are called for, doctrinal tenets are furnished up until they appear to their possessors to scintillate with the very glory of the Shekinah. But still, between denominations nearest alike exchanges will be made, for sweet reasonableness is not wholly wanting the State of Maine, and many of its inhabitants are working for the broader interests of the kingdom of God.

LEWISTON, MAINE.

# Literature

## The Marriage of William Ashe

MRS. WARD'S new story\* is a further intimation that the historical novel is gradually changing into a more graceful elastic form of fiction. We are about to be delivered from that class of heroes who are famous in history but who stumble so awkwardly in the alien atmosphere of romance and sentiment. In this instance, her purpose is not to present great men and great events, but to show a social order which existed in London a hundred years ago, and the people whose relation to it was equivalent to accent marks over the otherwise dull monotony of British morals and domesticity. They had those dangerous gifts which suited them to the romantic setting of a story better than they ever were suited to the responsibilities of real life.

The only important character in the book who is normal is that of William Ashe. This is a sort of life-size portrait of William Lamb, afterward Lord Melbourne, done in literary pigments by an artist who knows the sober coloring of British man-character. Lady Kitty, as Lady Caroline Lamb, was gossiped about in most of the letters and memoirs of her day. She figured in both Disrealli's and Bulwer's novels, and is said to have outraged and fascinated by turns the staid circles of English nobility. In this latter business Lord Byron, the Geoffrey Cliffe of this story, may be named as her co-adjutor. She declared that he was "mad, bad and dangerous to know," and was still flattered by his attentions. She burned him in effigy and satirized him in her novel, but remained beneath the spell of his evil charms so long as she lived. And here we come upon one of Mrs. Ward's "stock" ideas as an interpreter of woman-nature. Lady Eleanor, Lady Rose's daughter, and Lady Kitty are all dominated by the charm of some man, and the charm is not love so much as it is a kind of hypnotic

influence, against which they struggle in vain. And in this connection it may be of interest to add that she does not make a specialty of commonplace good people in her stories. With an artist's exquisite perception she knows that they get sifted out of history, out of poetry and literature, out of everything except the numerical columns in the census report. They may, indeed, be the bone and sinew of a nation, but there are no elevations in such characters upon which to reflect the high lights of expression. They are constant, dependable, but they do not appeal to the imagination. To be sure, one of them, like William Ashe, occasionally falls heir to a chaplet, not, however, because he was good, but because Kitty was an untoward circumstance which forced him to act a better part than nature designed for him. Meanwhile, the liberty-loving, irreverent sinners like Lady Kitty and Geoffrey Cliffe, who are always ready at least to tread close upon the forked tail of evil, have the advantage of being placed in the star rôles. And they have these parts not because of their perversity, but because they were the *italics* of a by-gone social order. They summed up in personality the emotions and passions of their age; they were not heroic except in the sense that they were the average type intensified.

Lord Byron has already strutted through one of the silliest books published last year. In that his worst traits were idealized, a sentimental significance given to his alcoholic incoherence, and the result was a very popular literary doggerel. But Mrs. Ward has no such design when she introduces him to her readers in this book. Probably for the first time in fiction we receive something like a contemporary impression of the man's character. A cad in his relations to women, an adventurer in politics, too vulgar to respect his own gifts as a poet, he shows as a cheap fellow in honor and morals whom men avoided and whom women courted; and for the same rea-

\* THE MARRIAGE OF WILLIAM ASHE. By Mrs. Humphrey Ward. New York: Harper Bros. \$1.50.

son that Eve engaged the devil in conversation the first time she met him—because women have always found Satan in whatever guise he appears to them diabolically interesting and stimulating to their somewhat anemic imagination.

But it is in the adequate presentation and interpretation of Lady Kitty that the author has achieved probably her greatest success as a literary artist. The letters of Julie de Lespinasse had already appeared last year when "Lady Rose's Daughter" came out, and it was easy to trace a likeness between the two heroines in spite of the care with which Mrs. Ward expurgated the poor French lady's annals and the art with which she made her English counterfeit out of the remainder. The task was really too difficult. There is a decadent pathos about some vices in the French character. They have a spiritual mannerism of meeting dishonor, a heroic impulse toward damnation. Now these traits do not bear transposition to the English type, and the truth is Mrs. Ward failed in the undertaking. Lady Rose's daughter was "out of drawing" with her native environment. But she has met with no such difficulty in developing the sprite spirit of Lady Kitty. And the book contains an explanation of the type which is original and satisfying. We are familiar with her. She had "fancies" for men and adventures. She warned her future husband of the disposition, and then comes the illuminating definition, "She was a creature of mind rather than sense, governed mainly by the caprices and curiosities of intelligence. Ungoverned imagination combined with a rather cold, indifferent temperament." How often have we seen them, these indiscreet women circling about the social horizon pursuing their own irresponsible fancies. In them passion is a form of mental excitement. They are Circe souls, deformed in that they have no physical sense, or delicacy, no right apprehension of sex. Lady Kitty, brilliant, fascinating to others, was incomplete in consciousness. There was a secret which nature withheld from her, and she pursued it in all her flirtations with men. She had a temperament madly divorced from moral law, and she was gifted with a histrionic ability for sincerely imitating

either virtue or vice. She could distinguish with agonizing astuteness, but she lacked the power to choose between good and evil. Such people are morally mad, and rarely has madness received a more dramatic interpretation. The reader ceases to hold the tortured creature responsible, but follows her with grave compassion from one scandal to another. There can be no doubt as to the veracity of the conception. But the immorality of the book may consist in this very fact. It not only suggests but proves the incapacity of some people to will themselves in the right direction. And it is morally enervating to know this even if it is true.

In her earlier books Mrs. Ward was disposed to burden the reader with too many excellent reflections on the general situation. There is no such fault in this story; the philosophy is implied, not expressed. She indulges in few descriptions of natural scenery, but when she does, she avoids the latest hysteria of novelists who dramatize and humanize their landscapes, until the reader often feels that some boulder on the frowning hill summit threatens his very life. She parts the fair curtains of her imagination and we see simple old earth as it is, which is always restful.

### Lord Acton's History

LIBERTY is the keynote of two latest volumes of *The Cambridge Modern History*.\* The wars of religion gave birth to religious freedom; the French Revolution to civil. Quite other the feuds and strifes of Vol. III from the "Warfare" of Andrew D. White and Draper's "Conflict." In fact, wars of blood were they, political chiefly on the part of the leaders, the Popes included, while the divergent creeds stirred up the people. Strange how men should hate one another for the love of God, and for the sake of truth build up dogmas on falsehoods and forgeries.

Along with that humanistic movement popularly known as Protestantism, it is no surprise that a Catholic reaction set

\* THE CAMBRIDGE MODERN HISTORY. *In Twelve Volumes. Edited by A. W. Ward, G. W. Prothero, S. Leathes. Vol. III. The Wars of Religion. Vol. VIII. The French Revolution.* New York: Macmillans. \$4.00.

in. Through the Roman Congregations, created by Sixtus V and still governing the Catholic Church, as also from the influence of the Jesuits and kindred movements, Absolutism developed in the old Church and grew with giant strides until in our own day the Pope was ticketed with the epithet of infallibility and Christ became his Vicar. One its own extreme side the Reformation developed more and more, so that its "Supreme Achievement is the Modern State" (III, p. 736). These wars of the Creeds raged from Ireland and the Netherlands to Tuscany and Savoy; in the Holy Roman Empire and the Ottoman Balkans. The greatest of all, however, the Thirty Years' War, claims a separate volume.

Religious freedom could not live without its twin sister, Civil freedom. This the French Revolution won for Europe at least. Like the movement of the sixteenth century that of the eighteenth wrought a reaction, which wound up in Napoleonic absolutism, still living in the Bureaucracy and the moribund Concordat. In fact, the most mischievous error of the National Assembly was grafting the Church into the State. The American doctrine that Congress shall make no law to interfere with freedom of conscience (Amendment of 1791) followed the Civil Constitution of the Clergy (1790). It was, to borrow De Maistre's simile, one of the swaddling bands wrapped around the new born republic of the Western world, destined, so thought this French ultramontane, to be soon strangled. But how wrong! Had France then and thereafter enjoyed a like separation of Church and State how much sorrow and bitterness would have been spared both the Church and her eldest daughter.

Were the Wars of Religion and the French Revolution abnormal freaks in the growth of Western civilization? Catholics will say that Protestantism, the occasion of those wars, was out of joint. The *Ancien Régime*, English Tories, and many among us as well as in Europe hold that the French Revolution was freakish. Of its story, Burke and Carlyle have been hitherto our popular teachers: a statesman and a seer, the one prejudiced and the other dreaming. Both

create a bad impression of the Jacobins. *The Cambridge Modern History* seems fair and fears not to accept the blessings of the movement of '89. In a few concise sentences, Vol. VIII, at its close rehearses the *Aufklaerung*, which it brought to mankind: curtailing the Church's power; removing the disabilities of the Jews; abolition of slavery; a turning point in the history of women; a great impetus to Socialism. Many more may be added—*e.g.*, the death of Feudalism, the suppression of the Jesuits, the pulverizing of class privilege. Human progress, indeed, is ruled by theses and antitheses, by antagonisms and repulsions in its several movements and nothing can be lost that is clearly gained (Symonds' "Greek Poets"). Of course, a strange medley of good and evil is to be found in both volumes, but throughout man rises and liberty advances,

"There is not one thing with another,  
But Evil said to Good; my brother,  
My brother, I am one with thee."

—Swinburne.

Furthermore, the panorama which both present of the convulsions of Europe is uplifting to us Americans, whose religious and civil liberties are, in part, the outcome of those upheavals and partly a protest against *Cujus regio, ejus religio*. In passing we may remark that credit is given in *The Wars of Religion* to the influence of Jean Bodin's *Six livres de la republique* (1576), altho he is not referred to in *The French Revolution*, and yet Bodin has been called "The precursor of Montesquieu" and his work, "The Summa of Political Science in the Sixteenth Century."

*The Cambridge Modern History* may be called a catalog, whose general divisions are the chapters, explanatory of the subjects treated. These again are rounded out in the full, painstaking bibliographies—the best part of the work, perhaps. It seems rather the nursery of thought-germs than a perfect history. Hence after closing *The French Revolution* we found ourselves wondering whether Lord Acton, if alive, would write his "History of Liberty," a life-long dream for which he had read, studied, taken notes, gathered a great library. It is said that he refused to put pen to paper because a full, true story of

the French Revolution had never been written. We fear his pen's point would still remain dry.

## Grove's Dictionary of Music

ALTOGETHER the most important and the most welcome of the season's books dealing with the subject of music, indeed the most noteworthy contribution of several seasons to the growing literature in English about music, is this first volume of a new, revised and enlarged edition of Sir George Grove's monumental *Dictionary*.\* Twenty-five years have passed since the first volume of the original work issued from the press. Naturally, therefore, to-day many men and many things not then appreciable demand attention in a work of this kind; and, taking this first volume as a criterion, they are likely to receive it. The new editor is a man of erudition, good taste and sound judgment. He has critical acumen, and while he is inclined to a thoroughly safe conservatism, such critical remarks as have been admitted are for the most part such as are likely to give to the reader a general idea of the special characteristics of the musicians dealt with. He has enlisted the help of a really imposing array of special writers, and the revised edition bids fair to be a great improvement upon the old—indeed, to be practically a new work. In the old edition the allotment of space was badly out of balance, because whereas only two volumes were intended originally the material piled up until it filled four volumes—besides a bulky appendix. This has been in a good measure corrected. The articles on such important composers as Bach, Berlioz, Brahms and Chopin have been extended and improved—tho that on Bach especially remains inadequate as compared with the one on Beethoven, which occupies more than seven times as much space. Yet to shorten this Beethoven article would have been to despoil a masterpiece, one of Sir George Grove's chief contributions to musical literature. It remains to-day the best biography in

English of Beethoven. The publishers of the *Dictionary* would do the musical world a good service to issue it as a book by itself. The difficult task of bringing the work down to date (the editor says that many hundreds of names have reached an eminence which makes their inclusion necessary, and many new reputations have been made since the first publication of the work) appears to have been accomplished in this Volume I, covering the letters A to E, remarkably well. There are articles on George W. Chadwick, the American composer; the Damrosch family, father and sons; Ernest von Dohnányi, the brilliant young pianist-composer, and so on. But by an inexplicable oversight there is no mention of Eugen D'Albert, one of Germany's foremost living musicians, a great pianist and a composer of no mean attainments. Neither is there any reference to Isidore de Lara, composer of the rejected but not altogether bad opera "Messaline," nor to Vincent d'Indy, a composer of symphonies, operas and other works which the French rank high and which deserve a wider hearing than they have yet had. To fulfill the editor's design of substituting fulsome cross-references for a general index these names should have been included under the letter D. However, with these exceptions, the volume seems to be exhaustive in its completeness. If the preparation of the other volumes yet to come is carried out with equal carefulness and skill the finished work will be an invaluable aid and a constant delight to students, musicians, critics, writers and all laymen genuinely interested in music or in music-makers.

**An Introductory History of England.** From the Earliest Times to the Close of the Middle Ages. By C. R. L. Fletcher, Fellow of Magdalen College, Oxford. New York: E. P. Dutton & Co. \$2.00.

With nothing to present as the result of original research, no new facts, nor scarcely a new light on any of the already known facts of English history, Mr. Fletcher still makes good a claim to a reading for his history of "Early England." His claim is founded simply on the fact that he gives a fresh and really interesting connected narrative of Eng-

\* GROVE'S DICTIONARY OF MUSIC AND MUSICIANS. Edited by J. A. Fuller Maitland, M.A., F.S.A. (In Five Volumes.) Vol. I. New York: The Macmillan Company. \$5.00.

land's emergence from barbarism and the beginnings of her national and institutional life. Mr. Fletcher does not consider history a useful medium of education. "A wide reading of history," he writes, "is necessary for every scholar and gentleman; but such reading is a matter for a lifetime rather than for those early years in which a young man's studies should be wholly directed to the stimulation of the reasoning faculties." Mr. Fletcher therefore aims at creating a taste for historical reading rather than at "pouring information into any one." "When I began it," he says of his book, "I had some foolish hopes that it might be a book which some boys would take up for amusement." Possibly the hopes were not altogether foolish. If the number of boys to whom the history will appeal be but small, there are surely very many older readers who will find the book more fascinating than most novels. In his effort to avoid the appearance of dryness Mr. Fletcher begins in the early chapters by a descent into the colloquial. There is a frequent use of can't and don't and of you and your in the first chapter, and occasionally there is a vestige of flippancy in his attempt to make history amusing. For instance, he writes: "The fat Emperor Claudius came in person; a fortnight of our climate was enough for him;" "King Edgar no doubt thought himself a very fine fellow when he steered a six-oared boat, rowed by six kings, with the King of Scots at the stroke thwart, on the Dee at Chester." But these characteristics disappear as the story goes on, and without losing the brightness, easy flow and lucidity of the narrative the style becomes more dignified, and there is nothing in it to grate upon the most critical reader. Mr. Fletcher's point of view is first of all English, full of pride in his nationality, in the great feats that England performed in the old days, full of pride in her national Church and in the long struggle that her kings made against the encroachments and usurpations of the Popes, and in her Parliament and her courts of justice. But he is also aristocratic and conservative in his sympathies, as he shows, for instance, in his treatment of landlordism and his skit at a

Parliament elected by men who pay no direct taxes. The whole story is English, but it is the England of the early days, when the forefathers of the Pilgrims of 1620 were helping to make English history and fighting the battles of England against Dane and Frenchman.

**Comedies and Legends for Marionettes.** A Theatre for Boys and Girls. By Georgiana Goddard King. Illustrated by Anna R. Giles. New York: The Macmillan Co. \$1.50.

It is a rare child that is not a mimic and actor and does not like a good show that is within its comprehension. Nearly every one who has seen the marionettes abroad or in the Italian quarters of America has enjoyed them. Indeed it is odd that some theatrical syndicate has not a dozen marionette theaters for children in New York. Miss King has launched a book in this new field for Americans, and furnishes the points necessary to a bright child for getting up a little theater with curtains, scenes and puppets; and then she has written a sheaf of plays, pantomimes and legends, that of St. Francis of Assisi being notable in its delicacy and truth. Charades and tableaux can be added as the young imagination is developed. Mrs. Giles's illustrations are laughably deft and clever.

**The Common Way.** By Margaret Deland. New York: Harper & Brothers. \$1.25.

A volume of essays on "The Common Way" and addressed to commonplace women everywhere does not have an alluring sound. Yet in Mrs. Deland's latest book there is charm of style and statement of common-sense truth not easy to resist. In "On the Shelf," which every man or woman past sixty should read, we find sentences like these:

"The sign of the elect is the possibility of growth in ideals."

"With reverence"—for age—"it is not ask and receive, but be worthy and receive."

One of the essays, "Concerning Church Going," appeared in THE INDEPENDENT not long ago. Many of them are vital and suggestive; all of them are worth reading. Especially good are "Love My Dog" and "The Tyranny of Things."

**Rachel Marr.** By Morley Roberts. Boston: L. C. Page & Co. \$1.50.

**Lady Penelope.** By Morley Roberts. Boston: L. C. Page & Co. \$1.50.

Mr. Roberts is a mime of the two masks. He follows his tragedy of *Rachel Marr* with the farce of *Lady Penelope*. In that way he gains two audiences, tho at some risk of disappointment to both, for few who liked one book will enjoy the other. *Rachel Marr* is a well conceived, brilliantly written story, but in it, as in other books of the year, there are too many morbid fancies and burning emotions in the woman who figures upon the stage of action. Five heroines in this year's fiction are introduced to the reader and immediately dipped like radiant Aphrodites into the sea, and not for any normal reason, but because they were morbid, nervous and overheated spiritually, according to their respective authors. Naturally, the tendency of such writers as Mr. Morley Roberts is to mix virtue and righteousness in diseased fever-heated situations. The worst women are so endowed with noble impulses and chaste wisdom of words that they seem to be the best; and the best men are invariably saved from perdition, given a sight of God and heaven through their instrumentality. This is an iniquitous confusing of values which must prove injurious to young readers, and all the more because the confusion is so beautifully dramatized that it appeals to their generous sympathies. And finally, the story is presented with so much intensity of feeling that it seems to tear at the very vitals of the reader. The author's descriptions of natural scenery are so dramatic that even they appeal to the emotions rather than to the sense of sight. And from first to last, he is too much disposed to draw character as if virtue and vice were twin experiences of the soul. Potentially, doubtless they do lie near and kin in every human being, but it does not help matters any to make a literary poster emphasizing the fact. It should be the purpose of art, as of every other human agency, to separate and alienate the two in definition and

consciousness. *Lady Penelope* is the best book we have seen for the use of those newspapers which a few years ago offered prizes for guessing how the story would end. The heroine has eight suitors and, because she hates the display of a church wedding, secretly marries one of them. Each of them claims to be the happy man and the reader is expected to "pick the winner." If he can do it he is smarter than the reviewer. This is one of the few books which should be published with uncut edges.

**Saints and Festivals of the Christian Church.**

By H. Pomeroy Brewster. New York: F. A. Stokes Co. \$2.00.

This single volume of hagiology is conveniently arranged in calendar form, giving for each day in the year some details of the life and legends of the saints whose festivals are celebrated according to the Roman Catholic and Episcopal Churches. A great deal of curious information, difficult to find elsewhere, is here given on sacred art and the symbols, ceremonies, superstitions, stones and colors associated with saints and their days.

**Duties in the Home and the Family.** By Walter L. Sheldon. Chicago: W. M. Welsh Co.

In this volume the author adds to his series of "Ethics for the Young" lessons on household duties adapted for children from ten to thirteen years of age. The instruction is not sectarian or markedly religious, and could be used in any school. The motives and limits of conduct are developed by questions and dialog and enforced by aphorisms, stories, poems and other illustrations.

## The Historians' History of the World

NEW YORK, March 10, 1905.

To the Editor of THE INDEPENDENT:

A review of "The Historians' History of the World" appears in the March 9th INDEPENDENT which gives such a totally erroneous idea of its contents and composition, and is so obviously based on a misunderstanding or incomplete examination of the work, that we are obliged to call your attention to certain points in it.

Your reviewer's statement "Why John

Frost's account of the events leading to the Declaration of Independence should have been chosen instead of Fiske's, Bancroft's," etc., conveys the impression that Frost is the only authority given on these great events. The fact is that Frost summarizes the unimportant events, while every conspicuous feature is treated by some more famous historian. Thus, we give Hildreth on the Stamp Act (p. 231), Eliot on the Repeal of the Stamp Act (p. 234), Hildreth on the Boston Massacre (p. 236), Fiske on the Boston Tea Party (p. 238), Hildreth on the Five Acts (p. 239), Bancroft on the Aftermath of Lexington (p. 242), George E. Ellis on the Declaration of Independence (p. 252). The quotations from Frost do not form a third of the matter on this period.

The next statement in your review, "Why the choice of Samuel Eliot's brief and wholly inadequate account of the organization of the State governments," conveys a still more erroneous impression. The quotation from Eliot to which he refers consists of 18 lines out of a chapter of 30,000 words by many authors. Among the remaining authorities on the Revolution and the establishment of the Union whom we quote at considerable length are A. B. Hart, Judson S. Landon, Hermann von Holst, Sir Edward Creasy, Benson J. Lossing, Edward Everett Hale, J. B. McMaster, John Richard Green, Sir Archibald Alison, etc.

The explanation of the use of such writers as Frost and Eliot is to be found in the just comment of your reviewer: "He (the editor) has very fairly judged the amount of matter assigned to each country and age." It was necessary to use as a groundwork in dealing with the less important events a very brief but accurate summary, and these authors answer these requirements.

We expect that, as a matter of simple justice to the editors of this great work, *THE INDEPENDENT* will publish this letter.

Yours faithfully,

THE OUTLOOK.

The reviewer speaks of the "account of the events leading to the Declaration of Independence," and the critic of the reviewer talks exclusively of events leading to the American Revolution. The writer of the above letter shows a curious lack of sense for the importance of the events leading to the Declaration—the campaign for independence, as it might be called. The very essence of the struggle for independence is to be found in the action of the revolutionists in the four or five months that preceded the Declaration. Of that the *Historians' History* has little or nothing. We in-

sist upon the accuracy of our criticism.

As to the second criticism of the review, the above paragraph concerning the "organization of State governments" contains its own refutation. The writer objects to the reviewer's criticism and then goes on in his defense to talk about another subject. The reviewer criticised the inadequate treatment of the organization of the State constitutions. The making of those constitutions was the American Revolution. In those instruments was expressed all that difference between the English political theory and the American which brought on the revolution. For a complete discussion of the importance of this difference of political theory, and the significance of the State constitutions, we refer the writer of the above letter to Professor McLaughlin's essay in the *Historians' History of the World*—in the volume which provoked this discussion.

## Pebbles

WHAT IS IT?

A buzz—a whir—

A cloud of dust—

A wild, blood-curdling yell—

A ghastly object flashing by—

Then silence—and a smell!

—*Harvard Lampoon.*

....This is from an Irish priest's sermon, as quoted in Samuel M. Hussey's "Reminiscences of an Irish Land Agent": "'It's whisky makes you bate your wives; it's whisky makes your homes desolate; it's whisky makes you shoot your landlords, and'—with emphasis, as he thumped the pulpit—'it's whisky makes you miss them.'"

....Peter Piper had just picked the peck of pickled peppers. "Reminds me, somehow," he said, "of Pennypacker preparing to punish the perverse Pennsylvania papers for printing pert and provoking pictures." Playfully pinching Penrose, he plucked a particularly promising perquisite from the political plum tree and proceeded in his promenade.—*Chicago Tribune.*

....It was at a university meeting that the proposition was being discussed to raise the degree of Doctor of Divinity by requiring of candidates two essays on some moot point in theology; whereupon Dean Mansel passed furtively this couplet to a neighbor:

"The degree of D.D. we propose to convey,  
To an A double S for a double S A."

—*Spectator.*

## Whither Will Russia Turn?

RUSSIA is hopelessly defeated on land, and it is reckless folly for her to look to her fleet to repair her lost glory. The remnants of the Manchurian army are fleeing as fast as they can to the banks of the Sungari River, and only the fleetest can escape. Their artillery is gone, their remaining cruisers are lingering on the African coast. And now their credit, too, is gone, and Germany and even France refuse to make further loans. Their conscripts will not go to the war, and riot and disorder are everywhere. It will take at least a year to reorganize army and fleet, even if soldiers will go and money can be raised to provide powder, food and transport. Revolution threatens everywhere, and the Czar is whiffing between the resolve to continue the war, and consent to allow representative government to the people.

It must be that the war will soon come to an end, and also that autocracy is doomed. But what then?

We hear it prophesied that the defeat of Russia will bring a period of rest to Europe. They tell us that Germany will have no further reason to fear on her Eastern border; that the Russian pressure will be taken off from Turkey and the Balkan provinces; that France, now escaped from her pact with Russia, and in friendship with Great Britain and Italy, will be delivered from entangling alliances; and that all the nations of Europe can reduce their armaments and war taxes.

We fear this is too hopeful a view. Russia, unable, with her long line of connection, to spread in the East, will still remain strong in the West. She will still be able to command an immense army in Europe, if not on the Pacific. The honor which she has lost in Manchuria she will be eager to recover nearer home. Do we remember what France has done since her war with Prussia? Shut out from her Eastern border, unable to recover Alsace

and Lorraine, but mad with ambition, she spread where she could. She has in these thirty-five years developed her magnificent African Empire. Almost a third of Africa she has annexed, and Morocco is the next state to be captured. Russia will turn for a generation from further encroachments on the Pacific, and is likely to look lingeringly toward Bulgaria and Rumania and Armenia, not to speak of Western Mongolia, Northern Afghanistan and Persia. If she cannot reach the ocean at Port Arthur, why should she not at Mohammera?

Nor is it clear that Turkey herself may not think, unwisely, that this is a time for her to break loose from her dependence on Russia, and to settle old scores with Bulgaria, if not with Greece. We cannot believe that the European Powers, Austria and France and Great Britain, would consent to this, or even Germany, but there are serious elements of danger in the situation. As France after 1870 recuperated herself with the resolve to recover her prestige and build up a new army and navy, so Russia is likely to do the same, and to find place to use them. She will talk of revenge against Japan, as France did against Germany; but her activities will be directed elsewhere and nearer home. How happy would it be for her, and for other nations, if she might learn that the victories of peace are mightier than those of war!

## Mediation of a Neutral Power

THE internal condition of Russia suggests mediation by friendly Powers. In the counterplay of assertion and denial we do not claim any wizardry as to the secrets of Cabinets. This we know, that the opportunity of mediation should be welcomed by any nation that can be regarded as friendly to both Russia and Japan. If that can be the privilege of the United States it would be to our honor to grasp the opportunity.

It is not long ago that the *Cologne Gazette* asserted that any proposal in the direction of mediation between Russia and Japan would be regarded as an unfriendly act on the part of the nation making such a proposal. This is an extraordinary assertion. As a matter of immediate policy, of practical wisdom, the tender of mediation by any Power at the present juncture of Russo-Japanese affairs might, or might not, be open to objection; but to say that any neutral Power cannot, at this or at any stage of the war in the Far East, tender its good offices or mediation without compromising its neutrality is another and a very different thing.

Has The Hague convention of July, 1899, for the pacific settlement of international disputes, become a piece of waste paper? Has Russia, Japan, Germany or any other signatory Power ever denounced it? If not, we are to assume that each and every such Power continues to approve its provisions, including the provisions concerning good offices and mediation. Now the second clause in Article III of that convention provides explicitly:

"Powers, strangers to the dispute, have the right to offer good offices or mediation, *even during the course of hostilities*;"

and the third clause in the same Article recites:

"The exercise of this right can never be regarded by one or the other of the parties in conflict as an unfriendly act."

It seems to us that these clauses were inserted precisely for the purpose of meeting just such cases as that presented by the Russo-Japanese war. Just because, during the ups and downs of the fortune of war, this or that neutral Power might feel a delicacy in proffering or in suggesting mediation, lest it should be accused of partisanship or meddlesomeness, was it needful that all the Powers should agree beforehand that the right to attempt mediation should be held sacred and as above suspicion. If a Power, having once offered mediation and having had its mediation formally rejected by one or both of the contending nations, should then, without at least temporarily abandoning its good efforts, persist in re-offering the same me-

diation, its course would indeed be open to severe criticism. But no such pertinacity is at all to be feared, either in the Russo-Japanese conflict or in any future case. The fear is all on the other side—the fear of offending the national pride or sensitiveness of some warring Power; and it was evidently for the express purpose of removing this obstacle to free and friendly offices that the members of The Hague Conference took the steps above mentioned. They even recommended mediatory effort as a duty in some cases, but they made it most emphatically clear that the *right* of offering mediation should be unquestionable.

There is no nation in a better attitude than the United States to offer her good will in this matter. We have always been friendly to both Russia and Japan. But more than this, we can be suspected of no ulterior hope of gain. We have no territory in China, no claims in Manchuria, Korea or Japan. That is not true of Germany, France or Great Britain, the only other Powers of the first rank. Our motives are unquestioned, our policy has been made plain. All we ask is open and equal trade for all countries, a fair field and no favor. Therefore it is that the repeated rumors that the United States is likely to be the intermediary in the coming negotiations are plausible enough to gain more credence than their evidence warrants.

## The Florida Retreat

It is questionable if Northerners do not more need a release from the winter's wear than from summer's enervation. It can be had as easily and at less expense. Florida has until recently been a land of myth, or, if known at all, mostly from its failure to escape touches of frost. We are just beginning to know it as a natural winter's retreat, with just frost enough to purify the atmosphere. Breezes blow almost continuously, either from the Gulf or the ocean, giving an atmosphere that is exceptionally pure and clear, while even the hottest days are tempered more than at the North. Instead of being a flat land, and mostly swampy, large tracts in the State are high and rolling—sometimes even hilly—while the lakes are tossed in by Nature

even more freely than in Michigan and Wisconsin.

Around these lakes our robins go to spend the winter, and why not we? Millions of our songsters fill the pine woods through the winter months—not winter there—and start slowly for the North during the last days of February. At this period the peaches, plums, violets, jessamines and strawberries are in blossom in the middle of the State, while lower down strawberries and pineapples are ripe. Yet the Northerner must not seek the more tropical parts of the State except as tourist. He is happier in the semi-tropical, where atmosphere and water and soil and fruit and flowers are more homeful. He can grow in northern and middle Florida his winter garden of lettuce, Irish potatoes and celery, while he is digging sweet potatoes; can have his cow in pasture all winter, and his chickens picking up their own living for the most part, while they furnish eggs and broilers. Bees are at work every month in the year and never gather honey more freely than when snow covers the Northern fields and keeps the Northern bee dormant. There is no good reason why half a dozen Northern families should not group themselves together about any one of the beautiful lakes found everywhere through the pine woods, breathe the air touched with turpentine, pluck all the flowers they like, cultivate winter gardens of flowers, vegetables and fruits, and in March or early April eat their own strawberries. The minister, the lawyer, the editor, the merchant will find such an experience—lasting from one to three or four months—invigorating, revelating and life lengthening.

Too much heat in summer is not pleasant, but we must reconstruct our cities to make it tolerable. It is not always escaped by those who go to the country. The true plan for summer is to make our towns and villages more shady, and our larger cities much more open and park like. But the real problem remains for all but the most wealthy, how to meet that season which kills the strongest and sows pneumonia in mansions. Last winter has been an illustration of demands that can be made hardly endurable by the stalwart. Well warmed houses do not

solve the problem, and heat that will checkmate blizzards is costly. It is not cheerful in the midst of slush and drifts, of March bluster and fury, to read of a land where the birds sing from day-break to nightfall, while the folk sit at midday with coats off, on their verandas, “looking at lakes that never know ice and at flowers that do not fear February.” In March the young peaches and mulberries are rapidly forming on the trees, while plums and cherries have dropped their petals.

The orange orchards are not the easy success expected, and our vacation hunter will not grieve over these changes which nature works in human economy. Millions of dollars were sunk in a wild rush for immediate wealth, but there are orange groves enough left. Florida is good for something better. It belongs to Yankees; it is their natural winter home-stead. It is the other end of New England. To enjoy it will not cost any more than a summer vacation in the mountains of New Hampshire or among the lakes of Maine. It has its resorts of cost, but it has also thousands of modest retreats, where one may live for five dollars a week on honey, and sweet potatoes, and milk, and good bread, and all vegetables that he desires. Oranges and grape fruit are the apples of Florida and just as free to the visitor.

The climate is never as hot as are the streets of New York. Even for a summer vacation it would be more endurable than some of the land-locked valleys of the Empire State, and far preferable to the black and treeless prairies that look toward the Mississippi. Of shade there is an abundance and the breeze is simply perpetual. Pine forests cover the whole center of the State, and the roads or drives, not always more than trails, wind through the clean forest, where the shafted trunks rise fifty feet to the canopy of limbs. Magnolias stand beside the basswoods, while catalpa trees and camphor trees grow neighborly beside the scarlet and the live oaks. In the orchard figs and loquats chum it with peaches, plums and pears. Pecan nuts and persimmons and sweet gum trees look familiar to the Northerner. Grapes climb cheerfully, and, when properly treated, bear enormous loads of fruit. But

Florida is a long State, with wide ranges of both vegetation and climate.

Every Northerner can find that which will suit his taste. A month in midwinter will be a revelation. It will go back to the North with him as a perpetual joy in the soul. Burroughs, speaking of Bermuda, calls it "tourist-infested." This is an apt description of some spots in the State of Florida—infested with a tribe that is ever on the go and never really comprehending anything seen. We have never learned from these people the best thing about Florida—for they have not apprehended it—that it is the place to hide, to rest, to recuperate, to escape Boreas' grind, to breathe easily—and spend very little money. Perhaps the average tourist would not like Florida so well if he saw this deeper meaning to its forests and its lakes. To us it seems to be the natural resting place of the fagged teacher and the tired pupil; the vacation retreat for those who have been worn not only by toil but by climate.

### The Offspring of Uranium

URANUS was the father of all the gods, and it is more appropriate than could have been anticipated that his name should have been given to that chemical element from which, as it appears, other elements are generated. That helium is formed by the decomposition of radium is pretty well established by experiment, and that radium is derived from uranium is rendered very probable by the fact that in the analyses of a very large number of minerals the amount of radium, as measured by the activity of its radiation, is proportional to the percentage of uranium that the mineral contains. Two facts, which appeared to disprove this theory, are now giving way. One is that certain lead-bearing minerals were found at Issy-l'Évêque in France which contained radium but no uranium, but it is thought that the radium may have come into these rocks from the radio-active water of the neighboring springs. The other objection was that Professor Soddy reported some months ago that he had kept a considerable quantity of uranium salts in a sealed vessel in his laboratory

without the formation of radium as rapidly as is required by theory. Now, however, he announces that the rate of production of the emanation, the radioactive gas by which radium betrays its presence, is much greater than at first, and this is confirmed by the experiments of Professor Whetham.

It appears, then, that uranium, which is a heavy metal, changes spontaneously into radium, a metal of less atomic weight, and this again into helium, a very light gas, tho there may be several unknown intermediate stages in both cases. This, very curiously, is the reverse of the speculations which used to prevail as to the evolution of the elements. Chemists have for a hundred years considered the possibility that all the seventy-odd chemical elements might be formed from hydrogen, the lightest known substance, or from some hypothetical element of less atomic weight, such as Crookes's "protyl;" but the opposite idea, that the small atoms might have been formed by the breaking up of the big ones, was not brought into the discussion. The atom of uranium is the heaviest known. It is 240 times as heavy as the atom of hydrogen and 60 times as heavy as that of helium. Apparently it is too big and too complicated to hold together, and some of its 240,000 electrons fly from their orbits, causing a general stampede of the rest, which fall into the groups known to us as other elements.

Professor Soddy's sample of uranium is changing into radium at the rate of one twenty-trillionth of its weight per annum. This leads to calculations as to the time when the element will entirely disappear, and also as to the age of the earth from the amount of radium contained in the rocks of its crust; but such speculations are rather rash, for it is probable that the reverse or synthetic process is also going on, altho less rapidly. In fact, we have experimental evidence of this if Sir William Ramsay is not mistaken in thinking that he has by the action of the rays from radium changed glass, which contains no element having a higher atomic weight than 40, into a substance having some of the chemical properties of lead, which weighs 207.

## Revivals to Order

WE hear it said that revivals must not be "got up," they must "come down." This sounds quite religious, if not pious; but those who wait for revivals to come down will never have them.

Let us assume a church in which a revival is to be desired, one in which the normal and preferable way of seeking the beginning of the religious life leaves many unreached, and where a certain public excitement is necessary in order to find those who are beyond the reach of the common religious influences. That probably requires a special mission, or revival. How is it to be secured?

Now this we have to say—and it is all—that spiritual results are as truly under the domain of law as any other. They come under the rule of cause and effect. Give the conditions and the revival will follow. One may talk about their coming down from above, about the descent of the Holy Spirit, and all that, but even the Divine Spirit works under law, for "God is a mathematician." There is no more divine caprice in a spiritual awakening such as now exists in Wales and is beginning in England, and has existed in a number of American cities this winter, than there is in the action of the law of gravitation. One who wants the spiritual awakening must create the conditions.

We all believe in natural law in the natural world; must we not equally believe in natural law in the spiritual world? And why should not a general popular interest in religion, in which many will be brought to accept their obligation to begin a life of service to God and man, as much come under the spiritual conditions of natural law as does the same effect in a single normal case? We expect the child, if brought up in the religious atmosphere of the home, instructed by parents and teachers, taught from his mother's knees to pray, encouraged from his earliest consecration to expect membership in the Church—we expect him to accept his parents' faith. We are surprised if he does not and we ask why the law has failed. There must be some reason for it, for the failure is not in the law. So we speak of the "means of grace," and we do not hesi-

tate to define them as preaching, reading the Bible, etc. That means simply the reign of law in the spiritual world, and, equally, that fit conditions which will bring one person into the religious life will equally bring a multitude into it.

It is not our object now to develop what those means are. It is enough to say that other means must be employed to reach those who are not interested and who are not religiously trained from what are used with the children of the Church. Somehow the members of the Church must be awakened and desire to use the means and expect the result. They must themselves be stirred to general warmth before they can expect to warm those that are outside. They must create a religious atmosphere. They must find out how to bring into their meetings those who do not usually attend. They must excite a curiosity, even an expectancy of a religious awakening, and they must provide such a kind of special attraction by public addresses as will "draw." As conditions vary, so will the means to be used. In some congregations perhaps no means can be used and no revival is to be expected, because there are none to be reached; but usually there will be an outlying population to be gathered in.

The substance of it all is that we must not abuse the "machine-made revivals." If they do more hurt than good the fault is in their making. Poor workmen will always make poor products. Nor can we say simply and lazily that we must depend on the Holy Spirit to come down. That is his province, not ours; ours is to prepare the way, sure of the Lord's coming; to sow the seed, sure of the harvest. If it is all grace on God's part, it is all law on our part.

Perhaps the plainest example of revivals made to order—"machine-made," people too often say—are those now so useful and popular in the Catholic Church. The parish priest finds his people indifferent, many already wandered away. He proclaims a mission. He invites several Paulist or Redemptorist Fathers. They have their regular methods. They preach the same order of sermons. The faithful are required to bring in the lapsed. They end with confessions and communions. The expenses are paid

by contributions for the missionaries and the sale of "objects of piety." There is no question among Catholics generally that the revival revives, that the mission brings large results. But the process, the method, the law is clear and fixed. And it is the same in other Churches. These laws are understood by Campbell Morgan and Mr. Watson, who are not so much themselves evangelists as they are its John Baptists, preparing its way, getting the laws into operation and going on to leave the preaching evangelists, pastors and others to gather the fruit. But in every case spiritual law rules. They are "revivals to order;" they "are got up," as well as "come down;" they are part of the good "machinery" of the Church.

### Disease and Dirt and the Tramp

DURING the last few weeks we have heard much of a disease, fortunately unfamiliar, that is working serious loss of life in the large cities of many parts of the country. Here in New York the death rate from epidemic cerebro-spinal meningitis has been on the average over 50 per week for the past six weeks, and according to the most recent prognostications of those best able to foresee the course of the disease in the future, this is likely to continue for some time. When we recall that this disease is usually responsible for at most a few deaths a month in large cities and that sometimes months will pass without a single death, it can readily be understood that we are in the midst of a serious epidemic. During the present winter the death rate from the disease has averaged one-half of the reported cases, tho of course it seems not unlikely that a certain number of milder cases have occurred without being recognized, or at least without being reported.

Last week the feelings aroused by the occurrence of so many deaths from the disease were still further intensified by the announcement of the death of a physician in Philadelphia and the subsequent quarantining of his brother physicians who had been in attendance on the case. The report may have been exaggerated by the sensational newspaper, but it was certainly calculated to produce

something of a scare with regard to the disease and awaken the impression that it is virulently contagious and may be carried from house to house by those who have been in contact with it. Epidemic cerebro-spinal meningitis is not a new disease, however, but one that has been known now for nearly a century, and its contagiousness in the ordinary sense of the word is by no means established. While occasionally cases do occur in members of the same family, this is rather rare and physicians and nurses in hospitals in attendance on patients suffering from the disease have very seldom been attacked by it. In fact, during all the epidemic of last winter here in New York, during which hundreds of cases were admitted to the hospitals, no case of the disease developed among the hospital attendants.

While there is no need, therefore, for fear of the spread of the disease through those who have been in contact with sufferers from it, there is no doubt of the infectious nature of this always very fatal affliction, and the problem is to secure, if possible, its eradication. Epidemic cerebro-spinal meningitis occurs by preference among the poorer classes, but usually there are a number of foci of the disease to be found in various portions in any city in which a true epidemic develops. It is as a rule practically impossible to trace any connection between the various centers of disease. It is not that the affection develops spontaneously, for between genuine epidemics sporadic cases of undoubted epidemic cerebro-spinal meningitis are often under observation, and it would seem as tho these constantly recurring isolated cases foster the growth of the micro-organism which causes the disease until, under certain conditions of climate and temperature, it gains sufficient virulence to attack not alone those especially susceptible, but even the more hardy members of the community.

It is rather interesting to find that in a large number of reported cases occurring between epidemics the patients belonged to that class of unfortunate individuals careless of their personal cleanliness and of their habits of living whom we in this country call tramps. In Europe it has been noted over and over again that the

first cases of the disease seen in cities about to become the locus of an epidemic occurred in gipsy wanderers or in vagrant laborers who had been for a considerable time out of employment and had been living under more or less filthy conditions. It is now well understood that dirt in general does not cause disease directly, tho it may foster the micro-organisms which are the direct cause. It has recently been suggested by a distinguished sanitarian at Yale that epidemic cerebro-spinal meningitis may be transferred from one person to another by means of flea-bites. There is no doubt that some mode of inoculation is required to produce the disease. Since the recent acquisitions to our knowledge of the method of distribution of malaria and yellow fever by the mosquito, this question of inoculation of disease germs by means of a parasite is much more readily accepted than before.

There is with regard to another disease, fortunately very infrequent in this country, some further evidence with regard to parasites usually associated with conditions of uncleanness that is very interesting in this regard. Relapsing fever, or, as it sometimes called in Central Europe, "Vagabond's Disease," is known to occur especially in wanderers such as described, and tho there may be many cases of the disease in a city, it does not spread by contact. It had been noted over and over again that hospital attendants do not suffer from the disease. On the other hand, those who used the bed clothing of sufferers from relapsing fever usually fell victims to it. An examination of such bedding often reveals the presence of unwelcome inhabitants. The spirillum, which is now known to be the cause of relapsing fever, has even been found in the blood of the *cimex lectularius*, the parasite too rude for ears polite now, but which our grandmothers called the bedbug.

It seems very clear, then, that society must learn to protect itself from these wandering carriers of disease-bearing parasites, which may prove the source under favoring circumstances of even a seriously fatal epidemic. Certainly the hundreds of fatal cases of epidemic cerebro-spinal meningitis are enough to justify the taking of every precaution

against the spread of disease by such unfortunate means. Inspection of lodging houses in the poorer districts of large cities and insistence on cleanliness with regard to bed clothing, and especially during times of epidemic of all portions of the bedding that may prove a lurking place for blood-sucking parasites of any kind, must be put into effect. Our sanitary regulations are only as strong as their weakest points, and here is a point that must be strengthened if successful avoidance of disease is to be secured. So much has been accomplished in recent years, however, in municipal sanitation with regard to hygienic details that looked almost more hopeless than this, that we may confidently expect amelioration of present conditions even in this matter if attention is once seriously called to it.

### Roosevelt to the Mothers' Congress

It may be that when, a hundred years later, a philosophical historian shall review the first decade of the century, and shall recount the forces which then slowly modified society, he will find in President Roosevelt's crusade against "race suicide" a deeper influence than in his more political service to larger Americanism. Surely something ethical will be in it. Already Mr. Roosevelt has enriched the language with two ringing phrases, one "the strenuous life" and the other "race suicide," the one to be praised, the other to be condemned; and of the two the latter may be the more effective, for the warning and instruction are more needed.

We make no crusade against the exceptional man, or the exceptional woman, who can do better work in another career than marriage and parenthood. Such exceptions there must be, and a woman defends them in our pages this week. We find no fault with her, but quite as much we honor the other woman who rejoices that she accepted another harder and quite as honorable a lot. President Roosevelt's address expresses solid and sound truth. We would like to print it all, but we give here a paragraph or two

which we would have young men and women, married or unmarried, read, for what he says is true:

"There are good people who are denied the supreme blessing of children, and for those we have the respect and sympathy always due to those who, from no fault of their own, are denied any of the other great blessings of life. But the man or woman who deliberately foregoes these blessings, whether from viciousness, coldness, shallow-heartedness, self-indulgence, or mere failure to appreciate aright the difference between the all-important and the unimportant—why, such a creature merits contempt as hearty as any visited upon the soldier who runs away in battle."

The result of such neglect of both privilege and duty has never been more frankly stated than in these words:

"If the average family contained but two children, the nation as a whole would decrease in population so rapidly that in two or three generations it would very deservedly be on the point of extinction; so that the people who had acted on this base and selfish doctrine would be giving place to others with braver and more robust ideals. Nor would such a result be in any way regrettable; for a race that practiced such doctrine—that is, a race that practiced race suicide—would thereby conclusively show that it was unfit to exist, and that it had better give place to people who had not forgotten the primary laws of their being."

Herein the President of the United States has done an extra-Constitutional duty. It is to be hoped that it will somewhat turn the current of public sentiment which is in most serious danger of cursing its blessings. It will be for the future historian to record the result.

**General Hawley** This generation has known him as Senator Hawley, for he represented Connecticut in the United States Senate for twenty-four years, having previously served three terms in the House of Representatives. But to the older generation he was General Hawley, the dashing soldier who served through the entire Civil War, entering as Captain and coming out, after following Sherman in his march through Georgia, as Brevet Major-General. But what he was loved and admired for was his vigorous, manly, honest character. He hated a sham; he was not good at

wire-pulling, but the people liked him and re-elected him as long as his strength would allow. He came into public life in his middle twenties as editor and founder of an anti-slavery paper—not the impractical sort that would have nothing to do with politics and would only abuse the South, but the kind that founded the Free Soil, and later the Republican, Party. And when the Party came into power after the War it found in him one of its most honored members. He was made chairman of the convention that nominated General Grant as President, and he was himself later a candidate for the nomination against James G. Blaine. He belonged to the best school of Connecticut politics, the school of Governor Buckingham, and his example may well be kept in memory in these later days.

#### Santo Domingo's Debts

The treaty with Santo Domingo having been laid aside in the Senate

for at least six months, our Government will continue to collect customs revenue at the Dominican ports of Puerto Plata and Monte Christi, applying nearly all of it each month to the claims of American creditors. It is this successful enforcement of our own claims that may invite the complications which Mr. Roosevelt sought to avoid by an agreement which other claimants were willing to accept. We have been taking \$37,500 per month under the arbitral agreement. We shall continue to receive that monthly allowance (on a claim of \$4,500,000), while the foreign creditors will be getting little or nothing. Naturally, they will strive to obtain a proportionate share of the republic's revenue, and they may find that our arbitral agreement bars the way. Complications may arise not only by reason of a seizure of custom houses, but also with respect to the fairness of the agreement under which American creditors have been taking and will continue to take so large a part of Santo Domingo's income. It is unfortunate that the Senate was unable so to amend the treaty that it would be acceptable to a two-thirds majority. In its original form it had objectionable features. These having been eliminated, it would have been better to accept all the restrictions and limitations suggested by the Opposition,

if thereby ratification could have been obtained, than virtually to reject the entire proposition, which is what the Senate has done.

#### A New Curriculum

Which of our universities is to lead in the experiment of educational progress for the new times? It was Harvard, under President Eliot, in its development of elective courses, and Chicago, under President Harper, with its majors and minors. Now Columbia University under President Butler makes a fresh and radical announcement. First, it offers the degree of Bachelor of Science to students who have no Latin or Greek, either on entrance or in their college course, but who, on entering, offered special preparation in natural and physical science. Next, a four years' course will not be required for graduation, only the passing of 124 *points*, each point meaning the completion of work requiring attendance of an hour a week for one half year. Thus one who takes 15½ hours a week will finish in four years, but one can take even 19 hours and not less than 12. With this an interesting new principle is introduced by which a student who for a half year is marked A (excellent) in two studies of a point each is credited with an extra point, while one who receives D (poor) in two studies is allowed but one point for the two. The influence of this provision is clear. Under the plan a capable student can graduate in three years, even without advanced standing on entering. This plan of graduating by courses pursued, instead of by time of residence, involves the privilege of entering college in the spring as well as at the beginning of the autumn term. In these respects Chicago University has set an example. Again, permission is given to the student who has achieved 72 points to enter one of the professional schools, whether in Science, Medicine, Teachers' College or School of Fine Arts, and at the conclusion of two years of such course he receives the degree of A. B. or B. S., leaving but two years more to conclude the professional course with its degree; or, on gaining 94 points, he can take his college degree after one year of the four years' professional course. These new rules seem

to mark a real step forward, for we do not fear that classical studies will lose their place in culture, and culture cannot all be of one type. The overlapping of the college upon the professional school is what we have to submit to, whether we like it or not; but the ideal will continue to be the broader general culture before the boy enters on his bread-winning studies. The working of the new plan to penalize poor study and reward faithfulness and ability appears to us safe and wise, and is worth watching with a view to adoption elsewhere.

#### "The Metapsychic Sciences"

Prof. Charles Richet, of the University of Paris, who has been elected president of the British and American Society of Psychical Research, has devised the term "metapsychical sciences" to cover the subjects studied by the society. He objects to "spiritism" because it implies an hypothesis which he does not accept and to the word "occultism" because every science deals with the occult at its beginning. "Metapsychics" bears the same relation to psychology that metaphysics does to physics. It treats of phenomena beyond the ordinary mental powers. That there are such phenomena Professor Richet believes, but he frankly admits that there is as yet no positive proof of the existence of such powers as telepathy and of mysterious forces capable of producing luminous apparitions and moving furniture. In an interview in *Le Temps* he says:

"All is possible; nothing is demonstrated. We have had for 30 or 40 years a considerable number of well sifted experiences, and this treasure augments every day, thanks to the labors of conscientious investigators scattered all over the planet; but an irresistible and conclusive proof is almost impossible to get. There always remains a rift where hesitation penetrates. The *experimentum crucis*, as the alchemists called it, the irrefutable demonstration, is yet to find.

"Science is as liable to err in proclaiming negations as it is invincible in the establishment of facts. I have often cited Magendie refusing to consider anesthetic surgery possible, Bouillaud believing that the telephone was a trick of ventriloquism, Pasteur himself, our great Pasteur, claiming that it was impossible to create by artificial synthesis an asymmetrical molecule, Lavoisier declaring

that meteorites do not come from the sky because there are no stones in the sky.

"I remember I was obliged to secrete myself to carry on my first experiments in hypnotism. Now they are classic. What wild laughter would have greeted me if, twenty years ago, I had told of the way I effected the metamorphosis of one of my friends into a parrot so completely that he said: 'Shall I eat all the grain in my cage?' That *my* is a miracle."

To a class of newly ordained Methodist ministers Governor Stokes of New Jersey said a few days ago that no remedy for "Trusts and other industrial evils" would be found until "the religious element of the country" should take up the question and "spread the gospel of honesty and uprightness until the powerful shall not prey upon the weak." Trusts are not always and necessarily an evil, but in dealing with the evils associated with some of them there is no more inviting field for missionary work than Governor Stokes's State, whose corporation laws have been so carefully adjusted to satisfy the needs of combinations and the promoters of them. This was well understood by the organizers of the Shipyard Trust, as was shown by Receiver Smith's memorable report. The young ministers whom the Governor was addressing might begin the work which he suggested by exerting their influence upon the New Jersey Legislature.

Among the most impressive monuments found by Layard in Nineveh was a great bas-relief showing a procession of gods captured in battle and borne on the shoulders of soldiers. Similarly Isaiah tells of Bel and Nebo carried captive, "a burden to the weary beast." Such a picture the Mikado may put in his palace, for we are told that in the house occupied by General Kuropatkin at Mukden were found all the ikons presented to him when he went to war, and which he was to take with him to Tokyo when he should dictate peace in the Japanese capital. These captured ikons would make a fine feature in a grand triumphal picture of pagan art—or might go to a Japanese Museum of Religions, to be labeled "Christian Idols, from Russia."

No man out of Colorado knows who was elected Governor by the people, nor any one in the State. Adams, Democrat, was elected on the returns, proved fraudulent; but the Republican returns were also fraudulent. The Legislature paid no attention to the evidence, but in voting to seat Peabody were controlled by purely political considerations. Even the ten Republicans who voted against Peabody, and the other twelve who voted for him on condition that he resign, represented not honest sifting of evidence, but the hostility to Peabody of a bitter faction within the party. That some conclusion is now reached peaceably is most happy, and it ought to give time to organize provisions for honest voting in future.

We need not be surprised that other countries surpass the United States not only in the benefits, but also in the profit, of their postal systems. While our Department costs us millions of dollars a year for its deficit, France reported a profit of \$14,063,519; Germany of \$14,624,095, and Great Britain of \$20,088,947. Our comparative deficiency is in part due to the fact that our Post Office Department does not have possession of the inexpensive and profitable telegraph and telephone business, in part to the expense of transportation over sparsely settled areas, and in part to the higher salaries here paid for service. Our postal service is far behind the times.

We feel very much like making an earnest appeal to the British people and to the incoming new Liberal Government for relief to the Zulus in South Africa. Since the war there the colonial authorities have increased the burdens and restrictions of the natives, as if desirous to equal the oppressions of the two Boer republics. They are treated much worse than our negroes are treated in any part of the United States, and the British Government ought to correct it. Where is that Nonconformist conscience we hear of?

# Insurance

## Harmony in the Equitable

It is gratifying to observe that the differences lately prevailing among the gentlemen composing the management of the Equitable Life Assurance Society have been reconciled, even tho the terms of the settlement may not be in harmony with the views of those who desired to see the company placed completely within the control of its policyholders. While essentially just, and in conformity with the intention of the founders, as evidenced by the charter, the change demanded by President Alexander and his supporters was a radical one, and it is therefore not surprising to learn that the only practical way out of the difficulties precipitated by the latter was through a compromise that leaves the stock proprietary interests intact, while awarding to the policyholders a slight preponderance of influence in the Board of Directors. If this preponderance is real, and not apparent, then the control of the company and its vast funds has actually passed from under the dominion of the owner of the majority stock and, except for some slight advantage which its possession might give in an unlooked-for emergency, might better have been sold and retired. The question which will arise is: Does the majority of four in the Board of Directors in favor of the policyholders actually place the direction of affairs in the hands of the latter?

After giving publicity to the statement made and signed by all but two or three officers of the company late in February, respecting the necessity which existed of fully and completely getting rid of the stock control and thus relieving the management of one person, it is going to be no easy task now for the management to repossess themselves of that measure of public confidence they formerly enjoyed. Before the public they are as a number of persons associated together in managing and caring for a trust fund who have quarreled among themselves, brought serious charges one against the other, which have neither been proved nor retracted. That this will

be used against them by their less powerful competitors and at least retard progress in the way of securing new business seems plain. This condition the reunited management must now meet and overcome.

While the matter ends in a way not entirely satisfactory to the believers in mutual life insurance—and they, we believe, greatly outnumber the stock school—yet a distinct gain has been made. The policyholders have it in their power to control the management, and any failure on their part to do so can only seriously reflect on their ability or integrity. The ground won will be used to further advantage, and it is possible that at no distant day the stock will be retired on a basis fair and just to the stockholders and the Equitable become, in fact, a purely mutual company. All well-wishers of life insurance will hope the company's troubles are at an end.

DISPATCHES from Salt Lake City announce the formation by several apostles and others prominent in the Council of the Mormon Church of a Mormon life insurance company under the title of the "Beneficent Life Insurance Company," with Joseph F. Smith, President of the Mormon Church, as chief officer. The Mormon Church leaders already control a fire insurance company, but the present is their initial venture in the life business. The company's capital will be \$500,000.

....In "The Umbrella and Other Stories" recently issued by *The Insurance Press* there is a very striking argument made in favor of life insurance in one of the "other stories." This argument is based upon the marriage covenant, wherein are the words repeated by the man when he promises the maid to "love her, comfort her, honor and keep her . . . as long as ye both shall live." As the writer pertinently points out, these words put a construction upon marriage that but few have considered. It seems certain, however, that the man is bound to protect the maid as long as she lives, whether or not he survives. Under such an interpretation of the marriage service it would seem essential for the man to provide a life insurance.

# Financial

## Steel Corporation's Report

THE Steel Corporation's report for the calendar year 1904 clearly exemplifies the great company's commendable policy of giving full publicity to the record of its affairs. Among the items which show the effect of last year's depression are these: A decline in gross receipts of \$92,000,000 (from \$536,572,000 in 1903, to \$444,405,000 in 1904); a decrease of net earnings from \$109,000,000 to \$73,000,000; a decrease of the sum applicable for dividends from \$55,000,000 to \$30,000,000; a decrease of the number of stockholders from 79,957 to 67,522. Payment of dividends on the preferred stock left a surplus of only \$5,047,000, against \$12,304,000 in 1903, when dividends on common stock also were paid. Salaries and wages fell from \$120,000,000 to \$99,000,000. This was due partly to a decrease in the number of employees from 167,709 to 147,343. The change for the better, which began to appear in the closing months of the year, has become most encouraging since the end of the term which this report covers. The output of iron has broken the record, the Corporation's mills are full of work, and it is advancing the prices of its products. The present year promises to be not less profitable than 1903 for this great company.

## Steam and Trolley United

By the purchase of the Hartford street railways (92 miles) the New York, New Haven & Hartford Railroad Company has so enlarged its holdings of such property that it now owns 427 of the 700 miles of electric road in Connecticut. It has acquired the Worcester roads and others in Massachusetts, and is now negotiating for the Springfield roads, for which, it is said, the offer is \$225 per share, or about \$4,500,000. To the Hartford Company \$285 was paid, or nearly \$3,500,000. It can be predicted with confidence that within a short time all the street railways between New York and Boston that touch this company's lines will be in its possession if it cares to have them. In this way it controls local short-distance competition, prevents the development of

long-distance competition, and will probably make profitable use of the street lines as feeders for its steam service. All this will be accomplished by a comparatively small investment, upon terms that will give a fair return for the capital used.

A STATEMENT accompanying the announcement of the Western Union Telegraph Company's customary quarterly dividend of  $1\frac{1}{4}$  per cent. shows that the surplus, which was \$15,793,257 on January 1st, will be (on returns partly estimated) \$15,876,236 at the end of the present month.

....The fifth annual report of the American Woolen Company shows net sales during 1904 of \$39,632,916, an increase of \$1,316,152; net profits of \$3,042,330, a decrease of \$301,189; undivided profits after dividends of \$1,642,330, and total undivided profits, \$8,196,925. President Frederick Ayer, in his report to the stockholders, says that business in the first half of the year was slow, due in part to the Presidential election, and the company operated, approximately, only 72 per cent. of its looms. There was an improvement as the year advanced, however, and in the last three months 88 per cent. of the looms were in operation. The company secured its wool at prices well below the present market.

....The Equitable Trust Company of Chicago, besides its booklets and prospectuses which call attention to its business as agent, trustee and executor, issues a really valuable little volume, which will interest students of legal history. It is remarkable that lawyers have paid so little attention to the most important of all discoveries in early law—the full Civil Code of Hammurabi—completed by that king in Babylonia a thousand years before the laws of Moses. In this volume Hammurabi's Laws of Descent and Inheritance are compared in parallel columns with the laws of Illinois, not wholly to the disadvantage of the former. At any rate, the comparison will be interesting to scholars and lawyers; and the topic is one which must concern a trust company that acts as executor of wills and transfers property to heirs.

VOL. LVIII

NEW YORK, THURSDAY, MARCH 30, 1905

No. 2939

## Survey of the World

### Politics and National Topics

In Delaware the Legislature has adjourned without electing a Senator. On the final vote Mr. Addicks had the support of 15 members; 27 were required for an election. The seat may remain vacant until 1907.—At a meeting in Kansas City on the 24th Major William Warner, the new Senator from Missouri, said:

"The burning issue of the day is that of setting proper metes and bounds to corporate power, and the suppression of unlawful encroachment upon the rights of the people by organized capital. These issues must be met and solved in a spirit of fair play and with a high resolve to give to every interest a square deal. I am an admirer of the personality of that Christian statesman, that ideal American, that friend of the people, Theodore Roosevelt; and as long as he remains as he is now, the champion of no special interest, but the fearless champion of the rights of the people, I shall be found marching under his standard."

Postmaster-General Cortelyou, retiring from the chairmanship of the Republican National Committee, has appointed Harry S. New, of Indiana, to be acting chairman. Mr. New is a journalist, the son of the late John C. New (formerly Treasurer of the United States and Consul General at London), and in the last two campaigns was in charge of the committee's work in the West. As he has not been a political supporter of Mr. Fairbanks, it was reported that the latter opposed his appointment. For this report there appears to have been no foundation.—Representative Babcock (associated with the opponents of Governor La Follette in Wisconsin) becomes that

State's member of the National Committee, and will retire from the Republican Congressional Committee, of which for a long time he has been the head.—Truman H. Newberry, of Detroit, has been appointed Assistant Secretary of the Navy by the President. Mr. Newberry is 40 years old, and his private fortune is estimated in the public press to be about \$20,000,000. He is an enthusiastic yachtsman, horseman and automobilist, and he assisted in building up the Michigan naval reserve, serving with it during the war with Spain.—Señor Azpiroz, the Mexican Ambassador at Washington, died last week, his fatal illness having been caused in part by exposure on Inauguration Day. He was the prosecuting officer before the military court that tried Maximilian, and he asked that the death penalty be imposed. Thus he incurred the lasting enmity of the Imperial House of Austria, and the attitude of the Austrian Ambassador toward him in Washington had sometimes caused embarrassment at social and official meetings.—At a public meeting in the Mormon Tabernacle at Salt Lake City, a few days ago, President Joseph F. Smith admitted that at Washington he had given false testimony when he said he had never received revelations. He explained that he thought the Senate committee was "trying to put him in a trap." The truth was, he continued, that he had received many revelations—one when he was baptized, another that Joseph Smith was the prophet of God, and others at each succession to the presidency.—With reference to recent

charges concerning land frauds in Utah, the Interior Department explains that if such frauds have been committed, the offense is one against the State and not against the United States, being confined to lands transferred to the State when Utah was admitted to the Union.—Owing to the Senate's action upon the treaty of reciprocity, the Newfoundland Government has given orders that our fishing vessels shall no longer be permitted to buy bait in Newfoundland waters. This privilege has long been enjoyed by American fishermen, altho denied to the French.

#### The Situation in Santo Domingo

Reports from Santo Domingo say that some expect an uprising because of an impression that President Morales has been discredited by the Senate's failure to ratify the treaty. Belgium has demanded control of some port and the payment of \$25,000 per month under an agreement made three years ago. Morales expects that other similar demands will be made, and fears that all the custom houses will pass under the control of foreign creditors. It was reported on the 24th that a temporary agreement had been reached at a conference between Minister Dawson and the resident representatives of France, Belgium, Spain, Germany and Italy. The proposition was made, it was asserted, that pending final action by our Senate all the customs revenue should be collected by an International Commissioner (an American citizen) to be named by Minister Dawson; that this Commissioner should pay 45 per cent. of the receipts to the Dominican Government and should deposit the remainder in bank to be held in trust subject to ultimate disposition or distribution under the treaty with the United States. It is said at Washington that Morales has proposed such a plan, but that it is still subject to negotiation. Our Government will make a thorough investigation concerning the debts and financial resources of Santo Domingo. The work will be done by Prof. Jacob H. Hollander, formerly Treasurer of Porto Rico, who will go to the island as a confidential agent of the President. It is hoped that the results

of his inquiries will have weight with opponents of the treaty in the Senate and lead to the ratification of it. Such an agreement as the one reported to have been made by Minister Dawson appears to be needed for the temporary restraint of foreign creditors, who see that American claimants are receiving monthly allowances, and who insist upon taking a part of the revenue for themselves.—Representative Babcock says that Mr. Roosevelt, in conversation with him on the 23d, expressed great regret that party lines had been drawn in the Senate on the treaty; that he also attributed the defiant attitude of Venezuela's President to the failure of the Senate to support the Administration in this matter, which might be regarded as evidence that the Administration would not meet situations involving the Monroe Doctrine and the interests of the United States in countries south of us.

#### Denial of the Readers' Assertions

The statements made by Mr. and Mrs. A. B. Reader concerning the treaty with Santo Domingo continue to excite discussion. Emilio Joubert, Dominican Chargé d'Affaires at Washington, says that Mr. Reader had no interview with President Morales. He was with Morales, he says, when Reader applied for an interview. Morales sent word to Reader that the latter should communicate with him through the American Minister, the Dominican Legation at Washington, or the Dominican Minister of Foreign Affairs. Reader, he continues, sent his papers to the Foreign Minister, who took no notice of them. There were no negotiations with Reader, he asserts, nor was there any intervention by the Washington Government to prevent them. The whole story, he says, is preposterous. This is corroborated by the Dominican Consul at New York, J. Emilio Villalon, a brother-in-law of President Morales, who remarks that Perez, who accompanied Reader, had been a follower of Wos y Gil and an enemy of Morales. Senator Morgan insists, however, that Morales sought to employ the Readers as agents to negotiate a treaty for the control of the debt and for the sale of Samana Bay to us for \$1,000,000. He adds that Smith

M. Weed, President of the Santo Domingo Improvement Company, can tell all about the Reader negotiations. Mr. Weed responds that he never heard of the Readers. Mrs. Reader asserted last week that Assistant Secretary Loomis could establish the truth of her story, and also said that the negotiations for her appointment as fiscal agent had been in his hands. Mr. Loomis responds with an emphatic denial and says that he did not know of her existence.

**The Isthmian Canal Commission** Attorney-General Moody has advised the President that the Isthmian Canal Commission must, under the law, consist of seven members. The President hoped, it is understood, that the law would permit him to get rid of the present Commission, to place the work in the hands of Chief Engineer Wallace, and to appoint three engineer Commissioners who should be an advisory board. As the law does not allow this, it is expected that he will reorganize the Commission, causing the retirement of at least four of the present members (Admiral Walker included) and so distributing the powers of the new Commissioners that three shall exercise executive power, while four (engineers) shall advise concerning the work of construction. Among those mentioned for the executive places are Horace G. Burt, formerly President of the Union Pacific Railroad Company; S. M. Felton, of the Chicago & Alton, and L. F. Loree, formerly President of the Baltimore & Ohio. Changes of this character were foreshadowed in correspondence concerning the published charges of Dr. C. A. L. Reed. The latter, a prominent officer of the American Medical Association, was sent to the Isthmus by Secretary Taft to act as assessor of certain lands. Upon his return he severely criticised the Commission's supervision of the sanitary work, and at the Secretary's request put his charges in writing. Then without the Secretary's consent he published them. The Commission replied with denials. Commenting upon the incident, the Secretary says, in a letter to the President, that undue delays in the furnishing of sanitary supplies have been due rather to the inherent

clumsiness of the Commission as an executive body than to wilful neglect, and that he will submit a plan for a rearrangement of the Commission and a new distribution of its powers. The President replies that he is glad that a plan for "a rearrangement of duties and a change of *personnel*" is to be laid before him. Dr. Reed is severely criticised by both the President and the Secretary for making hasty and unwarranted statements and failing to observe the proprieties as to the publication of them.

**Mr. Rockefeller's Gift for Missions** At a conference of Congregational ministers, in Boston, on the 21st, the Rev. Daniel Evans presiding, the following protest, with twenty-seven signatures, was addressed to the Prudential Committee of the American Board of Commissioners for Foreign Missions:

"Dear Brethren—The public prints of the week ending March 18th, 1905, report a gift of \$100,000 to the Foreign Missionary Society of the Congregational Church from Mr. John D. Rockefeller, the head of the Standard Oil Company.

"This company stands before the public under repeated and recent formidable indictments in specific terms for methods which are morally iniquitous and socially destructive. To arouse the moral reprobation of the general conscience and to direct it against specific offenses and offenders is the supreme need of the hour. The Church is the moral educator and leader of the people; and in order to fulfill this calling with freedom and effect it must stand entirely clear of any complication in the evil it is set to condemn.

"The acceptance of such a gift involves the constituents of the Board in a relation implying honor toward the donor, and subjects the Board to the charge of ignoring the moral issues involved. We, the undersigned, therefore protest against any action by which our Church may even seem to be compromised, and we plead with the officers of the Board to decline the gift of Mr. Rockefeller, or to return it if it has been accepted."

This protest was laid before the Prudential Committee by a committee consisting of the Rev. Messrs. Noyes, Knight, Carter, Evans and Morris, and was the subject of discussion for several hours. It was then referred to a subcommittee of three—President

Capen, Professor Moore and the Rev. Mr. Dennison. The Rev. Dr. Barton, Secretary of the Board, said: "For over a century the American Board has accepted contributions irrespective of their source. It has been held as a principle that acceptance of a donation does not imply indorsement of donor." It was reported on Monday that the gift would be accepted by unanimous vote of the Prudential Committee. The incident has excited wide discussion, in which many clergymen have taken part.

#### A Trip to the Philippines

Arrangements have been completed for the visit of a large party of Senators and Representatives to the Philippines with Secretary Taft. Among the fifty tourists will be ex-Secretary Elihu Root, Miss Alice Roosevelt, Senators Allison, Daniel, Dubois, Foster, Long, Newlands, Patterson, Scott, Stone and Warren; Speaker Cannon, Representatives Bourke, Cockran, Cooper, De Armond, Foss, Gillett, Grosvenor, Hepburn and Payne, and the wives of several of these legislators. The party will sail from San Francisco, July 1st, on the Pacific Mail steamship "Manchuria," which will touch at Honolulu, Yokahama, Kobe and Nagasaki before arriving at Manila. From that city it will make a trip through the archipelago on a Government transport, and will probably return to San Francisco about October 1st. At Manila, Secretary Taft will consider the bids offered for the railway concession under the terms of the recent act, which authorizes the Philippine Commission to guarantee 4 per cent. on the bonds issued by the builders of the projected roads. It will be necessary to reach an agreement with the English owners of the existing railway from Manila to Dagupan, and it is said that this road is for sale at a price to be determined by arbitration.—In a recent interview, Mr. Hull, chairman of the House Military Committee, repeats his prediction that Japan will attempt to take the Philippines, and that we shall be obliged either to sell them or to fight for the retention of them.—

The French Governor of Cochin China has been impressed by the progress made in the islands under American rule. At the direction of his Government he spent four months in an investigation. Progress during the last four years, he says, has been greater than during the 350 years preceding American occupation. "The natives are being educated, are receiving the benefits of municipal and provincial liberty and are rapidly acquiring the spirit of republican institutions. France can take a beneficial lesson from the splendid results of the American colonial system."

#### American Warships at Havana

The visit of a division of the North Atlantic fleet to Havana last week caused an interesting demonstration of international friendship. On the 20th the "Olympia," "Missouri," "Kentucky" and "Des Moines" anchored in the harbor, and after the customary salutes the commanders went ashore to call at the United States Legation and pay their respects to President Palma. Many buildings were handsomely decorated. On the 22d, 500 American sailors and marines were entertained at luncheon in the National Theater by prominent Cubans, and were heartily welcomed by Mayor O'Farrill. In the afternoon the wharves were crowded with people who enjoyed the boat races, for which the city had offered two prizes. Both of these were won by crews from the battleship "Kentucky." In the evening President Palma entertained seventy guests at dinner in honor of the American naval officers. Among those attending were Minister Squiers, members of the Cuban Cabinet and the judges of the Supreme Court. At another dinner, given to the American officers on the 23d by the Veterans' Association, there were interesting addresses. General Maximo Gomez said that the sacrifices of the United States in behalf of Cuba would never be forgotten. Señor Andrade, Secretary of the Interior, eulogized President Roosevelt as an embodiment of American generosity, loyalty, honor and courage.

If a foreign Power should attack the United States, he added, the Cubans would gladly take up arms in defense of their benefactors. Among the social events of the week were a reception on the "Missouri," Thursday night, and a grand ball in the Cuban Atheneum. The warships sailed away on the 25th, escorted by all the small craft of the port. Outside the harbor they joined fifteen ships of the fleet that passed in line within a short distance of the Morro and in full view of thousands of Cubans who had gathered on the shore.

#### The School Crisis in Canada

The separate school clauses in the measure for the incorporation of the new Canadian provinces, referred to three weeks ago, are meeting with widespread and emphatic opposition in the Dominion. First came the resignation of the Hon. Clifford Sifton, Minister of the Interior, and then an open letter of protest from Premier Haultain, of the territories to be made provinces. Protests and resolutions from Church and other representative gatherings followed in quick order, and almost every day brought to Ottawa scores of petitions against the measure. A notable feature of this opposition is the stand which prominent Liberals have taken against the position of their leader, Sir Wilfrid Laurier. Leading Liberal papers like the *Toronto Globe* and strong independent papers of the *Montreal Witness* type have also been most outspoken in their opposition to the measure. In response to the aroused sentiment it is stated on good authority that the school clauses will be so modified as to meet the approval of Mr. Sifton and the other western members, and if this be done the measure will doubtless allay the opposition called forth. A curious feature of the situation is the attitude of the two political parties to the question in view of their past record. In 1896 the Conservative Government of Sir Charles Tupper proposed remedial legislation in favor of separate schools for Manitoba, and as a consequence was overwhelmingly defeated in the general elections of that year. Sir Wilfrid Laurier, who succeeded to the premiership, in accordance

with his promise, settled the question on the basis of provincial rights, and to-day Manitoba has a united and efficient school system. Will the Conservatives, in view of their past experience, change their base and become the champions of provincial rights and a national school system? Their leader, Mr. Borden, is wary over the matter, and in his opening speech asked that it be not made a political question. There is this to be said for the Premier, that when Manitoba entered confederation there was no regular separate school system within her bounds, while in the territories now to be made provinces there is such a system based on Dominion legislation of 1875. Sir Wilfrid's interpretation of the British North American Act of 1867 is that new provinces must retain the system of education in vogue before their incorporation. It is, therefore, with him a question of law and not of choice. The apparent inconsistency of his two positions is further lessened from the fact that the schools in the territories, whether Protestant or Catholic, are practically common or public schools under the supervision of the territorial Government in inspection, text-books, and examinations. They have also in common the privilege of religious exercises from 3.30 to 4 every afternoon, and it is these conditions which Sir Wilfrid, according to his reading of the Confederation Act, would continue.

**Venezuela** President Castro has defied the United States. Last week, with France, Holland and Italy pressing their various claims, Mr. Bowen, under instructions from Washington, delivered what was practically an ultimatum to President Castro to the effect that he should arbitrate the pending disputes, or the United States would be obliged to take affairs in its own hands, which in diplomatic terms is a threat of war. Instead of yielding, Castro peremptorily told Mr. Bowen that he would not arbitrate. Before this, however, Castro had commissioned one of his European agents to consolidate the foreign debt of Venezuela, which is now held principally in England and Germany, and to pledge for the payment of interest on it 50 per cent. of the customs from all the custom

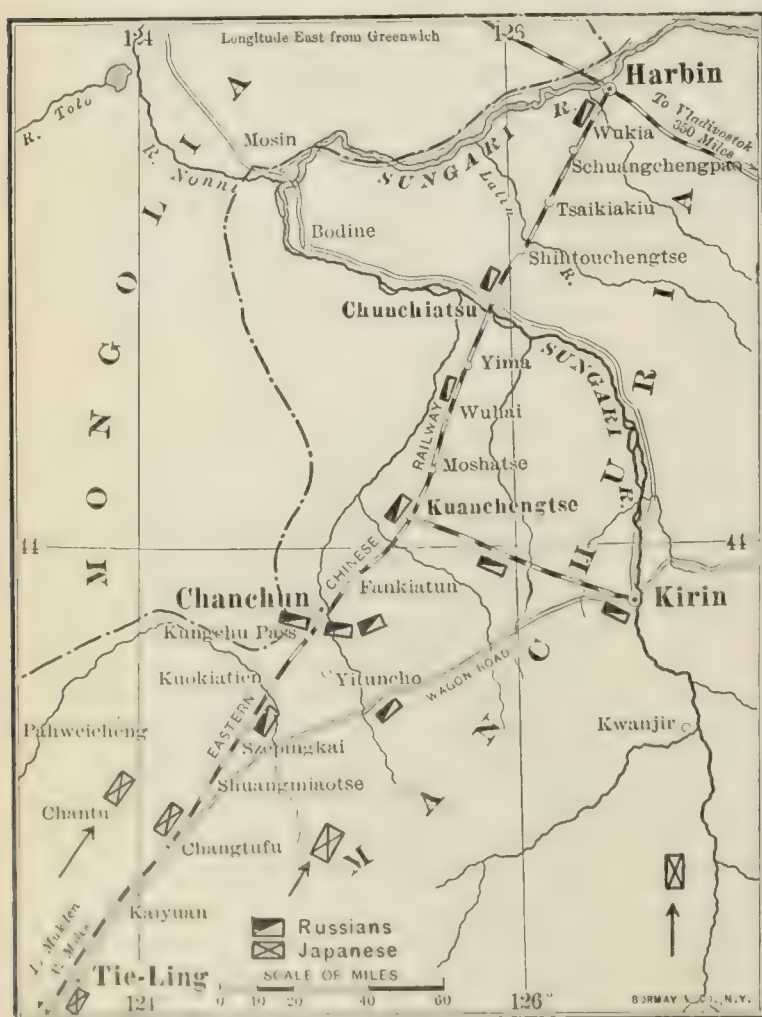

houses in Venezuela, except those of La Guayra and Puerto Cabello, which are devoted to the payment of the claims of the allies as awarded by The Hague Court. The significance of all this is that if the United States should attempt to land troops at any of these sea ports it would probably bring about complications, especially if these custom houses were actually under the control of English or German agents. The United States was apparently not prepared for this defiance of Castro, for it is now reported that the Administration at Washington will let things drag for the present. Some aver that nothing will be done at all and others that President Castro as a result of his personal excesses may have a "stroke" at any moment, and thus the difficulty will be entirely cleared up. The whole situation, however, could hardly be more tense without actual war, but apparently there is no expectation of going to this extreme at Washington. In the meantime it is a problem what

France and Holland will do. Reports from Paris say that France is not going to do anything drastic, while reports from the Caribbean sea ports say that French warships in that region are making every preparation to steam to La Guayra.

### The Retreat Toward Harbin

The Russian army continues to withdraw slowly toward the north by the railroad to Harbin and also by the old Mandarin road leading to Kirin. The force of the Russians is concentrated south of Chanchun or Gunshu Pass in an intrenched position. The Japanese have followed up the railroad, taking the towns of Kaiyuan and Changtufu, thus passing the Palisade, which forms a continuation of the Chinese Wall. Detachments of Japanese to the east and the west of the railroad hang upon the flanks of the retreating Russians. An army under General Kawamura is believed to have gone up the Yalu River from Korea

and gone down the Sungari River in the direction of Kirin, thus threatening the Russian left. If Kirin is captured this will compel the Russians on the main line of the railroad to retreat beyond the Sungari River and perhaps to Harbin. Even this would probably not insure safety, for the railroad to the east and west of Harbin would be exposed to the Japanese along its entire length and it would be impossible to prevent its being cut at some point. Vladivostok would then be isolated as was Port Arthur, and, since the Japanese now show no scruples about crossing the Mongolian frontier, a flying column to the west of the railroad, now said to be on its way, might make Harbin untenable and necessitate a retreat to Tsitsihar, 300 miles west. If the Russians are thus compelled to abandon not only Manchuria, but also Vladivostok and the Amur province, this would shut them out from the Pacific altogether and leave the ocean practically in the control

Map Showing the Russian Retreat from Tie-Ling Toward Harbin and Kirin

of Japan and the United States. A great deal, therefore, depends on whether the Russians can hold the branch railroad between Kirin and Kuanchengtse. General Kuropatkin has generously offered to continue in the service and has been assigned to the command of the First Russian Army, formerly under General Linevitch and now on the Mandarin road to Kirin. The two generals have, therefore, simply exchanged positions. Commander-in-Chief Linevitch has his headquarters at Chunchiatsu, where the railroad crosses the Sungari, which is not fordable below Kirin. The Japanese have the railroad in running order as far north as Kaiyuan except for the bridge across the Fan River, which has not yet been repaired. It is reported that Field Marshal Oyama has notified the Chinese Governor of Kirin that he will enter Kirin April 10th. General Gripenberg has been relieved of the command of the Second Russian Army and will be Aide-de-Camp General to the Czar. Field Marshal Oyama, in the first interview he has granted, speaks of his foes in the following terms:

"Personally, I have a high regard for the Russians. They are soldiers. The officers and men are brave and able and have fought well. During the war between China and Japan I was the commander of the army which captured Port Arthur. With a division and a half of troops we took the city in five hours.

"The result this time shows the wonderful difference between the Russians and the Chinese, but our army, both soldiers and officers, performed their duty as Japan knew they would.

"I was Minister of War for Japan for sixteen years, during which time conscription laws were passed. I have closely watched the making of the Japanese army, which has proved what I say, that the officers and the men have fulfilled every hope, as I believed they would in the older days, when the Japanese army was composed of the Samurai, professional fighting men. The modern army was drafted from all classes, yet all our hopes have been fully realized by the work this army has done in actual war."

**The Cost of the War** General Sakaroff, who is about to leave the Ministry of War, has given out the statement that the Siberian railroad since the beginning of the war has transported to Harbin 761,467 soldiers, 13,087 officers, 146,408 horses, 1,521

guns and 351,000 tons of stores. If, as has been estimated, there were no more than 60,000 men in Manchuria when the war broke out, and if there are only about 350,000 men there now, the Russian loss must have been about half a million. One of the Russian papers calculates the whole cost of Manchuria to Russia to have been \$1,000,000,000; estimating the expenditures for the Chinese Eastern Railroad at \$250,000,000, for the docks, buildings and fortifications of Port Arthur and Dalny, \$250,000,000, and for the war \$500,000,000. The announcement that Russia would raise \$100,000,000 by an internal loan since the failure to secure money from foreign sources caused Russian fours to drop to 87, the lowest point since the war began. The new Japanese bonds for \$150,000,000, to be secured by the tobacco monopoly, are in demand by English, American and German bankers, and it is rumored that even the French want to get some of them.

#### French and Germans in Morocco

The French are not having an easy time of it in Morocco. The diplomatic mission under M. Saint-Rene Taillandier, now in Fez, has not made any apparent progress in converting the Sultan and his advisers to the belief that it would be advantageous to open their country to European commerce and place French officers in command of the troops. In the meantime the chiefs of the tribes are becoming bolder in their depredations. The Sultan's representative has warned the Legations at Tangier that their protection cannot be guaranteed if they reside in the suburb, as Raisuli threatens to capture another European as he did Perdicaris last year. The Sultan has endeavored to buy him off by appointing him Governor of a number of important tribes between Tangier and Fez. Count de Segonzac, who was sent by the French Government to investigate commercial interests in Morocco, was approached by Sheik Sultanas with the request to be permitted to inspect the rifles of his military escort. As soon as the rifles were in their possession the bandits seized the Count, who was slightly wounded, and they now hold him for a ransom. The situation is rendered

more difficult by the attitude of Germany, which has never been satisfied with the disregard shown to German interests by the Anglo-French treaty. Negotiations are now in progress between Germany and France and it is understood that Germany demands a port in Morocco. Emperor William is now on his way to Tangier in the steamer "Hamburg" and will arrive there March 31st. Altho it is announced that the visit has no political significance, it will undoubtedly strengthen the opposition to French influence in Morocco.

#### Madagascar and New Caledonia

Reports from almost all the French colonies indicate an unfavorable financial condition, which in two of the island colonies, especially Madagascar and New Caledonia, have reached an acute stage. In Madagascar the President of the Colonial Union, M. Charles-Roux, admits that the commercial situation is very bad. The number of failures among the merchants is increasing at an alarming rate, and business has in many places fallen off. He lays this to the ruinous competition resulting from the number of French merchants and investors who have rushed to the colony within the last few years. The number of business licenses have increased from 7,418 in 1899 to 16,089 in 1904 and the licenses from the sale of liquor from 257 in 1900 to 1,039 in 1904. The stocks of merchandise are altogether too great for the business of the country and were not properly selected to suit local consumption. Besides this the managers in many cases had no experience in dealing with natives of the colony. Consequently goods had to be sold at low prices, sometimes at a loss, and money borrowed at the local rate of twelve per cent. M. Charles-Roux maintains that the Government is not in any way responsible for the unfortunate conditions, and points with pride to the fact that Madagascar has in nine years increased its exports fivefold. The opponents of the colonial policy of the Government, on the other hand, criticise his figures and deductions. They admit that the exports, which in

the first year of the French occupation of Madagascar were only \$721,000, reached in 1903 \$3,094,200, but they call attention to the fact that in 1896 there was a general insurrection on the island and little business could be done. For a fairer comparison the exports of 1894, which were \$2,000,000, should be taken as a basis of the estimate. Therefore it required seven years of French government to bring the exports up to their previous level, and it must also be remembered that the French colonial expenditure increased in the same period from \$1,000,000 to \$4,600,000. It is held that the fundamental cause of the condition of Madagascar is the tariff system by which Madagascar is obliged to receive duty free all French goods, but has to pay a duty on all its exports into France.—The abolition of the penal colony of New Caledonia and the opening of the island to voluntary industry has practically thrown it into bankruptcy. There was formerly maintained a penitentiary population of 8,000, together with the administrative officers and military guards. The mines and the farms were carried on by forced labor. Since this has now been abolished and the efforts made by the Government to induce colonists to settle there have not been very successful, all industries have suffered. It has not been found possible, on account of the distance, to supply France with agricultural products, and cattle cannot be sold in Australia, because that country is an exporter of cattle. The islands in the vicinity have no need of the products of New Caledonia, because they are so similar to their own. In order to secure cheap labor for opening the mines resource has been had to Java and Japan. The Japanese Government at once seized the opportunity, but stipulated that the treaty should provide that the Japanese should be fed and clothed with material purchased in Japan. This placed an additional expense on the colony and inflicted another blow upon the agricultural interests. In order to secure the money necessary for the improvements and the new railroad money was borrowed and heavy taxes and duties imposed.

# Social Forecast

BY JOHN BASCOM, LL.D.

[Professor Bascom was born in 1827, was President of the University of Wisconsin from 1874-87, is the author of many standard works on political economy and sociology, and is now lecturer on sociology at Williams College. The advanced views in the following article are of extreme significance, coming from a man of his age and academic environment.—EDITOR.]

A SPIRIT of forecast belongs to all knowledge, and is thought to be the best proof of its existence. Physical disease has its premonitions in the body or in the conditions which surround it. If we are observant of these admonitions, the larger share of coming evils can be escaped. Still more is this true of social disaster. Not only are the seeds of it in the soil, they are very visible there. The preparation for difficulty is conspicuously before us. The net is spread in the sight of the bird to be caught by it.

In the generation just passing forms of social activity have shown themselves and social states have arisen, which cannot but greatly alter the next thirty years. The multimillionaire cannot be the member of a free State, on equal terms with his fellow citizens. This would be true under any circumstances, but is still more true when this wealth has been acquired in abuse and in defiance of economic and civil law. This additional fact shows that the tyrannical temper is present, which, opportunity favoring, will disregard all rights in behalf of personal power. We can but predict that the next generation is threatened with a still greater perversion of the conditions which belong to a free and democratic community. These disastrous tendencies are not felt at once, because a large middle class is only slowly permeated by them. The disease is one which takes time to undermine the constitution which it attacks.

The most obvious and immediately serviceable of equalities, which go with free institutions, is equality in economic opportunities. No other equality concerns so many actions, or actions on which so large a share of welfare depends. The wealth of which we are

speaking has been accumulated at the expense of this equality, and now threatens utterly to destroy it. One who can bring hundreds of millions to an undertaking, and, by a little combination, can carry the capital invested into the billions, has a power which in comparison with that of men of ordinary means gives him complete control of large undertakings. Not only does this mastery extend to securing these forms of enterprise, it carries with it the ability of making them, under almost any circumstances, profitable. No competition and no fear of competition accompany the development of business of this order, and unless the conception itself was a piece of folly the profits of a monopoly accrue to it at every stage. This wealth may have been gained with a hard struggle, and at the expense of the rights of many, but once acquired there need be no farther trespass in its use. Legitimate as well as illegitimate forms of business feel at once this accumulation of power. Whether it is steel production or the stock market that is under consideration, the multimillionaire creates the conditions under which he operates. Equality of opportunity in business relations has suffered a sudden overthrow which the future will easily complete.

It was at one time felt that a large property would ordinarily be scattered in the next generation. This expectation does not apply to the magnitudes now contemplated, but vice, prodigality, indolence, can all shelter themselves in these immense fortunes like birds that nest in the carvings of a cathedral. Our very worship will not escape their contented chatter.

This accumulation of wealth has already destroyed political equilibrium. Political influence is won by a contribu-

tion to the expenses which attend on gaining political power. The ruling party is so pledged to the support of a given financial policy that its chief virtue comes to be standing fast in existing relations. Even the defeated party is almost equally involved in the same interested motives. If it comes into power, it cannot easily institute or carry out a scheme of reform. The same net with which its predecessor struggled in vain is at once cast over it, and it can redeem but few of the pledges it made in the hour of distress.

The hold which perverted business relations have on politics is seen in the railroad question. When the Interstate Commerce Commission was established it was supposed to have been granted a control which it has since lost and is struggling in vain to recover. The Commission was instituted to govern rates in behalf of the public welfare. It has sunk into a Board of Council, whose suggestions may or may not be followed. The officers of railroads to whose unfair terms much of the mischief of accumulated wealth has been due are left in control. The evil sprang up in the presence of railroads and courts, and the two are now to be left to correct it. The interstate commerce problem is not one of a tardy and inadequate redress of a wrong after it has been committed, but of anticipating and preventing the injury. Here is a square issue between a method that has signally failed and a better one which the people, nearly twenty years since, intended to put in its place. And yet the commercial and political worlds were never fuller of plausible reasons why the railroads, and not the people, should assign the conditions of traffic. There is a hum in the hive, but no readjustment of its position and relations.

Social equality cannot hold its ground while this abuse of privilege prevails in production and in politics. A wealthy class begins to act in vigorous modification of society. There may remain for a time a percentage of sober citizens, but little affected by these fluctuations, but inherited wealth will be associated with prodigality, will draw to itself dependents and retainers whose interests are identified with its own, and, in a large class,

subject to the drift of conventional sentiments, will give rise to admiration and emulation. The assumption which so readily arises from secondary considerations, the servility so indigenous to men, require but little time and opportunity to reappear.

The revival of feelings we have so long repressed occurs the more readily because of the exceedingly strong commercial temper which belongs to us. A high order of ability is disclosed in the pursuit of wealth, and wealth brings a real and still more an ostensible enlargement of power.

Any approach to social equality must be united with some equality in the conditions of life. Collective production now bears this burden of unusual accumulation and expenditure, and is borne down by it. The aggregate gains, waiting to be distributed in many channels, are diverted into a few deep cañons. Ordinary effort meets with increasing obstacles and diminished returns. That separation in society between wealth and indigence, those afloat and those submerged, sets in; a separation which is itself a decay of society, which is increased by its own action, and which, so far, civilization has never escaped.

The education on which we rely to avoid these social evils, and which we have extended with so much care, begins to show traces of the change in public sentiment. Education as a means to manhood is not identical with education as a means to wealth. While the two aims are by no means opposed to each other, they may be pursued in neglect of each other. The earlier education took form when the commercial spirit was less dominant and directed its attention chiefly to general culture. Education is now becoming an opening to an occupation. It thus drops into subordination to production, with an abatement of its own superior character. To become a good citizen and to become a good engineer are not of equal importance. They cannot be made advantageously ruling ideas in distinct courses. Citizenship is the disk which should carry all the florets in the composite flower of our civilization.

In connection with the tendency to turn education into training there comes a growing demand for large endowments,

and the college becomes a petitioner at the feet of wealth. Independence is sacrificed, commercial standards displace ethical ones, and civic principles adapt themselves as best they can to the new allegiance. The banner of success is borne to the front, and those who march must march behind it. Even so detached a pursuit as literary excellence does not wholly escape the secular temper, and the meed of praise comes to be "speculative, amused, undeluded children of the world." Herein is the cynicism of success.

A kindred feeling finds its way into college amusements. In earlier times they were open to all, called for no special training, and came and went as relaxation. Now they are in a high degree exacting and correspondingly spectacular. They have ceased to be sports, and call for serious sacrifices in time, expenditure and exertion. The feeling of the arena, with its urgent demands for success, rules in them. A series of games runs through the college year, and, to the average student, gives coherence and zest to the lagging months. There is a perceptible increase in the number of students who regard a college course, not as an opportunity, but as a means to social distinction to be acquired with the least labor. It may be thought that the strenuous and the indolent temper will be found in conflict. Not so. There were always enough Philistines to see Samson make sport, and enough Roman youth to crowd the amphitheater.

The strongest antagonism to social decay should be found in Christian faith, but faith slowly bends to the conditions which surround it. The Greek Church brings Russia no liberty. Our own religion goes but a little way in carrying sympathetic aid to the working class, or in arousing a sense of the service due from those who lead business. It has been no strange spectacle with us to find one ordering his economic activity in a method utterly subversive of the Kingdom of Heaven, and yet cherishing some detached notion of finding his way into that kingdom. He has provided himself

with a night key so that, an opportune moment arising, he may leave his business companions in the street, and drop into this quiet home of the faithful.

The social facts as well as the political facts which accompany this large accumulation of wealth constitute a status which cannot but be an immediate and urgent cause of social changes. The modifications of education and religious faith of which we have spoken are merely symptoms which go to show that these new forces are taking effect and may pass into pronounced disease. It is quite within the range of possibilities that the Standard Oil magnates and their collaborators shall give date to a period in which the self assertion of a few arose once more in the face of human attainments and the hopes of the many. We hear much of induction; what a terrible induction up to the present time goes to establish rank egoism against liberty. We have instant occasion for that eternal vigilance which is not only the price, but the function of liberty.

The Republican party is fast becoming the bondman of plutocracy. Its motto is to "stand pat," careless of discussion or vindication. It has so long prospered by concession that inquiry and resistance are foreign to its spirit. The temper of President Roosevelt, alien to this attitude, may make slight fissures and chip off thin flakes. The Democratic party has broken midway, one extremity plutocratic, the other democratic. There is as yet much hammering here and there, and searching the face of the rock, but the moment a workable seam shall appear many wedges are ready to be driven home. This is made obvious by the unrest of workmen, by scattered revolt in many States, as in Winconsin, by the number, radical character and large vote of secondary parties at the last Presidential election. Our forecast is that one of those sudden changes, which are sure to arise in times of wide pressure, will combine these forces of resistance, and with them sweep the field for another deal in human rights and one more approach toward the Kingdom of Heaven.

WILLIAMSTOWN, MASS.

# Mobilizing an Army Division in Japan

BY JOHN G. DUNLOP

MISSIONARY OF THE PRESBYTERIAN BOARD AT FUKUI, JAPAN

Illustrations from Stereographs Copyright, 1905, by H. C. White Co., N. Y.

THE —th Division of the Imperial Japanese Army was one of the last to be mobilized. The —th, like most of the other twelve divisions that make up the army, is not concentrated at one point, but divided into three garrisons stationed in or near as many cities or towns, each distant forty or fifty miles from the nearer of the others. The Division trains for military service the young manhood of three out of the more than forty prefectures that constitute the Empire. It consists of two brigades—that is, four regiments, or twelve battalions—of infantry, a regiment of cavalry, four eight-gun batteries of field artillery, one company each of field engineers and army service corps and one field hospital. In the largest city of the divisional district are stationed all but one brigade of infantry, which is divided between two smaller towns of the district, one regiment in each, with brigade headquarters in one of them.

The Division—at least that part of it already with the colors—had for several months impatiently awaited orders for the front. Of course, since the outbreak of the war the usual preparatory measures looking toward mobilization had been taken. Men belonging to the reserves had been required to keep within easy reach of the final call. Reservists in foreign countries had been recalled, so that it was jokingly reported in American papers that the piers in New York were crowded with Russians running away from their fatherland to escape the call to arms, and Japanese reservists hastening back at their personal expense to join their respective corps. Reservists who

had just before the war began secured passports allowing them to go abroad, found their passports canceled and their plans all disarranged, had to await in idleness the mobilization of that part of the army to which they belonged.

At last the order for the —th Division came, and as fast as the telegraph could carry it, aided by special runners appointed in the various local Government offices, with the route of each determined beforehand, it sped throughout the district. It found its way into the farm-houses on the plains and the fishermen's huts sheltering behind the sand dunes of the stormy coast. It called from their lonely labor high among the hills the miners and charcoal burners and timber cutters. It ran like wildfire through the towns and cities. It left no class of the population undisturbed. To give an example or two: T. is a round-shouldered, consumptive-looking teacher of Japanese literature in a middle school. He is a mystic, of the Zen sect of Buddhists, and practices for hours together the *zazen*, or sitting in religious meditation, immobile, expressionless, thumbs locked together in a certain way according to the requirements of the sect, and so forth. But some years ago, when he was younger and had a better physique, and was in danger of being taken in the conscription to serve three years as a common soldier, he requested to be received as a "one-year volunteer," and, being able to satisfy the educational and other requirements, he was accepted and put in a year of severer, higher and more varied training than is given to the common soldier. A year after leaving barracks he came back for

three months' further training, this time with the rank of sergeant, and later for another short term, and then found himself gazetted a sub-lieutenant of the First Reserve. The call to arms transferred him in a day from his school desk and *zazen* in the old Zen temple to the command of a company section in the —th infantry regiment. H. is a different sort and every inch a soldier. He was a bright pupil of the Foreign Languages School in Tokyo, and on graduation was employed as interpreter with the Standard Oil Company. As a student the law allowed him to defer military service till his twenty-eighth year, but the time approached when he had either to volunteer for a year or run the risk of being taken by lot from among the eligibles of his year to serve three years in the ranks. He volunteered and had barely reached his rank of sub-lieutenant of reserves when the war broke out. His exceptional knowledge of English has secured him the appointment of interpreter

to the Lieutenant-General commanding the Division. Another is a railway engineer, another a telegraph operator, another a Buddhist priest, and still another a Christian preacher. Nearly every school in the country has its staff reduced because of the general retrenchment due to the war, and most of them now suffer a further inconvenience through having one or more of their teachers called away by the order mobilizing the reserves. But the great majority are from the toiling classes, hard of limb and strong of wind and inured to exposure to the elements.

In a few hours the First Reserve men were in motion, not only throughout the three prefectures that sustain this division, but from all parts of the Empire into which its reservists had scattered. There were orderly processions of schoolboys to the railway stations to give their officer-teachers a hearty send-off. There were straggling processions of villagers, many of them none too sober after the farewell feasting, with a reservist in the midst and

a flag or two and cotton banners bearing patriotic mottoes and the names of their hero, his village and the donors of the banner.

On joining their corps most of the reservists were given billets in the town. Barracks were stretched to their utmost capacity. Bedsteads—for every Japanese "Tommy," accustomed all his life to sleep on a mat on the floor, has a bedstead as soon as he joins the force—were turned out and stacked in the barrack-yard, while the rough paillasses were laid on the floor as close together as possible. But for thousands there was no room in the barracks, and the citizens were called upon to supply billets. Some tried to avoid the obligation by moving into such small quarters that they could not be asked to relinquish any part of them for the soldiery. Not but that the Government pays well for what it demands, but the soldiers are often troublesome and easily get the idea that they are not being given all that the Government pays for. The allowance is 18 cents (American) a

day—about \$1.25 a week—for each man. An American housekeeper would soon be bankrupt if called on to feed a lot of brawny fellows from farm and work-shop at \$1.25 a week. But this is a land where skilled mechanics earn 30 or 35 cents a day at the outside, and where college students commonly get a room and board for 75 cents a week; so the Government's allowance for its soldiers is really generous.

Several weeks were allowed for getting the Division into shape to take the field. There were horses to be purchased by the thousand and broken in to their new work. There were drills and target practice, kit inspections and route marches, night exercises and bivouacs. The horses made the greatest confusion. When the Division finally set out it included 6,000 horses. In a section of the country where men, women and little children are the beasts of burden, toiling along mile after mile of the country roads with immense loads of timber, stone, farm produce, etc., it was a mystery where so many horses came from in so short a time. The Brit-

ish War Office pays £40 a head for its horses. Not so the Japanese. It is a question whether it pays one tenth as much, and it maintains no expensive remount department either. True, the horses are the veriest scrubs in appearance, and in conduct merit the worst that has been said about them in the books on Japan. But they are hardy and easily kept, and on the field they straighten up till even the much vaunted Cossacks are no longer a terror to them and their riders. But till they reach the field their conduct is atrocious. It is whispered that on the cars as they journeyed toward the port of embarkation many men were injured by the horses, and during their training it was a daily spectacle to see a number of them run amuck on the parade-ground. Some went over the edge and tumbled with their riders into a deep ravine, and two or three men were killed. But what did that matter? These were the fellows of those who swarmed like locusts up the hights at Kyu-lien and over the hillside at Nanshan, and with as little

fear of death as the locusts themselves.

There were drills and gymnastics to restore elasticity, to quicken and straighten the walk, and make the men *au fait* again with the manual. Boots at first were a sore trial, for most of them had not had a boot on since the day they left the barracks. The mere wearing of a uniform was an intolerable hardship. Here, for instance, is F., whom I have literally seen a great deal of for several summers past. The great part of the year he goes about his work as a fisherman, stark but for a loin-cloth, and sometimes, when the sea bottom is dirty after a storm and the nets get foul he is not particular whether he has that on or not. When he rejoined his corps it must have taken him many days to get used to the bothersome Western things again and make him the trim *joto-hei* (first-class private) he used to be.

There were many spectators of the doings on the parade-grounds, and a new interest on the part of the populace in "Reveille," "Boot and Saddle," "As-

Troops Practicing on the Parade-ground

Views at the Review

sembly" and "Dinners." To a foreigner the exercises were chiefly interesting for the wonderful contrast which they presented to the parade-ground spectacles of 15 or 20 years ago. Then we laughed at the awkward drill, even of the Guards, as we saw them on the great open space before the palace in Tokyo. But for a long time we have ceased to laugh. We find some amusement in noticing the strange translations of Western military commands. "Dress!" for example, becomes "Heels in line!" and "Rise, double!" is "Rise, running feet!" It is interesting, too, to see the struggles of a language that is anything but crisp and brusque to adapt itself to military uses. The imperative is little heard in Japan off the drill-ground. There it is not only used, but used in a manner that does violence to Japanese etymology, the verb being put before the noun as in English—"Shoulder arms!" "Pile arms!"—but directly contrary to Japanese usage, and a third word in such sentences, denoting the objective case, being dropped altogether.

Target practice became of critical importance with the prospect of having something living, with a gun in his hands,

to shoot at before long. Colonel S., of the —th, is an officer who believes less in drills than in learning to shoot straight, and there was incessant practice at the rifle butts of his regiment. The men were taught intelligently to choose a mark and fire at it, while volley firing was discouraged. Such instruction accounts for the amazing effect of the Japanese fire in the engagements hitherto fought.

The route marches were a severe test. T., a narrow-chested primary school teacher, weighing about 110 pounds, was serving the customary six weeks in garrison required of such teachers once after graduating from normal school. He called on me one day in July and looked so haggard that I asked him whether he had been ill.

"No, but I was on a route march yesterday with the full kit on."

"How far did you go?"

"Oh, a little over thirty miles."

"You must have been exhausted. Did many fall out?" (It had been a broiling day.)

"Fall out? Why, no one fell out. We would be ashamed to fall out. Of course, it was hard, but we sang *Gunka* (patriotic songs) and felt refreshed."

I went back in memory to a holiday parade of militia on a July day twenty years ago, and recalled the self-satisfaction of those who were not among the 20 or more out of a few hundred who were overcome by the heat and gave practice to the ambulance corps.

And bivouacs. Riding down the coast one day I came on the —th regiment bivouacked in a scrubby pine grove near the shore. They set out in fine weather and now it was a pitiless rainstorm. But they had come out for a certain exercise and they would go through with it. A couple of thousand soldiers were huddled in groups of 5 to 15 under the little pines, eating their rice and pickle. A few were grumbling because they had forgotten chopsticks, and were trying to make chopsticks out of the pine twigs.

"Boys, you'll have harder things than 'no chopsticks' soon"—and it has come to pass, for their regiment was cut up outside of Port Arthur a month later, and their rugged old colonel, who seemed more reckless of the storm that day than any of those about him, was among the first to fall.

Religious officers took their men for farewell services at the Shinto shrines. Others performed a duty of a very different character. They hunted out wearers of the *sen-nin-riki*, or "thousand-man-power" waist-bands, and in at least one regiment of the Division there was a public bonfire of these popular charms. The *sen-nin-riki* are pieces of yellow cotton stuff stamped with a thousand black dots, through each of which a thread is passed and tied by a separate female friend of the soldier for whom the charm is intended or sympathizer with its object. Protected with 1,000 good wishes from 1,000 different persons, the wearer is supposed to be proof against the enemy's bullets. The *sen-nin-riki* makers could give points to the chain-letter fiend at home. They stand at the street corners and beg women passers-by to add a stitch. They invade places of public assembly, and one instance came under the notice of the writer where one of them entered a Christian church and passed the charm from seat to seat among the women during the sermon. An American lady missionary not long in the country put in her stitch with the rest, and was aghast afterward on learning the meaning of what she had done.

Finally one day the word flew from mouth to mouth that the Division had at last got the route. The irruption of the Vladivostok squadron into the Japan Sea had caused a postponement, but now the hour when each unit was to entrain was posted up, and they were surely to go, and the excitement reached a feverish pitch. By this time the tests to weed out the least fit had been completed—

and obstacle races—and unspeakable was the grief and shame of those who were to be left behind. Farewell visits from all sorts of delegations to the commanding officers had been paid. During the last couple of days near relatives of the departing soldiers were allowed to visit them, and along every road toward evening were to be met red-eyed women, often with infants on their backs, old men, and little children, trudging home after the final parting. Many of them went back to a hard struggle for mere sustenance. There are a number of societies doing an admirable work for the families of soldiers, and there has been manifested a degree of philanthropic zeal that the Japanese were hardly supposed to be capable of, but after all is done only a small fraction of the sore has been touched, and there are tens of thousands of cases where the distress is acute. City families fare worst. In the country there is more neighborliness. Food is abundant and readily shared. Farm help likewise. But townspeople know less and care less about one another's welfare, and there have been cases not a few of death from starvation or suicide because of poverty. The field

Japanese Artillery Transporting a 7½ Cm. Mountain Gun Across the Hills

pay of the soldiers is a little higher than what they get at home, but in any case it never counts. Privates are divided into three classes, according to efficiency, but even the highest class receive less than ten cents a day on the field. In the old days the oldest son of a family was exempt from service; also families in the large northern island of Hokkaido (Yezo), to which the Government encouraged emigration; but with the doubling of the military establishment after the war with China ten years ago no such merciful measures were considered longer possible, and now the conscription spares none.

Take a look at the men as they entrain. After hard training and strict selection they look fit and "hard as nails." The infantry seem sawed off at a uniform standard of about 5 feet 3 inches. There are no short men in the center and tall ones in the wings. Taller men are taken for the other arms of the service, and the men of the artillery and military train especially are big, thick-chested, heavy-limbed fellows, who, man for man, could hold their own anywhere. All are in new field service uniforms of khaki. They are neat looking at first, but in a few days shabbier than the old white summer uniforms, and they never regain their first glory as the white ones do.

The officers are a businesslike, serious looking lot of men. No dilettanti among them. No aristocrats—except those who are soldiers first and aristocrats afterward. No rich men's sons who are officers because they do not know anything else to do with themselves, and join the service for a good time, a uniform and a handle to their names. Every Japanese officer is a scientific soldier, and it is no drawback here, as it is in some armies, to be scientific. The more scientific the better. Up to the rank of major promotion is half by seniority and half by selection. For every officer promoted by seniority one is advanced on his merits. Beyond major promotion is for merit alone. In the regimental mess-room you will see blackboard representations of Sadowa, Metz, Plevna, and other modern sieges and battles, and if you stop for a moment before one of them some officer is ready with an enthusiastic explanation of the affair and its possible

applications in the present campaign. In an adjoining office are colored charts of all the Russian uniforms and marks of rank, and every officer and non-com. knows them off.

To the unpracticed eye it is not easy to distinguish the officers from the men, and, in fact, there is no great gulf fixed between officers and rank and file as in some armies of the West. There is no snobbish talk in Japan about the military and naval academies being the only "schools for gentlemen" in the country. These officers are a democratic lot. It is surprising to find, in glancing through the newspaper sketches of killed and wounded officers, how many have risen from the ranks. "Why," said Major M. to me the other day, "General Baron Kodama, who is Marshal Oyama's Chief of Staff, was a sergeant with me in Osaka over 30 years ago. But," he continued, "Kodama was the best of us." And he went on to say that General Yamaguchi, who died lately in a high staff appointment in Tokyo, was a non-com. in Osaka at the same time. Such facts as these assure a wonderful unity in the force. There is not one *esprit de corps* among the officers and another among the men, but one for the whole army. Men write home in affectionate terms of their company officers. Officers write of shedding bitter tears over the loss of a capable non-com. or a favorite orderly. One young officer does not know whether to be pleased over his promotion to command a company, since it takes him away from the men of the company he has served with for years past.

Once on the cars the Division went through to Hirashima without change or detraining, except for meals at divisional points, where huge dining-halls had been erected. It was not moved with any remarkable rapidity, the regular commercial traffic being interfered with as little as possible. It takes, in round numbers, 100 trains to move a division—1,300 trains, therefore, to carry the Japanese army. By sending out 12 or 13 trains a day, the whole division was got under way in 8 days, and centralized at the port of embarkation in 10, within 3 days' sail of the field of war. This is striking enough compared

with what Russia can do. According to the military critic of the London *Times* it takes two and a half months to move a force of 41,000 men and 17,000 horses from Moscow to Mukden. This Division, of nearly or quite 30,000 men, was in its first action a month from the day its first trainload set out for the front, and it had already been nearly two weeks on the Liao-tung peninsula before that action occurred.

The uninformed idea no doubt is that

followed by 8 years in the Territorial Army, a militia maintained for home defense and not called out except in extreme need. At 37 their obligation for foreign service is completed, and at 45, after the 8 years in the Territorial Army, their military obligation is completely fulfilled. They have had 25 years of it. The reserve conscripts are supernumeraries, young men who, while up to the standard in every way, escaped the lot in the conscription. Till this month they

A Russian Soldier Shot in the Arm Attended by Nurses—Miss Wyeki and Miss Mishiro

as Japan takes these immense armies one by one to the Asiatic mainland, the islands are rapidly denuded of soldiers. This is far from being the case. The —th Division was hardly away till the several barracks were overflowing again—with the reserve conscripts and the Second Reserve. The latter are men who have served 3 years with the colors and 4 years with the First Reserve, and now have a further period of 10 years (only this month, October, lengthened from 5 years to 10) in the Second Reserve,

were divided, again by lot, into two classes. The first class were called into garrison for 90 days' training within a few months after they were first examined for the conscription at the age of twenty, and obliged during the succeeding 12 years to report yearly for examination. The second class had no obligations, but were simply kept on a register as available for training and service in an emergency. The new regulations published the other day abolish the distinction between first and second

class reserve conscripts, making a certain amount of training obligatory for every young man who passes the physical examination. As camp diseases and

losses in battle deplete the numbers on the fighting line, these reserve conscripts and Second Reserve men are moved forward to fill the vacancies.

FUKUI, JAPAN.

## City Government

BY GOLDWIN SMITH, D.C.L.

I HAVE just become a member of the National Municipal League, which has for its object the improvement of municipal government. Mr. Bryce speaks of the government of great cities as the one conspicuous failure of the United States. It is generally regarded as about the most knotty problem which we have to solve upon this continent. To me it seems that the problem is really solved, and that the difficulty with which we have to contend is that of getting the solution adopted. There is on this continent, so far as I can learn, one city thoroughly and securely well governed. That city is Washington, which is administered, not by an annually elected Mayor and Council, but by an expert, stable and really responsible government. All the services there appear to be good; everybody seems to be well satisfied. There is no suspicion of jobbery or corruption. Residence, I am told, is attracted by the goodness of the administration. Half the expense, it is true, is contributed by the Federal Government. But the Federal Government, an assessor told me, owns a very large part of the interest, and from whatever source the money comes, the purity of the administration is the same. Wonderful is the improvement in the city since the time when I was the guest of Seward and had to pick my way through a quagmire from his door to the State buildings, where I was to have the never-to-be-forgotten honor of an interview with Abraham Lincoln.

From cities on the continent under an elective form of government is heard in

accents more or less acute the same cry of woe. It is needless to recount the municipal history of New York, where the domination of Tammany, lawless as it is, seems to be the final resource of despair. The accounts of municipal government at Philadelphia represent a reign of organized brigandage, such as it would seem hardly possible to believe that a community of free men could endure. From Minneapolis the other day came appalling revelations. They are coming now from St. Louis. Very bad, I am told, has been the state of affairs at Syracuse. Chicago is notorious, and has had no parallel in Europe.

In Canada we have happily not had the gross corruption of some of your great American cities. Of jobbery we have probably had our share. An honest member of a city council has been known to leave it, saying that he was sick of it, as there never was a straight vote. But our general complaints have been of lack of special capacity, of stability, of foresight, of real responsibility, leading to maladministration and waste. In Toronto our elections are troubled by the ambition and cupidity of rival sects and nationalities. They have more than once been troubled and are always in danger of being troubled by the action of political party. An attempt at a financial crisis to put a leading financier in the Mayoralty was baffled by popular jealousy acting through an unlimited suffrage. By the same influence a ward politician was once elected as Water Commissioner against our most eminent engineer. With the system of annual

elections, forcing the aldermen to be always angling for votes, demagogism is inevitable and its influence is greatly felt. A step has recently been taken in the right direction by the partial separation of the administrative from the legislative functions of the Council through the institution of an elective Board of Controllers. We can hardly yet judge with cer-

form. William Tweed's gang is broken up and its leader is put into Sing Sing. But the spasm of reform is soon followed by relapse, and corruption resumes its sway. You have a general reign of abuse modified by occasional convulsions.

We are trying to run a city with a village organization. That, in few words, appears to be the real account of the trouble. The system of popular elec-

GOLDWIN SMITH

tainty of the result. But this at all events is a recognition of the right principle, that of separation of the administrative from the legislative or political and consignment of the administrative to expert hands.

At intervals, when maladministration and pillage have reached an intolerable point, the suffering community loses patience; some one like Mr. Folk, at St. Louis, is found to take the lead; and there is a spasmodic movement of re-

tion may do for a village, the concerns of which are simple, while people know each other and can exercise a collective choice in their elections. Extended to a great city, it breaks down. The concerns of a great city are such as only special skill and experience can manage aright. The people, not knowing each other, have no power of collective choice. Leading citizens cannot leave their business and the business of their stockholders to attend to municipal affairs. The inevitable con-

sequences are the ward politician, and the lapse of the city into the hands, almost always of incompetence, too often of organized corruption. City government becomes the pursuit of men who have "retired from trade or from whom trade has retired." The minor offices are sought as the first rung of the municipal ladder. I have heard of a case of a Library Board, of which, tho it had been running for a quarter of a century, not a single literary man had been a member. I could mention the case of an active citizen who in thirty years has only once or twice known enough of any candidate for the Education Board to mark his ballot.

The elective system comes down to us from the Middle Ages, when a city was no larger than a modern village. Administration in those days was simple. There were no city services of any importance, no fire brigade, no water works, no sewerage but the kennel, no public schools, no roads and sidewalks to be kept in repair, no police but Dogbery and Verges, or in case of public danger a levy of the citizens *en masse*. The leading men dwelt not in suburban villas, but in the heart of the city, knew all the people, and, no doubt, kept the administration practically in their own hands. In England, before the Municipal Reform Act, the corporations generally had become close. The business consisted largely in the control of trade and the management of trade guilds. But it was also to a considerable extent political, consisting in the assertion of city liberties and privileges against the King, the Lord and the Abbot. The proper sphere of popular election is politics, not administration.

If in English cities matters are better than they are in the great cities in this continent it is partly, at least, because the social structure of those communities is different, the influence of leading men is greater, and they take more part in civic life. But there as here large bodies of people, who know nothing of each other, are without power of collective choice; the consequence is that municipal elections are run by political party, a system of which the vices are obvious and which points to the evolution of a Tammany. At Birmingham,

Mr. Ostrogorski tells us, Mr. Chamberlain's Liberal organization excluded the Conservatives from public life. The Conservatives were dislodged from every position in the local government, from every representative body even of an entirely non-political character, from charitable institutions, from the governing boards of schools. Thus they came to identify the interests of Birmingham with those of the Liberal party, and to regard them with lukewarmness, almost with indifference. This is not a wholesome state of things. Mr. Ostrogorski's report on the state of Birmingham itself, the paragon of the system, is that the effect is very far from wholesome. He is told by a leading member of the dominant party that in the Council barely a third of the members are men of average ability, that the rest are nonentities, and that the only hope is that in twenty years' time the deterioration of the Council will be such that the system will bring its own destruction, the sickened and disgusted population will rise in revolt. Recent accounts of the financial condition of the great cities show a state of indebtedness which is causing great alarm, and which it may be suspected has its source, in some measure at least, in the spendthrift angling for popularity characteristic of political party. Demagogism is an inherent vice of the system of administration by popular election.

Berlin, we are told, is well administered with a system partly elective. But it appears that the Mayor is an expert and permanent, and that property is represented in the vote. The raising and expenditure of money is the chief work of a municipal government, and where property is not represented you have a joint-stock company run by a minority, sometimes a very small minority of the stock. A case might, I believe, be named of a first-rate candidate for the Mayoralty polling fully three-fourths of the tax-paying property of the city and being beaten by the other fourth. Yet no class suffers more from municipal maladministration than the poorest, which, having the fewest appliances for comfort and health at home, stands most in need of those afforded by the city. The poor man if he understood his own interest would gladly exchange his illusory vote

for the advantages of a skilled administration.

These elective municipalities, tho supposed to be responsible to the people, are as devoid of real responsibility as they are of administrative skill and foresight. The delinquent, his term over, slips back into the crowd. I could point to a case in which a very large sum had been wasted on a public work through negligence on the part of the committee by whom the execution of the work ought to have been controlled. When the reckoning day came one only of those who had been responsible for the neglect remained to answer for it, and that one man was on the point of retirement.

Nobody would desire to take from the people at large any power of which it is possible that they should make an intelligent use. The more we act not only for the general good, but as a community, the better. But when it is shown that nothing but evil to the people comes to the people from the system, and that, the elections being governed by the wire-puller, the exercise of the power by the citizens at large is an illusion, to resist beneficial change on democratic principle is surely to drag democratic principle through the mire.

No permanent improvement can be

hoped from convulsive attempts at reform, unless they go the length of a vigilance committee. They are sure to be followed by a relapse, and it is vain to expect that men absorbed in important business will give their time to municipal affairs. They will prefer to the loss of time any not intolerable amount of mismanagement and even of robbery. The only effective remedy is that to which the change in the city constitution of Toronto points. Let the administrative functions be placed in the hands of skilled, permanent and truly responsible administrators, not chosen by the blind chances of a popular election, the voters in which have no means of discernment or of a collective choice, but by some intelligent authority. If the authority is itself elective, as in the case of the Governor of a State, the appointment would be by election once removed. Let popular election be confined to the legislative body. The people would be resigning a power which, where there is no possibility of collective choice and they are at the mercy of the wire-puller, is a mere illusion, and would gain comfort, convenience and health. If this is hopeless, it is because democracy has not yet fully completed its destructive era and the constructive era is still to come.

TORONTO, CANADA.

## A Preacher

BY WILLIAM CLEAVER WILKINSON

BEHOLD him standing there, erect and tall,  
 Watched by those thousands of fixed, eager eyes;  
 Hear him. That voice! What matter of surprise  
 The heartsome accents hold his hearers all  
 Rapt and suspended in delightful thrall;  
 So frank, free, generous, cordial in his guise,  
 He seems to hail you comrade, comrade-wise,  
 And for response of comrade from you call.  
 The happy genius to be grateful his,  
 And an engaging fondness for profuse  
 Profession of indebtedness it is  
 That in such presence laps you in sweet truce  
 To other than all noble thought and high,  
 And one large love to all beneath the sky.

UNIVERSITY OF CHICAGO

# New Clairvaux

BY EDWARD P. PRESSEY

[We have all heard of social settlements in the slums of cities, but social settlements in the country are a new idea. The way the New Clairvaux Colony attempts to meet the social and industrial needs of the decaying New England country town is told by the Rev. Mr. Pressey in the following interesting article.—EDITOR.]

ONE object of New Clairvaux is to make country life interesting, and I am going to tell of that. But I also want at the start to make it very clear that our chief motive has been to bring new life into dead places. And to do that a very simple idea has possessed us: To become *ministers*. Before, some of us were ministers in the metaphorical sense of being mouth-pieces for the people. We now become participators in the daily life.

The hill towns of New England lacked much. Many considered them failures and wrecks. Herein was our challenge, a poor and needy parish, something hard to do for the State's and the nation's welfare. Something that could not be accomplished by words alone or by sedentary gentlemen of agreeable literary qualifications. Here was the work of a true *ministry*. We accepted the challenge.

The farmer persistently claimed there was not a good living in his farm and spoke grudgingly often of the seven hundred dollars in cash divided between the two ministers of the town. We accepted the challenge and dropped the whole of our five hundred dollars and bought a farm on the small payment plan and continued to preach with a better heart. We were under obligations to prove or disprove the grumble about a living or forever hold our peace. For we had preached a concrete Christianity that concerned the way of life in this world, a life that by the spirit and in strict accordance with moral law should make the desert blossom as the rose.

New Clairvaux is a school of methods of applying our long time beliefs to practice. And here follows the plain story of four years of it. How little we dreamed that so simple a proposition and

Abandoned Farm Turned Into a Settlement

The Village Shop by an Ancient Mill Race

the sober following out of simple duty would work out so much like a popular romance. The truth is stranger than fiction and duty more interesting than adventure.

There is a hill town in the Hoosac Mountains named Rowe, after that Revolutionary town father of Boston, who lost the tea without complaint in a famous Tea Party. Rowe is a fertile town of the sky, bordered by precipices and streams. It is a land of the wood flowers and the wood birds and simon-pure Yankee stock of wonderful traditions and old-fashioned ideals and iron individuality, of sweet children so far as there were any, of abandoned farms and decadence. I had skirmished in other parishes of the home missionary field, but this was the first parish that took hold of my heart with a love that has grown into the passion of an exile as the years go by.

It was my purpose which preceded my public consecration to do great things for Rowe. And when there were two of us the purpose was increased. We tried many things. But we were far too ignorant at first of the laws of the grain in human nature. But we analyzed the needs pretty clearly in the course of four

years and made the mistake of youth in publishing that analysis under the impression that it would be balm. The effect, however, was that of an acid. That is why New Clairvaux is in Montague on the Connecticut River, forty miles nearer Boston; but it is the working out of the same purpose for the same conditions of life.

In the year 1900, at Montague, in the heart of the same rural county of Franklin, which does not boast of a single city, a vision came to me. New Montague has been written up by Rollin Lynde Hartt as a part of "Sweet Auburn," his deserted village, after Goldsmith. Montague is a place of many brooks and rivers in narrow meadows, and surrounded by high mountains, a barren desert, and the broad, bridgeless Connecticut. I put my vision down in writing the same summer and it has since been printed many times. It was a vision of what was to come hereafter in place of the dying institutions of the fathers in these beautiful towns—nay, of the already dead institutions and dead lives of my people. The question was immediate and had an immediate answer. The six years' consciousness of the needs had unconsciously ripened an answer.

At any rate this is what I did after a little writing and a summer of further hard and specific study: I made a test for myself to see whether I had any efficiency at raising a little money. I found that I could raise money. In the fall of 1901 and at intervals through the winter I raised about \$1,200. I bought a printing outfit, a few carpenters' tools, and finally the farm, meeting the first payment of \$400. Then I took in sev-

with the new movement into adjacent parts of the village and town. The process has been one of slow, steady, natural increase. The first swarm took a portion of the industry to a beautiful new shop we had been able to build ideally suited to our purposes, a little back from the village street, by an ancient mill race. The printery and carpenter shop were moved there in the spring of 1903. These began immediately under the circum-

Type Room in the Village Shop

eral boys and girls of families with problems, both from the city and country, to raise with our own. In the next year we were carrying the burden of a family of old-fashioned size. We had thrown in our lot completely with the people to study and solve their problems with them. The parsonage was now a swarming hive of industry and life. The very attic and every shed and the little shop in the yard by the old canal and the old barn burst with activities. Meanwhile the old broken down Unitarian meeting house was assuming fresh color, too, and felt again the tramp of young feet.

Five or six times in three years the old parsonage working hive has swarmed

stances to body forth a character of their own. Other industries were provided space for development later on. One room is the repository of literature of all the good causes espoused by New Clairvaux—the peace movement, right relationship of races, universal religion, industrial education, the country and city problem, the simple life, the principles of co-operation, the political idealism of socialism, the cause of the individual against society, the woman's cause, right relationship with children, intensive agriculture and handicrafts, and other subjects. A missionary work is further carried on from this center by a monthly publication, *Country Time and Tide*,

which represents the theory and practice of New Clairvaux in its various departments and associations, and by voice of the members, who speak of the work in many places and who help organize arts and crafts movements in many hill towns. "The New Clairvaux Arts and Crafts Society" also has its headquarters and permanent exhibit rooms in the Village Shop. This society is made up at present of forty families of the old town and surrounding and distant towns, the latest application for membership being from the Province of Quebec, Canada.

The second time the parsonage have swarmed the minister's family and school went out to the farm, bag and baggage, to get more space for the young life

winter. Delightful work rooms for looms, dye houses, laboratories, etc., have been planned out and partly materialized. We are studying modern conveniences applicable to country houses and work.

Our beginnings upon little or nothing have had many of the hardships and all of the zest of pioneering the country for the first time. We have often compared ourselves and been compared with the Pilgrims at Plymouth. But there is this difference: We find many of our neighbors good carpenters. We have furnished new courage and fresh views of farm life, and they have helped us with their continuous experience with the soil and climate and their better teams and

Craftsman at the Press

away from the village streets. A smaller family with looms and spinning wheels came in to occupy the emptied space and join in the forward jogging work.

The one farm has again multiplied into four, with more than a hundred acres of land. The old houses are gradually being fitted into "settlement" homes, with ample firesides and many books, the particular joy of a remote country house in

machinery. There is a ready basis upon which to co-operate with all own town's-people. What we find the people discouraged about are, first of all, the monotony of the old rounds and then the bad economics of all they can see in it when all is done. It is our task where these things are so to show a life that is by no means monotonous, to show a year, a winter even, that is all too short

and that is richly productive of the necessities and the culture of life, even without a change in the acts of Congress. We fail and succeed in doing this on equal terms with the poorest of our neighbors, without salary, without even tools, without stock, without land in the beginning to call our own.

Such in outline is the New Clairvaux movement. I am aware of the questions that arise and will briefly answer them by themselves, as they are quite apart from a picture of the work as a whole.

people are sensible work people of competent experience in getting a living by the work they have brought here.

3. *Do the handicrafts amount to much economically?* As avocations they are a very important item indeed. There is a great and rapidly growing demand for hand-made goods, if they are artistic and well made. We sell all our excellent work and much that is poor, judged by the best standards. Our people produce much, especially in the winter months. But it has been impossible to get a sur-

In a Settlement Farm House

1. *Is New Clairvaux communistic?* No. It is individualistic. We believe in co-operation in details of life wherever that is a manifest advantage. We have many such enterprises, both formal and informal.

2. *Can you get a decent living and how do you meet expenses?* Yes, we can get a decent living. One or two men are printers and have a very good business. Several are farmers and doing as well as anybody. Others are skilled carpenters. One or two are expert poultrymen. There are many avocations. Our

plus for a representative permanent exhibit at home, there have been such quick sales. As education and art, however, the handicrafts have their most valuable place in the community, however great their economic value may be. It is a great fact that creative art is brought into the program of daily life in hundreds of country families.

4. *What are the terms of admission to New Clairvaux?* An independent occupation as a basis of self-support, a desire toward the sort of thing we are doing, and a self-election to the community.

Many come with or without their worldly effects and go. A cumulative community of the few whom it just fits stay and work things out to their own liking. New Clairvaux is entirely a growth and not an artificial organization. There are

no rules or constitutions but the thoughts and aspirations of its entire constituency. These have great variety, with certain common tendencies toward the practice of Christianity.

MONTAGUE, MASS.

## The Story of an Irish Cook

[This article is sent to us by one of the best known literary women of America, who is so interested in the biographical articles we have been publishing of late that she thinks this story of her former cook ought to be included in the series.—EDITOR.]

I DON'T know why anybody wants to hear my history. Nothing ever happened to me worth the tellin' except when my mother died. Now she was an extraordinary person. The neighbors all respected her, an' the minister. "Go ask Mrs. McNabb," he'd say to the women in the neighborhood here when they come wantin' advice.

But about me—I was born nigh to Limavaddy; it's a pretty town close to Londonderry. We lived in a peat cabin, but it had a good thatched roof. Mother put on that roof. It isn't a woman's work, but she—was able for it.

There were sivin childher of us. John an' Matthew they went to Australia. Mother was layin' by for five year to get their passage money. They went into the bush. We heard twice from them and then no more. Not another word and that is forty year gone now—on account of them not reading and writing. Learning isn't cheap in them old countries as it is here, you see. I suppose they're dead now—John would be ninety now—and in heaven. They were honest men. My mother sent Joseph to Londonderry to larn the weaver's trade. My father he never was a steddly worker. He took to the drink early in life. My mother an' me an' Tilly we worked in the field for Squire Varney. Yes, plowin' an' seedin' and diggin'—any farm work he'd give us. We did men's work, but we didn't get men's pay. No, of course not. In winter we did lace work for a merchant in Londonderry. (Ann still can embroider beautifully.) It was pleasanter nor diggin' after my hands

was fit for it. But it took two weeks every year to clean and soften my hands for the needle.

Pay was very small and the twins—that was Maria and Philip—they were too young to work at all. What did we eat? Well, just potatoes. On Sundays, once a month, we'd maybe have a bit of flitch. When the potatoes rotted—that was the hard times! Oh, yes, I mind the famine years. An' the cornmeal that the 'Mericans sent. The folk said they'd rather starve nor eat it. We didn't know how to cook it. Here I eat corn dodgers and fried mush fast enough.

Maria—she was one of the twins—she died the famine year of the typhus and—well, she sickened of the herbs and roots we eat—we had no potatoes.

Mother said when Maria died, "There's a curse on ould green Ireland and we'll get out of it." So we worked an' saved for four year an' then Squire Varney helped a bit an' we sent Tilly to America. She had always more head than me. She came to Philadelphia and got a place for general housework at Mrs. Bent's. Tilly got but two dollars a week, bein' a greenhorn. But she larned hand over hand, and Mrs. Bent kept no other help and laid out to teach her. She larned her to cook and bake and to wash and do up shirts—all American fashion. Then Tilly axed three dollars a week. Mother always said, "Don't ax a penny more than you're worth. But know your own vally and ax that."

She had no expenses and laid by money enough to bring me out before

the year was gone. I sailed from Londonderry. The ship was a sailin' vessel, the "Mary Jane." The passage was \$12. You brought your own eating, your tea an' meal, an' most had fitch. There was two big stoves that we cooked on. The steerage was a dirty place and we were eight weeks on the voyage—over time three weeks. The food ran scarce, I tell you, but the captain gave some to us, and them that had plenty was kind to the others. I've heard bad stories of things that went on in the steerage in them old times—smallpox and fevers and starvation and worse. But I saw nothing of them in my ship. The folks were decent and the captain was kind.

When I got here Mrs. Bent let Tilly keep me for two months to teach me—me bein' such a greenhorn. Of course I worked for her. Mr. Bent was foreman then in Spangler's big mills. After two months I got a place. They were nice appearing people enough, but the second day I found out they were Jews. I never had seen a Jew before, so I packed my bag and said to the lady, "I beg your pardon, ma'am, but I can't eat the bread of them as crucified the Saviour." "But," she said, "he was a Jew." So at that I put out. I couldn't hear such talk. Then I got a place for general housework with Mrs. Carr. I got \$2 till I learned to cook good, and then \$3 and then \$4. I was in that house as cook and nurse for twenty-two years. Tilly lived with the Bents till she died, eighteen years. Mr. Bent come to be partner in the mills and got rich, and they moved into a big house in German-town and kept a lot of help and Tilly was housekeeper. How did we keep our places so long? Well, I think me and Tilly was clean in our work and we was decent, and, of course, we was honest. Nobody living can say that one of the McNabbs ever wronged him of a cent. Mrs. Carr's interests was my interests. I took better care of her things than she did herself, and I loved the childher as if they was my own. She used to tell me my sin was I was stingy. I don't know. The McNabbs are no wasteful folk. I've worn one dress nine year and it looked decent then. Me and Tilly saved till we brought Joseph and Phil over, and they went into Mr. Bent's mills as weaver and

spool boy and then they saved, and we all brought out my mother and father. We rented a little house in Kensington for them. There was a parlor in it and kitchen and two bedrooms and bathroom and marble door step, and a bell. That was in '66, and we paid nine dollars a month rent. You'd pay double that now. It took all our savings to furnish it, but Mrs. Bent and Mrs. Carr gave us lots of things to go in. To think of mother having a parlor and marble steps and a bell! They came on the old steamer "Indiana" and got here at night, and we had supper for them and the house all lighted up. Well, you ought to have seen mother's old face! I'll never forget that night if I live to be a hundred. After that mother took in boarders and Joseph and Phil was there. We all put every cent we earned into building associations. So Tilly owned a house when she died and I own this one now. Our ladies told us how to put the money so as to breed more, and we never spent a cent we could save. Joseph pushed on and got big wages and started a flour store, and Phil went to night-school and got a place as clerk. He married a teacher in the Kensington public school. She was a showy miss! Silk dress and feathers in her hat!

Father died soon after he come. The drink here wasn't as wholesome for him as it was in Ireland. Poor father! He was a good-hearted man, but he wasn't worth a penny when he died.

Mother lived to be eighty. She was respected by all Kensington. The night she died she said: "I have much to praise God for. I haven't a child that is dependent on the day's work for the day's victuals. Every one of them owns a roof to cover him."

Joseph did well in his flour store. He has a big one on Market Street now and lives in a pretty house out in West Philadelphia. He's one of the wardens in his church out there and his girls give teas and go to reading clubs.

But Phil is the one to go ahead! His daughter Ann—she was named for me, but she calls herself Antoinette—is engaged to a young lawyer in New York. He gave her a diamond engagement ring the other day. And his son, young Phil, is in politics and a member of councils. He makes money hand over hand. He

has an automobile and a fur coat, and you see his name at big dinners and him making speeches. No saving of pennies or building associations for Phil.

It was Phil that coaxed me to give up work at Mrs. Carr's and to open my house for boarders here in Kensington. His wife didn't like to hear it said I was working in somebody's kitchen. I've done well with the boarders. I know just how to feed them so as to lay by a little sum every year. I heard that young Phil told some of his friends that he had a queer old aunt up in Kensington who played poor, but had a great store of

money hoarded away. He shouldn't have told a story like that. But young folks will be young! I like the boy. He is certainly bringing the family into notice in the world. Last Sunday's paper had his picture and one of the young lady he is going to marry in New York. It called him the young millionaire McNabb. But I judge he's not that. He wanted to borrow the money I have laid by in the old bank at Walnut and Seventh the other day and said he'd double it in a week. No such work as that for me! But the boy certainly is a credit to the family!

## Four Weeks in Venezuela

BY GARDNER RICHARDSON

[The fresh excitement over political affairs in Venezuela makes the following article timely. It represents the experiences of a college vacation last summer.—EDITOR.]

THE sun had not yet risen when I tumbled out of my bunk to watch our approach to the Venezuelan coast. Ahead a dense black mass loomed up like a thunder cloud. There was almost no wind, and the steamer was plowing through the long easy swell of the Caribbean at the same monotonous speed that she had made all the way from New York—ten knots an hour. Gradually the East became lighter, and the mass ahead seemed to resolve itself into definite lines. At last the sun rose, revealing in all its glory one of the most magnificent pieces of natural scenery ever accorded to a traveler's sight. Straight up from the thundering breakers rose a rocky buttress to a height of over nine thousand feet. There was a thick bank of clouds half way up, but above that the mountain ridges and peaks stood out bold and clear cut against the morning sky. Below the belt of clouds was La Guayra, the seaport of Caracas, with its clustered houses clinging to the mountainside. Off to the left was the beach of Macuto, the white surf breaking at the foot of a background of palms and cocoanut trees.

On arriving at La Guayra the traveler is certain to be disappointed. The town that looked so picturesque from a distance entirely changes its character on close inspection. The streets are narrow and filthy, the houses low and squalid, the people dirty and half naked. Everything seems wilted by the heat, and even at that early hour in the morning the sun was almost unendurable. In the middle of the day the sun beats so fiercely against this slope that all living beings are forced to seek shade and rest. It is with a feeling of relief that the traveler boards the little toy train and starts up the mountainside.

The construction of the railroad from La Guayra to Caracas is one of the most remarkable engineering feats in the world. The road twists and turns, crawling up the face of the mountain with almost impossible grades and curves. Now the train runs over a trestle hundreds of feet above a rushing torrent, now dashes through a tunnel and out around a spur of the mountain, revealing La Guayra far down below. The mountainside is so abrupt that it seems as if one could drop a stone on the

Caracas

decks of the ships beneath. The air becomes less sultry and heavy, and as the train climbs up a long ravine, a condor floats along on the same level with the track. Half way up the train stops at Zig-Zag. Here all the passengers are requested to sign their names on a slip of paper. The names have already been telegraphed to the capital from La Guayra, and any people objectionable to the Government are arrested here by the authorities.

Starting on again from Zig-Zag the train climbs upward to a pass, four thousand feet above the sea level. The air is now actually cool. The palms and coconut trees of the beach give way to a tangled tropical forest. Suddenly the train runs through a deep cut and out around a curve with increasing speed. The highest point has been reached, and from here there is a shoot of one thousand feet into Caracas. The valley opens up before us, stretching away to the southeast. Caracas, with its low tiled roofs and many church towers, lies close against the south side of the lofty coast range. From the summit of the pass into the little Caracas station is a short run, and

the traveler is soon seated in a small victoria, rattling over the narrow cobblestone streets at a reckless pace.

A South American capital has an atmosphere of its own. There is a certain charm in the lazy, indolent life. During the heat of the day the whole city is dead, but as evening approaches the streets begin to fill with people and the city awakens. In Caracas the center of gayety is the Plaza Bolivar. Here the crowd assembles every evening to listen to the band or to stroll up and down and watch the moving throng. Sunday evening is the culmination of the week. The Plaza is brilliantly lighted, the band plays and all the Venezuelans turn out in their best clothes. Here is a group of Caracas belles sitting at a table under a tree. Their heads are covered with black scarfs, and their cheeks have a generous coating of rouge. Over there is a group of young officers, in their gay uniforms, idly smoking cigarros. In the background one can see here and there the broad-brimmed felt hat and pancho that mark the man from the interior. He may have been traveling on horseback for twenty or thirty days to reach the city

he has heard of all his life but never seen. He watches with the most intense interest all this display and gayety so new to him.

While the Plaza Bolivar is the center of life, the other principal square is silent and comparatively deserted. But it is here that every American who visits Caracas likes to spend a quiet hour. In the center, amidst palms and tropical plants, stands the statue of George Washington. Here in this far off country he stands with that calm and serene expression which has so touched many a lonely American and given him courage anew to live a while longer away from "God's Country."

The social life in Caracas is conducted in a most formal manner and strictly according to rule. Venezuelans must be dignified at all times. For a girl to laugh, or even smile, during a dance would stamp her as very ill bred. A quadrille will be danced through without one of the participants changing their set expression. A girl may never see a man alone, even if she is engaged to him. The mother, aunt or older sister always

sits in the room, reading a book or knitting. In the evening the girls are always found at their barred windows, where their suitors stand outside and make love through the bars. Introductions at the window are not necessary, one must merely watch the movement of the beauty's fan to know whether to approach or not. Beware of trying a window in which a girl reclines fanning herself indolently. Here there is no chance for a chat and the window may even be slammed in your face. If a passer-by is looked on with favor, the fan of the belle moves rapidly. One may then approach and talk for a little while. If after several visits the suitor still finds favor in her eyes he may be invited inside.

One of the most interesting sights in Caracas is the early market on Sunday morning. On this day the week's produce from the country is brought in and sold. Long strings of donkeys heavily laden with tropical fruits, lines of jolting carts filled with fresh vegetables and men on foot carrying huge baskets on their heads all throng toward the busy mar-

La Guayra

ket place. Everything is hurry and bustle, and above the hum one hears the vendors crying out their wares and the crowd haggling over the prices.

To most of the peons—the peasants of Venezuela, mostly Indians—the money they obtain in the market is their only source of income. There are certain articles that they need in order to live, and toward these their little ready cash goes. They must have a machete, an implement which combines all farming tools into one piece. They must have a kettle and a few other kitchen utensils. Any outside expenses they are absolutely unable to meet. This poverty causes a remarkable state of affairs, as far as married life is concerned. To be fully married

in Venezuela only four hundred are the offspring of married parents.

The first Sunday that I was in Caracas I was asked to play in a baseball game. A club had been formed and divided into three teams, who were competing for a pennant. The teams were the Whites, Blues and Reds. I joined the Reds and played shortstop with them the four Sundays that I was there. At these games the enthusiasm ran high; every play was closely followed, and either applauded or condemned. The crowd never clapped and rarely cheered, their applause consisting of rapping the grandstand with their canes and stamping their feet. They never hissed, but instead every time a ball was fumbled or a man struck out a

On the Road from Caracas to Petare

in Venezuela requires both a religious and civil ceremony. The fees for these are beyond the means of most peons. Therefore a man and woman who would otherwise be married simply agree to live together and avoid paying the taxes. This causes a most remarkable percentage of children termed illegitimate. Out of every one thousand births

salvo of whistles and catcalls greeted him. The game itself revealed many interesting features. While some played fairly well the standard was very low. Any pick-up team at an American summer resort could have defeated the nine best men in the whole club. While I am probably below the average ability here in America, I achieved quite a reputation

in Venezuela, and was alluded to as the "marvillos Americano." The outfielders did not attempt to catch balls on the fly, but allowed them to drop and then tried to block them with their feet. When a ball went through a fielder, as it usually did, and a runner came in, a home run was scored. In this way I was credited three home runs in the first game that

Venezuela I must conquer its summit. It was not until a week before my departure that I finally arranged with two young Venezuelans and an Englishman to make the ascent. We left Caracas one afternoon and reached Petare, a small town near the foot of the mountain, by nightfall. Here we spent the night at a rancho. These ranchos are mud huts

Plaza Washington

in America would hardly have been safe hits. Venezuelans even in baseball preserve their dignity. They never slide to bases, and when in the first game I slid into the third baseman and accidentally knocked him down every one was horrified and I was called out "for roughness" amid a pandemonium of catcalls.

The highest point in the mountain range between Caracas and the sea is Naiguata. This peak rises to a height of 9,100 feet above the sea level, or about 3,000 feet higher than any point east of the Mississippi. It has been climbed but three times in recent years, and probably not half a dozen times altogether. When I first saw this peak from the steamer I determined that before leaving

with accommodations for travelers, their peons and horses. A continuous line stretches at intervals of about thirty miles along all the trails into the interior. By easy stages the traveler may go from Venezuela over the Andes to Colombia and southward into Ecuador and Peru. In the wildest and most mountainous regions he will always reach at sunset, clinging to a sheltered spot on the trail, a rancho with a warm welcome and good accommodations for himself and his tired beasts.

We left Petare before light and started for the foot of the mountain. We had a guide and ten peons, so there were fifteen members to our expedition. The peons carried about thirty pounds apiece

on their heads. The packs consisted of food, water and blankets. In addition each peon carried his machete, without which he is never seen. He uses it for every imaginable purpose, from fighting his enemies to cutting sugar cane and paring potatoes. It resembles a sword shaped like a scythe with a razor edge and flat blunt end. At the foot of the mountain the trail dwindled away to nothing, and we were soon forcing our way through the tangle of the tropical forest. The guide went ahead and with his every-ready machete slashed a way through the vines and creepers. Progress in this way is slow, but we pushed on as best we could. All day long we were forcing our way through the tangled undergrowth. We could hear the sounds of wild creatures ahead getting out of our way as we approached. This was varied by the continual swearing of the peons as they tripped on a root, or caught their packs on some hanging vine.

Toward evening we reached a valley at the foot of the summit proper. Just as we were about to make our camp it started to rain. A tropical rainstorm is irresistible. It soaked everything we owned. It was impossible to light a fire and there was no shelter anywhere. We simply rolled up in our wet blankets and lay on the soaked ground waiting for daylight. It rained at intervals all night, making sleep impossible. As we were at a high altitude it began to get

bitterly cold, especially toward morning.

We started for the summit as soon as we could see. Anything was better than to lie still, wet and shivering. The next two hours were the hardest kind of climbing. We had to scale rocks that were covered with brush and vines strong enough to impede progress, but too weak to bear weight. At last we saw the bald crags of the summit, and a final effort brought us to the top. We were standing on a rock hardly capable of holding four men. A bitterly cold wind was howling around us and we were drenched by mists and clouds. Nevertheless, the occasional glimpses we got were a sufficient reward for all our work and discomforts. To the north lay the Caribbean Sea; starting right at our feet it stretched as far as the eye could see. To the east was the island of Trinidad and the Atlantic. To the south the Orinoco Valley, and to the west the foothills of the grandest of all mountain ranges—the Andes.

The descent was easy as our path was already cut. We reached Petare late that afternoon, and in the evening got to Caracas wet, tired and hungry. At certain times during our climb I was not very enthusiastic, but when I stood at the stern of the steamer and saw that magnificent range of mountains, bold and defiant as ever, sink from view I saluted the king of them all and felt that I had scored a victory in Venezuela.

NEW HAVEN, CONN.

# The Dietetic Habits of Children

BY M. V. O'SHEA

PROFESSOR OF EDUCATION IN THE UNIVERSITY OF WISCONSIN

FOR some time I have been making inquiries among parents respecting the most serious problems they encounter in the upbringing of their children under modern urban conditions, and what methods they employ in attempting to solve these problems. Judging from the testimonies I have received it appears that in a large proportion of homes in comfortable circumstances the source of greatest anxiety concerns children's dietetic habits. Parents say that their children do not eat enough, or they are finicky about their food, refusing almost everything of substantial value. In discussing their modes of dealing with this problem my correspondents declare that they resort to various devices to entice and even to compel their children to eat, but often all methods fail to a great extent. One of the most common practices consists in rewarding children in one way or another if they will eat this or that dish, and they are sometimes offered a certain amount in cash if they will dispose of everything that is put before them. Then punishments are not infrequently meted out as stimuli to sluggish appetites. For instance, if a boy does not make way with his oatmeal at breakfast he is not allowed to play with his fellows during the day, or some other privilege is denied him. In some houses delinquent eaters get a "good scolding" in the belief that this will encourage them to perform their duty more readily and completely. Practically all parents who struggle with this problem seem constantly to urge or command their children to eat. They consider it like any other task to be performed—it must be done whether agreeable or not. "My boy could eat if he only would!" an eager parent declares, and she proceeds to stimulate his will in any way she can.

It is very suggestive that in homes where rigid economy in food is necessary this eating problem is presented in a quite different aspect. Here the children are almost too voracious. "It seems impossible to fill the child up and keep him filled for any length of time,"

is sometimes heard from parents. Children in rural homes are always first-rate eaters. They partake of everything on the bill of fare, and they leave nothing "on their plates," whereas the urban child in the well-to-do home often fusses over the portion of any dish that is given him and leaves the half of it uneaten.

I am aware that we have before us a difficult matter to handle satisfactorily, but certain principles respecting its treatment seem quite clear to me. The first is that the only way to get a child to eat is to awaken his appetite by means of an active muscular or physical life. All modern studies on nutritive processes indicate that food swallowed as a matter of duty is rather an injury than a help to the organism. The investigations of Pavlov show that when there is no appetite for food the digestive juices are not secreted and digestion takes place very slowly, if at all; while the reverse is true when appetite is keen. This means that the stimulus to eat must come from within; it seems worse than useless to be constantly telling a person he *must* eat his dinner or he will suffer pains and penalties of some sort. Perhaps it would be better to let a child starve of his own volition than to kill him by forcing unwelcome food upon him.

It is possible that we are too solicitous anyway about our children's eating. It is entirely reasonable to suppose that nature is gradually working out modifications in our dietetic practices to conform to the changed circumstances of life. Under modern urban conditions people must eat less than in the days of old, when subsistence was won by a hand-to-hand conflict with crude nature. Most adults, who as children lived out of doors much of the time but who in mature life have adopted the ways of the city, find that their greatest problem is to restrain their appetites, or, more properly, their eating habits. They are rather the worse off in maturity because they got into the way of disposing of everything set before them in their younger days. It is not unreasonable to suppose that children

destined to live under conditions when the muscles will be used very little should form the habit of eating less than their parents did when they were young. At any rate, if we cannot furnish opportunity for our children to engage in muscular pursuits for a considerable part of their time, we cannot expect them to have vigorous appetites, since appetite, at least before habits get fixed, is mainly a reflex or symptom of muscular needs.

Eating is one of those matters that ought never to be dealt with directly to any extent. We must rather deal with the conditions which determine it, and leave the thing itself alone very largely. The worst possible mode of treating it is to make it a task. Think of punishing a child for not drinking a glass of milk which he says he does not want. Could there be any better way of setting him against it permanently? It would be wiser to make food rather difficult to obtain than to force it upon a child. There is a subtle principle of psychology at the basis of this method. We readily grow indifferent toward any article of food that is over-easy to obtain, unless we have formed definite habits with reference to it. One great difficulty in modern life, among a portion of our people, is that food is too plenty. We urge it on the child partly because we can obtain it with little effort, and he, more or less unconsciously, reacts against the thing forced upon him, whether it be food or anything else. A child ought never to hear such expressions as "I wish you would eat more," or "Why don't you eat as your father does?" and so on *ad libitum*. In every way he should be made to feel that food is not over plenty, and under no account should eating be regarded as a duty or a task or a burden.

One factor that operates against the establishment of good dietetic habits in modern life is the excitement which fills every hour and minute of the day in many homes. There is so much that appeals to the child mentally that his attention is never relaxed so that he can give himself to the eating process, and the child needs to give this process a certain amount of attention. The boy comes to the table full of the happenings of the day, and his mind works on them

with almost feverish intensity. His brain takes all his energy. Under modern conditions in some homes the children do all the talking at table, and as a consequence they do little eating, and they easily acquire habits of taking less food than they really would take with relish if they were less intensely active intellectually and emotionally. It is worthy of note that often children will show improved appetite when there are guests at table, and the young ones must be quiet and listen. I have observed that in homes where much of the conversation at table is by older members of the family the children are inclined to be better eaters. Eating is their business, not entertainment of their elders, or argument among themselves. I do not mean that they should be too rigorously suppressed, or be suppressed at all directly; but the older people for the hour spent at table should be most in evidence, and unconsciously the children will play their proper rôle. Adults have established habits so that their minds can be active; they can sustain arguments and entertain those about them, and still they will get enough nutrition; but it is otherwise with children. In homes where the parents are *leaders*, so that the children enjoy listening to them and unconsciously look to them for entertainment during the hour at table—in such homes the children will give themselves more fully to the business of eating. If the children eat at their own table in the nursery then the governess must be the leader who will, in her stories and narrations, furnish the entertainment for the hour. If the governess is not strong in this respect the children will easily fall into argumentative combats, and they will grow so excited and intense that their eating will suffer. If this sort of thing continues long they will grow neurotic and will acquire habits of under-eating. The point I wish to impress is that in modern urban life we must try to make the children's hour at meals a restful one, in which the parents and governess take the lead in entertainment and discussion. All objects that excite and stimulate must be kept out of the dining-room, so that the attention may be relaxed and the feeding instincts be given a chance to manifest themselves.

# Literature

## Emperor William II

IN presenting to the English reading public an admirable translation of A. Oscar Klaussman's *Kaiserreden*\* Dr. Louis Elkind has made accessible a portrait of the present German Emperor very different from that in which the irrepressible humor of the American newspaper delights.

The construction of the volume is suited to its purpose as expressed in the prefatory note, that of giving a "character sketch of the Emperor as illustrated by his own utterances." We do not pass chronologically through the years of his reign, but instead there passes before us like the slides in a lantern a series of political issues, each an isolated background against which is projected the personality of the ruler. Thus we see him at the opening of his reign astonishing suspicious Europe by becoming the savior of her peace; we see him expanding his paternity to include not only the Imperial Territories and the electoral princes, but the Roman Catholic Church; and we see him admonishing deputations of workingmen and strikers.

In an address of great picturesqueness, delivered in 1890 on board the North German Lloyd steamship "Fulda," he quotes as expressive of his own views the maxim of another sovereign: "The Emperor's word must not be twisted or explained." This dogma might be placed as the motto of Herr Klaussman's volume, which does not seek to explain or interpret, but allows the Emperor to present himself untrammelled by comment, through the sole medium of the speeches, edicts, telegrams and letters of which the book is a compilation. There are, however, many ways of distorting truth, and an effective method is that of elimination. One cannot accept as complete a sketch of the Emperor which, for ex-

ample, has no word to say regarding the dismissal of Bismarck nor of the imperial restrictions upon free speech. Unless the reader is somewhat familiar with recent German history and politics and so can fill out the interstices with supplementary information the book will leave him with a biased or even false view of the Emperor.

And this view cannot be corrected by *Imperator et Rex*,\* a book naïve in its idolatry of the Emperor. Kindness, thoughtfulness, firmness, talents in variety and to a high degree—these are shown in many anecdotes of court life, for the author's familiarity with her subject cannot be doubted; her volume may, in many respects, compare with the French Court memoirs.

No fashion editor or society writer could excel the glittering feminine style of the author: "Upon her sunny head was set a white hat covered with lilies of the valley—*Maiglöckchen* (Maybells), as they so prettily call them over there, and six rows of admirable pearls were fastened at her throat by a magnificent diamond clasp." Pages on pages in this vein describe gods and goddesses, men and women, castles, landscapes, functions and political situations. Bismarck is severely dealt with and Morell Mackenzie caustically, and the entry into Jerusalem was a triumphant one.

Henri de Noussanne in *The Kaiser as He Is*† gives another and quite opposing notion of the Emperor, the pathological view. The Frenchman calls him *un malade*, a sort of sick chameleon, and attempts to prove the charge in this style:

"The Barmenians inaugurated the statue with much ceremony. It was the first counterfeit presentment of William II to be erected in public. The Emperor was not present at the exercises. More's the pity. He would have seized the oc-

\* THE GERMAN EMPEROR'S SPEECHES. Translated by Louis Elkind, M.D., from "*Kaiserreden*." Edited by A. Oscar Klaussman and Published in Leipzig. Translation Revised and Explanatory Footnotes Added by J. W. Bartram, M.A. Longmans, Green & Co. \$5.00.

\* IMPERATOR ET REX, WILLIAM II OF GERMANY. By the Author of "*The Martyrdom of an Empress*." Illustrated. Harper & Brothers. \$2.25.  
† THE KAISER AS HE IS. By Henri de Noussanne. G. P. Putnam's Sons. \$1.25.

casian to say most charming things about himself with his accustomed modesty." It seems, too, that a French reporter once thought he saw the Emperor incognito in Paris, as tho a royal head in a commoner's hat were never there before: and once *in propria persona* the Emperor uncovered at the grave of Napoleon, where "he was at liberty to take a lesson in tactics and good sense." Pity it is that M. de Noussanne did not use a finer satirical pen and a less spiteful, even tho he has given evidence as to the healing of the Sedan wound.

### Breaking the Wilderness

PROFESSOR BOURNE gives us in the De Soto volumes\* the narrations of the "Gentleman of Elvas" and of De Biedma, translated half a century ago by Buckingham Smith, and a translation of his own from the Ovieda narration, based on the journal of Rodrigo Ranjel, De Soto's secretary. The purpose acknowledged is "to place within the reach of every one interested in the subject the three most important contemporary sources relating to the expedition of De

Soto." No attempt has been made to identify the route, tho a map containing a conjectural tracing, prepared by J. C. Brevoort and published in New York in 1865, is reprinted, with evident approval. Professor Bourne lays great stress upon the importance of the Ranjel narrative, and believes that it will greatly facilitate subsequent studies of the route.

Mr. Winship reproduces a number of narratives of the Coronado expedition, including that of Castañeda.\* By means of liberal annotations he attempts to identify the route. Tiguex, which figures so largely in the narratives, he places as the modern Bernalillo, and Cibola as the Zuni villages. These are the usually accepted identifications, but Mr. Dellenbaugh, who has spent many years in a study of this subject, has a radically different theory. Tiguex he places about the site of the present San Antonio, more than one hundred miles south of the location usually given it, and Cibola on the headwaters of the Gila, in southwestern New Mexico. His arguments, it must be admitted, are strong and well supported and seriously weaken the older identifications.

In most, if not all, respects Mr. Dellen-

\* NARRATIVES OF DE SOTO [*The Trail Makers' Series*]. Edited, with an Introduction, by Edward Gaplord Bourne. New York: A. S. Barnes & Co. Two volumes. \$1 each.

\* THE JOURNEY OF CORONADO, 1540-1542, AS TOLD BY HIMSELF AND HIS FOLLOWERS. [*The Trail Makers' Series*]. Translated and Edited, with an Introduction, by George Parker Winship. New York: A. S. Barnes & Co. \$1.00.

On the Yuma Desert. From Dellenbaugh's "Breaking the Wilderness" (Putnam)

baugh's book\* is admirable. The text is a rare combination of history, observation and story telling, and it is beautifully illustrated. The "breaking of the wilderness," the once savage region west of the Mississippi, by explorer, fighter, trapper and settler is pictured to us as by a vitascope.

By the "Southwest" Mr. Brady means Texas, tho he makes one or two references to New Mexico, Arizona and California.† The Mexican War and the enforced cession of Mexican territory following upon it he treats as "The Great Spoliation." The historical scope of his essay is the period from the beginning of American settlement in Texas to the close of the Mexican War.

### Modern Business

WHAT may be called an academic preciosity characterizes the style of Professor Veblen.‡ His terminology is individual and often quaint. Moreover, he deals largely in abstractions. Other writers give us the abstract generalization with the concrete illustration. But Professor Veblen, except in his satiric moods, tends to an oracular and often to a tortuous mode of expression. His method of advance is rather by a series of enveloping flank movements than by a frontal attack.

In his satiric moods he can be simple and direct. The fine passage (p. 42) wherein he concedes that the business man may prefer honest methods to dishonest, provided he does not lose profit thereby; the yet more satiric passage (p. 281-82) wherein he criticises the allegation of the corruption of the courts, are cases in point. His comment (p. 35) on the generally observed fact that under the pressure of the capitalist régime the "business proletariat" tend rather toward some of the many varieties of social reform than to socialism is particularly quotable:

"The unpropertied classes employed in business do not take to socialistic vagaries with

such alacrity as should inspire a confident hope in the advocates of socialism, or a serious apprehension in those who stand for law and order. This pecuniarily disfranchised business population, in its revulsion against unassimilated facts, turns rather to some excursion into pragmatic romance, such as Social Settlements, Prohibition, Clean Politics, Single Tax, Arts and Crafts, Neighborhood Guilds, Institutional Church, Christian Science, New Thought, or some such cultural thimblery."

But when one overcomes this obstacle of a difficult style and penetrates to the substance within he finds a truly remarkable work. It is a profound and searching analysis of modern business enterprise, of "the aims, motives and means that condition current business traffic." Nothing has been overlooked, nothing has been slighted in treatment. From the impulse of profit-seeking that originates business to the remoter manifestations and influences of this enterprise in society the author follows his task of description and explanation point by point in a masterly manner.

"To a greater extent than any other known phase of culture," he writes, "modern Christendom takes its complexion from its economic organization." The characteristic features of this organization are the machine process and investment for profit. The machine furnishes the scope and method of modern industry, and pecuniary gain is its motive. Business is thus a conflict for the realizing of immediate and individual ends:

"Work that is on the whole useless or detrimental to the community at large may be as gainful to the business man and to the workman whom he employs as work that contributes substantially to the aggregate livelihood."

From this starting point he makes his way throughout the complex processes and relations of business to its social results. To attempt to indicate more than the scope and general character of the inquiry is of course impossible in brief space. The reader must glean for himself. That he will be amply repaid for his study may be confidently promised. By reason of its many evidences of keen and profound thought, of a high grade of scholarship and of a breadth and sureness of vision, the book is notable among

\* THE CONQUEST OF THE SOUTHWEST. By Cyrus Townsend Brady. New York: D. Appleton & Co. \$1.50.

† BREAKING THE WILDERNESS. By Frederick S. Dellenbaugh. New York: G. P. Putnam's Sons. \$3.50.

‡ THE THEORY OF BUSINESS ENTERPRISE. By Thorstein Veblen. New York: Charles Scribner's Sons. \$1.50.

recent contributions to economics; and tho its usual style is difficult, it is yet penetrated by flashes of an inimitable satiric wit that is delightful.

### "Under the Weather"

IN a monograph bearing the suggestive title of *Weather Influences*\* Prof. Edwin Dexter, of the University of Illinois, has made an energetic attempt to determine whether, how and to what extent the change in the environment of "a given community of limited area," caused by a change in weather conditions, tends to influence human behavior. The treatise before us embodies the conclusions reached by him after a laborious study of two communities of markedly divergent climates (New York and Denver) as based upon a careful comparison of school, criminal, hospital, mortuary and other records with the meteorological charts of the Weather Bureau extending over a term of years, and upon questionnaires sent to teachers and the heads of institutions.

Professor Dexter's findings must in large part be regarded as tentative, to be confirmed or disproved by further exploitation of the field in which he has broken much new ground. Briefly, his investigations go to show that certain meteorological conditions give rise to emotional states in which an impulse to do an improper act is less likely to be overcome than in others; that man is similarly influenced in the exercise of his intellectual faculties, and, finally, that "varying meteorological conditions affect directly, tho in different ways, the metabolism of life." Obviously out of the question to follow him in his exhaustive examination of the various phases of activity—in the case of death, cessation of activity—that come within his ken, it must suffice to draw attention to the more important conclusions which, as they stand, have a direct and significant bearing on problems of health, education and social uplift, not by way of proffering new theories so much as in the direction of giving force to old theories from new points of view. Perhaps the most strik-

ing inference is one drawn from a comparative study of the data regarding health, death, crime and deportment in school, prison and asylum. These indicate that the meteorological conditions under which the body is at its best and the mind most alert are precisely the conditions under which misconduct, using the word broadly, is most marked, and that "as a corollary, misconduct is the result of an excess of reserve energy not directed to some useful purpose," a conclusion rich in suggestion to parent, pedagog and social reformer alike. From a scrutiny of the data on the weather and health the physician as well as the lay reader may derive useful hints, while we especially commend to the latter Professor Dexter's exposition of the psychological effect of wind as emphasizing the necessity of paying constant attention to the ventilation of dwellings and places of business. Of salient importance, also, is the chapter on "Drunkenness and the Weather," the "curves" for ill health and drunkenness showing a parallel so striking as to afford corroborative testimony in favor of the theory that drunkenness is a disease.

Die Psalmen. Neu Uebersetzt und Erklärt.  
Von Arnold B. Ehrlich. 8vo, pp. vi, 438.  
Berlin: M. Poppelaner.

This title hardly distinguishes this from any other commentary on the Psalms, and yet it is a peculiarly valuable book, not to the homilist, but to the student who wants to know the real meaning of the original text. Mr. Ehrlich is an American Jew, soaked in the sacred tongue, well equipped with both the rabbinic learning and that of the modern schools and filled with the passion to discover, as one to whom Hebrew, with all its idioms, is familiar, what is the thought behind the text, which is sure to escape the mere lexical student. His complaint with the dictionary makers and grammarians is, or would be, that "they don't know Hebrew." Accordingly he finds a real meaning in passages which seem blind to the grammarian, and he is not slow, altho he prefers not to do it, to emend the text when required. Some of his emendations and interpretations are not

\* WEATHER INFLUENCES. By Edwin Grant Dexter, Ph.D. New York and London: The Macmillan Company. \$2.00.

new, but they are always shrewd, often they are brilliant, and they put a real meaning in passages that are not understood. Take, for example, an imprecatory Psalm, the 59th, and he thus makes it quite fresh. It is a late Psalm, attacking the persecuting Jews, who accept the rule of the Syrian Antiochus and who had cursed the pious Jews for their strict adherence to their faith and had said:

7. "Let them [the pious Jews] be reduced to starvation [*ra'abh* for '*erebh*] as they deserve [implied in *shûbh*] till they howl like dogs,

And let them go begging about the city."

8. Thus they speak regardless with their mouth; swords with their lips.

Who has ever heard of such a thing?

9. But thou, O Lord, laughest at them,  
Thou mockest at all such heathenish people.

10. My Strength, I will sing [*zamar* for *shamar*] of thee,

That "God is my stronghold;"

11. He will meet me with his grace;

He will let me see my will in my enemies.  
[*shorerai*, late Hebrew from *Syrians*.]

12. Kill them not, lest my people forget them;

But let them go begging within thy walls,

Reduce them to our charity [*magan* for *magen*] O Lord,

13. To the sin of their own mouth, to the speech of their own lips,

That they may be made to answer for their pride,

And that men may talk of their curse, and how it failed.

14. Accomplish it in thy wrath; accomplish it that they may be put to naught.

That it may be known that God rules in Jacob, to the end of the earth.

15. And [see vs. 7] "let *them* be reduced to starvation as they deserve, till *they* howl like dogs,

And let *them* go begging about the city."

16. Let them go begging for food,

And howl [*hiphill*] when not satisfied.

The volume is full of such fresh interpretations of the Psalms, on the idea that the writers had literary skill and talked good sense, which it is necessary to discover.

**Cuba and the Intervention.** By Albert G. Robinson. New York: Longmans, Green & Co. \$1.80.

This is a clear and unbiased account of one of the most interesting incidents

in our national history, indeed a unique incident in the history of the world, for there is no other instance of the intervention of one nation with the affairs of another at so great cost to the former, and with so great advantage to the latter. Mr. Robinson is very frank in his criticism of our mistakes in the administration of Cuba, but, on the whole, they are surprisingly few and trivial when we consider the difficulties of the situation and our national ignorance of the psychology and sociology of foreign peoples, even those just outside our doors. At least the reconstruction of Cuba was accomplished without leaving such *sequelæ* of hatred, debt and corruption as resulted from our reconstruction of the Southern States after the Rebellion. We quote the first paragraph of the author's summary:

"This experiment of the United States in colonial government was far from a failure, and perhaps equally far from an unqualified success. Much was accomplished which will be of lasting benefit to the Island of Cuba. The mistakes that were made were, in the main, individual. A fundamental error undoubtedly lay in the manner in which State-building was intrusted to hands untrained in the work and imperfectly qualified for it. Yet, in spite of all that lies open to criticism or to condemnation, it is entirely beyond question that when it withdrew on May 20, 1902, the United States left in Cuba an immeasurably better and surer foundation for a Cuban Republic than any upon which the Cubans could have built had they succeeded, without American aid, in expelling the Government of Spain."

**On Life's Threshold.** Talks to Young People on Character and Conduct. By Charles Wagner. New York: McClure, Phillips & Co. \$1.00.

Pastor Wagner's power lies in the fact that he is not ashamed to put commonplaces in plain language. He does not strive for novelty of idea, nor for originality in pleasing. Most of the things that we are sure are true have been said before and there is really no use pretending they are new. Especially in talking to young people, to whom many things are new that are old to us, is it necessary to avoid complexity of thought and speech, and be genuine, direct and simple. In this respect these talks are excellent,

and can profitably be studied as models by many of our preachers and teachers. The ethical instruction is developed by a process of reasoning instead of being based on dogma or authority, and is not even very definitely Christian, so there ought not to be any objection to the use of the book in the public school of any locality.

## Literary Notes

DR. LYMAN ABBOTT'S address on the "Personality of God," which aroused so much discussion a few weeks ago, is now published in the Worth While Series of T. Y. Crowell & Co., New York. 30 cents.

....Prof. William Cleaver Wilkinson's three epics of Saul, of Paul and of Moses, which we warmly recommended to our readers when they were first issued, are to be published with the author's other poems in a complete edition in five volumes by A. J. Scott & Co., Chicago, at \$15 the set.

....Baedeker's Guidebooks are not only indispensable to the tourist on account of their convenience, but are also valuable to those who stay at home and do their traveling by proxy. A complete set of them should be in every public library as reference books. A new edition of "London and Its Environs" has just been imported by Scribners (\$1.80).

....Prof. William James's admirable address on "Is Life Worth Living," an earnest plea for faith and courage much needed in these days of pessimism and suicide, is reprinted in "Ethical Addresses" (Philadelphia, 10 cents). Other numbers of this organ of the Ethical Societies contain addresses by Felix Adler, Percival Chubb, William M. Salter and Morris Jastrow.

....Among the spring books published by Little, Brown & Co., Boston, are new editions of their "History of North American Land Birds," by Baird, Brewer and Ridgway, illustrated with more than a thousand cuts and color prints, and of "The Colombian and Venezuelan Republics," by W. L. Scruggs. Their new fiction is mostly historical, among others, "My Lady Clancarty," by Mary Imlay; "On the Firing Line," by Anna Chapin Ray; "A Knot of Blue," by W. R. A. Wilson; "A Prince of Lovers," by Sir W. Magnay, and "Psyche," by W. S. Cramp, dealing respectively with the times of the Jacobites, the Boer War, Old Quebec, Princess Ruperta of Wal-davia and the Emperor Tiberius.

## Pebbles

"HAVE you heard about it? It's all over town." "What is?" "Slush."—*Harvard Lampoon*.

...."What is a 'faculty'?" "A 'faculty' is a body of men surrounded by red tape."—*Cornell Widow*.

....In the course of time maybe the Standard Oil Company will contend the States are in a combine to restrain its trade.—*The Dallas News*.

....If that great revival in Philadelphia is permanent in its results it ought to considerably reduce the vote at the next election.—*The Baltimore Sun*.

...."We will pursue this subject no further," said the Head Warden, as the Escaped Lunatic jumped over a precipice.—*Harvard Lampoon*.

....There are extant two letters addressed to Cæsar: Duæ Epistolæ de Republica Ordinanda," or, "Two Letters commanded by the Republic."—*New York Times*.

Oh, cut my trousers both broad and wide,  
And place a pocket on either side,  
And pad my coat as much as you can,  
For I'm a typical college man.

—*The Chaparral*.

Said Chesterfield Philander Strong,  
"I've had me frock cut very long.  
I wear it buttoned on the street—  
A sable robe from neck to feet.  
It costs me more that way, perchance,  
But then, it saves me buying pants."

—*Cornell Widow*.

THIS WAS SENT IN BY A SUBSCRIBER:

A hobo once boarded a freight,  
That was run at a very fast reight  
He fell under the wheels  
And made several meals,  
For the buzzards infesting that steight.

....This is how the editor of a paper acknowledged, the other day, the receipt of a new song, entitled "When First We Met." The "review" of this more or less melodious effort appeared as follows: "As the editor of this paper doesn't know a demi-semiquaver from a diapason or a bass clef from a bone tumor, he will not be expected to give an extended notice to this production. We can say, however, that the type used in printing the song is clear and plain, and the paper seems to be of the best quality of rag. The design on the front page is artistic, and the words are as tender as a veal steak and as poetic as the song of a meadow lark on a May morning. The melody is sound and all right, with no wind-galls or collar-marks. The harmony also seems to be in a healthy condition, with no patent defects or noticeable blemishes."

# Editorials

## When and How?

THE extreme significance of Professor Bascom's "Social Forecast" is spoken of elsewhere. We wish here to raise the question of when and how that sweeping of the field "for another deal in human rights and one more approach toward the kingdom of Heaven," which he predicts, is likely to be realized. Is it to come "not with observation," as a quiet process of social evolution, or is it to come with the devastating storm of a French Revolution?

That in one way or the other it will come we entertain no shadow of a doubt. The ideals of political and social equality have taken too firm a hold of the minds of men to be shaken off, and neither that spirit of tyranny which Professor Bascom rightly and bravely says is now abroad in our land nor yet that subtler spirit of subservience upon which we have so often commented, the demoralizing change in public opinion and popular education, will be powerful enough in the end to down that true American instinct which Kipling has assured us is to save us at the last. But the mere determination of a people to establish the reality of democratic society will not of itself control the ways and means of attainment. Objective conditions, the combination of many currents of social energy, will determine the when and the how.

Two of these objective conditions seem to us to be especially disquieting. They are distinctly unfavorable to progress toward equality by a quiet social evolution. One of these is the disorganized, the almost chaotic, state of the social forces opposed to a superbly organized plutocracy. The other is the half-good natured, half-cowardly attitude of the intellectual and spiritual forces inherent in the American people; the overpatient tolerance of tyrannical encroachments upon liberty, the unwillingness (to which we have heretofore called attention) to speak out on great issues of right and wrong.

The old Democratic Party, as Professor Bascom describes it without any mincing of words, has split cleanly and sharply in two, a plutocratic faction and a democratic faction. Mr. Bryan's leadership of the democratic faction does not seem at the present moment either forceful or judicious. Yet, obviously, he is the leader most likely to be followed. The Populists and the Socialists are at war with each other and among themselves, and still more hopelessly at war with the Bryan Democracy. All this is discouraging. The one encouraging fact in the situation is that the aggregate strength of these forces is increasing. They need only great unifying ideas and the organizing vitality of great leadership.

Of the indifference and cowardice of the educated classes it is difficult to speak with information and sure judgment. Like the Democratic Party, the educated element in American society must inevitably split, sooner or later. The men who care supremely for ease and social position must more and more align themselves with the plutocrats, becoming, as Mr. Ghent pointed out in his "Benevolent Feudalism," the most efficient agents of the privileged order. In all ages a sycophant priesthood has been the most effective police power of the oppressor, the apologist for his crimes, and the soother of his conscience.

But in all ages of oppression the prophet also has arisen as the fearless and wrathful arraigner of the subservient priest, and, happily, indications are not lacking that the class of the fearless prophets exists among us, and that it will increase in numbers and in power. The protest of Dr. Gladden and certain Congregational ministers about Boston against the acceptance of Mr. Rockefeller's gift to the American Board is from this point of view of much significance. Apart from the actual merits of the case in this particular controversy the mere fact that a group of influential men have been brave enough to speak their mind and record their protest is

morally bracing and sociologically hopeful.

There is a prevailing feeling in the community just now that ministers and university professors should hold their tongues on social questions. No professor is permitted to speak his mind in a straightforward way without being given to understand that his incontinence "hurts the university," which being translated means that he injures the university's chances of obtaining its proper share of the wealth of millionaires, whose great concern, as they approach the end of life, is to erect monuments to themselves. Unless this pressure can be resisted there is little hope for a rational and peaceful solution of our social problems.

For after all the answer to our question of the when and how turns absolutely upon the vigor and fearlessness of discussion. The sociological law that has ruled in human affairs from the dawn of history until now will not be abrogated. Physical fighting and intellectual fighting vary inversely to each other. When we have vigorous, intellectual fighting we bring about inevitable social changes rationally, peacefully, constructively. When men become intellectual and moral cowards the day when the sword of steel must be unsheathed is not far distant.

## The Anglo-Japanese Alliance

ALTHO Great Britain has not sent a soldier or a torpedo boat to aid Japan in the present war, her alliance has been an immense advantage to the Eastern island Empire. It has made it possible for Japan to fight one enemy instead of two. But for England it is certain that Germany or France would have gone to the aid of Russia, and that would have turned the scale. Then Japan could not have held full command of the sea, for it is on the command of the sea that Japan has depended for success. As it is, with Great Britain holding off Germany and France, Japan has been able to pour in soldiers and supply them with all the munitions of war, and gain an overwhelming victory. Such has been the

effect of the alliance thus far. But what next?

We may safely assume that if peace is not hastened by the submission of Russia the Russian army will soon be driven back to Harbin. The whole of Manchuria will be restored to the complete control of China. We may also assume that Vladivostok will be captured. With that will go the whole Asiatic coast east of the Amûr. Of course, Japan will seize the island of Saghalien, and may, if she wishes, also take Kamtschatka. When peace comes and she does the generous act of restoring Manchuria to China, she will certainly hold Port Arthur, and Saghalien, and in all probability Vladivostok. We can hardly think of her giving that back to Russia, even at the price of heavy damages; and the holding of Vladivostok will mean the region also east of the Amûr, if not Kamtschatka. Japan is sure to insist that Russia shall be shut off from the Pacific. The Pacific will then be an ocean divided between Japan and the United States, until China shall have well waked up.

But what will Germany and France say to this? What can they say if the spirit of the Anglo-Japanese alliance holds? When Japan defeated China the three Powers, Russia, Germany and France, were able to forbid the enlargement of Japan on the Continent of Asia. Conditions are different now. Russia is at the mercy of Japan. Germany and France can protest, but they cannot use force; for force is war, war in support of Russia, and the treaty requires Great Britain to support Japan in case a second Power makes war with her. Germany and France can then do nothing without bringing the British fleet into play. The conditions of peace will then be what Japan dictates, and that will be the expulsion of Russia from the Pacific.

And then? Will the alliance be renewed, and on what terms? Under the present agreement either nation can call on the other for help if attacked by two Powers at once. After this war there is no likelihood for a long time to come that either Power will thus be attacked by two others—certainly not Japan, and we can see little chance that Great Britain will be drawn into a European war. Her

danger-points are not in Europe, but in Tibet, Afghanistan and Persia. In the case of each of these it is only Russia that can block English ambitions. And yet it will not be British but Russian ambitions that can provoke war. It is not at all unlikely, as we have previously said, that Russia will desire to recover her lost prestige by extending her domain in the west of Asia when driven in on the east. Russian attack on Herat would be met by a British advance from Cabul. And yet we do not think Russia would be likely for a good while to stir up Great Britain. She would rather threaten Mongolia, with the possibility that she would then find Japan teaching China how to resist.

But the London *Times's* Tokyo correspondent suggests that when the treaty is to be renewed it be on other terms. He declares that what Japan now wants is a fighting alliance with Great Britain against the world—an alliance, if we understand it, in which each will help the other in its wars, without waiting for a second foe. For example, he says, let Japan consent, in return for the alliance, to aid Great Britain actively should she be driven to a war on account of Tibet, Afghanistan or Persia. Japan would help England keep Russia out of the Persian Gulf, and be able to turn in 800,000 soldiers in aid of the British land and sea forces. This she would be willing to do in payment for the protection which Great Britain would give her in holding the Pacific coasts now ruled by Russia. Then the two Powers, with the United States as a benevolent spectator, would be able to dictate the peace of the world.

But altho the advantage in such a new treaty would be considerable to Great Britain, we do not anticipate that she would agree to make the terms any wider than they now are. It must be remembered that there will soon be a new election in Great Britain, with the Liberals in power, and they are always opposed to alliances that may lead to war. The advantage of such a treaty to Great Britain would only be in case of war following an attempt to annex Afghanistan or Persia, and this the Liberal Government will not desire. Probably the renewal of the present treaty for another term is all that the new Government will venture to do.

## The Scientific Romance

IN reading the novels that pour forth in an unceasing and increasing stream one is most forcibly struck with their astonishing sameness. This is apparently due not so much to lack of originality in the authors, altho that is often painfully evident, but to adherence to the tacit rule that the novel can have only one theme, romantic love. That this is a mere convention is evident, for we know that love is not the strongest of passions in every human being, nor is the courtship the most important period in every one's life. While it may be conceded that love has a unique significance and general interest which will ever keep it in special favor with the poet and novelist, there is no justification for making it the motive of ninety-five out of every hundred romances, as is the custom now.

Authors commonly lay the blame for this state of things on the readers and say that the public demand it. That this is false is shown by the fact that in many of the most popular novels the love making is obviously introduced only as a concession to the convention or is left out altogether. The most striking example of this is found in Jules Verne, who, after he was forty years old, he it noted, struck the new field of romance which he has ever since cultivated with industry and success. He at once signed a contract with a Paris publisher to write two books a year at \$2,000 apiece, and this contract was terminated only by his death last Saturday at the age of 77. His novels owe their vast popularity to their originality of theme, for their deficiencies are so glaring that pupils in the first class in rhetoric can point them out. There is no wit, no beauty of language, no descriptive power, no character drawing, no love interest, no plot. Like a maker of fireworks, he sets up an artificial frame to hold as many facts as he can tack on it. He obviously gets up his subject, a country or a science, from encyclopedias and text-books, and puts in his statistics in the most inappropriate places. His romances are full of cold, undigested chunks of information. They are as popular in all other countries as they are in France, because, having no beauty of

style, they can be translated into another language without losing anything, like the multiplication table. His science is as unreliable as the history in the average historical novel. His Englishmen, Americans and Russians have not sufficient resemblance to reality to be called caricatures.

All these defects are enough to consign any author to oblivion—if people did not persist in reading him in spite of them. For the people, unlike the critics, care more for what is said than the way it is said. There was no vacant chair for Verne among the 40 of the French Academy. The anthology of the world's best literature has no space for him in its 40 volumes. However completely he may be ignored by the historians of literature, his influence has been greater than that of many of the recognized leaders of thought. He opened the eyes of millions to the romance of invention, the delight of exploration, the wonders of science. Without leaving his easy chair in Amiens he personally conducted, after the manner of Cook, crowds of tourists to every known and unknown part of the earth's surface, down toward its center and up through the solar system. He explored in three dimensions, and was only hindered by practical considerations from entering the fourth. Indeed, if we accept the hypothesis of his successor, H. G. Wells, that the fourth dimension of space is time, we cannot so limit his intellectual activity, for many of his stories deal with the discoveries of the future. But agile and free as was his imagination, limited not to the probable or the possible, but only to the plausible, it has been outstripped by the advances of science. Discoveries more wonderful than the wildest dreams have become commonplace, and even during his lifetime 80 days has come to be an unnecessarily long time for a trip around the world.

Jules Verne was not the originator of the scientific romance, nor its best exponent. Poe started it, as he did the detective story, the cryptogram story, and so many others. And now in the hands of Mr. Wells it is developing greater power and literary interest. But Verne's novels are still worn out rapidly in the public libraries. They are mostly read by boys now, but this is in the natural

course of things. The literary garments of a former generation are always cut down to make the small clothes of their children. "Arabian Nights," "Robinson Crusoe," "Pilgrim's Progress" and "Gulliver's Travels" were, like "From the Earth to the Moon," written for adults. We can remember well the family quarrels caused by the advent of the old Scribner's magazine with its blue cover of the bracket-sawed design, because each one wanted to read "The Mysterious Island" first. And even in this sophisticated age the father who takes the volume out of his son's hand to see what he is reading is not likely to lay it down until he has finished it. Verne's characters are wooden, but so are the ancient Egyptian statues now on view in our museums. Captain Nemo will still voyage under the sea in the Nautilus and Captain Hatteras press onward to the North Pole over the field of ice for many years to come.

## Oil and Railroads

WHAT can be accomplished for the relief of the complainants by this movement against the Standard Oil Company in Kansas? An inquiry concerning the company's business is to be made by Commissioner Garfield. What will probably be the character of his report? The public should not be misled as to the situation in the Kansas oil fields. There has been during the last year a rapid increase of output. In January last the product of the wells was 25,000 barrels a day; it is now larger. The capacity of the Standard's two refineries—one in Kansas, the other in Missouri—is 7,500 barrels; the only independent refinery consumes 200 barrels; the surplus accumulated so fast that on January 1st there were 5,600,000 barrels in the Standard's local storage tanks. If the projected State refinery should be ready for work three months hence, it could then use only 2,000 barrels a day. Litigation cannot force the Standard to buy oil or to surrender the use of its pipe lines to the owners of wells. Even if their oil should enter the pipes, it could be delivered only to a Standard refinery.

What the complainants need is local independent refineries that will consume their output, or an independent pipe line that will carry it to independent refineries on the Gulf coast for shipment to foreign markets. For such projects much capital is required. The Standard has invested about \$10,000,000 in these oil fields. Familiar with the history of such competitive ventures, capitalists are unwilling to enter upon a contest with the Standard there or elsewhere. If they could not rely upon pipe lines of their own to the coast, constructed at great cost, they would fear the depressing effect of discrimination in freight charges. This brings us to the question of railway favoritism.

It has already been shown that the Standard has been assisted by the railways in checking small independent ventures in Kansas. The Atchison road appears to have been in its service, as it was in the service of the Colorado coal company and of Mr. Morton's brothers in the salt business. Numerous official investigations and reports prove that throughout its career the Standard has fattened upon railway discrimination in its favor and against struggling competitors. There can be no successful independent movement in the Kansas oil industry, or in some other industries, until the rule of fair play and equal treatment for all shippers is enforced on the railways. This rule cannot be enforced by State laws.

We do not expect that Commissioner Garfield's report will disclose a general use by the Standard at the present time of such methods as were employed to accomplish the ruin of the late George Rice. But a searching and impartial investigation at the present time will show, we think, that railway discrimination and oppression have assisted the Standard in controlling the occasional development of new oil fields, like these in Kansas. With respect to a part of what has taken place in Kansas, the Standard offers a reasonable defense, but there can be no reasonable excuse for any combination with railroad companies designed to

overcome independent industry by an unjust use of freight charges.

Such evidence of recent discrimination as Commissioner Garfield may obtain should be accompanied by a summary of the abundant proofs of similar and more injurious discrimination in the past. The purpose of all that injustice has been accomplished, but the influence of it survives and is shown in the railway rebates and other discriminatory devices of the present day.

It is to such unlawful favoritism and to the use of such devices that the movement against the Standard in Kansas, the Garfield inquiry, the proceedings against the Beef Companies, and all similar investigations inevitably direct attention. The first and most important step to be taken for the relief of producers who suffer by reason of the unjust and unlawful acts of powerful combinations is one for the prevention of illegal favoritism in the freight charges of common carriers. Because of the importance of this step we regret that the movement in Congress in behalf of the desired reform has been injuriously affected by the character and aims of the Railroad Rate bill which the House passed.

This bill is aimed chiefly at the published general rates of railroad companies. As to these rates there is no general complaint. The officers and the counsel of the companies have met this attack upon the published and lawful rates by defences and arguments of much weight. Thus the real question is befogged.

This question is, how shall the use of concealed and unjust rates, of rebates and of discrimination by terminals, sidetracks and private car lines be prevented. All this is now forbidden by law, but discrimination is still practiced. Occasionally a victim of it suspects the use of loaded dice against him and succeeds in bringing the facts to light. This is shown in the recent history of the Atchison Company. How can the law be enforced? How can such discrimination be detected? How should the power of the national Government be used to detect it?

These are the questions which should determine the character of the railway

rate legislation of the new Congress. Some method must be devised by which the Government's agents can ascertain at any time and at all times whether a railroad company is charging one shipper less than another, and is using its enormous power to enrich one man or corporation at the expense of another's ruin. Railway legislation that will not open the way for getting such knowledge of a railroad company's charges will be of little value to the public.

## Hysteria

HYSTERIA is a very old disease. Hippocrates and Democritus exchanged letters about it. And doubtless Adam humored Eve through "spells" of it. No other disorder has so many symptoms. It is a voluntary or involuntary affliction, and there are many phases of it for which the sufferer is morally responsible. Yet it is about the only one we have with a distinctly religious history. During the middle centuries it appeared as an epidemic from time to time. The Children's Crusade was a manifestation of it. Visions, demoniacal possession and witchcraft were common symptoms.

And while we outgrow some phases of it, we still have the disease according to the mental, moral and physical fashions of the times. Some think that it is peculiar to women—"simply an exaggeration of certain female traits," according to one writer. But men are also subject to it. The difference is not in the disorder, but in the expression of it. Women, being more or less subjective by nature, make an emotional display of it; while a man, being objective in temperament, shows the same nervous distraction by hitting something, or accomplishing something, either foolish or heroic. If it is a fact, for instance, that fighting between men is an evidence of physical courage, it is also a sort of aboriginal hysteria, and when women fall into a similar rage it is recognized as the most disgusting virago form of the disease. And as a cackling, house cleaning irritability is another symptom in women, so "business" is the name of many a man's nervous disorder. His neurons have often caused panics in the Stock Ex-

change, and they have more than we suspect to do with his "bull" and "bear" performances in the markets. But if women bid angrily against one another at an auction for a candlestick, the same men who have yelled themselves hoarse on Wall Street do not recognize the symptoms of a common disease. The difference is in the pressure necessary to produce the same result. A candlestick seems trivial compared with a million dollar deal. And this presents the chief distinction which sex makes in the character of hysteria. A woman may fall into hysterics over anything or nothing. As a rule men do not. They hold together longer and do more damage when they go to pieces.

There is an intellectual form of the malady, very prevalent, and peculiar in that it has the same effect upon men and women. They are those people who pursue a course of conduct by rote, with a sort of ethical hysteria (or it may be logical!) which places them out of touch with real life. They have the doctrinaire symptoms, and always incurable, because they have founded their error with nervous rigidity upon an ideal of righteousness. The trouble is with the ideal. It does not, and probably never will, fit into the scheme of things. And they are among the most trying people in this world because their very attitude convicts all comfortably wise and adaptable people of sins, crimes and cowardice.

According to physicians, hysteria results in a weakening of the will power, but this reflex action or inaction of the mind is what laymen call stubbornness. And of course men are as grievously afflicted with it as women are. But it is possible to wheedle a man out of his nervous perversity, because his instincts are not involved. The case is different with a woman, whose obstinacy becomes hysterical. Her traits are involved, and by nature they are tolerated in this direction. She is like the hen whose maternal instinct is satisfied with "setting." If she never hatches a descendant she goes on setting because she has become the victim of a cataleptic kind of hen-hysteria. So many a woman loses sight of the ultimate purpose of her own course of action, because her mind is obsessed by some fixed idea. She will

lie in bed thirty years, deny herself all the joys of a normal existence, and for the same reason that the hen wears her breastbone bare upon a nest full of brickbats. They have both lost the impatience of hope, the power to expect results. The woman does not hope to recover, and the hen does not really expect to hatch a chimney. But neither can be divorced from a fixed idea which originally looked in that direction.

As hysteria develops in neurotic intensity, and as more and more of the faculties are involved, the women victims increase. And some phases of it are mildly immoral because they represent the inane way some of them make a conscientious business of degenerating. The beginning of the malady in such cases is frequently self-idealization and a corresponding impression that they are not sufficiently appreciated by others. A woman will go into a state of chronic martyrdom, just as a widow puts on mourning, because she thinks her husband does not "understand" her. And the more she broods over the matter the more she is convinced that nobody does. She is the kind of woman who sits in the dark yearning for "sympathy" and pitying herself, while her really afflicted family are gathered in the parlor making the best of the situation. She soon gets to the place where she longs to "pour out her very soul" to somebody. And what a puerile soul it is, prostrated by a sort of moral seasickness which results in that kind of heaving spirituality so embarrassing to reverent people. The preacher is one of the persons who falls a victim to this woman's malady. She is a spiritual invalid seeking advice, not because she is willing to follow it, but because it gives her an opportunity to "pour out her soul," and incidentally tell how little encouragement she gets at home to live the "higher life." She has that form of fainting piety which is difficult to cure and dangerous to deal with. She languishes with spiritual fatigue, and she ought to be "turned out of the church" until she can do better.

The woman who thinks she has committed the unpardonable sin belongs to a more pathetic class. More women than men suffer from this hallucination and they are usually innocent, anæmic spin-

sters. But when one of them confides in her pastor she can exhaust his reason and his theology in less time than the most accomplished infidel. And she withdraws from the argument more firmly possessed than ever of her unpardonable sin. What she needs is not spiritual advice, but outdoor exercise and a course in mathematics. Arithmetic is often a very good antidote for some foolish ideas.

The "family doctor" is probably the only one who knows how many women are victims of hysteria. Besides the really sick there are a very large number of self-elected invalids under his care. They are the women whose imaginary maladies have been labeled, those who have none, those who have mysterious diseases and who enjoy the distinction of having been "given up" by any number of doctors. (They live longer than the others!) The woman whose physician has humored her with a name for her affliction has the advantage, for she is thus enabled to study and develop her symptoms more accurately. And however dull she is in other matters, she acquires power for describing pains that is more harrowing than a modern novel. The woman who has no disease and is told so with unflattering emphasis, often clings tenaciously to the opposite conviction. She feels the same sense of injustice that a genius has whose gifts are ignored by his friends. And she is often so resolved to die of her disorder that she actually does die, to the chagrin of the doctors. But the star heroine of this entire group is the woman who has been "given up." She is canonized by this fact in the neighborhood. Her family regard her with awe and society treats her with funereal reverence. To her health is an egregious delicacy. And she resents an intimation to the effect that she is not as "bad off" as she thinks she is. She will take no advice from her family, but the doctor's dominion over her is absolute. She quotes him as some other people quote divinities. And she follows his minutest instructions with the hopeless air of one who is determined not to be benefited by them. If she only knew it, physicians have two reasons for giving up a patient, either because she cannot be cured or because she *will* not be.

When we consider the number of women afflicted with voluntary hysteria it is easy to understand the spread of Christian science. This is the only thing conceivable that is absurd enough to meet the absurdities of their condition. And at best it is only another, more interesting, romantic form of hysterics into which they progress without the shock of actual recovery.

### The Naked Spiritualities

WHAT in England are called the *middle class* we call the *well-to-do people*. They are the people who can take good care of themselves, who ask no favor of anybody, who supply their own comfortable and respectable pleasures and religion. To them belongs the Church, which they support for their own social and spiritual wants, understanding that the Church is of the well to do, by the well to do, and for the well to do.

What in England are called the *working class*, and are supposed to be below the middle class, in this country merge in part into the well to do and have the same interests. But with the stratification of society there is a growing tendency, emphasized by the workingmen's unions, to separate them from the well to do, and to make of them a socially and religiously inferior class, with other interests. It is utterly un-American thus to separate them from the well to do, with whom many of them belong, and to crowd them down with the shiftless, the improvident and the frequenters of saloons, the "poor men's clubs," so called.

For ninety-nine hundredths of our churches the "naked spiritualities" are all that is provided or desired by these well to do people. The church building is opened on Sunday for religious services and nothing else. It is opened again on a midweek evening for another bare religious service. Beyond that there is nothing but an occasional "sociable" for the families of the Church. For the larger part of the week the church is unused, of no help to anybody, the fires out, and the key put away by the sexton.

Is this a Christian way? Did Christ confine himself to the naked spiritualities? We hear that he occasionally preached to the multitudes on a moun-

tain, or opened the roll in the synagog and expounded the Word or told stories to the people; but we gather the impression that what drew the people was less his spiritualities than it was his temporalities. The poor people followed him because he healed and helped them.

There is no question that the so-called working people are now to a great extent separated from the Church. They have their Sunday meetings of their various organizations, and they have the saloons on the corner, and such other gatherings they prefer to the Church. They are not hungry for spiritualities. They want sociality, or some more practical advantage or pleasure, such as the Church does not supply.

If the Church is to reach them it must go back to the example of its Master; and this is done by what is called the institutional churches. We have such in this country; they have such in England. But they are so few that most church-goers have never seen one. They are both a church and an institute. There must be, as the Rev. C. Sylvester Herne, who has charge of one of the best in London, says, one door to the institute opening from the street, and another door opening into the church. This is the day of clubs, clubs for all sorts of people, for rich people and for poor people; and the Church which reaches people must be a club for them, and supply something more than the naked spiritualities. Otherwise it will not get the people. There is no reason why people who have bodies as well as souls, who want recreation and exercise as well as Gospel, should have to go to a drinking place for billiards or trapeze, or for a quiet hour with a friend and a cigar, for a reading room or a swimming bath.

It is true that the Church's business is to preach the good news; but what good news? Is there no good news for the body as well as for the soul? and how do we reach the soul except through the body? Was not the evidence that Jesus himself gave to John of his Messiahship first his care for the bodies of men—"the lame walk, the lepers are cleansed," and, last of all, "to the poor the Gospel is preached"? Is not the Gospel of naked spiritualities an amputated, mutilated Gospel?

It is clear that if the Church does not want to be a class Church, a Church for well to do people only, it must add the institute to its service. It will thus only be a really democratic Church. If it does not do it the evidence will be clear that it does not want such people, and that the Pharisees did not all die two thousand years ago.

#### **The Protestant Cathedral**

We do not imagine that the great "Dom," the "Protestant Cathedral" erected and lately dedicated by the Emperor of Germany as the center of German Protestantism, will bring any very great support to its faith. The object of a big church like that is display of magnificence and power. It is built by the largesse of the rich, not by the self-denials of the people. It is meant as a mausoleum for dead Hohenzollerns. The true cathedral is the church built for the people. It is not all arches and columns and stained windows, chancel and aisles. It has reading rooms and school rooms, and kitchens and gymnasiums, and play rooms and lecture halls, which are not too finely carpeted and cushioned for people who have no costly upholstery in their own homes. The Berlin Dom is magnificent—it befits an Imperial court, but there are unpretentious churches in the city which can help religion quite as much. The days of cathedrals have pretty nearly passed, except as show places for traveled visitors, while the day for churches where the people live, churches that will understand and supply the wants of the people, material, intellectual and social, as well as spiritual, is now upon us.

#### **Pauper Labor**

The expression is old and familiar. We find it adopted in a national political platform, as follows:

"We hold that the most efficient way of protecting American labor is to prevent the importation of foreign *pauper labor* to compete with it in the home market."

We know what a "pauper" is; he is one who cannot, or does not, support himself, and is supported by public or private charity. And we know what "labor" is; it is a term used collectively to

designate those who support themselves by their own work. But we do not know what "pauper labor" is, for the words are a contradiction in terms. What one asserts the other denies. There is either pauperism without the labor, or labor without the pauperism. In real fact the persons spoken of so contemptuously as "foreign pauper labor" are people who work hard, earn a living for themselves and their families and ask no support from charity. They add to the productive and acquired wealth of the country. They are a blessing to it and not a curse. They are to be welcomed, not scorned or libeled. They are quite as worthy of honor as are those who insult them.

The authorities of the Catholic Church in France, and equally in Rome, hardly know whether to be pleased or pained over the impending separation of Church and State. For their encouragement we will point them to what the Church of England does for its support and for benevolent purposes, by voluntary contributions; all in the nature of Government aid being strictly excluded. Its members raised in 1904 for assistant clergy and Easter offerings, \$3,542,210; for elementary education, \$4,577,045; for general parochial purposes, church building, etc., \$18,532,230; for home mission, \$3,169,960; for foreign missions, \$1,109,405; for training colleges and literature, \$660,475; for clerical relief, etc., \$1,109,905; for various philanthropic work, \$2,586,140; and the total for all purposes is \$39,058,365. Now let the French Church show a somewhat similar generosity and freedom will be a blessing.

That Mr. Rockefeller has given \$100,000 to certain missionary colleges in the East ought to be a matter of satisfaction to those who know what is their need, and how much good they do. And yet we are not surprised that fifteen ministers have been found to sign a protest against receiving the money. These gentlemen fear the gift of ten thousand dollars, perhaps, to a school in Turkey or in Ceylon will corrupt its teachers so that they will not properly instruct Armenians and Singhalese in the atrocities of American trusts. We would not have

these schools refuse money from the Sultan of Turkey or from some Bodhisata who sits cross-legged before Buddha's tooth at Kandy.

The French Governor-General of Cochin China has spent four months in the Philippines, and he is amazed at "the splendid results of the American colonial system," where "the natives are being educated, receiving the benefits of municipal and provincial liberty, and are rapidly acquiring the spirit of republican institutions." He thinks France could take lessons from us in the Philippines. Of course, our method is novel. We are doing what no English or French or German or Spanish Government has ever tried, and the question to be settled by us is whether Orientals are fit for free self-government.

Heaven helps those who help themselves. Japan is helping herself to Korea and Manchuria and she gets an island thrown in, or, to speak more accurately, thrown up. A volcanic irruption beginning December 5th has resulted in the formation of an island in the sea near Iwo Island in Southern Japan, which proves to be nearly three miles in circumference and 480 feet high, and contains a boiling lake. The natives who visited it in a canoe greeted it with many *banzais*, and it has been named Nushima. Such islands have a way of disappearing again and leaving a shoal where they were, but *absit omen!*

Washington is governed, and governed well, not by the people, but by a commission. Ever since the great storm, five years ago Galveston has been governed by a commission of five men, and governed so well that now Houston, a city too heavily in debt, is to try the same plan. The new act legislates out all the present municipal officers, and puts the entire authority in the hands of five men, with full power of removal—so that the city will be governed on business principles, just as is a bank by its directors. If the people wish it so it is as much popular government as it would be if every officer were separately elected.

Political selfishness never had a more confessed illustration than in the failure of Delaware to elect a United States Senator. J. Edward Addicks holds in his fist, or his pocket, some fifteen members of the Legislature who cannot escape him. It is impossible to elect him, but he will allow nobody else to be elected. So the Legislature adjourns, and for the next two years the State will have but one Senator. Luckily it is a small State, and it is the fault of the people if they submit to such selfishness. They order this matter better in Missouri.

Midshipman Arrowood, the deserter, has been sentenced to dismissal from the Navy, with loss of citizenship. It is a sad conclusion to what might have been an honorable career. He has no country. Let him go abroad and the flag does not protect him. We had hoped that he might be saved this final disgrace, and be put in the rank of a common seaman until he had served his time and been allowed to get over his foolishness.

The Central Presbyterian and other white Presbyterian churches in Atlanta and the South are listening with great delight to addresses by a negro missionary in Africa of the Southern Presbyterian Church. But the white Congregationalists of Atlanta, who are getting up a Southern Congregationalists' Congress, are particular not to put one colored man on their program.

The proposition of Governor Hoch to christen the battleship "Kansas" with a bottle of crude Kansas oil is surely like one of Dr. Osler's jokes. Of course there is nothing sacrosanct in a bottle of champagne, but, on the other hand, oil smells, and crude oil is dirty, and Kansas is a very serious State and does not always see the ludicrous side of things.

The sympathy of the country goes out to Secretary Hay in his illness. We are glad to learn that he does not intend to resign, but expects to recover his health and continue at the head of the Department of State.

# Insurance

## Boiler Insurance

THE recent disaster at Brockton, Mass., where the explosion of a boiler at the R. B. Grover shoe plant destroyed seventy lives, injured many people and brought about a property loss of a quarter of a million dollars, serves to call attention once more to the subject of boilers as insurance hazards. In the Brockton tragedy the boiler which caused the disaster had not been in use for some time. It had been inspected, it is true, in December of last year by inspectors of the Hartford Steam Boiler Insurance Company, but there is no knowledge as to the cause of the disastrous explosion derivable from this inspection. Theoretical causes abound, but they possess only incidental interest. The point remains that for some reason this particular boiler exploded and instantly caused death, casualty, suffering and property loss. The event is one that should not be quickly forgotten, for there are thousands of remaining boilers in the case of any one of which it may be possible for similar conditions to recur. If the inspections made in the case of the Brockton boiler were inadequate and some other sort of inspections might have discovered latent defects, then such inspections ought to be made obligatory not only in Massachusetts but in every State in which there are boilers which may explode. This cannot be done too soon, for seventy lives, crippled humanity and a large financial loss is too great a price to pay for a single unsafe boiler.

## 1904 A Record Accident Year

ACCORDING to the report of the Interstate Commerce Commission, covering the months of July, August and September of last year, which has just been published, the railroads of this country did damage to life and limb which the report fittingly characterizes as "the most disastrous on record." Seven hundred and fifty-six railroad employees and 228 passengers were killed during the summer months named. Railway accidents are increasing in point of numbers as well as fatalities with startling speed, as will be perceived when the

tabulations in the report are studied.

During the quarter ending with December, 1903, the number of passengers killed in train accidents was over three times the average of the nine preceding quarters. During July, August and September of 1904, according to the Commission, 50 per cent. more passengers met death on the rail than was the case during the last three (heretofore record) months of 1903. The most distressing accident that took place was the one which occurred on August 7th, in consequence of which 88 persons were killed, where Western floods swept away a bridge that spanned Dry Creek, across which a Colorado passenger train was just pulling. The engine and all the cars but two were precipitated into a raging torrent 35 feet deep, and were swept down by the bridge wrecking flood.

During the quarter covered by the report there were 2,760 derailments and collisions. The damage to engines, cars and equipment reached a total of \$2,439,073. Fourteen thousand two hundred and thirty-nine casualties in all took place. In most cases accidents resulted because of human fallibility. Dispatchers gave wrong orders; operators took many messages incorrectly or forgot to deliver the dispatches altogether. Engineers and conductors forgot train orders after receiving them. One engineer fell asleep in his cab and this fact remained unnoticed by his fireman until it was too late to prevent the resulting accident. The crews of certain wrecked trains had been on continuous duty for sixteen to eighteen hours. The whole melancholy report is an eloquent argument in favor of accident insurance.

THE unanimous approval of the directors of the Equitable Life Assurance Society was given on Tuesday, March 21st, to the announced plan of mutualizing that company. It is understood that harmony has now been restored in so far as the present administration is concerned. The charter will be amended to meet the new conditions, but the exact terms of the necessary amendment have not yet been made public.

# Financial

## Objectionable Tax Projects

THE attitude of the majority in the New York Legislature toward several new tax projects and one existing tax law is not what it should be. It appears to have been decided that the tax on the surplus and undistributed profits of savings banks shall not be repealed, altho repeal was promised in last year's campaign by Governor Higgins, and in his message of January 4th he earnestly recommended repeal. It is unwise to tax thrift and to impair the earnings of the savings of the poor. It is now proposed (with the support of a caucus of the Senate majority) that there shall be a tax on the premiums of all life insurance policies now in force. This tax ought not to be imposed. The insuring of lives should not be discouraged; the cost of such insurance ought not to be increased by taxation. Another bill, having similar support, provides for a share tax upon every sale at the Stock Exchange. This would be a tax on trade and would tend to divert trade to other Exchanges. It is an unwise proposition. Such evils as may be associated with Stock Exchange trading cannot be cured or prevented in that way.

WE have received from Fisk & Robinson, the well known bankers, *The New York Clearing House*, a little book remarkable for the fine quality of its one hundred illustrations and for the character of its text—historical, explanatory and descriptive—which is the work of William J. Gilpin, Assistant Manager of the Clearing House, and Henry E. Wallace, of *Bradstreet's Journal*. The portraits of New York's bank presidents have been finely reproduced.

....The report of the American Telephone and Telegraph Company for the calendar year 1904 is accompanied by a valuable map (about 24 by 40 inches) showing all the local and long distance lines of the company in the United States and Canada. The year's increases were as follows: Gross revenue, from \$16,545,632 to \$18,546,659; instruments in use, from 3,779,517 to 4,480,564; exchange stations, from 1,525,167 to 1,799,633. If stations operated under sub-

license contracts and those on private lines be added, the total now is 2,003,213.

....The substance of a series of lectures delivered before the classes of the New York University School of Commerce, Accounts and Finance by Prof. Charles E. Sprague (President of the Union Dime Savings Institution and Chairman of the Savings Bank Section of the American Bankers' Association) is to be found in an admirably printed volume, recently published under the title of *The Accountancy of Investment*, and designed for use as a text-book. We have rarely seen a work so carefully and completely adapted to the purpose of its author, or one of the kind in which the explanations are so clearly made. It is a book of very decided value outside of the class room as well as in it. While we are not inclined to single out any one of the chapters for special commendation (because all of them are so useful and instructive), we have been impressed by the fact that the one on the valuation and amortisation of bonds well deserves the attention of investors and banking institutions.

### ....Dividends announced:

- N. Y. Dock Co. (Preferred), 1 per cent., payable April 15th.
- Natl. Park Bank, quarterly, 4 per cent., payable April 1st.
- Buff. & Susq. R. R. Co. (Common), 1¼ per cent., payable April 1st.
- Amer. Woolen Co. (Preferred), quarterly, 1¾ per cent., payable April 15th.
- N. Y. Cent. & H. R. R. Rd., 1¼ per cent., payable April 15th.
- Am. Locomotive Co. (Preferred), 1¾ per cent., payable April 21st.
- Westinghouse Elect. & Mfg. Co. (Preferred, Assenting and Non-Assenting), 2½ per cent., payable April 10th.
- Bankers' Trust Co., 1½ per cent., payable April 1st.
- Century Realty Co. (extra), 2 per cent., payable April 1st.
- Century Realty Co., semi-annual, 4 per cent., payable July 1st.
- Rome, Watertown and Ogdensburg, 3½ per cent., payable March 31st.
- Am. Chiclé Co. (Preferred), quarterly, 1½ per cent., payable April 1st.
- Am. Chiclé Co. (Common), 1 per cent., payable April 20th.
- Electric Storage Battery Co. (Common and Preferred), 1½ per cent. each, payable April 1st.
- Minn. & St. Louis R. R. Co. (Pacific ext.), Coupons, payable April 1st.

# The Independent

VOL. LVIII

NEW YORK, THURSDAY, APRIL 6, 1905

No. 2940

## Survey of the World

### Santo Domingo's Revenue and Debts

At the request of Santo Domingo and with the acquiescence of the foreign creditors, President Roosevelt has approved an agreement or proposition the effect of which will be that the revenue of the republic will be collected by Americans, and that a little more than half of it will be set aside for the settlement of creditors' claims. But this money is not to be distributed at present. It is to be held in a New York bank, pending final action in the Senate upon the treaty recently negotiated. This proposition, of which we spoke last week, was the subject of prolonged discussion at Washington in conferences at which Senators Spooner and Lodge were consulted by the President and members of the Cabinet. On the 28th the President addressed a letter of instructions to Mr. Ade, Acting Secretary of State. At the beginning he quoted a message from Minister Dawson, who said that the Dominican Government, under the pressure of foreign creditors and domestic peril, offered to nominate a citizen of the United States to be receiver of the southern ports, pending ratification of the treaty. The four northern ports were to be administered under the arbitral award. Of the receipts, 45 per cent. was to go to the Dominican Government, and 55 per cent. was to be deposited in New York, "for distribution after ratification." The creditors were to agree to take no further steps in the meantime. The Italian, Spanish and German creditors, Minister Dawson continued, accepted this unconditionally; and the representatives of France and Belgium would recommend acceptance. Some *modus vivendi*, he added, was absolutely

necessary. Mr. Roosevelt then said, in this letter of instructions:

"I direct that the Minister express acquiescence in the proposal of the Government of Santo Domingo for the collection and conservation of its revenues, pending the action of the United States Senate upon the treaty, to the end that in the meantime no change shall take place in the situation which would render useless its consummation or bring complications into its enforcement. The Secretary of War of the United States will present for nomination by the President of the Dominican Republic men to act in the positions referred to, in both the northern and southern ports. The utmost care will, of course, be taken to choose men of capacity and absolute integrity, who, if possible, shall have some knowledge of Spanish. All the moneys collected from both the northern and southern ports, not turned over to the Dominican Government, will be deposited in some New York bank to be designated by the Secretary of War, and will there be kept until the Senate has acted. If the action is adverse the money will then be turned over to the Dominican Government. If it is favorable it will be distributed among the creditors in proportion to their just claims under the treaty."

In the meantime, he continued, Professor Hollander (who sailed for Santo Domingo three days later) would thoroughly investigate all the foreign claims and report thereon:

"This action is rendered necessary by the peculiar circumstances of the case. The treaty now before the Senate was concluded with Santo Domingo at Santo Domingo's earnest request repeatedly pressed upon us, and was submitted to the Senate because in my judgment it was our duty to our less fortunate neighbor to respond to her call for aid, inasmuch as we were the only Power who could give this aid, and inasmuch as her need for it was very great. The treaty is now before the Senate, and has been favorably reported by the Committee on Foreign Relations. It is

pending, and final action will undoubtedly be taken when Congress convenes next fall. Meanwhile Santo Domingo has requested that the action above outlined be taken—that is, she desires in this way to maintain the *status quo*—so that if the treaty is ratified it can be executed. With this purpose in view, I direct that the proposed arrangement be approved. It will terminate as soon as the Senate has acted one way or the other.”

In Santo Domingo, on the 1st, a decree was published to the effect that the Government had decided, for the protection of all creditors, that the President of the United States should appoint persons to collect the customs revenue, and that the payment of all claims should be suspended during the term of the *modus vivendi*. On the 28th ult., the commander of an Italian cruiser had demanded a settlement of the Italian claims, but had appeared to be satisfied when the nature of this arrangement was disclosed to him. Mr. Roosevelt asked William E. Gould, of Baltimore (an accomplished linguist and recently an instructor in Johns Hopkins University), to act as chief of the collectors, but he declined. It is expected that the place will be given to G. R. Colton, formerly a collector of customs in the Philippine Islands. All the moneys collected “from both the northern and the southern ports,” it will be noticed, are covered by Mr. Roosevelt’s instructions; and therefore the payments to the Santo Domingo Improvement Company, under the arbitral award, will be suspended. It is understood that Mr. Roosevelt’s action was approved by Senators Spooner, Lodge, Foraker and Knox, all members of the Foreign Relations Committee. Senator Morgan angrily asserts that the President has unlawfully established a protectorate by private agreement and has insulted the Senate. He promises that the treaty shall never be ratified. Senator Blackburn predicts that in October all the Democrats will oppose it and that several Republicans will vote with them.

#### A New Panama Canal Commission

All the members of the Panama Canal Commission have resigned, at the request of the President, and the chairmanship of the new Com-

mission has been accepted by Theodore P. Shonts, now president of the Toledo, St. Louis & Western Railroad Company. On the 29th ult. each Commissioner received the following note from Secretary Taft:

“The President directs me to ask the members of the Commission to hand in their resignations in order that he may have a free hand in reorganizing the Commission. Please wire General Davis requesting that his resignation be forwarded.”

Mr. Shonts is 39 years old and for many years has been an intimate friend of Secretary Paul Morton, whom he accompanied on the Secretary’s recent trip to Porto Rico and Havana. He is a graduate of Monmouth College and a brother-in-law of John A. Drake, the partner of John W. Gates, the well-known railway financier. It is said that the position was offered to Elihu Root and Henry C. Frick, both of whom declined it. On Monday afternoon, the 3d, the names of the new Commissioners were announced. They are: Theodore P. Shonts, chairman; Charles E. Magoon, Governor of the Canal Zone; John F. Wallace, Chief Engineer; Rear Admiral M. T. Endicott, U. S. N.; Brig.-Gen. Peter C. Hains, U. S. A., retired; Col. Oswald H. Ernst, Corps of Engineers, U. S. A.; Benjamin M. Harrod. Prof. William H. Burr and William Barclay Parsons (of the old Commission) will be appointed as members of the Consulting Board of Engineers. Each Commissioner is to receive a salary of \$7,500, with traveling expenses. Additional compensation will be given as follows: To the Chairman, \$22,500; to the Chief Engineer, \$17,500; to the Governor of the Zone, \$10,000. There will be nine members of the Board of Consulting Engineers. The Commission must hold quarterly sessions on the Isthmus, and an Executive Committee of not less than three members must hold regular meetings there on Monday and Wednesday of each week.—William Nelson Cromwell, formerly counsel for the Panama Canal Company, has, at the request of Secretary Taft, obtained from holders in Europe 270 of the 275 shares of Panama Railroad stock which our Government had failed to purchase. He also has procured a contract providing for the delivery to him of the

remaining five shares. This he has done since the adjournment of Congress. At the recent session, owing to the disagreement of the Senate and the House, bills providing for the acquisition of these shares were not enacted. Mr. Cromwell places the stock at the command of the Government at its actual cost, and is willing to carry it until such legislation as may be needed shall have been obtained. Secretary Taft, in a letter to Mr. Cromwell, says he cannot exaggerate the importance, to the Government, of what he has done. He commends his patriotism and unselfishness, pointing out that Mr. Cromwell declines to receive any compensation for his services, "which have been of such great value."

#### The President's Vacation

Mr. Roosevelt left Washington last Monday morning to take a vacation of several weeks. His first objective point was San Antonio, where it was his purpose to attend, on the 7th, a reunion of the Rough Riders, but it was his intention to stop for a few hours at Louisville, where the program provided for a reception by Governor Beckham and a parade in which Union veterans, Confederate veterans and soldiers of the war with Spain were to take part. He is to address the Texas Legislature at Austin on the 6th, and on the 8th he begins to hunt wolves on Col. Cecil Lyons's ranch in Northwestern Texas, where he will remain four or five days. Then his special train will carry him to Western Colorado, where, accompanied only by his guides, he will camp out and hunt bears and mountain lions for a little more than a month. He goes there not so much for the hunting as for a free life in the open air. His train will be sidetracked near Glenwood Springs, where Secretary Loeb and his clerks will be at work in the cars. In the last days of May the President will return to Washington.

#### Politics and Washington Topics

In Maryland the Court of Appeals has decided that Governor Warfield must promulgate the Constitutional Amendment relating

to elections and suffrage, which was passed by the Legislature. This Amendment contains a "grandfather clause." The purpose of it appears to be the disfranchisement of illiterate negroes, but it would empower unscrupulous registration judges to disfranchise those who are not illiterate. Partly for this reason, the Democratic Governor refused to promulgate it for ratification or rejection at the polls. The suit to compel him to do this was brought by the chairman of the Democratic Committee. In November next the people will vote upon the proposition. There are 52,000 names of colored voters on the registration books.—The Senate Committee on Interstate Commerce, of which Mr. Elkins is chairman, will begin on the 17th inst. to take testimony concerning railroad rates.—Preparations for the prosecution of the Atchison, Topeka & Santa Fé Railroad Company for giving rebates to the Colorado Fuel & Iron Company have been completed, and the evidence will soon be laid before a grand jury.—In connection with the inquiry now being made concerning the Beef Companies by a grand jury in Chicago, Thomas J. Connors, Armour & Co.'s general superintendent, has been indicted and arrested upon the charge that he has corruptly sought to influence and intimidate witnesses summoned to appear before the grand jury in this case.—All the battle flags, captured from the Confederates during the Civil War, that have been stored in the vaults of the War Department, are now to be returned to the States from which they came, in obedience to a recent act of Congress. Sixty-two of them were received last week by the Governor of Virginia.

**Mr. Rockefeller's  
Gift for Missions** The American Board of Commissioners for Foreign Missions announced on the 29th ult. that its Prudential Committee had accepted the report of a subcommittee recommending the acceptance of the gift of \$100,000 from John D. Rockefeller, but that final action had been postponed for two weeks. It was also stated that the sub-

committee's report expressed the unanimous judgment of the Prudential Committee and the executive officers. The gift was offered and unanimously accepted by the Prudential Committee on February 14th, and nearly half of the money has already been forwarded to mission stations in the East. The committee of protesting ministers has been enlarged and has issued a statement inviting all, whether clergymen or laymen, who sympathize with the protest, to send their names to the chairman, the Rev. Daniel Evans. Widespread discussion of the question, involving much criticism of the Standard Oil Company, has led H. H. Rogers, vice-president and director of that corporation, to publish the following:

"Ministers say queer things. Dr. Washington Gladden says that everybody knows that John D. Rockefeller has obtained his money dishonestly. With as much reason I could say that everybody knows that Dr. Gladden would not trust the Ten Commandments for ten days with the Deacons of the Church because they would surely break some of them and bend the rest.

"Slavery in certain sections of the United States was legal until President Lincoln's Emancipation Proclamation. Rebates on railroads were just as legal until the passage of the Interstate Commerce Commission act. After an exhaustive examination by the Industrial Commission, authorized by Congress June 18th, 1898, in a review of evidence, the Commission reported as follows:

"It has been charged as a matter of general belief on the part of almost all the opponents of the Standard Oil Company that these discriminations in various forms have been continually received, even up to date. On the other hand, these charges have been denied in toto and most emphatically by every representative of the Standard Oil Company with reference to all cases excepting one, which they claim was a mistake, the amount of freight due being promptly paid on discovery of the error. The Standard Oil Company not merely challenged the opponents to bring forth proof of any case, but produced many letters from leading officials of railroads to show that the company had in no case received any favors or asked for them."

Dr. Gladden replies that if there was no law when rebates were taken by which "that particular kind of robbery could be punished, the robbery was no less flagrant and outrageous." Even

under the common law, he thinks, such iniquity might have been punished. The denial that rebates have been extorted since the passage of the Interstate Commerce act, eighteen years ago, is not credible, he says. If slavery was "legal in certain sections," it was still an abomination and a curse. He remarks that "the system known as Standard Oil" has done what it could to reduce business to brigandage.

#### Labor Questions

A strike at the bituminous coal mines of Pennsylvania has been averted by the action of the mine owners. On the 29th ult. a strike of 60,000 employees was expected, as the operators were insisting upon a wage reduction of 10 per cent. after April 1st, and the men had decided to quit work if the old scale were not continued after that date and throughout the following year. On the 1st the operators yielded.—An increase of wages, averaging about 10 per cent. for all laborers and others employed by the day, has been ordered by the Steel Corporation, to take effect at once. This change does not affect the 30,000 coke workers, because their wages were increased about 16 per cent. a few weeks ago, nor is it applicable to the many who are working under agreements that will expire on June 30th. It is said that the Corporation is now employing more men than have ever before been in its service.—The strike of the capmakers in New York against an open shop has failed, and the employers are at liberty to enforce their policy.—New complications are reported at the Fall River cotton mills, where there have been strikes of weavers in several factories, owing to the introduction of improved machinery. Those who protest say that on account of the new devices they have been required to do additional work. On the 29th ult. the companies gave public notice that they felt obliged to install all the improved machinery which could be used to advantage, and that they must decline to make certain concessions for which the weavers had asked. At the end of the long strike Governor Douglas was empowered (by the agreement of January 18th) to decide, at the end of three months, whether the manufacturers'

margin of profit was sufficient to permit an increase of wages. His decision is soon to be announced. Some predict that he will find the margin insufficient because work in the mills has been affected by the action of the weavers.—In St. Louis, 1,000 drivers of coal and ice wagons are on strike against an open shop, and they may be supported by a strike of 4,000 teamsters. The Citizens' Alliance is assisting the employers by means of a large defense fund.

**Venezuela** The Venezuela crisis has remained *in statu quo* during the week. One of the judges of the High Federal Court at Caracas has declared that the French Cable Company concession is vacated, but the company has five days in which to make an appeal to the full court. The suit, however, instituted by the Venezuelan Government for damages against the company for complicity in the Matos revolution has failed. It is not expected that the French Government will now proceed to any demonstrations at La Guayra. The United States Government is waiting also. In the meantime a correspondent of the *New York Herald* at Curaçao has shed some light on President Castro's dictatorship. He says that now there are about 1,500 political prisoners in Venezuela jail, kept there by the grace of Castro; that Castro is envious of every business that yields a profit and is constantly scheming either to create new monopolies or to make it so uncomfortable for the people whose enterprises are successful that they will sell out to him for a song. He is supposed to have made a fabulous amount of money out of these monopolies and is said to be a very rich man.

**Norway and  
Sweden**

The demand of Norway for separate consuls and the delay, amounting to a practical refusal, on the part of Sweden has resulted in straining the relations between the two countries almost to the point of rupture. The new Premier, in outlining the policy of his Government before the Storting at Christiania, announced the intention to proceed with the establishment of a separate consular service for Norway

without waiting for the action of Sweden. He said the Norwegian people are united in their demand, and while they wish to live peacefully with their Swedish neighbors, they are determined to devote their whole strength to the development of the material resources of the country. The Norwegian contention is based upon the fact that the Rigsakt, or treaty of union, of August 6th, 1815, contains nothing about the consular service, which by implication is left to the two states individually. This view is confirmed by reference to the prior constitution of Norway, the Grundlov adopted at Eidsvold in May, 1814, which speaks of Norwegian consuls and which the Swedish King pledged himself to support. The Grundlov, however, sanctions the appointment of foreigners as consuls, and therefore the exclusive employment of Swedes in this capacity is justified, altho the Norwegians claim that this is purely a matter of convenience and economy and that Norway has never resigned her right to a separate service. The different industrial developments of the two countries has caused their commercial policies to deviate, until now Norway as a manufacturing and shipbuilding country stands for free trade, and Sweden is developing its manufacturing industries under protection. The management of the foreign affairs of the United Kingdoms is vested in the King personally, but by a revision of the Swedish Grundlov, or constitution, in 1885, the Crown is bound exclusively to employ the Swedish Foreign Minister, who is *ex-officio* a member of the Swedish Ministerial Council. This placed Norwegian international interests under a Swedish Minister, who is not responsible to the Norwegian Parliament, and aroused the dissatisfaction which has continued to increase for the last twenty years. Repeated efforts were made to come to an understanding, and March 24th, 1903, it was agreed by both Governments that separate consular services should be established, regulated by identical laws. But since then no progress has been made in coming to an agreement as to these laws, especially in regard to the power of the Swedish Minister of For-

oreign Affairs over the Norwegian consuls. In the belief that Sweden has been dilatory in her action and arrogant in her demands for the purpose of maintaining the present status, Norway has now determined to take the matter into her own hands.

Disorders in  
Russia

While there is no evidence of a systematic revolution in Russia the unsettled condition of the country and widespread disaffection is indicated by the repeated outbreaks of violence of all kinds, peasant riots, bomb throwing, strikes of workmen and soldiers, race wars, pillagings and burnings. The worst disorder is in the Caucasus, a region none too quiet in the best of times, and now practically in a state of anarchy. The massacre of the Armenian Christians by the Mohammedans in Baku, February 20th to 22d, which exceeded Kishenef in the number of the victims and the savagery of the assailants, is reported to have been due to the instigation of Russian agents. At least, the Cossacks looked on the slaughter without interference and the Russian Governor refused pro-

tection. At Yalta in the Crimea, March 28th, a mass meeting of workmen adopted resolutions demanding free speech and press, the right to strike, liberty of conscience, equality of all nationalities and religions, the stopping of the war and a representative assembly. Later a mob attacked the police stations, liberated all the prisoners, wrecked the vodka shops and set the town on fire in several places, preventing the firemen from extinguishing the flames. Three warships loaded with troops were sent from Sevastopol to restore order. In Poland, near Kutno, the troops fired three volleys upon an unarmed body of 150 peasants, who had refused to give their horses for use of the army, and some fifty of them were wounded. The wounded men were loaded into carts without medical care, and many of them died. The Catholic priests refused to bury them at night as directed by the police, and an immense crowd gathered at the funeral and the coffins were buried in flowers. Governor-General Maximovitch, on his arrival, drove through the streets without an escort of Cossacks, and attended mass at the Roman Catholic Cathedral.

Nurses and Doctor Bringing Wounded Soldiers to a Hospital in Charge of the Japanese Y. M. C. A.

the first time a Russian Governor has done this since the revolution of 1831. The Czar has instructed the Governor-General "to elaborate the reforms necessary for the prosperity of the Vistula Territory" (Poland), but in the same rescript he orders the suppression of "the artificially provoked disturbances," and condemns the agitation for the use of the Polish language. At Praga, a suburb of Warsaw across the Vistula, a bomb was thrown into the yard of the police station, wounding half a dozen policemen. Baron von Nolken, chief of police, while going to the scene in a carriage, was struck in the chest by a bomb and severely wounded. A cache of 80 bombs was found hidden in a grave in the Povonsky Cemetery in Warsaw. The only exception to the policy of repression now dominant in Russia is in the case of Finland. The petition of the Finnish Diet, asking that all imperial decrees since the Diet of 1899 be withdrawn, because they were not approved by the Diet, has been answered by a concession on the part of the Czar. The conscription act, by which Finns were drafted into the Russian army contrary to the fundamental law of Finland, has been suspended until 1908, when the question will be submitted to the Diet; in the meantime Finland will pay an annual war contribution of \$2,000,000 instead of furnishing recruits. The Czar restores the judges who were illegally removed from office for opposing the Russification of Finland. The Czar's leniency toward Finland is said to be due to the intercession of the Dowager Empress.—Maxim Gorky, the novelist, who is confined in Riga awaiting trial for sedition and treason, will be allowed to go to the Crimea for his health, as the doctors have declared this is necessary, on account of his tuberculosis, which has resulted in several hemorrhages.

**The War** Tho there are rumors from the Chinese of extensive movements on the part of the Japanese, it cannot be yet determined whether these are real or merely the anticipation of probabilities. Thus it is said that General Kuroki with the bulk of the Japanese

army has made a wide sweep to the east and is about to cut, or has already cut, the railroad between Harbin and Vladivostok, and, on the other hand, that a large force of Japanese is crossing or skirting the Gobi Desert, in Mongolia, to attack the railroad on the west of Harbin. What is known is that the Russians are slowly retreating northward along the railroad, closely followed by the Japanese, who are now about 40 miles south of Gunshu Pass, at which point and at Kirin on the branch line the main strength of the Russian army is concentrated. General Mistchenko is in command of the rear guard and has had to repel repeated attacks by the Japanese vanguard. The right and left wings of the Japanese army are in advance of the center and keep at a distance of ten to twenty miles from the railroad on the east and west. General Kawamura's force, still further east, is reported to be nearing Kirin. The Russians are completely destroying the railroad as they retire northward. The value of the stores abandoned or destroyed by the Russians in their hasty retreat from Mukden is calculated at \$1,750,000. They include a supply of boots and uniforms for the army which had arrived from Europe only four days before the evacuation of Mukden. The Japanese casualties at the battle of Mukden are estimated at 57,000 by the authorities at Tokyo. Generals Sakharoff and Stakelberg have left Manchuria for St. Petersburg. General Kaubbars has been appointed to the command of the Second Manchurian Army. General Sukhomiroff has been made Secretary of War.—Admiral Rojestvensky's fleet has left Madagascar and is supposed to be on its way east. It is expected to rendezvous near the Chagos Islands in the Indian Ocean, which are English possessions. It is reported that the bottoms of the ships are so foul with weeds and barnacles that their speed is seriously impaired, that there are not enough colliers to supply the fleet, and that the death rate on board is very heavy. All these rumors have been denied. It is impossible also to ascertain how much truth there is in the repeated rumors of peace negotiations in which the United States and other nations are reported to be acting as mediators.

### The Kaiser's Visit to Morocco

Emperor William of Germany spent only two hours in Tangier on March 31st, but this brief visit is likely to have momentous consequences on international relations, for it comes just at the critical moment when France is most assiduously courting the Sultan. The streets of the city were decorated with a profusion of flags and flowers and elaborate ceremonies of welcome had been planned, but these were curtailed by the Emperor, as he did not land from the steamer "Hamburg," in which he is making the tour of the Mediterranean, until three hours after the time he was expected. It was officially explained that the delay was due to the roughness of the sea, but it is rumored that there was danger of public disturbance if the full program was carried out. Accordingly he confined himself to a visit to the German Legation, where he gave reception to prominent Moors and to the German residents. The former included Abd-el-Malek, the Sultan's uncle, and El Menebhi, the ex-Minister of War, whose property has recently been confiscated by the Sultan. In his address to the German residents he said:

"I am happy to recognize in you devoted pioneers of Germany industry and commerce, who are helping me in the task of always upholding in a free country the interests of the motherland. The sovereignty and integrity of Morocco will be maintained. In an independent country, such as Morocco, commerce must be free. I will do my best to maintain its politico-economic equity."

On leaving Tangier the "Hamburg" went to Gibraltar, where the Emperor was received with military honors by the British fleet and garrison. It is supposed that the visit of the Emperor was due to the solicitation of Moorish notables who wish to check the French influence over the court. On March 11th M. Saint-René Taillandier, the French Minister at Fez, completed his exposition of the French plans for restoring order in Morocco and opening the country to commerce. The proposed reforms are vigorously opposed by the tribal chieftains, who thrive on the present disorder, and by the fanatical Mohammedans, who fear foreign influence. The tribes of

Beni Hassen and Berber refused even to come to Fez to discuss the French proposals. Reports are conflicting as to whether or not Germany was consulted previous to the adoption of the Anglo-French agreement, which virtually gave Egypt to England and Morocco to France, without any special consideration of the interests of Spain and Germany in Morocco. Fifteen years ago German commercial dealings with Morocco amounted to nothing; now 6 per cent. of the imports and 24 per cent. of the exports are in the hands of Germans. The French Minister of Foreign Affairs, M. Delcassé, has given an assurance of the fairness of French policy in the following words, in an address in the Chamber of Deputies at the time of the visit of the German Emperor to Tangier:

"France's Moroccan policy continues on the same conditions as it was begun. The Sultan's weakness and the anarchy resulting therefrom were prejudicial to everybody, and especially to France, in Algeria.

"We had to seek a remedy for the intolerable situation without allowing our action to awaken the suspicions of other nations. France does not pretend to base her interests on disregard for the interests of others. Thence arose negotiations resulting in agreements proclaiming that France possesses a special standing in Morocco.

"The Anglo-French treaty recognizes that it is France's task to assist in opening Morocco to civilization, and also that, from the economic point of view, all nations have an equal footing there. The Franco-Spanish agreement confirms these views. The terms of the Anglo-French treaty were immediately communicated to the Sultan; of this fact the issue of the Moroccan loan by France is proof.

"If France sought a pretext for intervention one existed in the disturbed state of the Algerian frontier. However, from friendship for Morocco and a clear conception of her own interests, France merely pointed out the necessity for establishing order. That position we still hold. The resistance of parties interested in maintaining the present anarchical condition of affairs leaves no room for illusion, but that will not modify our policy.

"Morocco is aware both of our good will and our strength, and also that we do not seek to expand a maturely thought-out program of Moroccan policy. It therefore appears that France will succeed in assuring its future in the Western Mediterranean without offending any right or clashing with any interest."

## Two Years in the Antarctic

BY OTTO NORDENSKJÖLD

LEADER OF THE SWEDISH ANTARCTIC EXPEDITION

EVEN at the present day we are still in the habit of talking of the *five* continents, as if no other could be supposed to exist on the globe. A dim notion has, it is true, been entertained for some considerable time past that there might be in the remote south a body of land which, by reason of its vast dimensions, would deserve the name of continent; it has, however, been reserved for the exploratory enterprise of the past few years only to lift a small corner of that veil of mystery that still enshrouds the southernmost portion of the globe, and to introduce to the sum of our knowledge an area of the earth's surface which, for all who desire to know whatever is to be learned about the earth on which we live, must be of absorbing interest, not only from its vastness, but, much more, on account of the peculiarities which mark it as wholly distinct from the other continents with

which we have long been familiar.

The present century had not proceeded far upon its course when serious attention began to be paid to the grand problem of the exploration of the South Polar Regions. The extent of total area to be investigated was too vast for the efforts of *one* country or of *one* expedition to be adequate. Our generation has, moreover, learned the value of earnest co-operation in pursuit of great ends, so that when

three European countries, England, Germany and Sweden, each equipped and dispatched in 1901 an expedition to explore the Antarctic continent, there was no rivalry between them, no jealous desire to get furthest south toward the Pole. An amicable arrangement was made whereby the field of operations was parceled out between the three expeditions, and it was clear from the start that each one had a sphere of action which would present features of

OTTO NORDENSKJÖLD

The "Antarctic" in the Pack-Ice

special interest, and also points of special difficulty to be coped with and overcome. The objective common to all three was, in noble emulation, to put forth unsparingly every effort to bring back home the richest booty attainable in order to further the interests of science.

The Swedish expedition under my leadership set forth on board the "Antarctic," a boat built specially for polar navigation. The destination assigned to us was the region south of South America and the Atlantic Ocean. From a scientific point of view, this was, perhaps, the most interesting section of the three, not least from the circumstance that it lies nearest to, and by its nature exercises the greatest influence upon, that part of the globe which we inhabit. At the same time there was reason to entertain an apprehension that we were destined to experience greater difficulties from the accumulations of ice in the waters we had to navigate than would fall to the lot of either of the other expeditions, and that proved only too truly to be the case, as we have every cause to remember. Hardly ever, surely, has a scientific expedition gone through stranger vicissitudes than ours.

Tho we were the last of the trio to get under weigh, we had the advantage of the other two in not being bound on quite so long a voyage; consequently we found ourselves already in sight of the far South Polar Lands by January 10th, 1902. The arrival within the region of our quest was the signal for strenuous

work to commence, and during the very first few days we were rewarded with a number of most interesting finds and discoveries. We could not, however, afford to tarry, but hastened to arrive at our real destination, where the chief part of our work was to be carried on, a point on the eastern coast of the land region. January 15th was a day of mark in the history of the expedition, for early on the morning of that day we sailed into the Antarctic Ocean proper, through a broad strait, which, if ever those waters come to be regularly traversed by trading craft, will certainly be one of the most important and frequented fair ways of the whole region. To that strait I gave the name The Antarctic Sound, in memory of our gallant and devoted ship, the "Antarctic," which, later on, was unfortunately wrecked only some few miles to the south.

On the western shore of this strait I observed a small bay, which, together with its remarkable surroundings, aroused my earnest attention. I saw before me mountain peaks soaring loftily above a sheet of what evidently was perpetual ice, while between the heights extended a defile whose content consisted of a superb glacier of a typical configuration such as is rarely to be seen. Along by the shore there stretched an extensive plain, bare of snow, and eminently adapted as a locality upon which to establish a wintering station. As we passed I was at pains to notify on the map the spot, registering it by the name of Depot Valley, for it seemed possible that we

might be glad subsequently to deposit stores there and use it as a refuge in case of need from our work in the south.

Thence we proceeded eastward, skirting the south coast of Dundee Island. On our way there rose up far away in front of us from out of the sea a black pile of rock, evidently an ancient, now extinct, volcano. It was the small island known as Paulet Island, and that was our immediate destination. On reaching it we went ashore, and beheld the most thickly inhabited spot which it was my privilege to see in the whole of the Antarctic region. So far as the eye could see in every direction the ground, as it sloped down to the water's edge, was densely covered with penguins, those strange birds which are incapable of flying, but can swim like fish, and which when on shore strut about with upright gait, looking, with their diminutive, arm-like stumps of wings and their irresistibly comic appearance in general for all the world like small-sized, crippled people. In all there must have been hundreds of thousands of them in view. At that time they had the young birds to look after, and they showed only too plainly in numerous

ways how little they appreciated the intrusion of strange visitors. We on our part, tho we gazed upon them with wonder and amazement as curiosities seen now for the first time, were only too pleased to withdraw from the busy throng that we might escape as speedily as possible from the far from agreeable sounds and scents by which we were assailed while we stayed in their vicinity.

The same evening we continued our course, our objective now being Seymour Island. That island is about 30 square miles in area, and is, perhaps, the largest piece of land in the Antarctic continent that is free from snow. For me it had a special interest as being the only locality in the South Polar Regions where any trace, however slight, of fossil remains had up to that time been found.

Little could I guess at that juncture what a momentous part the three places just named were destined to play in the subsequent fortunes of our research party.

The present paper does not profess to give any description in detail of the scientific investigations upon which we were engaged or of the results to which they

The Winter Hut on Paulet Island

lead. It will, therefore, suffice to say, that during the weeks that remained ere the summer was over we voyaged far and wide, without, however, being able to discover any spot further south that seemed suitable for winter quarters, and hence, in the middle of February, I was fain to determine to return to Snow Hill Island, which is situated directly south of Seymour Island, at a latitude of  $64\frac{1}{2}^{\circ}$  south, where we landed such material and stores as were requisite for the purposes of a winter sojourn. That well accomplished, the hour speedily arrived when I found myself standing on the shore with five companions watching the gradually fading hull of the "Antarctic" as she battled with the blocks of ice that impeded her progress on her voyage northward once more. We had before us, as we then imagined, one year of solitude, but also of abundant and enthralling work. We had no means of conjecturing the surprises that were in store for us, that we should be detained in our improvised home twice the span we were reckoning upon, and that the good ship we had just seen depart was never to return.

After having erected our dwelling and observatories we set about the tasks before us. During the following twenty months we took observations, for the most part once every hour both day and night, relative to climate and to the other phenomena that came within our purview, and the data of a specially interesting kind, from a scientific point of view, which we were able to register proved to be very numerous. Thus, marvelous fossils were found, relics of a period when these regions, which cannot at the present time boast of a single blade of grass, and scarcely of the most insignificant tuft of moss, were verdant with the most luxuriant woods. Then, again, the meteorological record we kept affords items of information of great general interest, being readily comparable to the figures for places with which we are already familiar. Our station was not more than 500 miles from Tierra del Fuego, where evergreen woods abound. It was, therefore, *à priori* to be imagined that the winter weather we were likely to experience would not be particularly severe. Our hopes in that direction were doomed to be grievously disappointed, for we

were subjected to a series of very disagreeable, albeit scientifically important, surprises. It was not actually the severity of the cold, tho the thermometer went down to  $-43^{\circ}$  F., of which we had cause to complain so much as the violent and terrible storms that visited us. They would rage for weeks at a time with such fury that it was an impossibility to stand upright in the open; moreover, these storms were accompanied by the intensest cold of any which we experienced. I am unable to recall that in any of the literature of the Polar Regions mention is made of any climatic conditions which would seem so entirely to preclude all thought of human beings ever being able permanently to support existence under them as did these of which I am speaking.

In order to investigate the natural features of our immediate surroundings we made a number of short excursions, and when spring came round I set out, accompanied by two of my companions and five dogs, on a more extensive expedition in a southerly direction. In thirty-four days we covered upward of 400 miles, and should have been able to get much further had we not got in for a very severe storm period, which necessitated our return, and which lasted all the time we were on our way back. At one time we were constrained to remain for five whole days and nights ensconced in our sleeping-bags, while on another occasion the wind played such havoc with our tent that we were in imminent peril of losing our lives. Nevertheless, we succeeded in making several interesting and unexpected discoveries.

The period of the year had now arrived when the temperature ranged highest, the summer so-called. What we were treated to was snow and mist and a climate more rigorous than the normal winter of southern Sweden, and also than that summer which the Nansen expedition spent drifting amid the pack-ice in the vicinity of the North Pole. The inquiring and searching lookout, which we kept from the loftiest point in our neighborhood, for the vessel which we were so eagerly expecting, or at all events for a possible channel in the sheet of ice through which she might find her way to our relief, proved all in vain. By degrees

the truth became patent to us that we were doomed to spend another winter in our then quarters. Under those circumstances it behoved us to busy ourselves about securing some seals, that we might be provided with blubber for fuel, and about laying in a stock of penguins and sea-birds to serve as food during the long months before us.

The winter came and went, bringing fresh storms in its train, tho luckily not such violent ones as its predecessor. We

one as regards the state of the ice. The attempt to penetrate as far as our station had to be postponed, and in lieu thereof interesting scientific studies were taken in hand.

The summer began, however, to slip away, and it was clear that, unless they were going to leave us to our fate at our wintering station, the most active measures must be resorted to. It was thought advisable to make a division of the party in such a way that three out of the total

The Winter Station at Snow Hill

were by no means at a loss for employment, yet all our scientific work, ingrossing as it was in itself, did not entirely suffice to set at rest our feelings of uneasiness and anxiety as we meditated upon the future and wondered as to the fates that had befallen the rest of our expedition and the vessel upon which they were embarked.

By this time we have long since learned what those fates were. After a well-spent winter and after having dispatched, as good luck would have it, all our valuable collections to Europe, the "Antarctic" had turned south once more, in November, 1902. She had not proceeded far, however, on her course before it became evident that the season was going to prove an exceptionally unfavorable

number, under the leadership of Dr. J. G. Andersson, should leave the ship and attempt to establish communication with us by proceeding in sledges over the ice, while the vessel itself, under command of her master, Captain Larsen, should be steered, as best she might, through the impeding masses and fields of ice, if perchance a channel could be forced, to enable her to accomplish the desired end and bring us succor.

Neither of the two schemes thus determined upon proved capable of realization. The "Antarctic" availed herself of every opportunity that presented itself to make some advance; wherever any open water appeared, there she endeavored to find a way through. All she succeeded in doing, however, was to get

The Winter Party from Bay of Good Hope on Arrival at Snow Hill

hopelessly wedged in the ice at a point from which there was no retreat and from which nothing was observable but one vast area of drift-ice and icebergs. When she thus lay a complete prisoner and unable to do aught in her own defense a violent storm arose, which forced the ice landward. For some considerable time the vessel's hull withstood the iron grip of the stern incoming ice. Inch by inch she was raised out of the water, until the process could go on no longer, for she had reached the surface; and now the ice got at the most vulnerable point, the keel. It was smashed off, the bottom timbers were staved in and the stern-post was crushed to pieces—in a word, the trusty steamer had become a wreck. For more than a whole month after that event all hands on board put forth superhuman efforts to keep afloat this cherished vessel, wherein lay our sole means of returning home, and which, moreover, was the storehouse of our collections and provisions, which we could so ill afford to lose. All was, however, in vain, for on February 12th, 1903, those on board were obliged to leave the ship, and in short space beheld, as they stood on an ice-floe in melancholy silence, how she gradually sank beneath the surface until the very top of the mast, where the Swedish colors still flew, vanished evermore from sight.

What they now had to do was to endeavor to reach the nearest land as best they could, taking with them such things

as they had had time to rescue. The land they made for was Paulet Island, known as the resort of numbers of penguins and seals. The task of getting there, however, proved a very formidable one indeed; sixteen days and nights were spent on the journey, the mode of progression being by boats, which were dragged for the most part over the rough ice, while the drifting seaward of the ice-floes they were on often carried them farther away from their goal in a day than they were able to advance by their own efforts. By the time they finally found themselves safely landed on shore a very considerable part of the goods rescued from the ship had had to be abandoned or had got lost on the ice.

The penguins of Paulet Island were regarded in quite a different light now by the twenty shipwrecked men who had landed there, bringing with them food which would last them barely one month. Had it not been, indeed, for the penguins their lives must have been lost from hunger in a very short space of time. As these birds have no wings and have not yet learned to dread man as a natural enemy, no great amount of skill or ingenuity is required for possessing one's self of them and killing them. Some 4,000 sufficed amply to feed the party throughout the winter. Boiled penguin and penguin soup, flavored with some pieces of seal blubber, and with seawater to supply the needful saltiness, constituted the standing *menu*. Nor could

any complaint be reasonably lodged against that diet, save that there was not always as much of it as was desired. What there was the greatest shortage of was fuel, and in order to husband the blubber to serve in that capacity restrictions were placed upon its use for food; consequently on some days only one meal was served.

The house they erected for their abode during the winter had double stone walls, with a packing of penguin guano between; the roof was of sealskin. By great good luck there happened to be among the things saved from the ship a couple of portraits, framed with glass, still intact. Out of these it was possible to make two windows for the house and so to secure the admission at any rate of some light in the daytime. The space within the house was very limited for as many as twenty persons, and they had to spend eight long weary months of winter packed together along the walls in anything but comfortable fashion. What they had to endure was of a certainty more trying than the somewhat similar experience of the North Polar expedition, for the Antarctic climate is much worse by reason of the terrible storms, which render it practically impossible to stir out of doors during quite half the winter. While they are raging the only expedient is to huddle one's self

together in one's bed-bag and adopt every means for keeping the cold out that one can devise.

Unfortunately there was one member of the party, one of the ship's hands, who was not able to withstand the hardship of the life they had to lead; he succumbed to disease quite early on in the winter. The others, however, fared much better and kept so well that when spring set in they were able to get vigorously to work on devising means for their own safety and upon prosecuting scientific work.

The lot that fell to the other three, who had started forth to try and reach us at Snow Hill by sledges overland, was in no sense preferable or less grievous to endure. As the ice was covered with a layer of water, and as open channels occurred here and there in their path, they found it an impossibility to make any headway and had finally to determine to return to the spot where they went ashore, and where they had deposited such stores as they had with them from the ship. That spot was no other than the one we had sighted on our first arrival, to which I had given the name of Depot Valley. At a distance the place had seemed inviting, and on a closer acquaintance it proved indeed to be so, for there were discovered a large quantity of penguins there, almost as many as on Paulet Island, and to their pres-

The Penguin Colony on Paulet Island

ence the three men doubtless owed the preservation of their lives.

At first they set about working, taking observations, etc., in the confident hope that the "Antarctic" would heave in sight before very long. As time passed, however, and each day grew perceptibly shorter than its predecessor, evil forebodings began to assert themselves, and lucky for them it was, that, acting upon their fears, they commenced to build a shelter for the eventuality of their being obliged to remain over winter there, while yet the ground was comparatively soft. It must be borne in mind that these three men were unprovided with tools, clothes or stores in sufficient quantity to enable them to face a winter sojourn. As it turned out, they were reduced to spending the dreary winter months in a stone hut they managed to improvise, which the snow for several days had so obliterated that the penguins unconcernedly used to pace over it quite unaware of its presence, while the inhabitants lay weather-bound within.

Under such depressing conditions, with no form of diversion and not a line of print to read, the time hung very heavy on their hands. Whenever the weather allowed of it they went out to fish and hunt, and they never lost sight of the scientific work for the prosecution of which we had come. When we were reunited once more this party of three had numbers of very remarkable proofs to show of the fertility of ingenuity which so often has stood men in good stead in the hour of need. Tho it is evident that the larger party at Paulet Island station were better off in many particulars, yet the others at Depot Valley had one advantage in that they never ran short of food. They had laid in a sufficiently large supply of penguins, and tho the seals they procured were not very numerous, yet they lasted them for fuel through the winter. In spite of all their difficulties and hardships they never lost heart, and so the bay on the shores of which they perforce tarried so long now fittingly bears the name of the Bay of Good Hope.

It is strange to contemplate how near the three sections of our expedition were to each other, and yet how far off,

through that memorable winter. Whenever the weather was clear enough to admit of our doing so we would ascend the heights at Snow Hill and gaze longingly northward. In the far distance could be discerned both Paulet Island and the hills above the Bay of Good Hope. Our thoughts were often with our good ship and her complement; often and often we wondered what Larsen and Andersson and all the rest were doing and what had become of them, but it never entered our heads that they were actually within sight, tho cut off from all means of communicating with us. Had we only known of their whereabouts it would have been comparatively easy for us, with our dogs and other equipment, to have got to them.

Strange tho that state of things was, the mode of our ultimate reunion was yet stranger. For over a week I had been away on a sledging expedition and had reached an unfamiliar archipelago, the islands and straits of which I was busy studying and mapping out, proceeding the while with that strange sensation that comes over one in the consciousness that one is in the presence of scenery never yet looked upon by mortal eye. The date was October the 12th, and as yet it was too early to hope for the arrival of any vessel from the outer world to our relief. All of a sudden I became aware of some black objects in the distance, which revealed themselves through my field-glasses as human beings. How can I describe my feelings on making that discovery? Or how shall I depict my almost greater astonishment at the picture they presented, these black-looking, unrecognizable objects, when I obtained a closer view of them? In appearance they were more forbidding in uncouthness than the Esquimaux of Greenland. Not, indeed, until they had told me who they were could I realize that they were, in very truth, my own comrades, and it was a long while still before I was able to grasp the details of the marvelous tale they had to tell.

We were still, all of us, in the dark as to the fate of the "Antarctic," but we had no reason, as far as we knew, to despair of her return. The weeks that followed were busily employed in work, for we were confidently expecting that

our time there was drawing to a close. One evening, on the 8th of November, as I was sitting indoors, some one came rushing in with the news that there were some strangers visible, approaching across the ice. Great was the rejoicing—they could, we thought, be none other than our comrades from the ship. Not until the strangers had reached us and introduced themselves as two naval officers from Argentina, and told us that no news was at hand as to the fate of the "Antarctic," did our high spirits desert us, but then to give place to the utmost despair. Were we then never to see our brave comrades again?

Most miraculous coincidence! While we were thus cast down and in dread for the safety of our comrades there were some of their number at that very moment fast approaching us. We had just commenced packing up some of our possessions, now that rescue had reached us, when, in the dusk of that summer night, whom should we see appear but Captain Larsen himself with five of the others mounting the rising ground up to our house. Here they were, arrived, after untold difficulties, just at the right moment to participate in the glad event of relief having come. Tho the story they told us aroused feelings of sympathy and sorrow, yet the joy we naturally felt at being restored to each other and at the prospect before us of being able now to return home at last was stronger upon

us, and we could not but consider that the results we had secured, more valuable from the very fact of our being stationed apart from each other and from the protractedness of our stay, must outweigh the losses we had sustained.

It will be some years before the results obtained can be made public. The Swedish Government has allotted a sum of money for the work preparatory to their publication; meantime a full and popular account of the expedition is to appear very shortly. Hence those points are not touched upon here.

In conclusion it may, however, be stated that our knowledge of the South Polar Continent has been materially modified by the results of the expeditions which have now returned. We now form a picture of it, that land of the terrible forces of nature, as a region under a mantle of perpetual ice, possessed of a wondrous, antediluvian fauna, with a summer of short duration and colder than our winter, and with those continual storms lasting through the long months of winter there. Not an attractive picture, certainly, and yet how much there is to be learned from a study of those remote and uninviting lands. We are able as yet only dimly to conjecture the importance that these researches really possess. It cannot be doubted that the nature of the South Polar Lands makes its influence perceptible all the world over.

# 式葬人軍本日

## Japanese Military Funerals

BY J. H. DE FOREST, D.D.

CORRESPONDENT OF THE INDEPENDENT IN JAPAN

IT is most natural that the whole Japanese nation should feel a profound satisfaction over the successful reduction of "the Gibraltar of the East," Port Arthur. Its second conquest has brought unspeakable joy to every heart and home.

All the same the desperate assaults night and day against those scientifically fortified heights, together with the bloody battles farther north, have cost the lives of thousands upon thousands, whose homes are now in deep mourning. While the joy of Japan is great, her grief also is profound. The ideograph for funeral, reproduced at the head of this article, is in every issue of every paper, and military funerals of various kinds are going

on in every town and village. Fitting honors given to each one separately would break up the daily life of the people. It is therefore necessary to have joint funerals.

In describing the funeral ceremonies of these soldiers I have no heart to criticise any customs or beliefs that are foreign to the Christian religion. He who touches upon the grief of a brave people must do it with the deepest sympathy. Rather would I bring out the fact that

MAJOR BUNJI OTA,  
Who Was Shot in the Shaho Battle

C. HAYAKAWA, Mayor of Sendai

the sorrow of the human heart is alleviated by religious ceremonies, especially when the faith expressed is linked with precious customs and rooted in the history of a nation.

When an officer falls his body is burned and a handful of charred bones is put in a cubical box about four inches in size and sent home to the military quarters where he was formerly sta-

tioned. But where thousands of common soldiers perish it is impossible to treat them separately, and so those belonging to one company or battalion are burned in one funeral pyre, from which fragments of the remaining bones are put in these tiny coffins, one for each of the dead, with his name carefully written on it. These, too, are returned to Japan and distributed to their respective temples, where with the relatives and friends the last rites are performed.

These boxes are often accompanied by tufts of hair or a bit of clothing cut off by a comrade and sent to the family of the dead. One of the most touching paintings produced here of late, before which men and women stand in silence, is that of a young mother with her little boy

MRS. SHIRAISHI,

Reader of "Words of Condolence" at the Joint Memorial Service in Honor of the Dead

by her side gazing at a lock of hair, a blood stained coat, and two medals just arrived from the battlefield. One of the hardest things of my early life was when, at the request of my dying comrade in our Civil War, I took his watch to his widow. Her trembling hands received it without a word, and she turned her back to me, dumb with grief. That experience is going on in thousands of homes here, and whatever comfort can be given by a public recognition of the brave deeds of the dead and by the religious sympathy expressed in customary

Lieutenant Ogawa, as He Started for War. He Was Killed at Port Arthur

funeral ceremonies is surely due to those whose lives are so sorely wounded.

At the home it is a universal custom to hang a photograph of the deceased high in the alcove (*toku-no-ma*) that is common to every house. A series of steps lead up to the picture, on which candles are kept burning and before which incense is burned. One of my former pupils, who entered the army years ago, rose to the grade of major and went to the Shaho battles, where he was shot through the head. I called on the widow, heard her story of his death told with a perfectly steady voice, how his last unconscious words were an order shouted to his men to advance; and then she tenderly brought out the cap he wore, stained with his blood. But all the time she was, as the Japanese language expresses it, "crying within, swallowing her tears."

The Head of the Procession at Lieutenant Ogawa's Funeral. The Banners Which are Carried Contain His Name and Rank

A few days later the Woman's Buddhist Association of the city had a joint funeral service held in honor of thirty-five officers and soldiers in one of the city temples, to which I also was invited. About fifty priests, dressed in all the colors of the rainbow, with black added, joined in the memorial ceremony. A small pavilion was placed at the inner entrance of the temple. In front of that and right over the main entrance were written the names of the dead. On either side of the aisle to the altar sat double rows of priests, facing each other, and intoning the liturgy in language that could not be understood by ordinary educated Japanese, much less by a foreigner. When this was concluded three addresses to the dead were read, copies of which were afterward made at my request. The translations of these, while not literal, are correct in substance of thought. What struck me as something wholly unique was the appearance of a lady before the pavilion in which the souls of the dead were gathered, reading in clear tones the following

#### WORDS OF CONDOLENCE:

"To-day I, the representative of the Woman's Buddhist Association, reverently address you, the spirits of those fallen in this war, and we have invited many priests to conduct these memorial services.

"This is a world of vicissitudes. Our friends with whom we were so pleasantly communing only yesterday are to-day fallen on the battlefield for our country's sake. Glorious, indeed, but also grievous!

"Manchuria invaded, Port Arthur fallen, the enemy's fleet broken in pieces! His Majesty's soldiers have met with only victory on victory! The joy of returning victors and the joy of loved ones meeting them is indeed unspeakable, but when we think of those who are never to return our hearts break with sorrow. But your glorious deeds will remain forever in history and be praised in lands far off. We shall always be proud of the beauty of Japan's blossoms, whose fragrance abides through endless ages. You are our jewels, tho broken, and infinitely more precious than common tiles.

"We men and women, with these honorable priests and this great assembly, pray that this commemorative service will impart some comfort to you, the brave spirits of the dead. Be

pleased to draw near and accept this our offering."

Next came the aged Mayor, with flowing white beard, a man who combines business ability with a deep religious spirit, and his words were in substance as follows:

"The Woman's Buddhist Association is now holding this meeting in commemoration of those fallen in this war against Russia.

"Last spring, after His Majesty issued his Declaration of War, his sailors shattered the enemy's strong ships, his soldiers assaulted and took the fortress that the enemy loudly claimed was impregnable. Everything has gone in our favor, and the fame of Japan is heard throughout the whole world. Therefore the day of lasting peace for the East is perceptibly nearer.

"That these things are so is owing first of all to the virtue of His Majesty and the protection of his Ancestral Spirits. Yet none the less is it due to the bravery of you who so gloriously faced death in the hour of national peril. Your glorious deeds will go down in history, and our nation will never forget your

great sacrifices. Here we offer our deepest gratitude for your valiant deeds crowned with success. You Spirits above, we pray you to draw nigh and accept our grateful admiration."

While the Japanese army employs no chaplains, the Hongwanji (temple) in Kyoto trains and sends forth chaplains to those divisions whose generals will accept their services. The chaplain of this Second Division then stepped forward and read the words freely translated below:

"Heaven and Earth are moved at the grief of men. The sufferings of those who go forth to war, who is able to imagine them! The flag of the Rising Sun waves over the fortress of Port Arthur! The strong walls thereof are utterly thrown down by the Power of His Majesty!

"Ah! we weep for joy. This meeting is but one result of the sincerest tears of these women. Thus would we comfort the souls of the brave dead and the hearts of those here who mourn.

"I am profoundly impressed as I take a hum-

The Shrine-Shaped Bler Containing the Ashes of Lieutenant Ogawa, Preceded by the Priests. In Front of These Walks a Soldier Bearing the Decorations Won by the Dead Lieutenant

ble part in these services. For, whether looking toward Heaven or Earth, this war has caused a cloud of darkness to settle over our souls. But now it is dispelled by the glory of His Majesty as it appears in the deeds of his soldiers. I pray by the help of all-merciful Buddha that we may accomplish His Majesty's will. Uttered with profound respect."

These farewell words to the spirits imply a belief not only in the immortality of the soul, but that the spirits are very near, sharing our joys and sorrows. It is the popular belief that the souls of the departed can be called together for certain anniversaries, and that they form a cloud of witnesses around the living. They can be called even from distant countries and be reverently and affectionately greeted as the living are welcomed—with music and food and commemorative words.

The great Hideyoshi, whose soldiers perished in such numbers in Korea three hundred years ago, expressed his regret on his dying bed that the souls of those dead samurai had not yet been called home. There is now no such neglect of the spirits. Everywhere in the large cities are *Sho kon sha*, soul-calling shrines, where periodically the souls of the dead are called together and their deeds celebrated. On such anniversary days soldiers march in platoons before the *sho-konsha*, the plaintive bugle calls to the spirits, the soldiers salute and pass on.

Already preparations are being made for patriotic and religious celebrations all over the country. This morning's paper tells of over 2,000 dead from this one division whose memorial services will soon be conducted with military and civil honors before the new *shokon-sha*

The Rough Pavillon in Which General Yamamoto's Insignia Are Elevated on a High Stand. Mrs. Yamamoto sits at one side robed in white, with her three children. On either side of the pavillon is a rude torii, each bearing a framed inscription; the one in sight reads, "The Gate of the Spirit's Exit." The inscription in front is not visible in the picture, but it contains the words, "The Gate of the Spirit's Entrance." The banners blown by the wind were made by his children and are inscribed, "To Our Beloved Father." The one hundred priests stand under the awning in front of the pavillon.

Cortège at the Funeral of General Yamamoto. It is Estimated that About 30,000 People Witnessed This Service

on the high castle that overlooks the city. On one side will stand military and civil officers in their uniforms flashing with gold and silver braid, on the other will be the fathers, mothers, wives and children of the dead. Between these two lines multitudes of Shinto officials and Buddhist priests will intone their liturgies, to be followed by condolences carefully written and read by the highest representatives of those assembled, and to crown all, perhaps the Emperor may

send his special representative to give royal value to these impressive ceremonies.

Such funeral services as these are not the fad of the hour, but are based upon sentiments that lie deep in the national heart, that profoundly affect the spirit of patriotism, and that account in no small degree for the soldiers' persistent courage and fearlessness of death that have so astonished the Western world.

SENDAI, JAPAN.

# Eastern Crete

BY RUFUS B. RICHARDSON, Ph.D.

LATE DIRECTOR OF THE AMERICAN CLASSICAL SCHOOL AT ATHENS, GREECE

THE southern coast of Crete is for the most part devoid of good harbors. One recalls St. Paul's difficulties in this region from poor harbors and the "tempestuous wind called Euroclydon."

After visiting Gortyna and Phaestos we had brought up to Vianos, situated on the mountainside and overlooking the plain of ancient Priansos and the Southern Sea. The next day we proceeded eastward, with the sea for the most part in plain view. But occasionally a hill or mountain turned our path inward. When we were in plain sight of Hierapetra, which stands on the shore and is in easy communication with the north shore by an almost level path over a sort of isthmus only ten miles wide, we refused this easy way of crossing the island, and plunged into the mountains again, because we wanted to visit Kalamafka, where some day excavations will be made. After passing the night we began a glorious descent to the north shore.

At noon we reached Gournia, where our countrywoman, Miss Boyd, almost, if not quite, the best known person in Crete, was excavating a minor palace

contemporary with that of Phaestos and Knossos. She gave us a royal welcome, and since it was a holiday she took us that afternoon to certain sites where she had excavated with good results in former years. These were six or eight miles farther east on Rusty Ridge and Thunder Hill, mountains, we may call them, which towered above the village of Kavousi, in which she found quarters. It took nearly two hours of riding to get up from the village to this high area of excavation. Since she made the climb every work-day for over a month one must give her great credit for pluck and perseverance, if for nothing else. This alone was enough to make her the wonder of Crete; but her results also were good. The work was most carefully done, too, and gained the plaudits of experienced excavators. Her results can be called minor only when one compares them with those achieved by Evans at Knossos and by Halbherr at Phaestos and Agia Triada. All the men who are excavating in Crete are ready to put laurels on her brows.

The next day, after showing us over her excavated palace, she sent us on our way, telling us of this and that per-

The Mighty Acropolis of Goulas

Church Festival at Lyttos

son in various villages who would be trusty persons to help us.

Mr. Bosanquet, the Director of the British School at Athens, was then excavating at the extreme eastern end of the island at Praesos and Palaekastro, in the so-called Eteo-Cretan region. Since these places were a good day's journey from Gournia, we decided not to take the three extra days involved in prolonging the journey to the bitter end. But one almost always makes a mistake in such omissions. The opportunity is not likely to come again.

Following in general the line of the north shore we got into the interior again in the afternoon, pressing through groves of mighty karob trees, and brought up for the night at Kritza, from which we visited Goulas, the most imposing citadel of Crete, overlooking its own little territory, a lake bottom quite near the sea.

The French began work here, but discontinued it, seeming to doubt whether it were a Mycenæan fortress. The opinion of most experts is that the work has not gone far enough to decide the question. It is certainly very old for a fortress of the Hellenic period. We then struck due west from Goulas, between two mountain chains, the coast range on the north and Mount Dikte on the

south. The valley rose as we proceeded, and with each zigzag up Goulas increased in impressiveness. That fortress was indeed well placed. After we had zigzagged up to the top of a *col* and descended about ten minutes another unique view presented itself. Before us lay a plain of somewhat irregular shape, called the Lasithian Plain, approaching an oval, and we were looking along its greater diameter about ten miles long. It was shut in all around by rugged heights. Anybody could see at a glance that this was a lake bottom and that the several hills on it had once been islands. In fact, in winter time it is said that it reverts in a slight degree to its original condition. The sight was so novel that we were reluctant to descend. At last having fixed our eyes on a village called Psychro, above which appeared a large dark hole in the side of Mount Dikte, we hastened on our way.

After luncheon at Psychro we made the ascent of about five hundred feet to that dark hole and went in. This hole was once the overflow pipe for the lake that covered the plain five hundred feet deep. At last the weight of water made a new hole for itself lower down, through which the plain is now drained, albeit somewhat imperfectly. The lower hole was probably made at least 2000 B. C.

The upper hole early became a sacred cave, and the fable ran that Zeus was born in it.

This cave was excavated some five years ago by Mr. Hogarth, then Director of the British School at Athens, with wonderful results. Not only were fragments of very early pottery found there, but bronze statuets of the most primi-

lected and one cannot go far in. The cleaning out of the upper part of the cave was rendered difficult by the falling in of great portions of the rocks which formed the edges of the cave. The work consisted more in blasting than in digging.

The village of Psychro had two houses with tile roofs, a feature that we had not

Lasithian Plain. Formerly the Bottom of a Lake. Mt. Dikte in the Background

tive type, various miniature implements forming dedicatory offerings, and especially double axes, the symbol of Cretan Zeus. The fact that these objects had long been in the market called attention to this cave as a place to investigate.

After cleaning out the upper part of the cave Mr. Hogarth went down farther into the mountain, into what might be called a second cave, a great part of which was taken up by stalactites, which in the obscure light look like a lot of gigantic organ pipes. In among the crevices between these stalactites were found a great number of the native bronzes; a great many also, having become embedded in the stalactites, had to be chiseled out.

The cave extended backward and downward, but the original discharge orifice being stopped up, water has col-

lected since leaving Herakleion. Everywhere we had seen flat roofs, usually of earth, but sometimes of large flat stones. On inquiry why tiles were not more widely used we were told that the art of making tiles was not generally known in Crete. Since Crete is by no means exempt from rain, mud roofs must leak horribly. It is instructive to find out "how the other half of the world lives."

When we had climbed out again from this bowl called the Lasithian Plain on the side opposite to that by which we came in the sun was nearing the horizon. Our next goal was Lyttos, represented by the modern village of Xidhia. Our path was very crooked, and also went up and down. At last a dark night came on when we were considerably short of our goal. Of course, Hassan, our guide, wanted to stop at a forbidding village at

eight o'clock, and the villagers reinforced him, but we were inexorable. It was almost nine o'clock when we reached Xidhia.

We went clear through the village to the house of a man named Pappadakis, said by friends who had lodged with him before to be the wealthy man of the place, a "blooming bachelor" and most hospitable to strangers. It was not a good time to present one's self without a letter of introduction. He was, however, one of the friendly blondes, and his cordiality was shown at once. His greeting was warm, but it cooled off at the sight of Hassan, who came in a moment later; I really thought we were going to be turned away. But now came a surprise. There was a wife in the room. Pap-

adakis had got married just a year before, and the wife proved to be our salvation. With her baby in her arms she seemed to us a madonna when she fixed the matter at once with a few quiet words. The gist of her plea seemed to be, "Never mind the Turk. This must always be a hospitable house."

est demur, and when he had made up his mind he did nothing by halves. He prepared us an excellent dinner of *pilafi*, which tasted all the better for being a little late. The quarters were as good as the food.

The following day was a grand church festival. I forget just what it was called. The family invited us to go to church with them; and since the church was on the high hill where once stood Lyttos we wanted to go anyway. So we accepted the invitation with alacrity. Hassan stayed behind with the horses from preference. The whole village as well as a good number of other villages collected at that church. The young wife, with her baby in her arms, made the ascent on horseback, while her hus-

Entrance to Diktacan Cave, 500 Feet Above the Village of Psychro on the Edge of the Lasithian Plain

padakis had got married just a year before, and the wife proved to be our salvation. With her baby in her arms she seemed to us a madonna when she fixed the matter at once with a few quiet words. The gist of her plea seemed to be, "Never mind the Turk. This must always be a hospitable house."

The husband then made not the slight-

band walked close beside her. I could not help being reminded of pictures of the flight into Egypt. When the young woman offered to give me her place on the horse, for a change, if I would carry the baby, I declined, preferring to walk unencumbered.

It was a jolly excursion. The church, with a standing capacity of about two

hundred, really had three hundred persons crowded into it. All three of us went in, to please our host. But I, for one, after going clear up to the altar, got out as expeditiously as was compatible with politeness. We certainly got near the people that day.

The service did not last much, if any, longer than half an hour. Then came one of the jolliest of picnics. All around the church, some backed up against it, were groups of men, women and children eating bread, cheese and eggs; and on this day of days roast mutton and roast pork. They washed all this down with copious drafts of strong red wine. The officiating priest was the most urgent of all in his invitations to drink and "celebrate the festival." A stranger who wished to meet these cordial people half way had to take small sips from his glass at each challenge or run the risk of getting tipsy. But none of the villagers, who certainly drank a good deal, was incapacitated from joining the dance that followed on the green sward.

We had intended to stay an hour and then continue our journey; but we were constrained to stay there three hours, taking now and then a stolen look at the remains of old Lyttos, which, tho magnificently placed, are not in themselves very impressive. It was easy to pick up coins by the handful. It was noon when we mounted again to ride to Knossos.

There is after all no feature of travel more interesting than the ways of the people. Mountains and ruins were the

object of our quest, but men and their human habits kept coming in and dividing our attention. The language which we had learned in Greece did not cover entirely the Cretan vocabulary. At one point in our journey we asked a Cretan in the best Greek whether we should turn to the right or to the left. The man did not understand the word *ἀριστερά* (left), and Hassan gravely explained to him that "it was the English word for *παβά*." We got many scraps of philology as we went along. But more important than language was "the human heart by which we live." The Cretans seemed to be a very warm-hearted people. At several places, as we mounted to start off, the people gave us flowers, with wishes for a fine journey.

It was a long ride from Lyttos to Herakleion, up and down, over ridge after ridge. We were soon comparatively near the sea, where the streams flowing down from the interior had furrowed the land in a direction at right angles to our course. It was toward evening when, after a brisk canter, we passed Knossos. After Phaestos I could hardly believe that this low hill, surrounded by higher hills, could really be Knossos. But the British flag waved over the excavations, and there could be no mistake. We deferred tasting British hospitality until the next day and pressed on to Herakleion, through the fast falling shades of night. We had completed the circuit of Mount Dikte.

NEW YORK CITY.

## Friendship

BY EDMUND KEMPER BROADUS

I KNOW not where the end will be,  
Hither or yonder, near or far,  
Upon the many billowed sea,  
Or where the trackless sand dunes are—

I know not how the end will be—  
Or nerveless fading out of life;  
Or throes of mortal agony,  
The issue of a luckless strife.

I know not when the end will be,  
Unvisaged, in the spirit's prime,  
Or when the palsied years set free  
The soul impatient of slow time.

I only know that time and place  
And menace of that spectral end  
Can never rob me of thy face—  
Can never dim thy smile, O Friend!

STATE UNIVERSITY, VERMILION, S. D.

# The Oregon Exposition

BY HENRY W. GOODE

PRESIDENT AND DIRECTOR GENERAL OF THE LEWIS AND CLARK EXPOSITION.

NOTEWORTHY, indeed, is the fact that the Pacific Northwest is the only territory acquired by the United States through actual discovery. This in itself deserves to be commemorated by the Lewis and Clark Exposition, but the event will also be significant of the truly remarkable progress that this—one of the youngest parts of the nation—has attained in the brief span of its existence. True, the intrepid explorers who led their little band up the Missouri and down the Columbia valleys in the journey across the continent reached the shore of the Pacific a century back, but so slowly did civilization follow in their footsteps that fifty years after they fastened the country's notice of ownership to the walls of Fort Clatsop the entire

State of Oregon contained but 14,000 people. In 1846 a Maine Yankee tossed a penny in the air on the bank of the Willamette River. It was a case of "heads, I win," and he named the settlement of the half dozen cabins "Portland," after his native city. To-day the community where the Exposition is located has nearly 150,000 inhabitants and the State of Oregon 600,000. To the student of statistics these figures prove the remarkable progress which has been made in the peopling of the Northwest,

and its corresponding expansion in industry and commerce. But yesterday the plow began to turn over the soil in the clearings, and while the great harbor formed by Puget Sound was entered in the last century, only in recent years has it

formed a haven for craft crossing the Pacific and been utilized by steamships and sailing vessels plying along the coast. Altho the lumber industry has become one of the most important in our own and adjacent States and Territories, but a small corner has been cut out of the vast forests which still await the ax and saw.

The Exposition will indeed be an exposition, demonstrating the energy and determination which have already accomplished such results in the Pacific Northwest, but those who cross the

PRESIDENT AND DIRECTOR GENERAL H. W. GOODE

continent from the shores of the Atlantic, the Middle States and the Central West will also have an opportunity to see not merely the display which has been made a hundred years since the white man first claimed this part of the continent for his own, but its wonderful natural resources, its picturesque scenery and the urban and rural life of its people—a civilization which we believe compares favorably with that in any other portion of the United States, despite the obstacles which we have been obliged to surmount and the

Experimental Gardens from Centennial Park

hardships which must be endured in turning the wilderness into a land of prosperity and plenty.

To refer to the Exposition proper, a brief reference to the manner in which it originated may be of interest. The idea of the centennial observance, while projected as far back as 1896, did not take concrete form until 1900. At the annual meeting of the Oregon Historical Society Lewis Berkley Cox, a prominent lawyer, since deceased, introduced and had adopted resolutions declaring it to be the sense of the people of the Pacific Northwest that the anniversary of the Lewis and Clark Expedition should be celebrated. From that time the Exposition idea began to develop definitely and representative citizens took hold of it. A stock company was organized and financial aid secured not only from Oregon, but from California, Washington, Idaho, Montana and Wyoming, while the Government made an appropriation of nearly \$500,000 and the city of Portland contributed \$420,000. In all nearly \$3,000,000 has been secured for the display.

Considering the small number of people and the limited financial resources of

the Northwest as contrasted with the wealth and population of the East, the donations, for such they are, have been generously large, but our people have an enthusiasm of the kind that does not wear off. When the project was launched a committee of thirty-five leading citizens made a canvass of the business and professional men of Portland itself. They wanted to sell \$300,000 worth of stock in the Lewis and Clark Corporation. They did not claim that the corporation would pay dividends, and the people they called on knew that there were many investments where returns were certain. But in two days the committee secured \$340,000, and this encouraged the promoters to increase the capital stock to \$500,000. When we called on the State Legislature for an appropriation that body voted \$450,000 for the Fair—nearly a dollar for every man, woman and child living in the State. And no one objected. Here is the secret of it: The people of Portland and in the rest of the State believe absolutely in Portland and in Oregon. Everybody believes in the Lewis and Clark Centennial and is anxious to make the Fair the success that it is confidently believed it will

be. Enthusiasm helps everything, but nothing more than an exposition.

In describing the project the location is worthy of note. The site, comprising 430 acres, is a triangular tract bounded by the Willamette River, the foothills and one of the principal residential districts of Portland. The mainland, on which the principal exhibition palaces stand, slopes upward from the lake shore, and the buildings are seen among the trees at the crest of the elevation. In the western part of the grounds a considerable tract, sloping down from the hill crest, has been left almost in its natural state, forming Centennial Park. Yet even here the workman has been busy, cutting out a tree that has hindered the growth of a sister tree more beautiful and culling a dead or unsightly branch or twig from an otherwise perfect specimen. The result of this work, now completed, is a stretch of woodland which has lost none of its natural loveliness and gained much that nature could not supply. The site in itself is really incomparable in the setting which nature has given it. Surrounding the grounds are the foothills of the Cascade Range. The hills, high enough to be called mountains in a flat country, are covered with a

heavy growth of fir trees and underbrush, so that they retain to-day the primeval appearance they possessed when Lewis and Clark first saw them. On the western side the grounds extend to the foot of the hills and the contrast is vivid. Beyond the foothills the lofty peaks of the Cascades bound the horizon like hoary-headed sentries. To the north Mount Rainier, 14,552 feet high, lifts its head, white and dazzling, and to the right of it is the white cone of Mount St. Helen's, 9,750 feet in height. Mount Adams rises in monumental grandeur to the northeast, and sixty miles distant, tho seemingly much nearer, stands Mount Hood. This mountain, 11,225 feet in height, looks higher than the loftier peaks, while its glaciers and snow fields seam the smooth whiteness of its surface and give the peak an air of rugged independence.

In several parts of the grounds, where embellishment by artificial means is fitting, the skill of the landscape gardener is found reflected in the Sunken Gardens. The largest of these will be in Columbia Court, the central plaza of the Exposition. The gardens are located between two wide avenues, and here will be little plats containing tropical flower-

Forestry Building

Oriental Building, Showing Corner of Forestry Building

ing plants, separated by winding paths. With fountains of picturesque design freshening the air with cold, clear mountain water, and the gardens bordered by a balustrade ornamented with vines, urns of rare plants and bay trees, the effect will be entrancing. To complete the picture, in the center of the court will be placed a heroic statue of Sacajawea, the heroine who twice saved the Lewis and Clark Expedition from destruction and

guided the travelers through the wilderness. The figure will form the centerpiece to a beautiful fountain.

Guild's Lake, the natural "Grand Basin" of the Exposition, is a fresh water body of rare beauty comprising 200 acres. It is spanned by the "Bridge of Nations," an elaborate structure built of wood and stuff in imitation of masonry. The amusement street, called "The Trail," is situated on the mainland end,

Grand Stairway, Showing European and Oriental Exhibits Building

European Exhibits Building

while an esplanade starting at the boat landing at the foot of the Grand Stairway extends out into the lake, then turns west and follows the lake shore to the live stock pavilions situated in the extreme western portion of the grounds. This esplanade will be an admirable promenade from which the visitors can watch the night illumination on the lake.

In planning the various exhibits the importance of the Oriental trade with the Pacific Coast States was recognized, and a building designed purposely for a display of the products of Eastern Asia and the islands of the sea. The progress of our part of the country in agriculture

will be shown in the largest structure on the grounds. Mineral development will be shown in a building devoted to mining and metallurgy. The extensive lumbering interests will be represented in and by a mammoth house of logs each six feet in diameter. It will contain a striking display of the wealth of our forests. The co-operation of European manufacturers and tradespeople has caused us to provide an edifice especially for them. New devices in mechanism, especially electrical appliances, will be shown in a special department, while other buildings include those devoted to varied industries, fine arts, as well as an ornate festi-

Agriculture Building, Showing Portion of Columbia Court

val hall. While they do not, of course, equal in size the great structures at the World's Fair, they are of such dimensions as to give them a stately and appropriate appearance. The Palace of Agriculture, for example, is nearly 500 feet in length and over 200 feet in width. Besides these, however, the States taking part will be represented by fitting structures, while the interest in the East is manifested by the pavilions which will represent New York, Massachusetts and other States on the site. The Government display will be contained in no less than five buildings.

While the exploiters of the Exposition planned that it should be national in its scope, the general impression at first was that the Fair would be a local industrial Exposition and would not prove of interest to many people outside the original Oregon Country. When the Government appropriated \$475,000 for the Exposition, however, the Fair at once took on a national aspect. Wholesale exploitation has served to spread a knowledge of the

coming Exposition to every corner of the United States, and the whole nation is undoubtedly alive to its importance. In fact, the surprisingly large number of inquiries which the management is daily receiving from persons not only on the other side of the continent, but abroad, is a most gratifying indication of how the enterprise is being regarded away from the Pacific Coast. The loyalty of the people of the Far West is such that we can count upon them for a numerous attendance, just as the residents of the States east and west of the Mississippi proved their loyalty to St. Louis; but I feel I am safe in saying that our countrymen in the East intend giving us an evidence of their appreciation of our efforts by journeying the thousands of miles to greet us. It may be needless to say that they will receive a hearty welcome. In short, the Exposition may be well worth while just to further cement the bonds of friendship between the Pacific Northwest and the balance of the Union.

Dinosaurs as They Appeared in Life. From a Restoration by Charles R. Knight. After a Photograph Provided by the American Museum of Natural History

## The Brontosaurus

BY W. D. MATTHEW

OF THE AMERICAN MUSEUM OF NATURAL HISTORY

**E**IGHT years ago the American Museum of Natural History of this city began a search for fossil reptiles in the Rocky Mountain States. The prime object of the search was to obtain skeletons of the Dinosaurs, those gigantic extinct animals whose fragmentary remains, discovered in that region and studied and described especially by the late Professor Marsh, have excited the greatest interest among men of science. In order to place these marvels of an antique world before the public in tangible form a Dinosaur Hall was planned, in which should be exhibited mounted skeletons of the principal kinds of Dinosaurs. To obtain these a series of expeditions into the regions of the arid West where such fossils are to be found was inaugurated and carried on under direction of Professor Osborn, and the collections of the late Professor Cope, containing three splendid skeletons

of Dinosaurs, were purchased through the liberality of President Jesup.

This program involved an amount of work hardly to be appreciated by outsiders, and it is as yet far from being complete. Nevertheless, the mounting of the largest skeleton, the Amphibious Dinosaur Brontosaurus, has been finished; the skeleton of a remarkable dwarf Dinosaur, the "Bird-Catcher," has been mounted and placed on exhibition; the preparation and mounting of entire skeletons of three other large and very extraordinary types (the carnivorous, duck billed and armored Dinosaurs) is well under way, and diligent search is being made for complete and mountable skeletons of other important kinds. Many other more fragmentary specimens have been found, some of which are exhibited in the wall cases around the hall of Fossil Reptiles (Dinosaur Hall), opened to the public last month.

The Brontosaurus skeleton, the principal feature of the hall, is sixty-six feet eight inches in length and stands fifteen feet two inches high. Its petrified thigh bone weighs 570 pounds. About one-third of the skeleton, including the skull, is restored in plaster, modeled or cast from other incomplete skeletons. The remaining two-thirds belong to one individual, except for a part of the tail, one shoulder blade and one hind limb, supplied from another skeleton of the same species.

The skeleton was discovered by Mr. Walter Granger, of the Museum expedition of 1898, about nine miles north of Medicine Bow, Wyoming. It took the whole of the succeeding summer to extract it from the rock, pack it and ship it to the Museum. Nearly two years were consumed in removing the matrix, piecing together and cementing the brittle and shattered petrified bone, strengthening it so that it would bear handling and restoring the missing parts of the bones

in tinted plaster. The articulation and mounting of the skeleton and modeling of the missing bones took an even longer time, so that it was not until February, 1905, that the Brontosaurus was at last ready for exhibition.

It will appear, therefore, that the collection, preparation and mounting of this gigantic fossil have been a task of extraordinary difficulty. No museum has ever before attempted to mount so large a fossil skeleton, and the great weight and fragile character of the bones made it necessary to devise especial methods to give each bone a rigid and complete support, as otherwise it would soon break in pieces from its own weight. The proper articulating of the bones and the posing of the limbs were equally difficult problems, for the Amphibious Dinosaurs, to which this animal belongs, disappeared from the earth long before the dawn of the Age of Mammals, and their nearest relatives, the living lizards, crocodiles, etc., are so remote from them in either

Vertebrae of the Dinosaur at the American Museum of Natural History. From a Photograph Provided by the American Museum of Natural History

Setting up the Skeleton of the Dinosaur. From a Photograph  
Provided by the American Museum of Natural History

proportions or habits that they are unsatisfactory guides in determining how the bones were articulated, and are of but little use in posing the limbs and other parts of the body in positions that they must have taken during life. Nor among the higher animals of modern time is there one which has any analogy in appearance or habits of life to those which we have been obliged by the study of the skeleton to ascribe to the Brontosaurus.

The Brontosaurus was one of the largest of the Amphibious Dinosaurs or Sauropoda, a race of gigantic reptiles which flourished during the Jurassic or Middle Period of the Age of Reptiles—some eight millions of years ago by a moderate estimate of geological time. They were the largest animals that ever lived, excepting some of the whales, and certainly were the largest animals that ever walked on four legs.

In proportions and appearance the Brontosaurus was quite unlike any living

animal. It had a long thick tail like the lizards and crocodiles, a long flexible neck like an ostrich, a thick, short, slab sided body and straight, massive, post-like limbs, suggesting the elephant, and a remarkably small head for the size of the beast. The ribs, limb bones and tail bones are exceptionally solid and heavy; the vertebræ of the back and neck, and the skull, on the contrary, are constructed so as to combine the minimum of weight with large surface and the necessary strength at all points of strain.

The brain-case occupies only a small part of the back of the skull, so that the brain must have been small even for a reptile, and its organization (as inferred from the form of the brain-cast) indicates a very low grade of intelligence. Much larger than the brain proper was the spinal cord, especially in the region of the sacrum, controlling most of the reflex and involuntary actions of the huge organism. Hence we can best regard the Brontosaurus as a great, slow

moving animal automaton, a vast storehouse of organized matter directed chiefly or solely by instinct and to a very limited degree, if at all, by conscious intelligence. Its huge size and its imperfect organization, as compared with the great quadrupeds of to-day, rendered its movements slow and clumsy; its small and low brain shows that it must have been automatic, instinctive and unintelligent.

The teeth indicate that it was herbivor-

from the world we know was that ancient world in which these huge creatures lived. Could the reader, equipped with the Time Machine invented by the ingenious fancy of Mr. H. G. Wells, transport himself back some eight millions of years to the epoch when this skeleton was clothed in flesh and blood, he would find himself upon an earth so strange of aspect that he might well imagine that he had turned the wrong lever and landed upon another planet.

The Dinosaur Recently Mounted in the American Museum, New York

ous, feeding on soft vegetable food, and the huge size and the imperfect joints and massive construction of the limb and tail bones indicate that the animal spent most or all of its time in the water, wading around on the bottom of the sluggish streams and bayous where its remains were buried. Thus the weight of the body would be buoyed up by the water, while the heavy bones of limbs and tail would weight the lower parts so as to enable the animal to keep its footing.

It is not easy to realize how different

He would find a moist and tropical climate prevailing from pole to pole, islands and continents of utterly unfamiliar form, covered with evergreen forests of odd looking trees and bordered by vast marshes rank with vegetation of still stranger appearance. Where now the bare, arid plains and badland deserts of Wyoming rise from five to ten thousand feet above sea level he would find himself in the center of a vast swamp scarcely above the level of the ocean, all overgrown with a jungle of cyads, tree ferns

and coniferous trees, its sluggish streams and broad bayous choked with water plants growing dense and rank in the moist hothouse atmosphere, and tenanted by creatures of aspect as strange as any of the imaginary animals he had read of in fairy tales. Crocodiles and turtles he might see in plenty basking on the muddy banks, and dragon flies flitting over the steaming pools, but little else that would recall the modern world. In the forests he would find none of the hoofed or clawed animals with which he was familiar, but in place of them reptiles great and small, some of huge size looking somewhat like gigantic long legged lizards, browsing on the trees or devouring each other, while, in place of birds, reptiles with batlike wings would fly through the air or perch upon the branches. In the depths of the bayou ugly reptilian heads surmounting long, snaky necks would rise from time to time out of the water, and sometimes the great whale-like bodies beneath them would appear above the surface and indicate where the huge Brontosauri were wading to and fro over the bottom. Perhaps a keen eye and a prolonged search might reveal little furry, shrewlike creatures no larger than a mouse cowering in the branches of the trees and all unconscious of the fact that they or others like them were

destined to outlive their gigantic contemporaries and in remote future ages to give rise to the various races of mammals that now inhabit the earth, and, in the end, to man himself. For in the Jurassic Period and for millions of years afterward reptiles were the dominant type of life of earth, sea and air. Huge marine reptiles, the Ichthyosaurs and Plesiosaurs, sea crocodiles and sea turtles swarmed in the sea ; the Dinosaurs, with fresh water crocodiles and turtles, tenanted land and swamp, while the Pterodactyls, or Flying Reptiles, and long tailed, toothed birds, half reptile, half bird, inhabited the air.

Whether from changes in climate and vegetation or from other causes about which we can only speculate, the Brontosaurus, along with many others of his kin, became extinct at the close of the Jurassic Period, to be succeeded by other generations of reptiles, which in their turn culminated in types equally bizarre and scarcely less huge. At the close of the Cretaceous Period nearly all of them died out, leaving only a few of the smaller reptilian orders to survive to the modern era, while the little arboreal mammals commenced their evolution into the various races of hoofed and clawed mammals.

NEW YORK CITY.

## A Song of Seed Time

BY FRANK H. SWEET

“WHOA! haw!” cheerily  
Over the field they cry,  
Glad with yielding of the soil  
And brightness of the sky;  
Farmer and boy and hired man,  
Harrow and horse and plow.  
“Whoa, haw!” hear the cry;  
“Steady, I tell ye now!”  
Over the field in straggling line,  
Ever and on they go,  
And watchful on his lofty pine  
Sitteth the thoughtful crow.

“Whoa! haw!” merrily,  
Downward the western sun,  
And to and from and back and forth  
Till their work is done;  
Farmer and boy and hired man,  
Harrow and horse and plow,  
Then through the bars to the barnyard,  
To chores and waiting now;  
Into the barn in straggling line,  
Feeding out stalks and hay,  
And from his notch on the lofty pine  
Flieth the crow away.

## A French View of England

THE change in the attitude of the French toward the English of late years is marked and curious. For the first time in history they are trying to understand their neighbors across the Channel, whom they have sometimes imitated and sometimes despised, but never comprehended. Three recent works indicate a very different national attitude: "What Is the Cause of Anglo-Saxon Superiority?" Boutmy's "Psychology of the English" and the witty and intelligent volume\* of travel sketches, by the Vicomte d'Humières, all avowedly written in the interests of a *rapprochement* of the two countries. A Frenchman who can so far rise above the inveterate prejudice of his race as to see that the English are not hypocritical in the homage they pay to domestic virtue, and that British imperialism contains an idealistic element, is sufficiently remarkable to merit attention. He has the usual French sharpness in detecting cant, political, social or religious, but he has the unusual keenness to see that there is something behind it worth considering. He has a certain appreciation of the importance and significance of British religion, notwithstanding he characterizes it as

"an asceticism that has performed the feat of reconciling itself and its dogmas with affirmed piratical instincts and of installing the Ark of the Covenant and the Cherubim of the Old Law on board the beaked galleys of the ancestral 'Vikings.'"

This estimate of British expansion is quite in the old vein, but we can scarcely believe our eyes when we see such words as these written by a Frenchman to his own countrymen:

"In insisting upon her civilizing task the most marvelous thing is that England may be right. In landing her bales and starting her caravans, she has simply proved her greater fitness for managing the traffic of the planet. And, in the name of the planet's interests,

which include her own, she claims the task as hers. The question allows of only one reply on the part of the rivals of this champion so certain of her strength; to do better. In every human being the right to rule is measured by his capacity for ruling."

This strong language may be explained by the fact that the Vicomte is, like so many of his countrymen nowadays, an admirer of Nietzsche, "the man who, by dint of going to the end of his mind, went out of it." He also has a great admiration for the poet of imperialism, and a visit to his home near Brighton affords us a rare glimpse of Kipling *intime*. A trip to England and one to India form the substance of the volume, but the vividly sketched pen pictures go far to excuse the trivial and personal character of many of the incidents he narrates. He uses as sharp a wit as Max O'Rell in describing British customs, manners, sports and institutions; but his criticism is much more just and much less bitter.

## Recent Plays

It is surely a sign of promise for the future of the literary drama that so many English and American dramatists and playwrights are beginning to publish their work, and thus challenge literary as well as theatrical criticism. In France, Russia, Germany and the Scandinavian countries this custom has prevailed for a long time; but in England and America it is only beginning to become general. Before the international copyright law the Englishman did not dare to publish his dramatic effusions; but, says Mr. Jones, in his admirable book, "The Renaissance of the English drama":

"If from this time forward a playwright does not publish within a reasonable time after the theatrical production of his piece it will be an open confession that his work was a thing of the theater merely, needing its garish artificial light and surroundings, and not daring to face the calm air and cold daylight of print."

Certain it is that every year sees an

\* THROUGH ISLAND AND EMPIRE. By Robert d'Humières. With a Prefatory Letter by Rudyard Kipling. New York: Doubleday, Page & Co. \$1.40.

increasing number of published plays in the English language; but, unfortunately, the number thereof is more encouraging than the quality. Of the seven contemporary English dramas lying on our table, not one can by any stretch of language be called great, either in promise or in performance, and only two can reasonably be called clever. For theatrical purposes the best is unquestionably Mr. Jones's *Maneuvers of Jane*,<sup>1</sup> which lately met with such deserved success in New York. Fortunately for morals, but unfortunately for his art, the playwright who works for an English audience is greatly circumscribed in his choice and treatment of human themes, and after the strong meat of contemporary French and German plays, *Jane* seems rather tame. Still, the situations are the work of an undoubted expert, and the dialog is skillfully written. Now that Oscar Wilde is dead, Mr. Jones has only one equal in England, the Ibsenized Pinero. . . . Mr. Davis, whom the New York *Sun* has called the "head of the marshmallow school of fiction," has written a charming little one-act comedy in *Miss Civilization*.<sup>2</sup> What a contrast between his heroines and—let us say, Clarissa Harlowe! Here we have a girl like Hope Langham, who instead of having many nerves has only one big one. This playlet is admirably suited for parlor and amateur theatricals, where it will furnish both to actors and audiences unalloyed delight. . . . *The Florentines*, a drama in blank verse, gives an incident in the career of Benvenuto Cellini. It has some pleasant lines, but no real force. The verse, perhaps in the author's effort to avoid rigidity, is rather too loosely woven and constantly tends to disintegrate. . . . Among these writers, Tolstoy<sup>3</sup> looms up like a giant among gnomes. His terrible *Power of Darkness*, acted constantly in Russia and in Germany, is never seen on the regular American or English stage, altho Mr.

Franklin Sargent, who has done so much admirable work in reviving old dramas and in putting on for single performances plays that no manager will mount, is not afraid of the great Russian's frankness. *The Power of Darkness* is a naturalistic tragedy, written with appalling moral earnestness; while the *Fruits of Culture* is a really charming comedy, containing social satire worthy of the great Russian humorist, Gogol. Every page that Tolstoy writes bears the stamp of genius.

*The Saxons*<sup>4</sup> is a long, confused drama in blank verse, where the ambition of the author is more praiseworthy than the result of it. . . . *The New Lights*<sup>5</sup> is a realistic prose play, dealing with a religious sect in Pennsylvania, and mildly interesting for the information it contains. It is crudely written, and leaves only a faint impression. Few of the characters are convincing. . . . As has before been pointed out in these columns, the Holy Bible is at this moment the chief quarry of the dramatist. Miss Florence Wilkinson, an author of some genuine poetic talent, gives us in one volume two plays of Israel,<sup>6</sup> the first dealing in an inadequate manner with the lives of David, Saul, Jonathan and other Hebrew heroes; the second play is much superior, and contains many excellent lines. It makes, however, the unpleasant impression that Mary's career before her repentance is more interesting to the dramatist than her repentance itself. The attempt to make a harlot beautiful, clever and interesting is as old as the stage and often degenerates into sickly sentimentality. Paul Heyse's "Maria von Magdala," a play greatly superior to Miss Wilkinson's, and effectively acted by Mrs. Fiske, is by no means free from this same defect. . . . Mr. Lodge's *Cain*<sup>7</sup> is a veritable volcano of poetry, pouring out real fire mingled with smoke and ashes. What Mr. Lodge lacks is the saving sense of humor. He has undoubted force and

<sup>1</sup> THE MANŒUVRES OF JANE. *An Original Comedy in Four Acts. By Henry Arthur Jones.* New York: The Macmillan Co. 75 cents.

<sup>2</sup> "MISS CIVILIZATION." *A Comedy in One Act. By Richard Harding Davis.* New York: Charles Scribner's Sons. 50 cents.

<sup>3</sup> PLAYS: THE POWER OF DARKNESS, THE FIRST DISTILLER, THE FRUITS OF CULTURE. *By Leo Tolstoy. Translated by Louise and Aylmer Maude. With an Annotated List of Tolstoy's Works.* New York: Funk & Wagnalls Co. \$1.50.

<sup>7</sup> CAIN. *A Drama. By George Oabot Lodge.* Boston: Houghton, Mifflin & Co. \$1.00.

passion, and we shall await with interest his future poetic productions; but the attempt to make a hero out of Cain seems somehow very *young*, and the whole play gives the impression of reversed dynamics. The volume is pompously dedicated to Jesus of Nazareth, which reminds us of Dogberry's "Write God First."

## Marriage and Divorce

ONLY recently has the attempt been made to view the problems of marriage and divorce, the relations of the sexes, the position of woman in society, and the ideals of the family in the cool light of scientific investigation and thought. Professor Howard's volumes\* are admirable studies and a much needed supplement to the famous works of Starcke and Westermarck.

But his task is narrower than theirs; it is the development of marriage and the family in the three homes of the English race, including therein a discussion of the history of the family among primitive peoples. The first part is devoted to this latter subject, the second and third to the matrimonial institutions of the early Teutons, England and the United States.

While the thoroughly scientific nature of the work is best evidenced by this inclusion of the discussion of primitive marriage forms, a reading of this part leaves one with the feeling that its omission would not have been fatal to the work. In justice to the author it must be kept in mind that this question of the historical succession of the various forms of the family is still the fighting ground of anthropologic warfare. Professor Howard accepts the conclusion of Westermarck that pairing is the typical form of marriage. In the early stages individual, tho temporary, marriage prevails; in later stages various forms of polyandry and polygamy make their appearance. Monogamy is never superseded, and, in its last form, is a union for life. Marriage by capture, either actual or symbolic, gives way to marriage by

purchase, the first real form of the marriage contract. Wife purchase is to be found in every branch of the Germanic race, the purchase contract becoming in the end a ceremonial conveyance and the bride-price a dowry.

To follow the further stages of the matrimonial institution is very fascinating. Before the thirteenth century the legal form of marriage may be characterized as a private business transaction, requiring no public license, registration or priest. With the rise of the canon law the Church begins the successful attempt to bring marriage under its jurisdiction. Professor Howard does not fail to remark the contradiction between the leanings of Church theory toward asceticism and the holiness of celibacy and the belief in marriage as a sacrament. In the Protestant Reformation the denial of Church authority over the matrimonial relations and of the sacrament theory constituted the essence of the change with regard to marriage. But civil marriage, as we understand it to-day, did not become practically existent in England until the middle of the eighteenth century.

A theory of marriage has as its obverse a theory of divorce. If marriage is a sacrament, then divorce is unpermissible, except for extreme grounds. The widening of the causes for divorce comes only with the Reformation and finds its most liberal expression in that Protestant of Protestants, Milton.

After so complete and illuminating a study an examination of marriage and divorce laws in the United States, from the Colonial period to the present day, gains in light and clearness. America starts her career with certain distinct advantages over the Old World, unquestioned civil jurisdiction and the equality of husband and wife before the law. Yet the colonies betray marked differences in their points of view, differences suggesting interesting variations in their psychologic make-up. These differences were often lost and as often accentuated as Colonial history became State history.

Professor Howard points out that the marriage rate is steadily falling, that of divorce steadily rising, "and is proportionately greater than of any other civilized country, except Japan; but that he

\* HISTORY OF MATRIMONIAL INSTITUTIONS. By George Elliott Howard, Ph.D. Chicago: University of Chicago. 3 vols. \$10.00.

does not hold divorce *per se* evil may be seen from his statement:

"The divorce movement is dependent upon causes which lie far beyond the reach of the statute maker, for it is but a part of the mighty movement for social liberation ever since the Reformation."

The trouble, in his opinion, is mainly with our bad matrimonial laws, and the first step, therefore, is the reform of the present laws.

Terminating the work is a discussion of the future of the family in its relations with the economic emancipation of woman and the enlargement of State functions, remarkable for its keenness and sympathetic insight.

**The United States of America.** By Edwin Erle Sparks, Ph.D. Two vols. - New York: G. P. Putnam's Sons. \$2.70.

This new history of the United States does not attempt to tell of the Colonial period, but begins with the making of the Confederation during the War for Independence. It endeavors to trace the gradual evolution of a confederated republic forced by necessity to an ever stronger union. It constantly takes account of the underlying forces of heredity and environment. The apparent attempt to take into account only the cen-

tralizing or decentralizing factors that have aided or hindered the process of unification causes the author to leave out many of the details ordinarily found in our history. There is little about men, and much about economic and social forces. There is no story of human events, but rather a well-knit continuous essay upon the forces that have directed human action. Hardly any former attempt to write our history has taken into account so many of the different forces that have influenced its progress. In fact, the book is a good summary of the best work done on American history. There is little original research, but McMaster's voluminous work is condensed, and Turner's masterly essays are expanded. The growing West is given its proper place almost for the first time outside of Turner's epoch making essays. New England is neglected, if anything, and the omissions of her historians in matters of Western history are amply retaliated upon in this new work. The interest of the book depends not upon an unfolding drama, but upon the quick succession of interesting facts, topically arranged. The style is clear and pleasing, except for a tendency to sententious truisms, such as "Diplomacy is not a game for amateurs," "Sentiment plays no part in the rivalry of nations" and

Broadway, New York City, in 1835. From Sparks's "United States." Putnam

"War is abnormal." The book is well illustrated by pictures that have real historical value, not purely fanciful conceptions of historical events. Besides maps showing the progress of population and reproductions of contemporary documents, there is a series of cartoons reproduced from prints of the time which recall the spirit of political controversy as nothing else can.

**The Tom-Boy at Work.** By Jeannette L. Gilder. New York: Doubleday, Page & Co. \$1.25.

This volume is the sequel to Miss Gilder's story of "The Tom-Boy," which appeared last year. And it illustrates the difference between the gift of veracity and that of imagination. Of the latter we are having too much nowadays; it is becoming simply the faculty of fabrication; but the art of writing out the experiences of real life, as Miss Gilder has done in this story, with all the halcyon touches of youth and energy and hope, will always be as rare as it is refreshing. Some women work because circumstances compel them, and they have a pathetic way of relating their hardships which pains the sympathies more than it excites admiration. But the Tom-Boy was born with the achieving spirit. Her energy, pluck and cheerfulness make poverty seem natural and stimulating. It is the spur with which she rides through vicissitudes, that are accounted adventures by her gallant spirit, into fame and fortune. There is not a single cheap miracle recorded by which the heroine wins out, but it is all a matter of wit and work. But to represent the book as merely the story of an enterprising young woman journalist is to omit half the charm of it. The heroine gives her impressions of New York life thirty years ago. She met many of the distinguished men and women of the times, knew nearly all the great actors and actresses, saw the best plays, and everything else, for that matter, which went on about her. And she has interpreted the whole situation with that shrewd, honest, impersonal intelligence which is founded upon humor and common sense rather than upon the usual sentimental pose of such a writer to her theme. And this young woman tom-boy is so sincere in her enthusiasm, so natural

in her affections, so right in her appreciation of character, so kindly gifted at caricaturing, that one wonders if such a person can grow old. And if she can, what manner of an *old* tom-boy is she? Meanwhile, the record of the tom-boys she has been should be in the hands of every young woman who can or ought to work. Not one in ten thousand will cap the climax by becoming editor of a great literary magazine, but they can all emulate the fine temper of her spirit.

**The Ragged Messenger.** By W. B. Maxwell. New York: G. P. Putnam's Sons. \$1.20.

It is interesting to observe how a daring and suggestive novel will fail to attract the attention of the novel-reading public. The explanation is that this class of readers usually require a bulletin board advertisement of sensational features in the initial chapters. And *The Ragged Messenger* did not fulfil these requirements. The scenes are laid in London slums and in great houses alternately. To all appearances it begins like an evangelical romance, but really it is an effort to account for the life and character of Jesus upon a physiological basis. The hero is a street preacher, who had curious illusions when he was a boy, and who believes that some man incarnates the Messiah ideal in every generation. And he attempts to live this messenger life, not as Charles Sheldon would represent such a character, but he lives it with a sort of humanistic passion and a glorified imagination. He is met everywhere with ridicule, and uninspiring conditions. He is maligned by those he would save, victimized by harlots, and cheated by his disciples, but he clings to the idea of his Messiahship with a sincerity and courage which fascinates attention. Nevertheless there is a downward pull in him. He is capable of ungovernable rage, and of awful repentance. He offends good taste, and transcends imagination in his genius for giving. But the distinguishing feature of the story is a certain physician, who follows the hero from pillar to post throughout his adventures, and who furnishes a physiological explanation for all the divine phenomena of his experience. The book is written in the usual absent-

mindful manner peculiar to English novelists. The reader gets the impression that he is listening to a man talking to himself.

**The Garden of Allah.** By Robert Hichens.  
New York: Frederick A. Stokes Co.  
\$1.50.

"As I came through the desert thus it was—  
As I came through the desert."

—*The City of Dreadful Night.*

Mr. Hichens has written his masterpiece. *The Garden of Allah* is the Sahara Desert, and never was the lure of the long, white road through its mysterious silence more convincingly portrayed. The hush and heat of noon-day, the sunlight on the warm red sands, the brooding peace of night, the strange witchery of vast and arid spaces burned over by the vivid blue of tropical skies, the voice that invites the traveler, all call us, too, and we follow as we needs must. The Desert is a Presence throughout the book; it seizes us, as it does the heroine Domini, and hurries us on to the end. Great passions and joys and renunciations demand a wide stage like the desert. There is a hint of mirage in the scenes sometimes, a mist through which the principal figures loom larger than the people we know—but not often—they are real. We sometimes have to remind ourselves that there are still men and women in the world who believe passionately that monastic vows are sacred and more binding than those a man makes "to a woman when he loves her." Here is devotion unto death, to an ideal which we may not share, but which we must respect. And about this intense tragedy of human feeling broods the eternal silence of the desert, "the Garden of Allah."

### Literary Notes

THE New York News Company is publishing, at 50 cents each, a series of translations of stories by Eugene Sue, translated by Daniel De Leon, the Socialist labor leader.

....For all collectors in natural history the book of addresses published by S. E. Cassino, Salem, Mass., under the title of "The Naturalists' Universal Directory," is very useful, since by referring to it one can get the names of mineralogists, botanists, entomologists, etc., in any part of the world for the purpose of arranging exchanges.

...."Nature-Study" has been a term of very vague and questionable meaning, but the following definition seems to be a good one: "The elementary study of any natural objects and processes from the standpoint of human interests in every day life and independently of the organization characteristic of science." A new journal devoted to the subject thus interpreted, "The Nature-Study Review," is published by Prof. M. A. Bigelow, of Teachers' College, Columbia University, New York. The second number contains a symposium on the educational aims and values of nature-study.

### Pebbles

HE: "Did you succeed in having your prize cat insured?" SHE: "Why, no; they wanted to charge me nine times the regular rate!"—*Detroit Free Press.*

...."Just my luck! That little alligator they sent me from Palm Beach died the first day." "That's odd! What did you keep him in?" "Why, Florida water, of course."—*Cornell Widow.*

....In a Montana hotel there is a notice which reads: "Boarders taken by the day, week or month. Those who do not pay promptly will be taken by the neck."—*Country Life.*

A LA KUROPATKIN.

The cat sat on the backyard fence  
And sang a solo sweet.  
He did not wait for encore calls,  
But beat a quick retreat.

—*Punch Bowl.*

....Short: "Hello, Long! Where are you going?" Long: "I'm on my way over to the post office to register a kick against the miserable delivery service." "What's the trouble?" "Why, that check you promised to mail me ten days ago hasn't reached me yet!"—*Chicago Daily News.*

....An editor at Eddyville notified his subscribers that if they again seize upon him on the street after dark, stand him on his head and pour rice up his pants' leg there is going to be trouble. Some newspaper men are very finicky and never seem able to adjust themselves to the amenities of journalism.—*What Cheer (Ia.) Chronicle.*

....Mrs. Nayberleigh: "Why, what are you crying about?" Mrs. Youngbride: "Well, you know, John is away on a business trip—" Mrs. Nayberleigh: "Yes." Mrs. Youngbride: "He writes that he gets out my picture and k-kisses it every day." Mrs. Nayberleigh: "Well, that's surely nothing to cry about." Mrs. Youngbride: "Yes, it is! Just to play a joke on him, I took my picture out of his grip when he started, and put one of m-m-mother's in its place!"—*The Cleveland Leader.*

## The Mind of April

IF all the Aprils of all the years could compare notes what an anthology we should have of love and life, what a ritual of bird-songs and wind-prayers! She is the maiden-teacher of earth's sweetest doctrines. She is a pretty dogmatist of greenness and beauty who outwits winter and death with the foolishness of flowers and the fragrance of spring breezes. The air of her heavens is scented with nosegays before a blossom is to be seen. It is the perfume of flower-life in the soil baptized with love-rains from wooing skies. It is April in the ground, April in the treetops and in the heart of every little winged Sir Lancelot of the forest. Not one of all her dear ones is neglected. The tiniest springbeauty in the remotest boscage is remembered. The bilberry upon the furthest mountainside receives her blessing. All the world is "in the spirit" of her ministry.

Given April and the whole year's seasons may be inferred; but we cannot begin to reckon without her. And to begin with her is like beginning with a phrase in music. She is so much of the air, so little of the earth; so much a mood, so little a reality that she can only be defined as an immortal humor, visiting the world in behalf of heaven. There are, of course, for stupid people a sort of pole and axis explanation of why she comes. But that is a partial explanation. It does not go beyond the solar system of things, which is probably no more than the beginning.

But if one April should come when the earth lay dead, unblessed by a single bloom or blade of grass, when the brown buds failed to swell, when the birds forgot to sing their mating songs, there would be such a panic in the land as neither war, famine nor pestilence could produce. Even the agnostic would know then that we had lost God. For whatever doubts some may entertain concerning the dog-eared theology of mankind there are certain scriptures assured to us

forever. No man nor Church can tamper with earth's April resurrection, nor read into her fragrant gospels of peace and good will a clause of perpetual damnation. If we live or die she is sure to come again, bringing with her the same miracle of life renewed. She is sure to call forth all the good, green impulses of nature. She is sure to work all things together for the good of May and for the full blown rose of June. Nothing we know or do not know can take away this promise of life everlasting. It is not founded upon a theory, but upon a fact. If we miss the assurance it is because we have less faith than the dumb earth. She does not send up her lilies and flags according to a creed, but by the divine inspiration of earth and sky; they come when April calls. Nothing since time was divided into years has changed this joy-quickenning order of things. And we all believe in it with a profound confidence. Infidelity is at last only a sound of the voice, a conceit of the mortal mind. Back of it lies a faith so regnant that the veriest skeptic of us all still sows his seeds in April, and expects her to win them back from the sod in a new, fairer form of life.

And there is an immortality of dust as well as of spirit. It never dies but to rise again in some sweeter guise. Last summer's leaves are this year's violets. The very stones are dissolved in the great chemistry of life. And what is now the sepulchered heart of a grove may some day be the heart of an oak. Sooner shall the spirit itself perish than this myriad-form dust from which we are made.

And there is a resemblance, an association of ideas which remains throughout all changes. White lilies make a candlelit altar in the valley's deepest shade. That is the poetry of religion told in candlestick flowers. Wood violets are like the eyes of a girl—innocency revealed in color. A robin offers his mate a feather. That is the romance, reality and purpose of love naïvely confessed. The trees of the forest withstand the

storm and save every young leaf, every nest upon their boughs. That is the epic of war, beat out to a wind measure.

## “Tainted” Money

CAN money be “tainted,” so tainted that it cannot be received for purposes of benevolence? That is a question that has been raised in a surprising way these last few days.

There was an old Mosaic rule that only sheep, goats or bullocks “without blemish” should be received for sacrifice. If the creature was lame, or blind, it was rejected. It must be in perfect condition. Just so, we suppose, the half-shekel which was required as temple tax must be a good half-shekel, not clipped or sweated so as to be of less than its face value, and so we suppose now that good money should be given for benevolence, and not debased coin or unbankable cheques. But this “tainted” money they talk of is something else; for the temple treasury asked, of saint or sinner, only that it be good money.

The term “tainted” money is applied to money obtained dishonestly, such money as Matthew and the other publicans were supposed to get rich on; such money as gamblers earn, or the profits of brothels, or the wealth of the saloon, or the loot of thieves and pirates, or the gains of illegal dealings in trade and finance. The question is whether the taint of a bad man so passes to his money that it also is tainted, so tainted that it can neither be given nor received for a good purpose.

The proposition is so preposterous that it would seem hardly worth while to discuss it. If it is forbidden to receive such money, it is forbidden to give it. One who was a sinner could not give a dinner to our Lord, and Jesus could not eat with publicans and sinners. A saloonkeeper could not subscribe to build a church; every man in charge of a church or a charity would be required to judge his neighbor before taking his money, and then to refuse a good share of it with the rebuke, “I am holier than thou.”

But simple as the matter is, let us consider it seriously, for good men and wise

men are confused by it. The argument is, that if a good man takes money from a bad man for a good cause he condones the bad man’s sin. Now this is simply not true. He is not a partaker in his sin, he does not help him sin, he does not approve his sin. If it were a condition of his receiving it that he approve the sin or the sinner, that would be a bribe and wrong; but here is nothing of the sort.

Now let us take the case in hand: Mr. Rockefeller is a very rich man; he is charged with having got some of his money by oppression. Perhaps he has, and many people so believe. Now he wants to do good with his money. Is he to be forbidden? He has offered \$100,000 for the endowment of missionary colleges in China and Japan and Ceylon. Where will be the wrong of allowing him to give it?

It can hardly be claimed that those Chinese and Japanese and Ceylonese will be corrupted by it, so that they will be led to believe that rebates are right and that competition, if successful, is wrong; certainly not that. Only one injury is conceivable, that those here, who take his money, somehow give him public credit for being a good man. We do not see that that is true. They simply give him credit that his money is good, and that he wants it put to a good purpose; and to that extent he is good and deserves credit. But absolutely nothing is said or done to approve his bad deeds, which may be blazoned as much as any one pleases.

But it will be said that if those who receive his money do not approve the way in which it was gained they yet will have their mouths closed so that they cannot denounce his sin. In all probability their mouths were closed anyhow, because they did not know, and could not know, enough to judge him. They may have read much about him, and may believe a part of it to be true; but yet they are not so convinced that his ways are worse than those of other men in business, or have been so illegal, that they feel obliged to speak. It is the special investigator who has the right and the duty to condemn a man whom the law does not find occasion to punish. We do not believe that this gift of \$100,000 will silence one man’s tongue; it is much

more likely to loosen tongues, as it has done already.

Being probably the richest man in the world many people single out Mr. Rockefeller for their spite against wealth. But is he a sinner above all other rich men? He has carried competition to an extreme. He has undersold other people and taken their business, which is the way in competition. He has succeeded in getting better rates for his freight from railroads than other men have got, and has done it by rebates from the ordinary rates. But that is what they all do, or did, as they could. When President Cassatt, of the Pennsylvania Railroad, refused to allow the old rebates any longer, did not Mr. Carnegie threaten him with a rival railroad? and who objects to taking Mr. Carnegie's money?

Now far be it from us to approve the competitive system, certainly in its extreme. But the competitive system is that usually accepted, and business morals rest upon it, often pretty poor morals. Still it is as it is, and we have not got well beyond the competitive system, which works badly for the weaker and grandly for the stronger. Get what you can, within the law, is the rule, and the Devil take the hindmost. Those who growl because competitors are crushed must growl at the competitive system, not at those who have the wit and strength to do the crushing. The competitive system is not based on the Golden Rule.

Now when these giants of competition get rich under the competitive system there is no reason why they should be forbidden to do good with their money. Some of them—and Mr. Rockefeller is one—try to be very quiet about it. Who has heard about that money he gave, we have been told, a year or two ago for the Presbyterian mission colleges? The trouble is that somebody told about this gift for the American Board. Who knows who gave the million dollars which is carrying on the work of the Southern Education Board. Should it have been rejected if it came from Mr. Rockefeller?

Take money, for a good cause, from anybody, if there be no conditions or implications that you will approve a wrong. Take it from the Unspeakable

Turk; take it from the Devil himself. Above all, take it from a bad man, a gambler, a thief, if, with his wickedness, he has some weakness for doing good. Let him have that little honest pleasure to relieve his sin. Let the taint in some of his money be cleansed. Let the gold, as well as the wrath, of a bad man praise the Lord.

## Tammany, the Subways and the Public

THE people of New York City are at a serious crisis in their affairs. A decision that they must make within six months will determine for years to come the quality of their municipal government, the degree of order and decency that shall prevail in the greatest city of the Western Hemisphere, the degree of comfort and convenience that the people themselves shall enjoy and conditions more or less favorable to general prosperity.

The crisis is created by the conjunction of two overwhelmingly important public issues. One is the fresh demonstration that Tammany is a power that exploits the community for its own ends instead of maintaining a high standard of municipal government with popular welfare as the supreme end in view. The other is the immediate necessity for deciding whether the gigantic possibilities of underground New York shall be held and controlled by the people and for the people or be given over for exploitation to certain privileged corporations.

Tammany and these corporations are working together, and will work together. Experience has demonstrated that Tammany cannot be defeated except when some great public issue is raised. In the next municipal election it will be more than ever impossible without such an issue to put Tammany out of power. Mr. McClellan, as all concede, is, so far as his own personality goes, an exceptionally good Mayor. The evil influence of Tammany, which manifests itself in certain great departments, such as the Tenement House and Building Departments, is not apparent in Mr. McClellan's individual acts. A campaign based upon mere charges of Tammany oppressions

and blunders will not succeed this time. There must be a clear and large issue of public concern, and a positive program, to unite the anti-Tammany forces.

Such an issue is presented, it is fairly forced upon the people, in the new Subway projects. The phenomenal success of the Subway now in operation has demonstrated that this is the means of passenger transportation that is destined to dominate all others for this vast city. The Rapid Transit Commission has but given formal expression to the universal public will in deciding that no more elevated structures shall be erected in New York City streets. Corporate interests are tumbling over themselves in their frantic eagerness to secure Subway franchises. The Rapid Transit Commission will probably recommend the immediate building of at least twenty-four new Subway lines, including three or four highly important cross-town lines. Within less than the lifetime of a generation underground New York will be a veritable net work of electric railways, many of them extending far out into the suburban belt, to the north of the city, on Long Island and in New Jersey.

Do the people of New York City intend to give this vast realm, with its staggering possibilities of wealth creation, to great private corporations? Do they really prefer to go on indefinitely living the life of "strap-hangers" for two or three hours a day, in order that a score or two of multi-millionaires may as rapidly as possible become multi-billionaires? That is the issue, plain, straight, unmistakable. If the people of New York City are four millions of human beings not merely "mostly fools," as Carlyle phrased it, but universally and teetotally fools, as devoid of rational sense as so many grasshoppers, they will let the corporations, the Chamber of Commerce, the Rapid Transit Commission and the Tammany organization carry out their present intentions. If they have some glimmerings of courageous intelligence they will organize and support an anti-Tammany party on the clear and paramount issue of Subway ownership, Subway construction and Subway operation by the people and for the people.

In the Citizens' Union and the various

other non-Tammany associations and political parties the people have organizations that can be and should be made to get together to plan and to push a broadly conceived and strenuously managed campaign on this supreme issue. The Rapid Transit Commission is fatuously opposing the Elsberg bills at Albany which give to the Commission *permission* to let the construction and the operation of the new Subways to different parties, or, if that arrangement fails, to build and operate the Subways as municipal enterprises. These bills instead of going too far do not go far enough. We have had altogether too much tender consideration by the city authorities, the Chamber of Commerce and the Rapid Transit Commission of capitalistic interests. Will the people forever permit these interests to be held superior to the comfort, the convenience and the well-being of the multitude? Or will a flood tide of popular indignation submerge the business and administrative agencies that are too selfish or too blind, as the case may be, to put the popular welfare above mercenary considerations?

Now is the time for the people to act. They can have a vast system of up to date, well managed underground transportation, with seats for everybody, without the intolerable pushing and crowding which have disgraced this community for a generation, and with less than five-cent fares, if they want it, and if they have the courage and the intelligence to take it. Or they can sell themselves and their posterity into new slavery for generations to come if that is what they prefer to do. But they will have to act promptly. If they want at one stroke to throw off the power of Tammany and of the corporations to exploit them they must act now, and they must act by forming themselves promptly into an anti-Tammany political party on the paramount issue of Subway ownership, construction and operation by the people and for the people.

### Mr. Roosevelt and Santo Domingo

To get a just view of the pending treaty with Santo Domingo or of Presi-

dent Roosevelt's recent action, we should recall some things that have taken place in the last two or three years. In 1903 a foreign Government that has claims against Santo Domingo proposed that the creditor nations should exercise joint fiscal control over the republic, in order that all claims might be satisfied, so far as this could be done. The United States declined to approve this plan. But thereafter it took measures for the collection of the claims of its own citizens, by the arbitral agreement and award of July, 1904, and it has since been collecting, at custom houses held by its agents, \$37,500 per month for the satisfaction of those claims. In the meantime, other foreign creditors have been getting nothing. Naturally and reasonably they have complained. That joint fiscal control which we would not accept would have given them a share of the revenues.

Some of them have recently threatened to collect their claims by force. It has been established that creditor nations which use force, or go to the expense of preparing to use it, are entitled to preferential treatment when the debts are paid. An enforcement of this ruling at Santo Domingo would probably work to the disadvantage of American claims. If we should now refuse the request of Santo Domingo to assist in the adjustment of her debts, could we reasonably complain of the seizure of her custom houses by European creditor nations? But such seizure would involve possession of them for many years, with complications due to local disorder. This we are not inclined to permit. It was mainly for the reasons thus suggested that a large majority of the Senate, at the recent session, desired to ratify the pending treaty. Only two or three more votes, it is understood, were needed to make the required two-thirds.

Now, let us see what Mr. Roosevelt has done since the Senate adjourned and left the treaty hanging in the air. He has merely consented—at the earnest request of the Government of Santo Domingo, made with the approval of the foreign creditors—to suggest the names of competent American citizens for appointment by Santo Domingo as agents for the collection of the revenues. At the same time he has directed our resident

Minister to acquiesce in the plan proposed by the Dominican Government and its creditors "for the collection and conservation of its revenues" pending a final vote upon the treaty. Surely these acts are within his Constitutional powers.

It is true that the plan of the Dominican Government is substantially in accord with the provisions of the treaty. That was to be expected, because the provisions of the treaty were suggested by Santo Domingo. Mr. Roosevelt is not enforcing a treaty or an agreement which our Senate has failed to ratify. He is using his good offices to assist Santo Domingo in satisfying or appeasing her creditors during the few months that will elapse before our Senate shall take final action upon a treaty that has been favorably reported from committee and which a large majority of the Senators desire to approve. He suggests the names of these agents as he would nominate an arbitrator, if requested by a foreign Power to do so; and for naming an arbitrator he would not have to seek the consent of the Senate.

He has not assumed any obligation with respect to Santo Domingo's debts. He has not undertaken to maintain the *status quo*; Santo Domingo is striving to do that. "She desires," says Mr. Roosevelt, "in this way to maintain the *status quo*, so that if the treaty be ratified it can be executed." The selection of a bank in New York is pointed out by opponents of the President in support of their allegation that he has established a protectorate over the republic. But that selection was very naturally made by the Dominican Government, which desired thus to convince its European creditors of the honesty of its purposes.

In thus responding to the request of Santo Domingo Mr. Roosevelt is protecting the interests of American citizens; for American claimants would suffer loss if the demands of foreign creditors should be supported by force, or if there should be a complete failure to provide for a fair adjustment of all obligations.

It is said that the President would go beyond the Constitutional limits of his powers if, in case of a revolt against the Dominican Government, and an attempt by insurgents to take possession of the custom houses, he should direct that the

navy and the marines be used to defend these and the agents in charge of them. In a certain sense he would then be protecting American citizens and American interests, for the collectors are to be Americans, and the interests of American creditors would be injuriously affected if revolutionists should attempt to oust them and seize the revenues. These collectors, however, are to be employees of the Dominican Government. There is room for some difference of opinion as to the President's rightful power, before the ratification of such a treaty as the one now pending, to use the navy for the suppression of an uprising that should menace the Dominican custom houses. We think he would not hesitate so to use it, and that the American people would support him in this course. But his action would give his partisan and other enemies an opportunity of which they would take all possible advantage, and we think it would kill the treaty. We earnestly hope that the issue will not be raised by anything that may occur in Santo Domingo.

The treaty ought to have been ratified at the special session. It should never have been made a party question. Amendments were needed, and the novel undertaking should have been guarded in all reasonable ways. But the substance of the proposition should have been accepted. It is to the deep discredit of the Senate Democrats that they permitted their course to be shaped by Mr. Morgan, who complained that the negotiation or the acceptance of the agreement by the Government of the United States had upset the plans of private speculators.

### Carnegie's Colleges

MR. CARNEGIE'S transition from libraries to colleges has been easy. First he gave them libraries; then, as the demand for city and town libraries fell off to only about one a day, he had to look around for some other way to give his money, and he found it in helping other needs of colleges, especially for endowments, until now he has given two million dollars for college libraries and four and a half millions for buildings, endowments, etc. Mr. Carnegie is good to re-

porters, and the papers all like him, and he freely tells them what they want to know, and quite commendable it is. There are fifty institutions, he tells them, on his list, not one of them a university of the first rank, mostly what would be called "small colleges." A few colleges have had as much as \$100,000—Oberlin, Tufts, Syracuse and the Pennsylvania State College. No other has had more than \$50,000, and the amount runs down to as low as \$6,000 for Benedict College. Among the colleges are Iowa, Beloit, Mt. Holyoke, Berea, Washburn, De Pauw and Drake; and the gifts to Tuskegee, Talladega, Wilberforce, Atlanta and Fisk show that the negro institutions are not neglected.

Mr. Carnegie is wise in making these gifts to the small colleges. They generally represent local or special needs, and their resources are scanty. The students who attend them would to a great extent not have gone elsewhere. They anticipate and create the demand for the higher education. The students who attend them are of the best quality, not from the ranks of the rich, but from the common people, and they come to work. They represent ambition and noble purpose. These smaller colleges produce their full share of men of mark. Their students are under closer supervision and instruction than are those in the larger classes of great institutions. They spend scanty money in social entertainments, liquor and tobacco, and their athletics cost them little in cash. What money they have goes to their education, and they have high purposes with it.

The time has passed to flout the small colleges or the fresh water universities. They can hold their own. They will continue to do the larger work in education, their number making up for their smaller size. In the next century, when the West is filled up with population as the East is now, every city will provide collegiate education. What is now a struggling Grasshopper Falls college, so called, will have a larger population attached to it than Yale had at the beginning of the last century. There is no danger of too many colleges. Some will be reduced to secondary schools, but more academies and high schools will take on college studies; for the higher education must

come to the people, not the people to the schools of higher education.

There is some limit to the number of free public libraries which Mr. Carnegie can endow, but the limits to the needs of our higher institutions will not be reached during his life time. His great gift to education in Pittsburgh is not included in the summary given above, nor his gifts to musical education. Money can hardly be given more wisely at home or abroad than to colleges and universities; and to discourage such gifts and to attack the motives of such givers is of no benefit to the public. Such men as Mr. Carnegie and Dr. Pearsons, not to speak of those who have bestowed their large benefactions on a single institution, deserve to be held in honor for works' sake and for their example. We do not complain that they insist that what they give shall be duplicated by other friends.

### Student Strike Breakers

SAMUEL GOMPERS, the President of the American Federation of Labor, speaking of the voluntary offer of a number of Yale students to act as strike breakers on the New York, New Haven & Hartford Railway, draws this contrast between Russian and American college students:

"In Russia students defy the autocracy, assume risks and make great sacrifices for the sake of the ideals of liberty, equality of opportunity and justice for all. In this free and republican country college students welcome, even anticipate, the opportunity to exhibit themselves as 'scabs' and strike breakers, and deprive workmen struggling for a decent standard of living of their only means of subsistence. A contrast truly!"

Young men are much the same the world over and we venture to suggest that the willingness of college students in this country to enlist as strike breakers is not due to pernicious instruction in economics, as Mr. Gompers thinks, so much as it is to the strong individualistic tendency of youth which leads to revolt against any forcible restriction of action, whether wise or not. It is the same spirit which leads them to violate the rules of college and pester the professors. If they do not come into conflict with the police in our cities as they do in Russia it is

because the police here do not interfere with their petty infractions of the laws.

A Columbia College student does not ordinarily hanker after a job as subway guard or ticket chopper, but he would like to see any union try to stop him if he wants to be one. True, our students are more alive to the restrictions on personal freedom of action enforced by the unions than those imposed by the trusts, but such one-eyed vision is also characteristic of youth. Besides the former is direct and obvious, and the latter indirect and insidious. We all know it when the cars stop running, but that the fair fare is three cents, instead of five, has to be told to us by experts and they do not always agree.

We should not credit the students of St. Petersburg with any profound knowledge of the principles of government or of love for humanity because they tore down the portrait of the Czar and paraded the streets yelling for a constitution, nor can we suppose that by so doing they rendered any important assistance toward solving the political problems of their perplexed country. Notwithstanding our sympathy with their impulse we must admit that they acted no more wisely than the students of Paris, who shouted "*Conspuez Zola*" because he stood up for a persecuted Jew, or the students of Athens, who were recently rioting because the New Testament was to be translated into modern Greek. They are all cases of what Dr. G. Stanley Hall would diagnose as ephebic erethic diathesis. Mr. Gompers should not be discouraged over college students. The tide may turn at any moment and then they will be found defending labor with the same eagerness, self-sacrifice and lack of discrimination as they now show in defense of capitalism.

### What Is Civilization ?

A JAPANESE magazine, which also has an English department, recently published the following article under the title, "Our Civilization":

"What does civilization mean? We have always understood that the word represents a state of things in which organization is perfect, the enlightenment and morality of the people are of the first order, science and art are highly developed and peace reigns supreme.

Some foreign journalists, however, appear to think otherwise. For, in spite of the fact that within the last two decades our country has made remarkable progress in all that constitutes the elements of civilization, in the true sense of the word, they never regarded us as a civilized nation; but when our arms proved superior to those of Russia, then, and only then, did they begin to grant us that distinction. To their eyes the spread of education among us; the great progress made by us in science and art; the constitutional government we possess; the freedom of speech and religious toleration we enjoy; the railways, steamship service, perfect system of telegraphic and postal communication and a thousand other modern blessings we have adopted, are not sufficient tests of civilization. Only when our fleet crushed the Russian fleet and our army defeated the Russian army did they commence to take us seriously and to say that we had proved ourselves worthy to be taken into the rank of first class civilized Powers. In other words, it is by virtue of our achievement in destruction, and not by that in construction, that we have been recognized as an equal among occidental nations. We do not know whether or not this is a matter upon which we should congratulate ourselves."

Is this a fair statement? Is it true that those countries which claim to possess civilization were unwilling to credit Japan as possessing it until she had proved it in war?

This is in part true; and yet by no means wholly so. Doubtless Russia had utterly underestimated the civilization of Japan. She thought it a summer's holiday to enter Tokyo. But there has been in this country and in England a pretty fair recognition of the development of the empire in all that makes civilization. Our relations with Japan have been very close. It was an official recognition that Japan had the legal institutions of civilization which led the United States to be the first Power to yield the right of extra-territorial jurisdiction over American citizens; and other nations followed our lead, with more or less hesitation. We would not have done this if we had not believed that Japan was civilized, and that her courts can be trusted. We do not allow this to China or Turkey.

It is, however, true that the success of Japan in this war has made it clear to all the world that Japan has achieved a full measure of Western civilization.

And this is not because war is any part of civilization, altho it is a test of it. War is a tremendous struggle. It tries shams; it pricks bubbles; it crowns both courage and intelligent skill. The world cannot see how successful is the post office system of Japan, and few can examine or understand her school system. But when with silent, swift steadiness the machine of war moves forward till the crash comes resistless, when the total engineering of battle by land and sea presses on unflagging and undeviated, then the world knows that all the mighty forces of science and skill must have been wielded and welded into sure victory; then it knows that the hardest tests of constructive and destructive civilization have been met with full success. A nation that can do all this, with individual dash and combined and consummate co-ordination of national forces and industries, must be civilized. It is not war that makes civilization; but war bids the world look and see what civilization can do, even in a field that is most destructive to all the true purposes of civilization; for it needs must be that that which teaches us how to live well will teach us also how to kill. The successful conduct of war is a by-product of civilization; and we admire more the intelligence, the courage, the development of Japan when we see its civilization proved and crowned in war.

#### Philippine Freedom

Do we think of it—and it a most marvelous fact—that less than two years from now, on March 27th, 1907, there will meet the first Philippine Legislative Assembly, that the full authority of the Philippine Commission will then end in all the civilized portion of the Islands, and that all legislative power will be vested in two houses, of which one will be wholly elected by the people, while the present Philippine Commission will constitute the other house, which Commission consists of seven members, of whom three are Filipinos? Then there will be two commissioners elected to represent the Islands in this country, and they will doubtless be admitted as Delegates to our Congress. All this is an utter innovation in the control of Eastern

colonies. It assumes that men of other races have the same rights and capacities as men of our race, the same right to self-government, and that they should be trusted with it. Those noisy scolds who had no faith in the righteous purpose of our Government and of our people in taking possession of the Philippines from Spain, and in holding control of them for the sake of the people there rather than for exploitation and ravage, have a duty of humiliation and confession in this Lenten season.

#### **The Need of an Annual Cyclopedia**

Unless one has a mind which will automatically sort miscellaneous information like a mail clerk throwing letters into his bags, the most extensive and diligent reading of periodical literature will not take the place of an occasional review of a subject such as is given by the articles in a good annual. At the end of the year every man ought to have a chance to read a connected and concise account of the history of each country and the progress and present state of each one of the arts and sciences, prepared by some competent specialist who knows how to write plain English. It is the only way one can keep up with current events and gain an accurate and comprehensive knowledge of the progress of the world. The German has a *Jahresberichte* for more sciences than the average American knows the names of, but we have no such publications of a satisfactory character, notwithstanding our national fondness for cyclopedias. Appleton's "Annual Cyclopedia" and the "International Yearbook" published by Dodd, Mead and Company both stopped a few years ago and nothing has taken their place. There certainly ought to be enough demand to support one such publication, if not the two. Such annuals as the newspaper almanacs are very cheap and useful, especially when one wants to know the vote of a country or the yell of a college; but they are neither scholarly nor complete enough to fill the want. The "Annual Register" is too characteristically British, both in its contents and in the inconvenience of its arrangement. A file of some well indexed periodical of wide scope like THE INDEPENDENT is the best available source of

recent information, but it does not take the place of an annual, because in any magazine some repetition is necessary and some omission is unavoidable. The custom of many papers of giving every New Year's a series of brief summaries is commendable, but inadequate. For general science the annual Report of the Smithsonian Institution and for agriculture in all its branches the Yearbook of the Department of Agriculture are very good and can be had for the asking, but, like all Government publications, they come by slow freight. It ought to be possible with modern printing processes to issue by February of each year a single volume containing an accurate and readable record of the most important things that had been done and discovered throughout the world, illustrated with maps, diagrams and pictures, and sold at a price which would place it in every public and school library.

#### **Persecution in the Spanish Republics**

The Catholic papers are publishing a letter from the Rev. Paul J. Volk, engaged in missionary work in Central America. He is building a church in Colon, the only city named after Columbus, in which, four centuries after Columbus landed there, no Catholic Church exists. He says:

"There is at the present here in South and Central America a real satanic conjuration going on to persecute the religious orders and to drive them out from one country into another. Banded together in this warfare against Christ and His Church are Chile, Ecuador, Venezuela, Costa Rica, Gautemala, San Salvador and, lastly, Nicaragua. The President of this last named Republic, a Mr. Zeleia, publishes the following edict: 'From the first day of January, all religious persons have to leave this country. Processions in the streets on Good Friday, Corpus Christi, etc., are forbidden. No priest is allowed to wear a cassock in public. No cross, or surplice, or religious song at the burials, etc.'"

The more prominent priests signed a protest declaring that they had the right, under the constitution, to dress as they please, and the same right to make processions as have the Free Masons. For this protest Zeleia arrested them, sent them to jail, and next day expelled them from the country. When Bishop Pereira

refused to condemn his priest, Zeleia banished him and confiscated his seminary. He came to San Salvador, but the Government there would not allow him to remain, and he went to Guatemala, where again the doors were shut against him, and he was driven to Mexico. All this is very strange, and would seem to be very wrong. It does not represent free government. These ecclesiastics may come to the United States and have all the freedom they want. But what concerns us is to understand why the people of these Catholic countries are so hostile to their clergy. It is not like any old persecutions we read of, where one religion persecuted another; but the people brought up in a religion, baptized in its churches, educated in its schools, are its foes. There must be some plausible ground for this hostility, and we wish the papers which print Father Volk's letter would make the matter clear. It is not enough to talk about Free Masons, or infidels; why are they such? We understand it in the Philippines, where the priests were the agents of the detested Spanish Government, but why is it so everywhere in the self-governed Catholic countries of America?

#### "Race Suicide"

As we have lately said, the term *race suicide* is one the credit of which, like the credit for "a strenuous life," will be given to President Roosevelt, simply because it is he that gave it currency in 1903 in his famous letter to Mrs. Van Vorst. Doubtless he did not originate either of them, altho he made them his own. The origin of the term "race suicide" seems to belong to Prof. Edward A. Ross, of the University of Nebraska. In his Presidential Address on "The Causes of Race Superiority," delivered before the American Academy of Political and Social Science, Professor Ross spoke of the danger that a high "standard of comfort" would tend to limit parenthood, so that a superior race would dwindle in the presence of a lower and more prolific race, and he said:

"For a case like this I can find no words so apt as 'race suicide.' There is no blood shed, no violence, no assault of the race that waxes on the race that wanes. The higher race quietly

and unobtrusively eliminates itself rather than endure individually the bitter competition it has failed to ward off from itself by collective action. The working classes gradually delay marriage and restrict the size of the family as the opportunities hitherto reserved for their children are eagerly snatched up by the numerous progeny of the foreigner."

So far as we know this is the first use of the term, but it will still belong to President Roosevelt as "innocuous desuetude" belongs to President Cleveland. A dictionary of such familiar phrases as "Where am I at?" "step down and out," explaining their origin, would be of historical value. We suspect that Professor Ross would now revise his statement in the same address that "the courage of the Mongol is 'a sudden blaze of pugnacity' rather than a cool intrepidity." So the Russians thought. Many such traits supposed to be racial really belong to mere social heredity, to training and education.

#### Japanese Immigration

There has been a recrudescence on the Pacific Coast of the effort to shut out Japanese as well as Chinese immigration, and the Methodist ministers appointed a committee to look up the charges made against the Japanese. These charges are absolutely denied. The Japanese are particularly obedient to law; are neat and cleanly; they do not work for starvation wages, but expect the highest prices; they compete, when at all, with Russians and Italians and not with Americans, and their feeling toward America is kindly in both Japan and here. There is no danger of their deluging us with cheap labor:

"Only graduates of the Government academies are permitted to leave Japan for the coast ports, and even they are obliged to certify that they do not come as laborers."

The Japanese peasants which now arrive come from Hawaii, and most of them were in the islands before they became an American possession. The agitation is ill-timed and baseless.

#### The Doctrine of the Bible

On the doctrine of the Bible Protestants and Catholics are getting nearer together. The Catholics have

made the Church the final authority in faith, and Protestants have given this place to the Bible. But, under historical criticism, the doctrine of infallibility and inerrancy has been much weakened where it has not been lost. This tends to make the Bible less a standard of ultimate appeal, and to make more of the developed conscience and judgment of the Church. They call it the guidance of the Spirit. But the Catholic doctrine which makes the Church the ultimate standard, even for the interpretation of the Bible or for the development beyond the Bible, provides for the modification of doctrine as the intelligence or ethics of the Church is developed. The Catholic Church would not now approve, with a Roman medal, the massacre of the Huguenots or the cruelties of the Inquisition, by appeal to Scripture. An enlightening article on the liberty of Catholic doctrine as to the Bible is made the leading paper in the February *Catholic World*. The writer, the Rev. James J. Fox, D.D., answers the question of a university student who finds that the modern learning compels him to reject the history of the Creation, the Deluge, etc. Yet he finds the Catholic books put in his hand forbid him to admit any such doubts. Dr. Fox quotes in reply Catholic authorities who allow the acceptance of the results of the higher criticism, such as Father Lagrange, Dominican, and Father Prat, Jesuit. The latter says that we must allow that a proved historical fact may enter into collision with a biblical assertion, or, rather, with our interpretation of it. Father Lagrange says that scientific progress necessitates the abandonment of many beliefs that have been long enshrined in our theology or apologetics, and speaks of these beliefs as "now decidedly intolerable for a century initiated into a knowledge of Oriental antiquity." Father Lagrange, in his "*La Methode Historique*," develops very sharply this liberty of accepting modern discoveries even when they contradict biblical statements as to historical fact. Yet we seem to recall that he has found some

difficulty in maintaining his position in the Catholic Church.

We should be very sorry if under the new control of Carlisle the lesson should be taught to the Indians that to them belongs a special career different from that of other citizens. The male Indian may be a policeman or soldier, but he may also be a merchant or a doctor. The female Indian may be a nurse, but she may seek any cases that any other woman may seek. The Apache, Dr. Montezuma, a graduate of Carlisle, told the truth in an address which he was not allowed to deliver at the Carlisle commencement—we hope it was not needed.

Movements for the liberation of the Church from the State seldom come from within the Church. Its clergy like to keep their sure support, and they like the dignity which their relation to the Government gives them. Accordingly it is remarkable that a considerable section of the Orthodox clergy in St. Petersburg should have asked for such separation. It shows that Father Gapon is not the only priest who believes in revolutionary changes. But we can hardly expect that the movement will make much headway except as part of a political revolution.

It was not to be expected that the Inter-Church Conference on Marriage and Divorce would take the extreme grounds against all remarriage after divorce, for that is past all reason. But the recommendation that no minister should marry divorced persons until a year has passed since the divorce is one that all should approve, as it tends to prevent the indecent haste in which parties have secured divorce for the purpose of marrying some one else. It is no hardship to make one wait a year between the two marriages.

Three tickets, Republican, Democratic and Socialist, promise municipal ownership of street railways to Chicago. Now we will see if they will get it, for, of course, the present holders of the franchises do not want to give them up. Which are the stronger, the people or the railway men?

# Insurance

## The Equitable's Affairs

RECENT developments indicate clearly that the harmony existing between the factions in the management of the Equitable Life Assurance Society resulting in the alleged compromise to "mutualize" the company by giving the policyholders twenty-eight and the stockholders twenty-four directors was more apparent than real, and the complexion of things now points to a finish fight between them. The charges made against the vice-president by his fellow officers in the documents of February 2d and 3d remain unretracted, except through his request for an investigation of the society. The difficulty to be encountered in relieving the society of its stock domination and doing so without violating the sanctity which attaches to the title to property is realized; but if the interests of hundreds of thousands of policyholders are in any way imperiled by the influences behind that stock, then it becomes the duty of the State to protect the policyholders. It is reported that the Superintendent of Insurance has been requested by all parties to the dispute to take charge of and examine the books, accounts and contracts of the company. This should be done at once, done thoroughly and exhaustively, and then all the facts should be made public without regard to the effect they may have on the interests of the disputants. The Insurance Superintendent should bear in mind at this time that the public eye is turning toward him as the crisis approaches and that it is coldly critical. He will not be expected to do any harmonizing. He will ascertain facts and make them public just as he finds them. He will remember that the policyholders owe no debt of gratitude to the stockholders; that the latter have been abundantly rewarded. The Insurance Department will find itself on trial in this case, and it may as well realize it at the outset.

## The President of the Connecticut Mutual

THE INDEPENDENT has always had the greatest respect for Col. Jacob Lyman

Greene, President of the Connecticut Mutual Life Insurance Company of Hartford, Conn., who died of cerebral apoplexy at his home in Hartford on March 29th. Colonel Greene was perhaps the foremost advocate of straight life insurance as opposed to the tontine principle. He used his influence in favor of life insurance as protection for the family without the speculative or gambling features that are sometimes considered perfectly legitimate. Colonel Greene was born in Waterford, Maine, August 9th, 1837. He was educated in the district schools, at the Fryeburgh Academy and the University of Michigan. Subsequently he studied law and was admitted to the bar in 1859. He began practice in Lapeer County, Mich., and was appointed Court Commissioner in 1860. In June, 1861, he enlisted in the Seventh Michigan Infantry. He saw much active service and fought his way to a commission. He suffered imprisonment at Libby, Macon and Charleston. Being exchanged he joined General Custer and was his Chief of Staff, with the rank of Major. He was brevetted Lieutenant-Colonel. His military career closed in April, 1866, when he was mustered out of service. On his return from the field he became agent for the Berkshire Life Insurance Company, at Pittsfield, Mass. Four years later he was made Assistant Secretary of the Connecticut Mutual, with which company he remained until death came. He rose in the company's service by successive stages until upon the death of President James Goodwin he succeeded to the Presidency. Colonel Greene was widely known in insurance circles, both here and abroad, and was regarded by those who knew him as a man of marked ability, outspoken fearlessness, and sterling honesty. He was the author of many authoritative contributions to periodical literature upon insurance schemes. His management was characterized by economy, and it was his custom to publish an annual report containing full information as to his company's progress, together with pertinent criticism of the general subject of life insurance. The death of Colonel Greene is a decided loss to the insurance world.

## Demand for Japan's Bonds

JAPAN'S new loan of \$150,000,000 was offered for subscription last week, half in London and half in New York, where subscriptions were received by the house of Kuhn, Loeb & Co., with which were associated the National City Bank and the National Bank of Commerce. The bonds bear interest at  $4\frac{1}{2}$  per cent., are redeemable at par in twenty years, may be redeemed in five years, and were offered at  $87\frac{5}{8}$ . There was an extraordinary response to the invitation. In this city the lists could have been closed one hour after the opening. There was as great a demand in London. It is estimated that the subscriptions were \$700,000,000 in London and \$500,000,000 in New York, or in all eight times the amount offered. Bids for \$15,000,000 came from Chicago; San Francisco wanted \$3,000,000, and many other cities asked for allotments. It is significant that large subscriptions from France were received in this city, France being the ally (and the banker) of Japan's foe. In London, Switzerland asked for \$10,000,000. Many of those applying here at Kuhn, Loeb & Co.'s banking house were from the rural districts, and their deposits were made in cash instead of checks. On the same day (the 29th ult.) Russian four per cents declined 2 points at St. Petersburg, to  $82\frac{5}{8}$ , the lowest price on record. These fours were taken in 1902 by European bankers at  $93\frac{7}{8}$  and floated at  $97\frac{1}{2}$ . Altho Japan has now borrowed for war purposes \$450,000,000, her credit has improved since November last. She borrowed then at 6 per cent., and the bonds were placed at a price only a little higher than the price obtained last week.

THE directors of the Pennsylvania Railroad Company have ordered an issue of \$100,000,000 in convertible bonds at  $3\frac{1}{2}$  per cent.

....Very large deposits of petroleum have been discovered in the Canadian Northwest, not far from the international boundary.

....There are indications that the Chicago, Milwaukee & St. Paul Railroad Company is about to extend its lines to the Pacific Coast.

....Mexico's new currency policy is soon to be enforced. On the 16th inst. the free and unlimited coinage of silver at Mexican mints will cease.

....George W. Young, well known for many years as the president of the United States Mortgage & Trust Company, has resigned and formed a banking house under the name of George W. Young & Co. The new president of the United States Mortgage & Trust Company is George M. Cummings.

....The old established firm of Vermilye & Co. having expired by limitation, William A. Read, for nineteen years a member of the firm of Vermilye & Co., has formed a banking house under the name of Wm. A. Read & Co., in order to carry on the general business of banking and dealing in Government and other investment securities, doing in general a business similar to that carried on for so many years by Vermilye & Co. With Mr. Read is associated Joseph H. Seaman and Charles Hazard, a member of the New York Stock Exchange. The firm will have branches in Boston, Baltimore and Chicago.

....Alfred H. Curtis was last week elected president of the National Bank of North America. Mr. Curtis was born in New York fifty-one years ago, and in 1868 began as a clerk in a broker's office. He entered the Bank of the State of New York in 1877, working up to the cashiership, and when the Bank of the State of New York amalgamated with the Bank of North America Mr. Curtis became cashier of the latter institution. He is vice-president of the New York State Bankers' Association. The capital of the National Bank of North America, which was incorporated fifty-four years ago, is \$2,000,000, and the surplus and profits are \$2,017,086. The total resources are over twenty-six and one-half million dollars.

....Dividends announced:

Schwarzschild & Sulzberger Co., \$1.25 per share, payable April 29th.

N. Y. & N. J. Telephone Co., quarterly,  $1\frac{1}{2}$  per cent., payable April 15th.

Manufacturers' Commercial Co., Preferred, quarterly,  $1\frac{1}{4}$  per cent., payable April 15th.

VOL. LVIII

NEW YORK, THURSDAY, APRIL 13, 1905

No. 2941

## Survey of the World

### The President's Vacation

Mr. Roosevelt started for San Antonio and the Rough Riders' reunion on the 3d, in good health and fine spirits. At every stop throughout the journey there were crowds of people whom he greeted in the most democratic fashion. "Things will be all right at Washington," said he at Harrisburg; "I have left Taft sitting on the lid, keeping down the Santo Domingo matter." At many stations he was greeted by regiments of school children in bright array. In his brief addresses he repeatedly urged fathers and mothers "to teach their children not to shirk difficulties, but to overcome them." Stopping over for two hours at Louisville, he was escorted to the court house there by Confederate veterans, Union veterans and soldiers of the war with Spain. Governor Beckham (a Democrat) said in introducing him:

"I believe that it is in the power of this great man, who more than any President since the big-brained and big-hearted Lincoln holds the affection and the confidence of the people of this country—I say, I believe it is more in his power than in the power of any other man to establish beyond question the fact that in the United States there is no North, no South, no East, no West."

Mr. Roosevelt said it was true that "upon all the important questions, the questions that infinitely transcend mere partisan differences, we are fundamentally one." He was glad to see in the escorting procession both the Blue and the Gray:

"In the dark days each of you fought for the right as it was given him to see the right, and each of you has left us the right to feel pride not only in your valor, but also in your devotion to what you conscientiously believed

to be your duty. As a reunited people, we have the right to feel the same pride in the valor of the man who conscientiously risked his life in a Confederate uniform that we have in the man who fought in the Blue. We have shown to mankind that the greatest war of the century can be followed by the most perfect union that any nation now knows."

The National Government ought, he added, to erect a statue to the memory of Andrew Jackson and the victors in the battle of New Orleans. To the German singing societies he spoke of the German contributions to our national life, not the least of which had been "the power to know what the joy of living means." Louisville gave him a silver flagon filled with water from a spring on the old Lincoln homestead, and an inkstand of oak from a tree that shaded this spring.

### Citizenship and Railroad Rates

At Muskogee, Ind. Ter., Mr. Roosevelt spoke of the expected statehood of the Territory (in conjunction with Oklahoma) and of the duties of citizenship:

"Statehood is a first-class thing if you use it right. It will be a mighty poor thing if you don't. You need just the same qualities in government that you need in average life. A man who is a good neighbor, a good husband, a good father, is the type of man who will be a good citizen. The person you want to have as a neighbor is the man to whom you can tie, on whom you can count, the man who is a game man in time of trouble, but who does not seek trouble; the man who does not brag and brawl, but who makes good; the man who is decent and pure in his dealings with others. That is just the type you have got to have in public life. You cannot afford to let any man represent you in public life if he is crooked."

There were 100,000 visitors in Dallas when the President reached that city. In an address delivered there he spoke again of the Blue and the Gray, repeating parts of his Louisville speech. "I can, in a sense," said he, "claim to be, by blood at least, a typical President; for I am half Southerner and half Northerner; I was born in the East, and I have gotten a great deal of the West in my experience." No people more than the Texans, he remarked, "had made it impossible for this country to be anything but great." There was to be no stop at Temple, but the City Council there hurriedly passed an ordinance requiring all Presidential trains to stop three minutes. This ordinance was telegraphed to Mr. Roosevelt, who gave orders for a stop at the place, where he was most heartily welcomed. At Austin, he said, in the course of an address before the Texas Legislature, which recently by resolution commended his attitude toward railway rate regulation:

"On the whole, there have been few instruments in the economic development of the country which have done more for the country than the railroads. I do not wish in any shape or way to interfere with the legitimate gain of any of these great men whose special industrial capacity enables them to handle the railroads so as to be of profit to themselves and of advantage to all of us. I should be most reluctant—I will put it stronger than that: I should absolutely refuse—to be a party to any measure, to any proposition, that interfered with the proper and legitimate prosperity of those men, and I should feel that such a measure was aimed not only at them, but at all of us, for an attack upon the legitimate prosperity of any of us is in the long run sure to turn into an attack upon all.

"With that proviso, as to which I ask you to remember that I mean literally every word, let me further add that the public has a right, not a privilege, but in my view, a duty, to see that there is in its behalf exercised such a supervisory and regulatory power over the railroads as will insure that, while they get fair treatment themselves, they give it in return."

There should be, he continued, legislation enabling "the representatives of the public to see to it that any unjust or oppressive or discriminating rate is altered so as to be a just and fair rate, and is altered immediately." There

was, he admitted, a chance that this power would occasionally be abused, as other powers may be:

"There must be a certain trust placed in the common sense and the common honesty of those who are to enforce the law. If it ever falls, and I think it will, to my lot to nominate a board to carry out such a law, I shall nominate men, as far as I am able, on whose ability, courage and integrity I can count, men who will not be swayed by any influence whatever, direct or indirect, social, political, or any other, to show improper favoritism for the railroads and who, on the other hand, if a railroad is unjustly attacked, no matter if that attack has behind it the feeling or prejudice of ninety-nine per cent. of the people, will stand up against that attack. That is my interpretation of the doctrine of the square deal."

#### With the Rough Riders in San Antonio

The 7th was a great day for San Antonio.

Mr. Roosevelt found his Rough Riders in camp there. Before joining them he spoke to a great audience in Travis Park. Parts of this address—relating to the Blue and the Gray, the training of children, etc.,—had been heard at other places. He spoke of the raising of his regiment, in San Antonio, and of the association in it of rich and poor and men of every social grade. "Remember always," said he, "that you listen at your peril to any man who would seek to inflame you against your fellow citizen because he is better off." The teachings of the Rough Riders' experience in war should be used in civil life:

"If your comrade was a banker, he was all right if he was a good fellow and did his duty. If the rich man now does not do his duty, cinch him, and I will help you just as far as I can; but don't cinch him because he is rich. If you do, you are a mighty mean creature yourself—you are not a good American."

If another war should come, he continued, we should surely win, because our men still had in them the spirit that made their forefathers do well in battle. Touching upon international relations and the value of a navy, he said:

"We all believe in the Monroe Doctrine. I have a little difficulty in getting some of my friends to accept my interpretation of it, but they will in time, because that interpretation has come to stay."

His intercourse with the Rough Riders

during the afternoon was of the most informal character. He ate dinner with them in camp, and became acquainted with their wives and mothers. Almost all of these veterans he could call by their first names. Incidents of the war were recalled, and stories of camp life were told again. These men's admiration of their old Colonel, and their affection for him, were without bounds. On the 8th Mr. Roosevelt was in Ft. Worth. "No President," he said there, "can afford not to come to Texas, for he must leave it a better American than he was before." That night he arrived at Frederick, Okla., where he left his train to hunt wolves for a few days.

#### For the Canal at Panama

The new Isthmian Canal Commission will be controlled by three members, Chairman Shonts, Chief Engineer Wallace and Judge Magoon, Governor of the Zone. Each is the head of an executive department, and the three constitute the Executive Committee. The remaining four Commissioners appear to have been appointed only because the law required seven. All of them are engineers, and are more than 60 years old. Rear-Admiral Endicott will retain the office of Chief of the Naval Bureau of Yards and Docks; Colonel Ernst will continue to serve as President of the Mississippi River Commission, and as a member of the International Deep Waterways Commission. Chairman Shonts's powers will resemble those of a railroad president; Engineer Wallace will be general manager in the field, having full control of construction; Governor Magoon will execute the laws in the Zone and have charge of the sanitary work. The first two have been intimate friends from boyhood and they were classmates at Monmouth College. Mr. Shonts has been associated with Secretary Paul Morton in large and profitable railway operations, and it is said that his selection was due to the Secretary's suggestion and commendation. His age has been incorrectly stated; he is 52 years old, and the engineer is 53. Mr. Shonts studied law, but became connected with railroad work by reason of his association with his father-in-law, ex-Governor Drake, of Iowa. The newspapers of his home city,

Chicago, say that while he was president of the Illinois, Indiana & Iowa road, control of the stock was obtained by himself and Secretary Morton, and that the sale of the road to the Vanderbilt interests yielded them a profit of about \$1,000,000 apiece. Mr. Shonts has since increased his fortune, and it is said by these newspapers that his annual income exceeds \$100,000. The President has appointed Mr. Grunsky, of the old Commission, consulting engineer and adviser to the Director of the arid lands reclamation service, at a salary of \$10,000. This appointment has been criticised because an unsuccessful attempt to create such an office was made at the recent session of Congress. England, France and Germany have been asked to supply three members of the Commission's Consulting Board of Engineers. Data and projects will be laid before this board, whose recommendations will be considered by the Commission, and then, with the latter's recommendation, will be submitted to Mr. Roosevelt for a final decision. Secretary Taft said in his recent letter to the President that a sea-level canal might be preferred, altho the cost of it would exceed the estimated cost of a lock canal "by at least \$100,000,000." Engineer Wallace said, on the 5th inst., that in a sea-level canal a tidal lock would not be needed to control the excess of 20 feet in the tidal movement on the Pacific side of the Isthmus, because a canal 47 miles long would "take up this difference." General Hains, a member of the Commission (and, formerly, of the Nicaragua Canal Commission), published an article last month asserting that a tidal lock would be required, to prevent swift currents in the canal. It is now expected that a large number of Japanese will be employed in the work of construction.

#### The Condition of Cuba

In his message to Congress, on the 4th, President Palma spoke of the peaceful and tranquil condition of the country. This was due, he said, to the respect of the people for law and the Government, and to general confidence in the rural guards. Because of the essentially moral character of the American people and their disinterested efforts to promote the independence of Cuba, he

was confident that the Isle of Pines treaty would soon be ratified at Washington. Imports in 1904 were \$82,842,000, an increase of \$15,750,000, and exports were \$89,978,000, an increase of \$11,500,000. The effect of reciprocity was seen in the growth of trade with the United States. Exports to the States were 83.7 per cent. of the total, and the increase of the States' purchases was \$14,400,000. Of the proceeds of the new loan (\$31,675,000) only \$13,555,000 has been paid to the veterans, owing to delay in identification and the production of the evidence required. The cash in the treasury (the loan money on hand having been deducted) is \$10,764,000. Owing to a decline in school attendance, he urged a reformation of the local school boards. The death rate in 1904 was 14.90; the birth rate, 34.41. He spoke of the exclusion of yellow fever, quoting the congratulatory resolutions of the American Public Health Association (adopted at the recent meeting in Havana) as an answer to sensational reports published by a newspaper in New York. He recommended that the construction of railroads in undeveloped districts be promoted by guaranteeing interest upon the bonds to be issued.—The Moderate party, of which President Palma recently became a member, is now a minority in both Houses, owing to the defection of those who have heretofore represented the party in Santa Clara. In the Senate, General Sanguilly, Independent, has been elected President, displacing Señor Capote, a Moderate and the intimate adviser of President Palma. In the House, Speaker Canisares has been re-elected, but he is one of the Moderates who recently went over to the Nationalists. Leaders of the National party say that the change in Santa Clara insures the defeat of President Palma at the coming presidential election.

#### Santo Domingo's Debts

The Belgian creditors of Santo Domingo are unwilling to accept the new agreement or *modus vivendi*, and have insisted upon the payment of \$25,000 a month, under their own agreement of 1901 with the republic. But the decree by which President Morales

announced the acceptance and enforcement of the new agreement has tied up the customs revenue, and it is expected that the Belgian creditors—whose claims are said to be nearly half of the entire debt—will eventually submit to the provisions of the new plan. Nearly all the British claims are said to be included in the so-called American claims of the Improvement Company, covered by the arbitral award, which is displaced temporarily by the new agreement. Officers to collect the revenues have been selected at Washington. Colonel Colton, formerly Collector at Iloilo, will be the chief, and Morales will pay him \$500 a month. His deputies will be D. F. Morris, who has also been employed in the Philippine customs service; J. H. Edwards, who has had a similar experience; Warren W. Rich, from the Treasury Department, and Richard J. Leupold, recommended by Dr. Gould, of Johns Hopkins University. A statistician, an accountant, and a translator and stenographer will be sent from the Bureau of Insular Affairs. Secretary Taft has selected the National City Bank, in New York, to be the custodian of the funds. It is said that an International Committee of representatives of the European creditor nations will hold meetings in Santo Domingo next fall for the adjudication of claims, and that its findings will be supported as a basis for settlement, even if the treaty should be ratified.—In a published interview, James P. Cooper, of London, secretary of the Foreign Bondholders' Corporation, says that the market price of South American and Central American bonds has greatly advanced during the last few months—Colombian, from 17 to 40; Costa Rican, from 15 to 40; Guatemalan, from 16 to 27, and Venezuelan, from 27 to 46. This change is due, he thinks, to a prevailing impression that the United States will intervene in some way to make the defaulting nations meet their obligations.—By recent appointments President Morales appears to have conciliated some of his opponents. The editor of a hostile paper has been made Consul at New York, succeeding Señor Vasquez, who returns to become Minister of Public Works. Another hostile editor receives a consulship in England.

**Chicago's Election  
and Railways**

At the municipal election in Chicago, on the 4th, Edward F. Dunne, Democrat, a judge of the Illinois Circuit Court for the last thirteen years, was elected Mayor by a plurality of 24,518 over John M. Harlan, Republican. For a Socialist ticket 20,323 votes were cast. The issue was the method of enforcing the city's established policy of municipal ownership and operation of street railways, Judge Dunne representing the opposition to any further grants or concessions to the companies and the demand for immediate action. The policies of the two parties and the meaning of the voters' decision are considered in our editorial pages. The new Council has a Republican majority (37 Republicans, 32 Democrats and 1 Independent), but it will support the new Mayor so far as the railway question is concerned. The latter says that it is his purpose to proceed with due caution, and to be guided by the advice of competent experts whom he will appoint to make a thorough survey of the situation. The city, he says, will obtain control of the railways gradually, and it may within a few months begin to operate the Adams Street line. He has by cable asked the Lord Provost of Glasgow to give the manager of that city's street railways a vacation of one month in order that he may come to Chicago and give the Mayor the benefit of his experience. A favorable reply has been received, and Manager Dalrymple will start for Chicago on May 10th. By invitation, on the 7th, Judge Dunne addressed a large meeting held in New York under the auspices of the Municipal Ownership League of that city. He was born in Connecticut 51 years ago, and was educated in the schools of Illinois and at Trinity College, Dublin. He believes that the national Government should own and operate the interstate railroads and telegraph lines, and carry on the express business; also that street railways, electric and gas lighting plants, telephones, etc., should be owned by municipalities.

**The British  
Budget**

Austen Chamberlain as Chancellor of the Exchequer presented to the House of Commons April 10th a very

favorable report of British finances. He stated the revenue of the year just closed exceeded his estimate by nearly fifteen million dollars, so the heavy deficit of last year will be very much reduced. The bountiful cotton crop had revived the Lancashire industries; shipbuilding and the iron and steel industries are improving. There had been, however, much pauperism and distress. The consumption of beer and spirits was less in 1904 than in any of the preceding fifteen years. The expenditure of the fiscal year 1904-05 was below the estimate by \$7,070,000. The national debt has been reduced by \$37,790,000, and at the close of the year stood at \$3,775,360,000. For the year 1905-06 Mr. Chamberlain estimated the expenditure would be \$705,160,000 and the revenue on the existing basis of taxation \$720,020,000, leaving a surplus of \$14,860,000. Mr. Chamberlain said that he would not be able to relieve the income tax payer, but that the extra duty of four cents per pound on tea would be taken off July 1st.

**A Revolt  
in Crete**

The movement in favor of the annexation of Crete to Greece has reached the stage of armed rebellion against the autocratic administration of Prince George. At Therisso, March 27th, a gathering of the insurgents organized a provisional national assembly, repudiated the suzerainty of the Sultan and proclaimed the union of Greece and Crete. The Powers who made Prince George High Commissioner have sent troops to the disturbed province. The French colonel in command has notified the insurgents that he is authorized by the Powers to negotiate with them and that he hopes for a peaceful solution of the difficulty. British warships are in Suda Bay, but no British troops have been landed. Prince George has issued a proclamation declaring his own intention to preserve order and requesting the Powers to abstain from interference. The revolution is extending and has broken out in Sitia at the eastern extremity of the island. The French gunboat "Condor" has gone there. A mass meeting of Cretans held at Athens demanded that the Powers grant the wish of the Cretan people.

ple, and beseeched Prince George and the insurgents to avoid a conflict with all its fatal consequences to the cause.

**Naval Battle Imminent** The Russian Baltic Squadron passed through the Strait of Malacca April 8th, and sailed northeast. As they sailed by Singapore, at a distance of seven miles, fifty-one vessels were counted, steaming slowly four abreast. The decks of the warships were loaded with coal, and sea weed a foot long appeared at the water line. No stop was made, but the Russian Consul approached the flag ship for the delivery of dispatches, and gave news of the fall of Mukden. The squadron consisted of the battleship "Sissoi Veliky," the cruisers "Admiral Nakhimoff," "Dimitri Dooskoy," "Oleg," "Aurora," "Izumrud," "Jentchug" and "Almaz," four former Hamburg-American liners and seven torpedo boat destroyers. Under the commercial flag were the steamers of the Volunteer Fleet and Russian Navigation Company, a hospital ship, a salvage ship and sixteen colliers. Soft coal was burned, producing great clouds of smoke visible for many miles. The battleships "Kniaz," "Suvoroff," "Alexander III," "Borodino" and "Orel" were not with the squadron which passed Singapore, and their whereabouts is unknown. St. Petersburg claims that the Japanese were outwitted by Rojestvensky, who directed the Russian Admiralty to send the colliers to the Strait of Sunda, 500 miles south of Singapore. As a consequence of this, it is claimed that the Japanese guarded all the southern straits, but left Malacca open. Only two men in St. Petersburg were entrusted with the secret and therefore the news that the Baltic squadron had passed Singapore created as much astonishment there as elsewhere. But since the Japanese patrols have been recently seen near Singapore, it is more likely that the Japanese left the Strait of Malacca purposely open and are awaiting the Russian fleet nearer Formosa, 1,800 miles north of Singapore, where they will have the advantage of being close to their naval base. Admiral Togo's fleet,

or part of it, was reported on April 6th south of the Island of Mindanao, the southernmost of the Philippines, where they would be in a position to intercept or to follow the Russian fleet as it goes northward. The nearest port open to the Russians in these waters is Saigon in French Indo-China.

**The Opposing Fleets** No definite opinion can be formed of the relative fighting strength of the two fleets now approaching each other off the coast of China, but the lists given below contain the data derivable from the official reports as to size, speed and armament. It is not known how much the Japanese ships are damaged as the result of their hard fighting of over a year, nor how many of the vessels listed Admiral Togo has in southern waters to meet the enemy. On the other hand, the Russian ships, altho uninjured by war, are overloaded with coal and hampered by their train of colliers and supply ships. The bad condition of their bottoms resulting from their long stay in tropical waters must reduce their speed, but how much they can do in an emergency is a matter of guesswork. If they left Madagascar March 16, as reported, they have made the 4,000 miles to the Straits of Singapore at an average rate of eight miles an hour, which was their speed as they passed Singapore. At Vladivostok there are three cruisers, the "Gromoboi," "Rossia" and "Bogatyr," which, if they are not prevented by Japanese patrols from passing out of that port, might join the main fleet, or at least make themselves felt by threatening the coast cities of Japan. If the battle is delayed long enough the Russians may be reinforced by the squadron under Admiral Nebogatoff, which recently passed through the Suez Canal and has left Africa for the Far East.

**An Earthquake  
in India**

The southern slope of the Western Himalayas was shaken by a terrific earthquake April 4th and many towns in the valleys of Kashmir and the Punjab were destroyed. In Kandia out of a total population of 6,000 only a tenth of the number escaped alive. The town of Dharmsala was in the center of disturbance and all the buildings except one were demolished instantly. The falling of the stone walls of the cantonment crushed to death 150 men in the Seventh Ghurka Regiment. The dead which could be recovered were buried near their homes or cremated with wood taken from the ruined houses. The towns of Palampur, Bhawan, Sujanpur, Mussoorie and Multan suffered severely. The number of Europeans reported killed amounts to 37. At Simla the Vice-Regal Lodge was badly shaken and Lady Curzon had a narrow escape from death. Her sitting room and bedroom were damaged and the Vice-Reine and her family have taken refuge in another house. At Lahore, Agra and Amritsar many buildings were injured. The first and most violent shock was felt at 6.10 in the morning and lasted several minutes. The vibration traveled from west

to east. The earth of the whole region continued quivering for five days after.

**The Morocco  
Situation**

The visit of Emperor William to Tangier continues to be the main topic of discussion in European politics. His speech at the German Embassy declaring that no European Power should have a predominating influence in Morocco has been met in a firm but quiet manner by the French Government, and King Edward has taken occasion to show a marked friendliness which indicates that England will support France in carrying out her policy of the pacific penetration of Morocco as permitted by the Anglo-French agreement. There are even rumors that the French and English fleets will co-operate in the next naval maneuvers. King Edward is, like his nephew, making a cruise in the Mediterranean with Queen Alexandra on the royal yacht "Victoria and Albert," which sailed from Marseilles to Port Mahon, Minorca, April 8th, and it is possible that he will find it convenient to visit Tangier. On his arrival in Paris the King was met by President Loubet, who journeyed with him on his private car to Lyons. No report of the conversation has been made public. The Kaiser has continued his cruise to Naples and Greece. The German press is outspoken in its denunciation of the attempt of England and France to ignore German interests in Morocco and suggests that an international conference be called to settle the Morocco question, to which Italy and the United States should be called. Baron von Sternburg, the German Ambassador at Washington, called upon Secretary Taft April 5th and left a memorandum for the consideration of the President which announces in the most explicit language that Germany stands for the "open door" in Morocco no less firmly than in the Far East, for the preservation of the Moroccan *status quo*, and for the safeguarding and protection of the commercial and trade interests in Morocco, not only of Germany, but of all the trading nations of the world. Our Government has so far given no indication that it considered its interests imperiled by the extension of French influences in Morocco.

MAYOR EDWARD F. DUNNE

## An Election with a Sequel

BY WILLIAM HARD

[Mr. Hard is one of the best informed men in Chicago on its civic and political activities, and we are delighted to be able to give to our readers his views upon last week's great victory for municipal ownership.—EDITOR.]

**C**HICAGO is one of the political clairvoyants of the country. Her electorate is a magic crystal in which she can discern the radical thought of the future and by means of which she is sometimes able to hand out first-class tips to political plungers.

Gentlemen who want to bet on approaching national issues should therefore jot down the following facts:

In 1897 the Illinois Legislature, in-

stigated thereto by the representatives of private ownership (which is so much purer than public ownership) passed a corrupt law empowering the Chicago City Council to grant private ownership street car franchises for fifty instead of for twenty years, and it was with great difficulty, including threats of ropes and lamp-posts, that John Maynard Harlan, Mayor Harrison and other citizens prevented the Chicago City Council from

availing itself of this unexpectedly lucrative privilege. Nevertheless on April 4th, 1905, the city of Chicago, by a plurality of about 25,000, preferred Judge Dunne to Mr. Harlan for Mayor, on the ground that while Mr. Harlan was for municipal ownership as soon as feasible Judge Dunne was for it even sooner.

Judge Dunne was for municipal ownership "immediately." But the street car companies are still in possession of many unexpired franchises. Judge Dunne was, therefore, in favor of buying up those franchises from the street car companies through condemnation proceedings. Mr. Harlan hesitated. What man dared he dared, but he thought that the legal and financial difficulties involved in Judge Dunne's program would require a wizard. So he suggested that a compromise settlement be made with the companies, and that their claims be all of them extinguished on a certain fixed date, say ten years in the future, whereupon the city could automatically, and without condemnation proceedings, come into full possession of all the street car property within the city limits.

This apparently was too slow for Chicago. Political passengers who would like to know how fast the train is traveling will find that Chicago is a good place from which to look out of the window and count the telegraph poles.

Of course the issue was not clear. It never is. Louis XVI was a much nicer man personally than Danton and the men who voted for Mr. Harlan were in general much nicer than the men who voted for Judge Dunne.

The underworld and the halfworld were for Judge Dunne. The gamblers voted for him. And, without further ill-natured specification, so did almost all other men who require for self-expression the fullest possible measure of "personal liberty."

Mr. Harlan did his best in this matter. He is not a morose person. He has been merry once or twice ere now. And when a committee of ministers waited upon him he eagerly assured them that he would under no circumstances accede to their request and that he would not close the saloons on Sunday. But Judge Dunne divested himself of ministerial support with equal celerity and enthu-

siasm, and while he is a strict family man with a broad brood of children—and a positive passion for staying at home—still he is a Democrat and a man of the people, while Mr. Harlan is a Republican and is marooned among the silk-stocking respectables. So all the boys got out and voted the Democratic ticket.

Mr. Harlan meant to stand for administrative reform. He believed in making the City Hall employees earn their living. But he couldn't disentangle himself from the popular impression that he stood for moral reform and that he intended to make his neighbors better than they wanted to be. It will be a good day for municipal government in America when these two ideas get pried apart.

Side by side with the boys and the sports in defense of immediate municipal ownership stood the worst men in the City Council. Most of these worst men are Democrats. They naturally supported the Democratic ticket. But Judge Dunne went out of his way to speak a kind word for the municipal ownership virtue of Michael Kenna, who is the ablest of the worst men, and he again went out of his way to support George Harding, who has a vile record and who is a Republican, but who promised that in the City Council he would vote for municipal ownership ordinances.

Judge Dunne owes much to the sports and to the grafters. But he owed his nomination entirely to municipal ownership. He himself is neither a sport nor a grafter. His greatest fault is of a negative kind. He has been content to allow corruption within his party to fester on as long as he had a handkerchief and could look the other way. But it was not any organization intrigue that made him the Democratic candidate for Mayor. It was a municipal ownership tumult among the rank and file of the Democratic party. Without municipal ownership the nomination would have gone elsewhere.

Mr. Harlan was, therefore, compelled to face a battle line of far-flung proportions. The Democratic machine, formidable in itself and securely entrenched among the Aldermanic corruptionists and the open-town enthusiasts, was reinforced in the center and along both flanks

by swarms of municipal ownership guerrillas, who were willing to sacrifice almost anything to the accomplishment of their object.

Meanwhile behind Mr. Harlan there was treachery. Mr. Harlan experienced the rebound of the fact that in 1897 he bolted the Republican ticket and ran independent for Mayor.

Mr. Harlan is independent not only by occasion, but by temperament. He can walk around a room and never once touch the floor, traveling entirely on toes and most of them sore ones. He is magnificent on the platform, where frequently the incandescence of his moral emotion will flare up about him and consume from the minds of his auditors all petty party personal considerations. But party workers are not auditors. They just work. And on April 4th they worked so hard that Mr. Harlan lost innumerable Republican organization votes.

To this defection of spite now add a defection of principle. Men who had voted for Roosevelt because he was against national monopolies voted for Dunne because he was against all local monopolies. Harlan talked against private street car companies. Dunne soon finished up the street car companies and began to expend the large surplus of his indignation on private electric companies and private gas companies.

The line began to be stretched between conservatives and radicals. Mr. J. M. Patterson, the assistant editor of *The Tribune*, discovered that he was a radical. He, therefore, resigned from *The Tribune*, which continued to support Harlan, and took the stump for Dunne. He developed into the most logical and convincing speaker on the Democratic side.

It became apparent that the fight against monopolies was the same fight whether it was waged in the nation or in the State or in the city. Almost all the arguments used by Judge Dunne and by Mr. Patterson against the private ownership of street railroads could be used with equal propriety against the private ownership of steam railroads.

This is the significance of the Chicago campaign for the whole country. The tariff ought never to have had any influ-

ence on municipal elections. The status of the Filipinos was a still more extraneous issue. But in the fight against monopoly there is little difference between National Anthracite and Municipal Gas. The element of monopoly is just the same in both cases.

We have been told that in municipal elections the only things to be considered were a candidate's honesty and his intelligence. His political opinions were negligible. This is obviously not true when monopoly becomes the issue of a municipal campaign. There are honest and intelligent men on both sides.

If the election of Judge Dunne were not enough to show what the cry of immediate warefare on monopoly can do, even when it is so closely associated with graft as to alienate many conscientious men, the deficiency would be supplied by the referendum vote which was taken on the day of the election. That vote stood 141,000 to 55,000 against any franchise to any company.

Of course, the referendum is a callow political expedient. It is so young that sometimes it gets embarrassed and can't express itself. For instance, in the Third Ward Alderman Foreman went out before his constituents and said: "I am in favor of one more franchise to the private companies." Whereupon his constituents sent him back to the council with a plurality of 1,700. At the same time these same constituents took up their referendum ballots and voted against any franchise to any company by a majority of more than 1,700. *Vox populi, vox Dei* said one thing out of one corner of its mouth and another thing out of the other, for certainly the divine will is shown just as much in the selection of candidates as in the selection of principles.

Alderman Foreman himself, however, has announced that he will co-operate with the administration in any reasonable municipal ownership policy. He reflects the temper of the conservative element in the council. Five years ago his present position would have seemed dangerously advanced. He would have been clearly a socialist.

It isn't so easy now to earn the title of socialist. A man has to do something to get it. With a Mayor who spoke dur-

ing the campaign against all local private monopolies and a council which is willing to give the Mayor fair treatment, the Chicago election of April 4th ought to be of considerable interest to monopolists

of all kinds, national as well as municipal, who may have thought that no one but a socialist would object to being monopolistically squeezed.

CHICAGO, ILL.

# The Dominican Convention with the United States

BY CARLO F. MORALES

PRESIDENT OF SANTO DOMINGO

Communicated by his Private Secretary, Andres Julio Montolio.

**B**Y special order of the President of the Republic I transcribe for you the paragraphs of the Message which he read before the National Representation on the 27th of February, on the sixty-second Anniversary of Independence.

The paragraphs referred to have relation to the Convention dated the 20th of January last, amplified by the additional act dated the 7th of February:

"That Convention and the additional act recorded are the immediate consequence, on one side, of administrative errors committed by former governors, and of the urgent necessity of giving heed to the peremptory demands repeatedly made by foreign creditors.

"The moment has arrived to declare solemnly in your presence, honorable representatives of the people, and from this august chamber, before the face of the country, that I am and will be, in every circumstance, the most zealous guardian of the national independence, and that, no matter what means may be employed, nothing shall ever be able to make me waver when the integrity of the territory and the political autonomy of the Republic are in question.

"The Convention is the work of necessity, and the only way to arrive at a result that will place the country in a condition to solve the problem of its debt.

"In submitting it to your high approbation I am confident that your patriot-

ism, dealing with the various troubles and difficulties which have brought the Republic to its present condition, will be able to draw inspiration from the actual conditions that surround us. That patriotism alone is fruitful which develops its force in works of practical utility, and not the sort which, under color of flattering the multitude, hurries the Republic into grave and inevitable conflicts. Civic courage does not consist in giving occasion for dangerous incidents, but in correcting past mistakes by the force of virtue, by practical wisdom, and by consecrating ourselves to the task of rendering our nationality inviolable by the prestige of its credit and the evolution of its life of civilization and culture.

"I repeat before you, citizen Deputies, that at this grave, this solemn hour of the Republic, I shall always be at my post, maintaining unblemished the national honor."

The President understands clearly that nothing can be more noble than that the Republic should, by virtue of its own strength, by a wise and provident administration, have resolved, not only the problem of its debt, but also, and that, too, in behalf of a settled peace, have developed the energies of a people united by legal and constitutional bonds.

The Convention affirms a lofty conception of effectual patriotism, and the President responds to it.

SANTO DOMINGO, DOMINICAN REPUBLIC.

# The Philosophy of Harakiri

BY ADACHI KINNOSUKE

S AID an American friend of mine the other day:

"There is one thing I do not understand about your soldiers. It is the harakiri. Why should you make any effort to kill yourselves? It would cost life, ammunition and trouble; what is the reason that you would not give that job to your friend the Russian?"

"When our men start out to the battlefield," I said, "they enter the gateway made famous by Dante. With the soldiers of Nippon to enlist means to give their lives to the country. After that, all they want is to make their lives count for the utmost. The power of endurance, the education of the stomach and of the muscle, the skill in handling the modern machinery of war—of all of these, most certainly, the Nippon army takes a thorough account, just as the armies of the West. Only our army goes a step further. The homeland of the soldiers and his Majesty, whom they serve, expect of their soldiers a little more than a mere human could accomplish. You know quite as well as I that there is a power in man which is quite beyond the boasted understandings of modern science.

"Now, the strength of the Nippon army is not so much in the quantity of muscle, neither is it in the nature of the men, nor even in the Spartan training which they receive. I do not hesitate to say that the real strength of our army—that which accomplishes the feat which appears to the Western eye not far short of being miraculous—is psychic.

"When the Nippon soldier commits harakiri he does so because he is convinced that his death awakens this mystic force in his comrades; because he believes that by his death this real strength of the Nippon army is so much the more strengthened. You yourself, if you were convinced that by dying you could strengthen the army of your nation much better than by living, would you not yourself die rather than live?"

"But how, in what way, does this

harakiri work this miracle?" was the next question from my American friend.

"The explanation lies in the traditions of the samurai. It is as deep and extensive as the bushido.

"In the first place, then, you must know that the distinction of the samurai lies in the fact that he is the master and the arbiter of his own life, and this even in the hours of humiliation and dishonor. And that is the reason that when a samurai was found guilty of a crime in the braver days of our country he was not executed as other criminals. To them was extended the courtesy of the 'three-inch-and-half,' which is the length of a dagger by which he committed the right of Kappuku, as the ceremony of the harakiri is more commonly called among the samurai. Now, even in battlefields it has been considered something of a shame for the samurai to be slain by the sword of his opponent. The samurai has always prided himself in knowing the season and the hour in which he should die; just as the cherry flower in the ancient flower lore of our land is reputed to see the hour when it is bravest and best for her to scatter. It is written in the code of the samurai that he shall never survive dishonor. And remember that nothing is more dishonorable than a failure—it matters not how adverse the circumstances may be—of accomplishing the duty toward the State and the Emperor. These are questions of sentiment, to be sure, and the civilized might say of them that they are foolish. But we of the primitive race and training might be permitted to retort and say that it is not a whit more foolish than that a peaceful citizen should shed his blood upon a battlefield in trying to kill his neighbor of another country, who, like him, is fighting for the cause, or a blunder, as is often the case, for which he himself had not the slightest blame. Foolish or wise, it is certainly very absurd for any one to close his eyes against the existing condition of things.

"Moreover, in the military annals of

our country it has always been held that the death of an officer at the hand of the enemy reflects discredit upon the men under him, who have not been able or thoughtful enough to prevent such shameful death to their officer.

"An officer, his sword broken, fatally wounded, committed harakiri in front of Liaoyang. The men under him dashed ahead like a band of demons with one thought of avenging the death and of carrying to completion the work he had left undone. This officer in question knew these things:

"First, he knew that the bullet had pierced through his heart; he knew that his life was like unto a candlelight in front of a stormy wind; second, he knew, also, that as long as his breath was within his body his men would cling around him in their desperate efforts to save him from hostile bullets and hostile swords; third, he knew, also, that his men looked upon him as a samurai of the first water. They were the men fostered upon the old ideals of the Nippon soldier. Every one of his men would rather have given their lives than to have discovered a jarring note in the make-up of their commanding officer. Rather than to find their officer lingering like a coward, reluctant of this earthly life, they would have given their life if they could but apologize thereby for the fault of their commander. Every officer is an embodiment of his men's ideals. Their officer who expects them to look upon the earthly life quite 'as lightly as upon a particle of dust,' when the question of the State, of the honor of the flag, is at stake, is, to their way of thinking, a man who also looks upon life even lighter than they themselves are required to look upon it. The all-important thing upon the battlefield for the Nippon soldier is to accomplish his duty. Through the combination of circumstances a Nippon soldier finds himself powerless to carry out the work to completion. He is not expected to spend time and thought in apologizing for the unkindness of fate or the combination of circumstances. He faces one fact—namely, the failure of accomplishing his duty to the State. He finds himself utterly useless. He takes upon himself to shed the useless abode of himself. Fourth, moreover, he knew, also, that

under the circumstances to him was given one opportunity to make himself either a god or a coward in the eyes of his men and in the eyes of the army."

"And this, then," remarked my American friend, "is simply a question of sentiment; there is no rational basis therefor? And you, yourselves, then admit that the practice of harakiri is unreasonable, that it is not consistent with the ideals of the civilized life?"

"Perhaps," said I, "only remember that the Nippon officers of to-day in Manchuria are not put at the head of their men to argue the rationality or the irrationality of the heroic tradition of their country. To them certainly is not given time sufficient to revolutionize the sentiments and ideals of the army. By taking this life when he found his body utterly useless to the purpose to which he is dedicated he takes it himself. This act proclaims him in the eyes of his men a master of life, a man to whom death is a mere incident. Fifth, he knew also that by so dying he would not only inspire his men with a fire as from above, but his example in showing himself a samurai of the old standard would inspire the *morale* of the entire army to the extent that his example would count more than the reinforcement of a thousand men; for if you could fire the enthusiasm of men to such a pitch that a thousand men could accomplish miracles which is beyond the power of five thousand men, your death, which, after all, is the death of one individual, is counted for the reinforcement of many thousands.

"Moreover, it would be easier to the Western way of looking at things to understand the philosophy of harakiri if the West could see into the question of life and death as the Far East looks upon it. There, in the benighted land of the sun and of heathenism, we hold that there is one entity in the universe and we call it life. It is the *noumenon* of which all the empirical world is nothing, a mere expression, the world of phenomena. Life, we say, is something that is super-sensual. You have never tasted, smelt, heard or touched life. When one says he has killed a man, or when you see a flower plucked and withered, you have seen the passing away of one of the

myriad phenomena of the true entity, the life which you have never touched, of which you have no empirical knowledge. Now, death, to our way of thinking, is nothing but a mere destruction of one of the innumerable expressions of life. With us, then, to die is quite as trivial an affair as to sleep. Upon our transport 'Kinshumara,' and as a fog-wrapped moon was sailing over the midnight sky of April 25th-26th, 1904, under the storm of shells from the Vladivostok squadron, you could find Captain Shima at the head of his fellow officers unsheathing his sword. With the calmness of one and quite as solemnly as he who presents his respects to his prince he seated himself upon the deck of the sinking vessel. He performed the rite of the harakiri. To-day the men of the Nippon army talk of him as one of the guardian ghosts of the land of the gods.

In the first place he saw that his life was useless. He would either be a Russian prisoner or go down with the ship. He had dedicated his life when he left his home to serve under the imperial colors. He had not dedicated his life to squander away his hours in a Russian prison. He knew the moral effect of his death after the ancient rite of the samurai. He knew that if he cast away his body, his life, which is imperishable within him, will assume another form, and he will continue the work which he has left undone. Death was nothing to him, the accomplishment of his work was everything to him. Face the situation yourself. Could you have done otherwise than what he did to himself?

"Commander Hirose wrote upon a piece of paper with his own blood the following: 'Through nine cycles of existence shall I come back to earth till I see my work accomplished.' He wrote it on the day when he started upon his first attempt at bottling up Port Arthur. Not many days ago, in the city of Tokyo, in the Aoyama cemetery, you could see Admiral Togo attending the funeral rites of the men who had died before Port Arthur, and here is his address to the spirits of the dead:

"Since the opening of war, for over ten moons, both you and I have all passed in and out between life and death over the field of battle. Many were the things that I expected

from your able hands, and already you have, shouldering upon yourselves the glory of having served the country with your lives, started on the far away journey," etc.

"If those sailors who had served under him were facing him at that hour he could not have spoken to them in a more intimate style. In the eyes of the Admiral, as well as in the eyes of all of us, the men who have passed into heroic memory are as vividly existent as any of their surviving comrades. You of the West say that you believe in the immortality of the soul, and so do we; only we go a little farther than merely saying it. Because we look upon life and death from the standpoint of the larger tome of which the earthly life is nothing but a page, and a very small one, too, are we to be considered misguided and benighted, mere heathen to be pitied? Now, with this conviction, which is common throughout the Far Eastern land, our men commit the harakiri with a rather cheerful grace. Our men go into action. Upon the battlefield they are not surprised to meet death; in fact, that is the only thing they expect to meet there. It is this high, and perhaps oversensitive, regard—superstition, if you will—for the higher honor of the fighting men that makes of a company of Nippon soldiers a force which is irresistible. All the knowledge of the modern medical science has never been able to translate a mere mortal into a miracle worker. Over and over again history has testified that that enthusiasm which thrills the hearts of Nippon men, which has thrilled the hearts, fired the enthusiasm, of generations of samurai gone by, has once again translated an army of mere mortals into something akin to an army of gods. It is to maintain this sense of honor, it is for the preservation of this supreme fire that quickens the spirit and electrifies the enthusiasm of the Nippon soldier, that many officers among us throw away our lives, as you would call it, in performing the rite of the harakiri."

"But it is such a painful thing to go through," remarked my civilized friend. "Is there not another form less painful and much more comforting to the common sense, and much more in harmony with the conscience of the civilized occident that might serve this purpose quite

as well as the old rite of the samurai—harakiri?"

"Perhaps. Of one thing I am quite sure—that if such were to be found, de-

sirable and happy as indeed it would be, it would take more than a few days to introduce this as substitute for the time-honored and painful rite of the harakiri."

NEW YORK CITY.

## Trade Schools and Their Value

BY W. L. DOUGLAS

[One of the features of the inaugural address of Governor W. L. Douglas, of Massachusetts, and one of the chief features of his administration, is his advocacy of and labor for the establishment of trade schools. He is the first Governor who has ever made the technical education of the masses an official issue, and he has set forth the reasons for this unusual the commendable enterprise in the following article prepared for THE INDEPENDENT.—EDITOR.]

THE object of the industrial and trade school is first to benefit the individual—the person who is compelled to earn his own living by the work of his hands. It is intended by the establishment of these schools to teach the person not only how a thing is done, but why it is done, and to broaden his knowledge of the entire industry in which he is engaged, so that when he has served a sufficient time he will be capable of purchasing the raw materials, converting them into a finished product and possess some knowledge of marketing them.

The second object of the trade school is to provide a sufficient amount of skilled labor to enable the manufacturing industries of each State to keep in the lead in its several lines of manufacturing.

I am loth to say it, but it is true that our country is far behind other nations in the establishment of industrial and trade schools. Recently a meeting was held in Boston for the purpose of securing an expression of interest in the movement. That meeting was attended by the representative men of the State—lawmakers, business men, educators, mechanics, philanthropists and representatives of the organized labor movement. It was agreed at this meeting that Massachusetts, as usual, should take the lead in the establishment of industrial and trade schools, and arrangements were made for proper representation before the

Legislative Committee on Education, which is soon to give a public hearing on the matter.

America's progress in science, education, invention and manufacture has been the wonder of the world. Our raw materials seem inexhaustible and convenient for the purpose of mining and manufacturing, and our country industrially is in the front rank of the nations of the world. It is our duty to keep her there.

The method of conducting trade schools in Germany and the thoroughness of the education are the best in the world. Germany saw the need of such schools many years ago. Trade schools were organized, graduates sent out, and the effect was so marked on the industrial situation that other countries were attracted by the progress made, and finally realized that Germany was distancing them in the excellence of her manufactured goods. Germany with her technical schools and army of educated workers has demonstrated the great economic principle that finer and better goods can be manufactured at a less cost than by uneducated and unskilled labor. Throughout the empire of the Kaiser trade schools are to be found in all the cities, towns and large villages. New factories are springing up everywhere, and Germany is increasing her export trade wonderfully. In Berlin as well as in most German cities, trade schools for shoemakers, tailors, carpenters, metal workers, masons, etc., are being con-

ducted with friendly relations with the labor unions, and in many cases the boards of inspection have upon them members of the trade unions.

England, too, has schools teaching 66 trades. These schools are in operation and doing good work in all the cities, towns and larger villages. France is making great strides in the trade school movement. Belgium, Italy and Switzerland are also endeavoring to teach their young men to become expert mechanics. In Geneva, where the best watches are made, a young man must serve a five-year apprenticeship in order to get his education. He must make five or six of the best watches, make every part and put the watch together, before he can receive a diploma which certifies that he is a practical, skilled workman.

American schools of technology, the textile schools and nautical training schools are doing a great work. The pupils have an ambition to excel in their chosen lines, and the country will be made richer by their careful, competent training. Twenty-five years ago a mine that would not yield from twenty to thirty dollars' worth of gold to a ton of ore could not be worked, because it cost \$10 to get the gold out of it. Now, thanks to education, a ton of ore can be worked profitably that does not contain over \$2 worth of gold. Under the Elmore process a ton of ore can be worked and 98 per cent. of the gold extracted at a cost of ten cents a ton. Twenty-five years ago only about twenty-five per cent. of the gold could be saved. This shows what education can and does accomplish in our own country.

The shoe industry is greatly handicapped by a lack of expert workers, especially in the cutting departments. Forty per cent. of our cutters do not perform the amount of work they should, owing to the lack of training to use quick judgment in placing patterns on the leather. In a trade school such as is proposed a competent instructor would teach pupils how to place patterns to the best advantage. By this lack of proper training the manufacturer loses because the shoes cost more to cut; he loses because the workman is not able to produce as much work as an expert in the same number of hours. He also loses because the un-

skilled workman does not always put the right piece of leather in its proper place in the shoe.

The shoe manufacturer is also handicapped because of the men who run machines not more than 25 per cent. know how to keep their machines in thorough working order to produce the best results. Men have to be hired to do this work for them. A large corps of subforemen have to be employed to watch the men carefully to see that the work is kept up to a proper standard to meet competition. All of this extra help and the extra cost in cutting on account of unskilled labor make the goods cost more to produce and place our manufacturers in a position where it is becoming harder and harder every year to meet competition.

With a thorough system of technical education, where a man would serve an apprenticeship and learn all parts of the business, our goods would be produced at a less cost, and the workman would receive higher wages. When a young man thoroughly learns a trade and receives a diploma from a trade school he is sure to get employment.

When our young men are all taught a trade the problem of the unemployed will be solved. Those who are out of employment to-day are men who have very little knowledge of the work to be performed in any of our industries.

There will also be an opportunity for our girls to learn a trade. In the factories owned by my company 680 women are employed. Trade schools would furnish an opportunity for girls after leaving school, between 14 and 17 years of age, to prepare themselves for employment.

Trade schools have been made necessary to the community by the great changes that have taken place in the last generation in processes of production. Formerly the master gave time to the young men in order to bring them up in his business. He could give his personal attention to the young man, who was accordingly apprenticed to him to learn the trade. The system of apprenticeship properly belonged to a condition of production where the young man could meet his employer and be taught. Under the present system of production it is im-

possible for the employer to give personal care to the young man who wishes to learn a trade.

The apprenticeship idea cannot meet the requirements of the present factory system. It has been outgrown. We must find a broader, larger way to assist the young man who desires to learn. The school for the many who may learn at once must take the place of the master who formerly personally taught his apprentices.

The specialization by which one worker learns but a minute part of the whole process in manufacturing any commodity tends to narrow his capacity and prevent his obtaining a complete knowledge of his art. The extent to which the present factory system has limited the range of the workman can only be appreciated by those who have given the matter careful examination; but it is undoubtedly true to-day, and each year is becoming more true, that the introduction of machinery, supplanting hand work and a general knowledge of the business, and introducing in place of it a special knowledge of one minute part, has caused a weakness in our industrial system which should be properly compensated for.

In the last generation the position of Massachusetts as a manufacturing State has greatly changed. Processes which we supposed a century ago were ours by a certain sort of right have been transferred to other States. This process has continued and will continue in the future until economic laws—which it is useless for us to oppose—will show to us that we are practically limited in this State to work of the highest skill.

Skill in workmanship will decide the

future of Massachusetts, and only by the use of the best skilled labor can we compete with the German, English and French. The education of the young men to make them skilled artisans should be heartily approved.

The skilled labor necessary to our industries should be furnished, not by skilled labor imported from abroad, but by the young men from 15 to 21 years of age who are to become citizens. We take away their birthright when we refuse them the positions of skilled laborers which we give to others, and equally so when we refuse to assist them in obtaining the knowledge which will enable them to compete with other skilled labor in their own State.

If we do not replace the system of apprenticeship, now outgrown, with some means of instructing the young men adequate to the requirements of the present modes of industry, we leave our young men without any means for reproducing the skilled labor of the generation now passing off the stage.

Competition and the present day industrial organization demand a new system of industrial education. Great corporations are making a greater demand for educated labor than ever before. The poor man's son can graduate from a trade school, and his diploma will mean as much, if not more, than the diploma awarded the rich man's son by the various colleges and universities. Competition can best be met and overcome with expert labor. The trade school will unquestionably give us this expert labor, and it should therefore be a pleasure as well as a duty to do all we can to bring about the establishment of trade schools.

BOSTON, MASS.

# Public Men and Publications in England

BY JUSTIN McCARTHY

IRELAND has been again to the front in the troubles surrounding and threatening the English Conservative Government. The disputes which were raised over the policy pursued in Ireland by Sir Antony MacDonnell, the permanent Under Secretary to the Lord Lieutenant of Ireland, and the disavowal of that policy made in the first instance by the Chief Secretary have ended in the Chief Secretary's resignation of his office and may still lead to further changes in the administration. The Chief Secretary who has just resigned is Mr. George Wyndham, a man who has by family a close and remarkable association with a very troublous period of Ireland's story. George Wyndham is by his mother's side a descendant of Lord Edward Fitzgerald, the celebrated Irish patriot, who took a leading part in the rebellion of 1898 and died of the wounds received in his struggle to free himself

from arrest. George Wyndham was, therefore, believed likely by many Irishmen to show something like sympathy with Irish national feelings when he took office as Chief Secretary to the Lord Lieutenant. I think there is every reason to believe that his own personal feelings toward Ireland were kindly and even sympathetic, and that he would gladly have made himself welcome to the Irish people if the conditions of his office had allowed him to deal liberally with the national demands. But the truth is that the present system of governing Ireland does not allow any man who holds office in an English administration to make himself really welcome with the Irish people. Wyndham is a man of decided political capacity and in the House of Commons proved himself again and again an apt and even eloquent debater. But he remained an English Conservative administrator all the same and his attempt to enter into a sort of compromise with the energetic and resolute Irish patriot, Sir Antony MacDonnell, proved a total failure. The whole question was brought under the notice of the House of Commons and it soon became a matter of doubt, conjecture and speculation as to which official would have to resign his place, the Lord Lieutenant, the Chief Secretary or the permanent Under Secretary. It was quite certain that the three men could not continue in office together. Sir Antony MacDonnell is a convinced and an earnest Home Ruler, and there is a strong impression everywhere that his appointment to the office of permanent Under Secretary was due in great measure to King Edward's belief in his administrative capacity and his desire that some consideration should be shown for the national feelings of the Irish people. The end of the crisis has probably not yet come, and it only adds one other trouble to the many troubles now surrounding the Conservative Government. If, indeed, there were at the present hour

WALTER H. LONG

a strong and united Liberal Party in the House of Commons the Government would probably have been forced before this to dissolve Parliament and appeal to a General Election, and there can hardly be any doubt that such an election if brought on now or soon must result in the recall of the Liberals to power. But then, as I have said in former articles of mine, the Liberals are much divided among themselves, and especially on the question of Home Rule for Ireland, and they have no strong man among them who could by the spell of his genius and his influence command and compel their united allegiance. Lord Rosebery has entirely repudiated any adhesion to the principle of Home Rule, and others among the Liberal leaders have more or less explicitly followed his example. The immediate result of this is that the Irish Party hold themselves absolutely aloof from the Liberal Opposition and their votes are so many and so certain of united action that the Liberals lose all chance of obtaining a majority over the Government on some critical division in the House of Commons. Ireland once again holds the balance between the two great English parties.

Meanwhile there has to be a successor to Mr. Wyndham in the office of Chief Secretary, and that successor has already been found and has accepted the position. The newcomer is Mr. Walter H. Long, who has for some time held the important office of President of the Local Government Board in the Conservative Administration. The announcement of this appointment suggested to many the idea that every other available personage must have had the offer and declined it and that then there was absolutely no one left to whom it could be tendered but Mr. Walter Long. Certainly Mr. Long would seem one of the least likely men to prove successful in a position of so much difficulty, delicacy and administrative risk as that of Chief Secretary for Ireland under a Tory Administration.

Mr. Long is essentially what his friends would describe as a solid, and his hostile critics would speak of as a stolid, Briton. He has been a member of the House of Commons for some fifteen years and has held administrative office more than once. I had many opportuni-

The Gorgeous Marquis of Anglesey. His array for this photograph was a symphony in pearl gray, with only a few stray thousand dollars' worth of jewelry

ties of meeting with him while I was still a member of the House and I always found him genial and courteous and willing to consider any suggestion made to him with regard to the business of his department, but I can recall nothing in him which suggests the possibility of his becoming a success in the solution of that most difficult problem—how to govern Ireland on Tory principles. Some comic papers have already given us many caricatures intended to serve as humorous illustrations of the difficulties which Mr. Long will have to encounter in his new office. One journal suggests that the reason why Mr. Long was selected as Irish Chief Secretary was because during one of his former periods of official work he had successfully carried into operation a measure for the muzzling of dogs. Perhaps, the writer of the article goes on to say, it is hoped that Mr. Long may prove himself equal to the muzzling of the Irish members, but he expresses also his full belief that any such hope will be disappointed.

A very welcome and valuable contribu-

tion to the literature of our time is given by Mr. George W. E. Russell in his volume on Sydney Smith. I mentioned in a former article that this book was about to make its appearance and was to be one of the volumes constituting Messrs. Macmillan & Co.'s interesting and important series entitled "English Men of Letters." Mr. Russell is a member of the family of the late Lord John Russell, afterward Earl Russell, who was at one time a friend of Sydney Smith. Mr. Russell's volume is an appreciation as well as a biography of Sydney Smith. Every stage in the career of the great wit, humorist and essayist is illustrated by some appropriate passage from Sydney Smith's sermons, essays or speeches. What especially impressed me in reading the volume is that Mr. Russell has brought out with admirable effect those qualities of Sydney Smith with which the world in general is least acquainted. We are most of us well able at any moment to quote some of the humorous sayings, the brilliant sarcasms, the exquisitely droll comparisons by which Sydney Smith could reduce to absolute ridiculous absurdities the stock arguments by which the old-fashioned enemies of human enlightenment, progress and liberty endeavored to maintain their antiquated systems. But we know far less of Sydney Smith as the great moral teacher, the eloquent and high-minded preacher, who could fill the hearts of his listeners with the most exalted and at the same time sweetest and tenderest appeals to the highest qualities of man's nature and man's purest hopes for the hereafter. Mr. Russell has done justice to this side of Sydney Smith's character and has illumined his pages with many extracts from Sydney Smith's sermons, which are not likely to be forgotten by those who read them. I feel convinced that the intelligent public in the United States as well as in the British islands and colonies will thank Mr. Russell for giving them this book.

Another lately published book also deserves a special recognition. Altho I have already referred to this book, I feel it deserves a somewhat fuller review than that which I was able to give it in my former letter. "The System" is the work of Mr. Percy White, and is pub-

lished by Messrs. Methuen. This title could not seem at the first glance to offer much attraction to the ordinary reader of fiction, but I think the reader must be a dull personage indeed who can go many pages into Mr. White's novel without becoming wholly absorbed in it. It is the story of an ardent young man, an enthusiast, a thinker, even a dreamer, who, born to rank and fortune, is filled with a positive passion for putting to rights all the antiquated anomalies and evils of our existing systems, for bringing about an era of equal liberties and opportunities for all human beings and for making this world a better world even in the present. He is in fact a sort of modern Don Quixote of English civil life. Byron has declared that Socrates himself is but "wisdom's Quixote" and something the same might fairly be said of Mr. White's hero, Carey Butler. I shall not make any attempt to tell the story here, but I may say that it has a story, a very attractive and fascinating story, and that it is not by any means an illustration of eccentricity or an analysis of generous monomania. Every character of the book is distinctly and vividly drawn and the men and women are living pictures. The surroundings of each personage are made real and lifelike with easy touch and there are many artistic descriptions both of scenery and of social life. The hero's father, a county magnate and a man of wealth, is admirably drawn as a type of a certain old-fashioned class of English country squire, and while a very excellent personage in himself is brought into the happiest and most effective contrast with the dreaming but very active philanthropist reformer, his son. I may add that the hero in the course of his experimental enterprises visits the United States. I feel no doubt that the volume which tells his story will make the same visit.

The British peerage has lately lost a member the eccentricities of whose career might almost be described as unparalleled in the history of that order which has so many eccentric as well as so many really illustrious members. The late Marquis of Anglesey died at Monte Carlo, where he had been staying in the hope of improving his health, and he was

only in his thirtieth year when he died. He was the descendant of that celebrated Marquis of Anglesey who as Field Marshal commanded the English cavalry at Waterloo and won the admiration of enemies as well as friends by his skill and his daring and his noble character. His descendant who has just died came into a vast fortune—it would be considered a great fortune even among your wealthy folks in the United States—and he became not only Marquis of Anglesey, but what Byron calls “lord of himself, that heritage of wo.” He allowed himself to develop a passion for extravagance of all kinds, but especially for extravagance in wearing apparel and more especially still in the buying and the displaying of jewels. He bought up wherever they could be got at the most costly diamonds, pearls and other precious stones, and his mania was not merely to preserve these treasures for array in his cabinets or to lavish them upon his personal favorites, but to adorn with them his own form and fingers, to deck himself in fact with jewels from head to foot. He had a theater in Anglesey Castle and he loved to make his appearance there in some dramatic performance which gave him the opportunity of exhibiting himself in his adornments of precious stones. *The Daily News* tells of him that

“his collection of walking sticks numbered over a thousand; his overcoats were another remarkable assortment; Persian lamb, sealskin,

Russian sables—all were represented. In number over a hundred they hung in ordered rows, the special care of his valets, four in number.”

Lord Anglesey had a passion for acting, and at his theater in the castle he would exhibit himself to his friends and his tenantry in all manner of characters which allowed of gorgeous dressing, and he occasionally exhibited himself as a dancer in tights. His extravagance in his jewels and his dresses and his purchases of all kinds was so vast that not long before his death he became practically a bankrupt and failed for rather more than half a million of English pounds sterling. This was indeed a dismal, and at the same time a ludicrous, close to the career of Wellington’s great officer, the Lord Anglesey who rendered such splendid service at Waterloo. An American visitor to England may see at Holyhead, a place not far from the Anglesey estates, a monument erected on the spot where the hero was entombed. The leg which he lost at Waterloo is buried on the battleground, under a monument. Some poet has written that

“A sculptured stone  
Makes proudly known  
Where the limb of an Anglesey lies.”

The sculptured stone which shall make proudly known where the body of the later Lord Anglesey lies can hardly tell of anything very proud in a career of half insane extravagance.

LONDON, ENGLAND.

## A Signet

BY MARGARET ROOT GARVIN

My heart is cut intaglio;  
A signet ruby, warm of tint;  
Cut even wasteful deep, that so  
A clearer image it imprint.

My heart is cut intaglio,  
And so, whatever may be pressed  
Thereon, with fervent love, shall show  
In proud relief that image blest!

Like seals, where men of long ago  
Carved god, or queen with diadem,  
The image made the jewel glow,  
And where it rested left a gem.

WHITESBORO, N. Y.

# The Tower of Babel

BY MORRIS JASTROW

[Professor Jastrow, of the University of Pennsylvania, is one of the most accomplished students of Assyriology in this country, and his exhaustive "Religion of Babylonia and Assyria" is now appearing in a German translation.—EDITOR.]

WHO has not been alternately puzzled and fascinated by the curious tale related in the 11th chapter of the Book of Genesis? Within the compass of nine verses the narrator furnishes his answer to two of the most perplexing problems in mankind's history—the dispersion of the human race and the diversity of human speech, and incidental to the solution reveals his view of human progress. Indeed, it would not be difficult from these nine verses to reconstruct the system of philosophy to which the narrator was attached.

The tale merits the epithet *curious*, for while we find parallels among other nations for most of the other stories, legends, traditions and myths that are strung together in the early chapters of Genesis, this one is quite unique. Speculation in regard to the origin of the world led people while still in a state of primitive culture to devise creation myths in abundance. Stories of a lost Paradise and of a golden age placed in the remote past are similarly found among various nations, while deluge traditions are so common that it is rather exceptional to hit upon a quarter of the globe where they do not exist. To be sure, the stories of creation, of a golden age and of a deluge are by no means in all cases original productions. Parallel to the migratory movements of mankind we have the migrations of traditions, which, as they are carried from place to place, undergo manifold transformations in being adapted to different conditions, and in view of the agreement and of the interdependence in the case of so many primitive myths and traditions, it is rather significant that such a tale as the one that follows upon the Biblical account of the deluge was not carried about and that it has not even been found in the one place where we would natural-

ly look for it, Babylonia. The story, however, is far more curious—it is in its present form one of the most characteristic productions of the religious spirit impressed upon the Hebrews in part by their political experiences, but in large part by the influence of a remarkable series of religious teachers that arose among them during the eighth and seventh centuries B. C. and who gave a new direction to the religious and social development of the people in whose midst they lived and taught. Tho the scene of action in the tale is the Euphrates Valley, and the setting is entirely Babylonian, the story is not a Babylonian one, nor based on any Babylonian tradition; it is an expression in legendary form of the spirit and philosophy of the Hebrew prophets.

The story at first glance seems simple enough. All mankind, speaking the same language, dwells together in a valley in the land of Shinar, when a decision is reached to build a city and a high tower. The plan is frustrated by God, who is here designated as Yahweh, who confuses the speech of the people so that, no longer able to understand one another, they abandon the building of the city and scatter over the face of the earth. The story closes with an etymology of Babylon, which it is said was so called because Yahweh there confused the speech of mankind. The etymology rests upon a play of words—the Hebrew verb for *confuse* being *balal*, and which comes sufficiently close to *Babel* (as tho contracted from *balbal*) to warrant the association. The Babylonians explained *Babel* or *Babylon* as compounded of two words, *bab*—gate, and *ilu*—god; but this may likewise be merely a play upon the name, and have no more etymological value than the Hebrew explanation.

Brief as the story is, it does not appear to be of one cloth, but is compounded, as

so many of the narratives in Genesis, of two tales, or perhaps it would be more correct to say, of two versions of one and the same story. According to the one the story deals with the building of a city undertaken by mankind in order to "make a name" for itself and which was interrupted by Yahweh without any apparent reason. Yahweh in this version simply says: "Behold! They are a united people and have the same speech. Let us go down and confuse their speech so that no one should understand the speech of the other," and the story closes with the etymology of Babylon as follows: "They were obliged therefore to abandon the building of the city. Therefore the place is called Babylon, for there Yahweh confused the speech of mankind."

The other story, or version speaks of the building of a tower, and a reasonable motive is assigned for Yahweh's opposition to it by the express declaration of the builders, represented as mankind in general, that the tower is to reach up to heaven; and altho this is not done with a view of invading Yahweh's domain, but, as the builders add, "that we may not be scattered over the face of the earth," yet Yahweh, who is described in this version also as coming down (from heaven, where he dwells) to look at the tower which mankind has built, objects to the ambitions of the human race and fears the further growth of human power. "This is merely the beginning of their work; henceforth they will not abstain from anything that they may plan."

It will be noted that in the one story the building of the city is interrupted, whereas in the other the tower is represented as having been completed. Nor is it implied that Yahweh destroys the tower—he merely frustrates the desire of mankind not to be dispersed over the earth. The second story, moreover, contains no reference to any confusion of speech, but it agrees again with the first in making Babylon the scene of action, for the end of the ninth verse, which belongs to this version, expressly states, "thence (*i. e.*, from Babylon) Yahweh scattered them over the face of the earth."

Both tales therefore agree in one es-

sentia point—in manifesting a spirit of opposition toward the achievements and ambitions of the Babylonians. The high tower is the characteristic sacred edifice of Babylonia, as characteristic as the pyramid is of Egypt. Built in imitation of mountains, the erection of such towers—called *sikkurats*—in a flat country like the Euphrates Valley would seem to point to a mountainous origin for the population, or for a portion of it which believed that the gods dwelt on the tops of mountain peaks. Hence at the top of the towers, which consisted of three, four, up to so many as seven stages superimposed one upon the other, and provided with means of ascent either by a winding balustrade or by a direct staircase from one stage to the other, there was the chamber sacred to the god in whose honor the tower was built. Such towers were found, in addition to the temple proper, in every important religious center of Babylonia. They are frequently referred to in the historical inscriptions of Babylonian rulers. The University of Pennsylvania expedition to Nippur unearthed the remains of one which dates back to the third millennium before this era, and it is hoped that the German expedition now conducting excavations in the city of Babylon will succeed in discovering the site of the seven staged tower sacred to Marduk, the chief god of Babylonia, and which is probably the one described by Herodotus in his History (Book II, No. 189). It bore the proud name of "The Foundation Stone of Heaven and Earth," and its restorers, after the destruction of Babylon by Sennacherib, Nabopolassar (625-605 B. C.) and his great son, the famous Nebuchadnezzar (605-562 B. C.), use the same expression, "to make it 'as high as heaven,'" that we find in the Old Testament story, to emphasize their ambitious hopes. According to modern standards these towers, ranging from 90 to 150 feet, would not be regarded as particularly high; but from the point of view of the "Pentateuchal" writers, whose ideal altar was a simple construction of earth, and according to whom Yahweh's favorite sanctuary was a portable tabernacle of small dimensions and of primitive construction, the Babylonian towers appeared huge indeed. It

is in all probability the *zikkurat* of Babylon, "the foundation stone of heaven and earth," that the narrator in Genesis had in mind, and his protest against such an edifice—which represented the quintessence of piety and of notable achievement in the eyes of the Babylonians—as not at all pleasing in the sight of God, involved a condemnation of the entire Babylonian civilization. Similarly the city of Babylon, which the latest redactor of the story has in view, was not the older city which was completely destroyed by the Assyrian king Sennacherib in 689 B. C., but the new Babylon, due again to Nabopolassar and to his son Nebuchadnezzar, and which is the scene of action in the book of Daniel (4: 26, 27). It is this newer city likewise which classical writers describe in such grandiloquent terms as the pride and wonder of the world and which contained, among other notable structures, the famous Hanging Gardens.

All such ambitious undertakings were distasteful to Hebrew writers, who, following in the steps of the prophets, emphasize the simple agricultural life as the ultimate cultural development beyond which it is sinful to pass. In the Pentateuch as in the Prophets, the establishment of a kingdom with an elaborate court, with a standing army and with all the paraphernalia of royalty, is discountenanced. Yahweh should suffice as the people's king, and the highest official therefore in the Pentateuchal legislation is the priest as Yahweh's vicar—not the warrior or the nobleman. Babylon is chosen as the symbol of all that is distasteful to the pious Yahweh worshipers, and the hostile attitude revealed in the ninth chapter of Genesis against the great city and its huge tower is in keeping with the general spirit of opposition against the ambitions and achievements of ancient civilization. The condemnation of Babylon and of its *zikkurat* involved an opposition to other seats of culture as well—of Egypt, for example, and Phœnicia—but Babylon is chosen as typical for special reasons. In the first place, as a military power Babylonia and Assyria far outstripped the kingdom of the Nile, particularly in later times. Moreover, was it not Assyria that destroyed the kingdom of Israel and was

it not the famous Nebuchadnezzar who had applied the torch to Yahweh's temple at Jerusalem and who had demolished the independence of Yahweh's people? To be sure, according to the prophets, the punishment was amply deserved, for the people had sinned against their God; but, for all that, the patriotic feelings of exilic and post-exilic Hebrew writers were particularly aroused against the power that had worked such dreadful havoc among them.

The main purpose of both stories therefore is to utter a protest against ancient civilization as personified in Babylonian achievements. One writer chose the sacred edifices of Babylonia as the point of his attack; another went still further and condemned the building of the entire city of Babylon as an impious act, prompted by the sinful ambition to "make a name"—that is, to acquire fame and renown. The glory of the new Babylon proved to be of short duration. Less than sixty-five years after the death of Nebuchadnezzar Cyrus entered Babylon in triumph and put an end to the Babylonian empire. The capital of the new empire became Susa, while the building operations in Babylon, as a matter of fact, ceased, and tho the city continued its existence for some centuries, it lost its importance and its rank entirely. The post-exilic editor of Genesis saw in this humiliation a confirmation of his view that the entire Babylonian civilization was displeasing to Yahweh.

The Biblical writers, however, are not merely pessimists, giving expression to their personal feelings. Closely entwined with their patriotism and their religious fervor is a system of philosophy. According to this system mankind, created by one God, necessarily originated in one place. The extreme age of the settlements in the Euphrates Valley profoundly impressed the Hebrew writers, more particularly as the traditions of the Hebrews pointed likewise to this valley as the home of their own ancestors. It was but a natural step to picture the valley as at one time actually the home of all mankind. The question therefore arose in the mind of a philosophic writer: How came mankind to be separated in all parts of the world, and, furthermore, the writer argued, if all mankind was settled

in one place, there must have been only one language spoken at that time. How then account for the dispersion of mankind and for the great diversity of human speech? His answer is: Babylonia is responsible for both. The author or compiler, voicing the religious hope of post-exilic Judaism that all nations may once more be united in the worship of the one God, singing in tuneful accord the praise of Him whose only legitimate sanctuary is in Jerusalem, views both circumstances, the dispersion of mankind and the diversity of speech, as a temporary punishment which could only have been sent by a just God for some sufficient reason. The philosopher steps forth and justifies the preacher's protest against the achievements of civilization by advancing the theory that civilization defeats its own aims. "Making a name"—*i. e.*, the achieving of fame and renown, which, according to him, is the only motive behind the cultural aims of mankind—is sinful. Such motives arouse Yahweh's opposition and the latter therefore decides to frustrate human aims by a simple device—the confusion of tongues. To build a tower that should reach to heaven is likewise a sinful ambition. Such an edifice is not the kind of sanctuary that Yahweh desires—and just because mankind does not desire to be scattered, Yahweh determines to manifest his superior power by scattering them. Both evils, therefore—the dispersion and the diversity of speech—are due to civilization, and the typical example of Babylonia illustrates what the outcome of civilization necessarily is.

Such is the purpose of this curious tale, the present form of which belongs to the period after the rise of the Persian empire under Cyrus. In thus bringing the final redaction of the story down to so late a period we must beware of falling into the error of supposing that the tradition to which a writer (or a school of writers) has attached his philosophy and his solution of puzzling problems is also of a late date. As in the case of all the myths, legends and traditions embodied in the book of Genesis—in many respects the most remarkable in the Old Testament collection—we must distinguish between the original features and such elements as have at various times

been introduced for the double purpose of bringing the stories into accord with the religious and ethical views of later times and of making them serve as illustrations of religious doctrines, of moral precepts or of the philosophy of life. This task of analysis, which is still engaging the attention of scholars, is an exceedingly difficult and necessarily delicate one, requiring the exercise of sober judgment in combination with the most careful attention to minute variations in phraseology in one and the same story and to a separation of the varying and often conflicting conceptions introduced in the different parts of the tale in question. So the Creation story, as is now admitted practically by all scholars, consists of elements which take us back to primitive conceptions of the universe, and which therefore belong to a very early age, and yet these older elements are combined with such an unsurpassed statement of an advanced monotheistic doctrine as the opening words of the story. The older elements in this process are not rejected, but transformed by the view pervading the whole of the Hebrew Creation story, which makes the universe to be the emanation of a Divine Spirit, whose fiat is sufficient to change chaos into order and permanently to establish the laws of Nature.

Similarly, in the story of the Tower and the City there is abundant evidence that it existed in an older form than the one now at our disposal, told without the purpose that led to its retention in the narrative of the early fortunes of mankind, and it is also clear that in this older form it rested upon very simple and almost childlike ideas of the manner in which Yahweh carried out his purposes. Traces of the older story are to be found in the description of Yahweh coming down to look at the doings of men and in his fear of what might happen if mankind were permitted to go on in their work, implying that they might threaten Yahweh's own domain. Such a God is far removed from the one of whom the Psalmist (Ps. 2: 41) says that from his seat in the heavens he laughs at the futile efforts of men to alter the Divine Will, and still further removed from the conception embodied in the dedication prayer put into Solomon's

mouth (I Kings 8: 27) of a Being whom "even the heaven and the heaven of heavens cannot contain."

In its original form the story need not have referred necessarily to the *zikkurat* of Babylon or to the city of Babylon. Any one of the staged towers in the various religious centers of the Euphrates Valley would have served to impress profoundly the Semitic nomads who regularly poured forth from the Arabian Desert, and who in the course of their wanderings to the north skirted the district of the Euphrates and Tigris and saw with their own eyes the achievements of Babylonian culture. In the minds of untutored Semites the high buildings and extensive cities of Babylonia aroused not only astonishment, but also a sense of horror, and that this view, resting ultimately upon the barbarian's instinctive protest against culture, still prevails in the East even after centuries of Islamic influence, may be gathered from the attitude of the modern Arabs, who when Layard conducted his excavations at Nineveh attributed the great monuments unearthed by him to Nimrod, the embodiment of all that is wicked and cruel.

The question may be raised, Are we, indeed, justified in ascribing to Hebrew writers such views as are involved in the interpretation here proposed on the basis of modern Biblical research? In reply one need only point, as already intimated, to the general spirit which pervades the Pentateuch. The happiest state of mankind is pictured in the primitive life led by Adam and Eve. On the "tree of knowledge of good and evil" hangs the forbidden fruit. The phrase, "knowledge of good and evil," means in Hebrew parlance the "reasoning faculties." The Hebrew writer consistently carries back the misfortunes of civilization to the first step—the acquirement of reason. *C'est le premier pas qui coute*. In the story of Cain and Abel the preference is given to Abel, the pastoral nomad—representing the simple form of culture—over Cain, the fratricide who becomes the city builder. The murderer passes over the body of his victim to a higher form of culture. The cultivation of the vine—

another achievement of advancing culture—brings about the pious Noah's disgrace. The typical Hebrew—the patriarch Abraham—leads the life of a pastoral nomad, whereas his nephew, Lot, abandons this form of existence to settle in the cities of Sodom and Gomorrah, which *because* they are cities, are described as hotbeds of vice and corruption. In the Pentateuchal legislation a concession is made to necessary conditions by holding up agricultural life as the proper ideal, but the protest against culture is quite as forcibly maintained in the opposition to commerce, to royalty and in the approval of the simple altar and of the portable sanctuary, as against more ambitious structures. The simpler life is in every case preferred to the more advanced, the pastoral stage given the preference to the agricultural and the agricultural to the commercial stage. It is in accord with this spirit therefore that the compiler who combined the story of the City with that of the Tower illustrates by this example his view, that civilization as understood by the ancient world is a curse, leading to divine displeasure and divine punishment. What we would call progress is frankly declared by him to be responsible for the ills and misfortunes of mankind.

Strange as this attitude in certain Old Testament writers may at first sight appear, it is not so uncommon among earnest religious minds as one might be led to suppose. The early Christians looked upon Roman civilization in much the same light as the pious post-exilic Hebrews did upon Babylonian culture. Called forth by a recognition of the oppression, misery and moral corruption that so often accompany political aggrandizement and industrial advancement, this attitude finds an exponent even in our own days—in no less a personage than Tolstoy, who so eloquently pleads the cause of the oppressed and who, like the ancient Hebrew editor of Genesis, holds modern culture and modern science directly responsible for the inequality existing among mankind and for the consequent sacrifice of the weaker for the benefit of the stronger.

# Political Conditions in Hawaii

BY S. E. BISHOP, D.D.

IT is a pleasure to report that the political situation in Hawaii Territory is now more quiet and generally favorable than it has been at any time since disturbance began under King Kalakaua in 1887. This became clearly manifest as the result of the November election, with the overwhelming triumph of the Republican Party. For the first time a decisive majority was secured for the party of the Federal and Territorial Administration. It was also a very large majority over the combined votes of both the opposing parties, the Democratic and the Home Rule.

The Home Rule Party was that of the great majority of the native Hawaiians. They had deeply resented the deposition of the native Queen and the assumption of political control by the capable and intelligent whites by means of a moderate property qualification for suffrage, which excluded the ignorant and shiftless classes, including a large majority of the natives. Indeed, under the monarchy the franchise had always been much limited, and one-half of the Legislature, called Nobles, had been appointed for life by the Sovereign. When Congress annexed Hawaii in 1898, and organized it as a Territory under Federal law, an unlimited franchise was given to all citizens who could read and write either English or Hawaiian. This admitted all native Hawaiians to the polls, common schools having prevailed for sixty years. The late Delegate to Congress, Robert W. Wilcox, at once organized the Home Rule Party, which carried all before it, the Democratic vote being next to nothing, and the white Republican vote largely swamped.

That was in 1900. The ensuing session of the Legislature was one of extreme confusion and fruitlessness, owing to the ignorance and childishness of a majority of the members. The election of 1902 gave a somewhat improved Legislature, with a small majority of Republican members; but a large pro-

portion of these were incompetent, and their biennial session was much a failure as to useful results. The present Legislature, now convened, promises somewhat better things. There is probably in it also a large element of incompetence. It was impossible for the party to be choice in its selection of candidates for the Legislature. Nearly all those elected are natives, other candidates hardly being capable of gaining majorities from a native electorate. But it is a great gain to have a Legislature which is in accord with the Administration and not factiously opposed.

This improved political condition is much owing to the natural effect of true and quiet good government. The Home Rulers became discouraged by the incapacity of their leaders to accomplish anything whatever of practical gain. The country was settled as a part of the United States, and they had only to make the best of it. That best was very good indeed. The natives were never more comfortable. Their sentimental grievance more or less abated with time. But the improved feeling has been especially promoted by the change a year and a half since in the *personnel* of the Government. The late Governor S. B. Dole was undoubtedly the best man for the office during his period of service, and his earlier removal would have been disastrous. But he was necessarily unpopular with a majority of the natives from having been closely identified with the dethronement of the Queen and with subsequent measures of some unavoidable severity. At the expiration of Mr. Dole's four years as Governor of the Territory he was succeeded by George R. Carter, a vigorous young man of thirty-six who had attracted the favorable attention of Mr. Roosevelt. Like Mr. Dole, he was born in Hawaii, of white parents. Mr. Carter's parents also are Hawaiian born. His mother was a daughter of Dr. G. P. Judd, who was eminent in the government of the King

from fifty to sixty years ago. His father was the brilliant H. A. P. Carter, who was once the King's Minister at Berlin and later at Washington.

Governor Carter has taken especial pains to enlist the personal regard and confidence of the very kindly disposed Hawaiians by much touring through the Islands and inquiry into their wants. He has done this with much success, as evinced by the results of the late election. But a most marked proof of their confidence in him was shown by the action of the Legislature in extra session some ten months ago, when in twelve days they put through a stringent revision of Territorial expenditure in precise conformity to Carter's recommendations. The whole proceeding was an absolute reversal of their treatment of Governor Dole's recommendations a year before. There is much reason to hope that the new Legislature just chosen will prove similarly amenable to kindly guidance.

The leading measure which appears to be unavoidable for the coming session is that of establishing county government. Such a measure was passed two years ago, creating five counties with their local administrations. It failed to go into effect through technical defects in the law. Probably it was also seriously defective otherwise. It must be very difficult the next time to arrange and enact a really good measure of this kind. The scheme is a very popular one, especially in the outer districts. But I think the majority of our wiser citizens feel that the time has not arrived when the public interests can be as well and economically administered by the small local communities as they now are by the central Government of the Islands. The Governor will doubtless as a matter of policy lend his full support to the County Bill, and this may prevent it from becoming a cause of serious strife.

A source of friction in the government of Hawaii is such a proclivity of the native Hawaiians to financial irregularity that it is very difficult to trust either natives or part-whites with any financial responsibility, while it seems invidious to appoint chiefly whites to important offices. During the past two years and more there have been disclosed a large number of defalcations in important pub-

lic offices, amounting in all to over \$40,000. Several of these proved to have been accumulations of small embezzlements which had been going on for many years. Most of the culprits were part-whites. Two were whites. A number were indicted and some were convicted. On the whole, a good contribution has been made toward the education of the people in financial probity.

This lack of honesty in the native Hawaiian is not a mark of peculiar depravity or due to any profound perversity of nature. It may be called a social defect or weakness. Hawaiian society is thoroughly pervaded by the sentiment, which almost amounts to an instinct, that it is the proper thing to help one's self or friends with moderation to money or other good things in one's keeping. It is as any servant might feel about tasting a little of the dainties served up to the family. The idea of rigid keeping of accounts and of the strict sacredness of trust funds was absent from the Hawaiian mind. It used to be, and still is, the hard-learned lesson in our native churches that they must never intrust the keeping of their church funds to any native official, who would be sure to muddle it away. A white man must always be found to take charge of it. I have known repeated instances of native pastors of eminent spirituality who were heavily short in the church accounts, and it was without deliberate intention of wrongdoing.

Polynesians, like all the depressed or uncivilized races, among whom, however, they hold a high grade both mentally and morally, are in their pervading ethical sentiment in marked contrast with the highly civilized races in two leading particulars. The civilized peoples hold the financial probity of the man and the chastity of the woman as indispensable to respectable character. The Polynesian thinks little of either. Now Christianity has wrought a great work among these Hawaiians. It has especially given a widespread quickening of conscience and sense of the importance of doing that which will please God. But in these eighty years from its inception time enough has not yet been given to educate the depressed moral sense as to what is fit and becoming, nay, sacred, in social

duties. The old ingrained proclivities to free and easy ways still remain, especially in the two respects named.

Yet these defects are fatal to civilized prosperity, and one of them, more than any other cause, is chargeable with the terrible wasting out of the Hawaiian people. But much has been and continues to be done to educate the Hawaiians to higher standards of living. The most efficient educating agency has been that of boarding or training schools for both sexes. From these during the past forty

years have gone forth more than a thousand persons of each sex to educate their fellows and disseminate among them the higher moral standards of conduct which belong to Christian civilization. But to thus uplift a whole race takes generations of constant care and most patient education.

The American people are likely to gain much and painful experience in this line in trying to lift up the weak races of the Philippines into capacity for self-government.

HONOLULU, HAWAII.

## The Stampede

BY ARTHUR L. CALDWELL

THE red sun breaks through muddy lakes of haze and rifted cloud,  
And still and gray the prairies lay as moveless as the shroud.  
But a distant roar was on the air, a rumble from afar,  
And a dust cloud brown was sweeping down from the blue horizon's bar.

Above the line the great horns shine, beneath, the sharp hoofs speed,  
And the solid ground shakes with the sound of a herd in full stampede.  
And close to the lead is a coal-black steed, and a boy with a dashing bay,  
Then a man with a roan who rides alone, whose hair is streaked with gray.

While the West still glowed they mounted and rode, and the reckless race began  
Through the dim starlight of the prairie night, and still they galloped on.  
For life is cheap when men must keep these runaway brutes beside,  
And until they stop, or the horses drop, it is ride and ride and ride.

The sun, from high in a murky sky, shines hot on the dusty track  
Where two men ride by the great herd's side, still led by the fiery black;  
An hour ago on a treacherous slough the gallant bay went down,  
And a young voice clear rang out a cheer for the men who galloped on.

And now the black is falling back, panting, with low-hung head,  
And shortening strides, tho his dust-gray sides the spurs have marked with red.  
He is out of the race, but into his place the gray-haired rider sweeps,  
And foot by foot and inch by inch to the head of the herd he creeps.

And along the flank of the surging rank, over the trampling noise,  
The echoes break as his pistols speak in sharp and threatening voice,  
Till the danger is past, and they turn at last, with heavy, plunging tread,  
Tired and blown, and the plucky roan swings slowly 'round ahead.

Give praise to the old gray veteran bold, who turned the maddened throng,  
Nor let it lack for the man with the black, who held the lead so long;  
But what shall we add of the bare-faced lad, who knew that his race was done,  
When, helpless, he lay by his fallen bay, but cheered his comrades on?

GEDDES, SOUTH DAKOTA.

# The Family

[We imagined that no article could elicit more discussion than did our story of the "Illinois Farmer's Wife"; but the confession of the "Childless Wife" in our issue of March 23d proved that we were wrong. The article has not only been copied extensively by the press and been the subject of discussion at many women's clubs, but we have received more interesting letters on the subject than have been inspired by any article published for ten years. We herewith print a few, tho we are bound to say that "there are others." The interest aroused and the value of the personal testimony elicited justify the introduction into the magazine of a topic so unconventional, yet of such immense importance.—EDITOR.]

## *Why I Became a Mother*

IN common with many others, doubtless, I read with exceedingly great interest the article "Why I Have No Family," in THE INDEPENDENT for March 23d.

Her ideas previous to her marriage are so like my own that mine are sufficiently described in her article. I, too, worked for years without the slightest intention of ever becoming married. I, too, was so fortunate as to find Mr. Right, a good man of pure life, whose ideas as to the rights of women were, if anything, more "advanced" than my own. The only point on which we disagreed was as to the marriage ceremony. He urged that it was necessary for my sake, because otherwise, as society is at present constituted, I would be under a social ban. I cared more for my independence than for social approval and felt that he would be just as faithful to me, if not more so, if bound to me only by honor than by a legal tie. Neither of us considered the question of children, as we had not the slightest intention of having any. Finally, I consented to his views and we were married as quietly as possible to conform to the law.

After our marriage the years passed happily. We were well mated. Both of us worked at wage-earning employment. Not only was my money my own, but my husband's money was mine also. I soon realized that the essence of love in men and women differs in that in men it reveals itself in a desire to give, in women to receive; that there is a charity in receiving gracefully as well as in giving; that a man knows no other way of expressing his love than by giving tangible, physical, substantial things, of which money is the symbol and the means; while a woman gives her soul, and her instinct leads her to hide her love.

It dawned upon me after a while that there are certain elemental laws, forces, instincts, which no amount of reasoning can overcome. The first of these is the instinct of race-preservation; the second, self-preservation, and the third, progression.

I considered my life and looked forward into

the dry and barren years yet to come. My husband and I are as surely one as it is possible for mortals to be—more so than it is given to most to become—and as truly happy as people can be on this earth. I considered my office work—for people who did not care for me any more than they cared for the machine on which I wrote—and the years ahead looked very tasteless. I reasoned that if I had children I would be condemned to much harder, duller, more routine work even than I was doing. For when I did office work, tho it might be monotonous, I still had my evenings and holidays with my husband, and we were as children together. I shirked the responsibility; I shirked the pain; I shirked the hard work.

One night I dreamed that I stood at the edge of a deep, deep, but narrow chasm. On the far side of the chasm stood a little boy, who stretched out his arms to me, crying, "Let me come, let me come." Night after night the dream returned until I could endure it no longer, and then I told my husband. I had not told him because I feared to grieve him. Even the suggestion of a third person, I felt, might mar the perfect harmony in which we lived. I did not realize that that very fear was an indication of the fragile nature of our alleged happiness.

Then followed for a time the distress of uncertainty. Finally I decided, and knew my baby would come. From that hour until the day of agony I lived in a heaven such as I had never imagined. I told myself frequently that it was all an illusion; that this happiness so keenly felt was a fool's paradise. Nevertheless, it was very real. Somewhat to my surprise, too, my husband was evidently happier. We had thought we were as happy as mortals could be, but were finding out there were heights of which we had not dreamed. It had always annoyed my husband that I should work to earn money. His generous soul desired no other happiness than to pour out all life's blessings upon me. Now that I was unable to work he was at liberty to enjoy that pleasure. I have no doubt he thought more of me than of the coming babe. Of the or-

deal ahead he did not like to think. That his wife was entirely his own at last was evidently happiness enough. I cannot find words to express the state of bliss in which I lived during that year. It was well worth all the suffering of my whole previous life and all that has come since. "It cannot be," I said to myself, "that a child is 'conceived in sin and the child of wrath,' I am sure mine is conceived in happiness and the child of joy, and perhaps that is why I am so happy." We named the baby. My husband said, jokingly, "Suppose he should be a girl." But I could make no reply, for I had seen the vision of the boy.

Since the baby was born, three years ago, I have learned many things—so many that I would not for anything else life could give me go back to my mental state before my baby was born. A baby teaches one more than one can ever learn from books or from outside observation. There is a whole world of "woman knowledge" which men cannot know, nor women who have no children. A rich woman will step up to a poor woman who is fondling a child and murmur some sympathetic word. The poor woman looks up quickly, "You are a mother!" she says, and they know each other for sisters, fellow-sufferers. "You are a mother. You also have died and been born again. You also have entered the new life and know that true, stable happiness comes only through suffering."

Not for all the gold of Golconda, to use the cant phrase, not for all the knowledge of the schools, would I give that which has come to me with my baby—the love, the sacrifice, the joy he brings me are worth all the work I am capable of doing. And I have found by years of experience of both that work at bottom is all alike, whether in the office or the home. It all grows monotonous after a while, and it is the inspiring mind, the motive behind the mechanical work that makes one kind hard and another kind easy.

I have learned that Thomas à Kempis left out of his chapter, "On the Uses of Adversity," the greatest use of all—probably because he was a monk—which use is that for us to suffer adversity (or pain) makes us sympathetic with others. A hand pressure from one who has "been through" the same suffering that you are enduring will mean more to you than all possible well meant efforts of one who has not.

I have learned that that self-sacrifice which is the ultimate achievement of mankind, while comparatively rare in men, is the common lot of women. This was an exceedingly hard lesson for me to learn, as I felt precisely as your writer does about my personal independence. I learned the truth that a woman who makes a home works equally as hard if not

harder than the man who supports it. And as for the work she does for humanity—who shall compute it? It is trite to quote the mothers of great men; the idea will occur at once to any one that they have done more than all the "social workers" put together for the uplifting of the human race—to mention only one, I will speak of her who is known as the Virgin Mary.

Here I may speak of those women who bear children "out of wedlock," as it is expressed. In my eyes, at least, they are far purer than are those married old maids, those bachelor wives, who condemn them.

I consider that I earn as much as my husband in dollars and cents. I have carefully estimated the cost of living while I am at work at a wage-earning business and at work in my own home, and find that, if anything, the latter is more profitable. It would be easy to write a long article on this one topic. But I will merely suggest that it costs much more to live when one must hire somebody to do one's work without personal oversight, and also much more to dress when one must go out to work every day than when one lives at home. It is a matter of earning more, but thereby necessarily greatly increasing expenses, or of cutting down the expenses and saving.

What a state of affairs! The barren woman is proud of her barrenness. That which in the olden days was regarded as a curse and a shame is shouted from the housetops, and men are called upon to applaud. The bachelor maid has become the bachelor wife. Wherefore does she take that honorable name of wife, if only to desecrate it? The highest joy comes to him who thankfully accepts whatever pain results from his efforts to do his duty. The height of happiness is measured by the depth of woe. The duty of every man and of every woman is to place himself and herself in harmony with the laws of the universe by obeying the elemental instincts. And the more knowledge we gain, the clearer our vision, the more perfectly can we follow those instincts.

A woman is made, constituted, formed, primarily with a view to bearing children, and man, her complement, with a view to begetting them. That is their first, their highest duty in life. All others are subordinate. This does not imply that people must necessarily recklessly produce offspring in unnumbered quantities; far from it. But there is as much difference between the woman who has even one child and the one who has none as there is between barrenness and fruitfulness; between positive and negative. The tree that bears no fruit shall be cut down and cast into the fire. Certainly there is no figure more nearly parallel than that of a fruitful tree and

a child-bearing woman. The child is the fruit of her life. Zola's "Fruitfulness" is a passionate plea—and it is addressed to men as well as to women.

Since I saw the light which leapt into my husband's eyes when he looked at his baby for the first time and realized that he was a father, I have been content for his sake. Before that I had been troubled about what seemed to be an additional burden which he was shouldering for me. But as I see him, day by day, going from greater to greater delight in his baby, my heart is too full for words to express. Truly, as Froebel says, the man and woman are incomplete without the child, who fills in the chord that makes the harmony of life.

When I realized that my baby had come I understood some of the joy which God must have felt when he looked upon creation and pronounced it "Good." I knew something of the suffering of Christ as he hung upon the cross. I more thoroughly appreciated my mother and all she had done for me, and all she had been to me. Are these things worth nothing? And may it not be that she who is least in the eyes of men may become greatest in the eyes of God?

It distresses me to write these things—I feel a sense of exposure, such as one imagines was felt by that poor creature that was cast up from the depths of the sea in Kipling's story of the sea serpent. But it is high time somebody should write them, and who shall defend the cause of the happy, healthy mothers unless it be one of them?

A HAPPY MOTHER.

NEW YORK CITY.

### *A Commonplace Marriage*

IN characterizing our marriage as commonplace, I do not mean that *we* have ever looked upon it as such. I believe it is as true of John as of myself that it has always seemed the most important event and the greatest good of our lives; but it has had no special originality to distinguish it, in the eyes of others, from thousands of such marriages; it possesses only the common, human interest of all familiar, satisfying things. There has been no such tragedy as is depicted by "An Illinois Farmer's Wife," nor such highly exciting performances as "Henry's Wife" delights in, and yet I have had my small tragedies and experiences quite exciting to me, however ordinary they might seem to others.

The first year of married life was the most trying of all the twenty years we have lived together, and I do not think my history is peculiar. I never see a bride in whom I am interested without wondering if she will be able to pass through the experiences of that first

year without bitterness. The stovepipe was up before we arrived at the new home, but we found a rock of offense in the window shades, which did not fit the windows—through a mistake of John himself in making measurements. He immediately exercised his right to consider himself infallible and became grumpy with the shades, and also with me when I offered suggestions. Then I began to see that it is best to leave John to rectify his own errors, at least when he is obliged to acknowledge them, and also that there might be other things about him that I had not yet learned. We were both young and strong-willed, and had been little accustomed to opposition; hence, naturally, the adjustment of our two individualities to a harmonious union was not accomplished by the words of the marriage ceremony, nor during the honeymoon, nor for many days thereafter. Indeed, I am not sure but that some adjusting may still need to be done during the next twenty years if we should be spared to each other so long, but the possibility does not hold any dread for me, for I know that our affection will keep us steady during the crisis, whatsoever it may be.

In those early days—I must admit it—I *did* feel that I was a superior being, conferring a favor upon this chosen man. Some of my friends had kindly intimated to me that I was choosing beneath myself, and John himself put me on a pedestal, which I was foolish enough to occupy—but not for long. After a few descents to settle differences of opinion which led to hasty words, tears, apologies and a replacing on the pedestal, I found it more fitting to remain below. I learned also that, tho I might gain my point by feminine insistence or artifice, the fruit of such methods was bitter to the taste; that I could often win more pleasantly by a candid expression of opinion with my reasons, and that I was better satisfied in the end, whatever the result. After all, it is not the differences of opinion, which there will always be between husband and wife if they stand on a basis of equality, but the manner in which they are met that often wrecks the bark upon the marital sea, driving it, perhaps, upon the fatal rock of divorce. The word "obey" was omitted from our wedding ceremony at the request of both bride and groom. I have never suspected that John was sorry.

The "romantic love and coquettish exercise of the imagination" of "Henry's Wife" may have belonged to our earlier years; it is so long ago that I am not sure when the sentimental romance faded out and gave place to the deep, abiding love founded upon mutual understanding and confidence. I am glad it was early in our life together, for while romantic love has its place and we would none of us forget the golden glamour it cast over our youthful fancies, a man's true affection, approved by sane

judgment, is much more satisfying and far less troublesome to hold—for a matter of fact woman.

It is not my purpose, however, to enter into a psychological exposition of our emotions. My life has been too full of activity to give opportunity for the study of marital experiences from such a standpoint. We are both college graduates and teachers, so when we were married I stepped at once into the private school of which John was principal and taught for a part of the day, leaving time for the home-making also. John and I have neither of us ever considered that my work was of less value in any way when it was inside of the house instead of outside.

We both belonged to large families, and it never occurred to either of us to expect or plan to be childless. When three years had passed and no little one had come to our home, it was a real disappointment to us both to have to face the possibility of living our lives without children, and I think I was the more keenly disappointed, altho I loved my work in the school and had unusual opportunities for influencing the girls who were under my care. I was as fully informed as one without experience could be of the dangers and responsibilities of motherhood, but none of the arguments which a "Childless Wife" so ably sets forth in a recent issue of *THE INDEPENDENT* came to my mind, and the advent of a little daughter the next year brought us the greatest happiness we had yet experienced. Another daughter and two sons followed, and I was of necessity compelled to give my attention to the home. Our children were not saints, but were as active and mischievous and troublesome as other children, and we had to work hard and make sacrifices to care for them. John's salary did not always increase with the family, and hence we were obliged to cut off luxuries and make our living more simple. Yet, tho I treasure many kind expressions of my pupils and their parents in praise of my usefulness as a teacher—tributes which might have been greatly multiplied if I had been without a family—if I could not keep both I should unhesitatingly choose the family and obliterate the memory of service to those outside my home. Four children seemed to us as many as we could care for properly. We had always thought that the right number, and are still satisfied with our judgment—and with the children, tho in some respects they are less saints than when they were babies.

Since they have all been in school I have sometimes taught again. It has given me a welcome relief from the sewing machine and the pots and pans of the kitchen, which my salary made it possible to put into other hands. The keeping in touch with my husband's work

and thought has no doubt helped to make us better companions, tho for the twelve years when the babies needed me I did not shut myself away from all social pleasures, but trained the little ones, by judicious neglect, to do without me sometimes and accompanied John to concert or lecture or made myself useful to him in some way, whether it might be by darning his socks or by helping him write a poem. I am convinced that personal charms and graces could never appeal to John, at least, as does the feeling that he can depend upon me for some things; and yet, far be it from me to impress upon *him* the sense of his dependence. Moreover, my dependence upon him is far greater. We have educated each other, and the children have helped. I recognize in myself more self-control and patience and am convinced that living with me has developed these and other good qualities in John. Yet, whatever development of John's character I may have caused has come about without any attempt at "management" on my part. Some wives, since they do not wish to "obey," would prefer that the service should read, "I promise to love, honor and manage"; but I have found it sufficiently engrossing to manage myself, the household and the children and have been glad to place the responsibility for John upon his own broad shoulders.

I have never felt it necessary to assume varied rôles for my husband's delectation. Being matter of fact, acting is not one of my accomplishments, and John is certainly astute enough to see through attempts at duplicity.

The foundation principle of my relation to my husband through all the ups and downs of our twenty years together has been perfect honesty and openness. Perhaps this has led to greater frankness of speech than was necessary or pleasant at times, for too much of any virtue may weight the balance to the level of a fault, but I may at least be sure that John's affection is for *me*, and not for semblances of other personalities portrayed in me, and tho I doubt if he has found me amusing, that he has found me satisfying I have positive proof. Recently, after I had suffered a long illness, during which the lines of anxiety deepened in his face, he told me, with great tenderness and many caresses, "It has made me see how much I think of you"; and when my daughters, too, took me into their strong, young arms and I sat again in the dear family circle and saw the faces of my sons shining with welcome I realized that the greatest blessings of earth are mine.

That there are many such satisfying, commonplace marriages in our land I sincerely hope and firmly believe.

A MATTER OF FACT WIFE.

CENTRAL NEW YORK.

*Apropos of "Freak Articles"*

My husband drew THE INDEPENDENT from its envelope, glanced over its table of contents, then looked across at me with an amused smile and said: "You are all right this week, there are two freak articles for you." Now by freak articles he refers to such articles as "Why I Do Not Marry" and "Why I Have No Family." Such articles amuse him, and I amuse him still more by taking them so seriously and discussing all the pros and cons of the questions which they present.

For many years I was a bachelor maid. I put my whole energy into my work as a teacher and I was successful. I earned a good salary. I strove hard to have my pupils grasp not only the learning found in books, but to grasp also the problems of life and to have high ambitions.

By and by, as is usually the case, along came Mr. Right. I am not sure that is just the right way of putting it. To be truthful, he had been near all the time. We were classmates in college, and from that time on had kept in touch.

Now in the class room I was his equal. In the years of work which followed I was equally successful. In our marriage relations we took the same standing. It was to be the closest of earthly partnerships of two equals.

Here my path and that of the "Childless Wife" must part.

I gave up my work. We both understood that I was capable of earning half, or, if it were necessary, the whole of the living, but we desired much more than the mere earning of money.

First, as a result of our partnership, we wanted to establish a home, in the truest and highest sense of the word. In due time our little girl came. She did not come because we feared "race suicide" and wanted to do our duty as good citizens, nor did she come the undesired result of unrestrained passion. She came as a precious gift from God to a husband and wife who, having every reason to believe that they were physically, mentally and financially capable, desired a little one in their home. We thought that we were happy before, we were blessed in so many ways and loved each other so dearly, but after our darling came we found that life held so much more for us; and now that after a number of years we have a little brother for our girlie, our share of joy is unspeakably increased. Of course, it was not all smooth sailing on a waveless sea. Before our babies came we talked the matter over carefully as did the "Childless Wife" and her husband. But there was one thought that never crossed our minds—that I, in the rôle of mother, might not be so acceptable to my husband as I was before. And now, held by the

ties of parentage and of love, we are happy and contented.

A CONTENTED MOTHER.

NEW MEXICO.

*Implicit Obedience and Affection*

At the time of my marriage to a newspaperman I was a music teacher earning an income as large as his, which was small. Both of us belonged to large families and never discussed the question of children before marriage. We expected them and four have arrived in sixteen years. As my husband worked at night and all afternoon I saw little of him for some years, except on his day off. Yet we were very happy. I went to the theater or to concerts, sometimes alone, sometimes with a friend. Later he escaped all night work and since then we have had the best of times together.

The point that interests me in all this discussion about children is the constant assumption that childbearing is a terrible burden, that it restricts the life of the mother and makes her a slave. I have not found it so, but quite the contrary. I cannot imagine a family life happy without children, tho my observation is that many mothers are unnecessarily miserable. I think I have shown more good sense than many of my sisters. Until my children are two years old they spend about eighteen hours a day in bed. They are fed regularly on good food, are never rocked or carried except in case of illness. If they want to cry they do so, but they soon get tired of it. By six o'clock they are in bed, and after the first few months are not fed until morning. It is astonishing how soon they get used to this régime. As a consequence I have most of my married life had all my evenings to myself, and I consider it as much my duty to spend the day in work as for my husband to do so, tho I find plenty of time for recreation by daylight.

I have never had any trouble with servants worth mentioning, and have been no better off than my sisters in securing them. I treat them as human beings, expect them to do a fair day's work and to do their work well. I give them all reasonable privileges, help them in many ways to get along and show personal interest in their affairs. If I give a dinner party I expect to pay them extra. It seems to me they are as much entitled to tips as the waiters in the hotels. If at any time an emergency comes I expect them to help out and they do so willingly. In consequence, they usually stay with me until they get married. In fact, I am accused of running a marriage agency, but one result has been that in nearly every case a servant leaving has procured her own successor. I do not pander to them, but

treat them well, just as I would want to be treated. One result is that I have no hesitancy in leaving home for a few days, leaving my children, including two babies under three years old, entirely in the hands of the servants, who apparently are as devoted to my interests as any one could be.

I like to run off for trips in an automobile, or to New York, and occasionally to Chicago, and I have never any fears for my home and no occasion for any, and I do not think that what I have accomplished in this respect is owing to anything but the exercise of good sense, as we have a small income. I belong to a card party, in which there are twenty women, of whom sixteen are married. The other fifteen have one child among them, while I have four, yet when there is anything especial to be done I am always asked to do it and I always have the time. It seems to me that the unhappiest people I know are those who are married and childless. They seem to be constantly set on edge toward the world, are always complaining about something, and many of them are rich. I do not know a woman who has more time to do the things she wants than I, and yet I can truthfully say I have never neglected my children. I have always required of them implicit obedience and never allow them to "talk back." On the other hand, I give them love and care, but none of the alternate scolding and coddling which ruins so many families. I think it would be hard to find children who love their parents more than mine. I am constantly looked upon as a wonder, because with so many cares I have so little trouble and so much time. I see nothing remarkable about it. I only use common sense and refuse to worry. Most of my troubles have never happened, so I have learned to ignore them.

A COMMONSENSE MOTHER.

PHILADELPHIA, PA.

### *The Value of Good Stock*

NOTHING I have ever read of human production has stirred me so profoundly as what I find in your issue for March 23d, 1905, under the heading "Why I Have No Family."

Its subtle sophistry, with its stupendous selfishness set out most plausibly, are calculated to make a wide and baneful impression upon thousands of unmarried women, and will go very far toward embittering many a married woman who is enduring the test of life's duties, and cause her to rebel, where she should be loyal, brave and hopeful.

My husband was one out of a family of thirteen, and at the celebration of the Golden Wedding of his parents this was recorded of the family: "On that occasion the father and mother had a vision with which few parents

are indulged; eleven sons and daughters in health and prosperity, each having made his or her fortune in life. All of them, save one, at the head of promising and respected families; all enterprising and successful; all patriotic, the sons having served their country as soldiers, or in some other station, three of them promoted to be officers in the army, one bearing honorable scars received in battle; all but one having held offices of trust and none of them having betrayed their trust; none of them incompetent; none of them intemperate; none of them vicious, and none of them lazy; all of them moral, and giving their support to the cause of religion; and all of them on the side of liberty and equal rights. Of twenty-nine grandchildren, twenty-seven were present." Could the mother of this notable company look into the face of any child there and say she grudged the care, the toil, the actual suffering and sacrifice that gave them life and brought them forward to superb manhood and womanhood?

Nay, verily!

I am the mother of ten children myself, and I should be proud to specify the success of the risks taken.

A MOTHER OF TEN.

MINNEAPOLIS, MINN.

### *Interviewed by Her Husband*

[The Little Woman and I were discussing an article read in THE INDEPENDENT. She was quite warm about it. "Give me an interview," said I, "and I will write it down and send it to the Editor." So, while her needle flashed in and out, the family mending and what here follows were accomplished together. I thus send you the views of "a plain mother," with the full indorsement of

HER HUSBAND.]

"A CHILDLESS WIFE," writing in THE INDEPENDENT of March 23d, tells a waiting world "Why I Have No Children." I don't suppose the world, or even that enlightened portion of it which reads THE INDEPENDENT, cares a fig about the opinions of us individual women on the subject—whether we do or why we don't—or that THE INDEPENDENT itself cares either, except as our opinions make interesting or shocking "copy." Further, I am inclined to agree with my husband that the world would revolve with pretty much its usual regularity if there were no yellow journals or ethical weeklies, devoting space to discussions of the sex problem and the propagation of the human species.

Some fifteen years ago, when I was a young and ambitious trained nurse, more or less ignorant of life, I held views concerning men and marriage quite in accordance with some of those expressed by "A Childless Wife." My work in one of the oldest hospitals of Greater New York, particularly in the maternity ward, where the birth of fatherless children was an almost daily occurrence, did not tend to alter those beliefs. Nor did I give them up imme-

diately upon marriage. For five years we two were as happy as anybody could be. Then we changed our minds. Now, having been married a dozen years, we have a dear little girl, five years old.

My husband's income has not at any time been large. There have been sickness and worry with many nights of weary vigil; but we have never regretted assuming the proud, yet heavy, responsibility of parenthood. I cannot bear to hear young mothers of my acquaintance state with regard to their offspring:

"We cannot afford it. We did not mean to have it."

God forbid that any child of mine should lie under such reproach!

"A Childless Wife" says that her standard of human value is social usefulness. That is a good standard and a worthy. Among my acquaintances is a middle-aged pastor of a large church in a manufacturing town. He has a wife who helps him in his pastoral work. They have no children, on the ground that a family would interfere with their church duties. And when this really good man passes along a street filled with his youngest parishioners, romping at their play, the little ones neither expect nor receive any kindly recognition from him. There is no bond of real sympathy between the shepherd and the lambs of his flock, tho he tries in church and Sunday school to tell them about the love of the Great Father. Such things constitute the reason why I, who once seriously planned for myself a single life devoted to works of charity and mercy, do not believe in a celibate priesthood.

So it seems to me that a woman's "social usefulness," before and subsequent to the stupendous event of maternity are not even to be compared. The wife who is childless from choice and the man-hating spinster miss a vast means of grace, agent of development, ground of universal sympathy necessary to fit them fully for that social service of which "A Childless Wife" speaks so securely. In reality, she has never qualified, and, poor woman! she doesn't know it.

A PLAIN MOTHER.

SYRACUSE, N. Y.

### *A Betrothed Girl's Problem*

THERE are many who will think it unseemly that an unmarried woman—an old maid, in uneuphonious English—should make plea for the unborn child, the right of the child not to be born, except under ideal conditions.

I am a college graduate and a professional woman, holding an editorial position, gained after ten years' hard work, which gives me a comfortable living, work that makes my days happy and association with delightful people.

I am blessed with perfect health. I am told that I am rarely fortunate in the pleasures and

friends that gladden my days. My common sense tells me that my life is rarely happy and rich.

What has all this to do with the unborn child? It helps to explain my position. I am to be married within the year to very much such a man, I hope and trust, as the husband described by "A Childless Wife." I shall surrender my position to some woman to whom it means support, and devote myself to my home and to doing such good as a physician's wife may accomplish among the needy of his patients. My idea of happiness for years has been a home, home with love and companionship and little children. To me motherhood is the most beautiful thing in all the world. My husband-to-be and I are one in our love of little children; but we shall have none of our very own, and, blessed as I am, my heart never quite ceases aching that the crown of motherhood, worn lightly by so many women, is not for me.

Why? Because we cannot take the responsibility of creating human life, with all its vast potentialities. We are of good family, with records above the average morally and physically. But—

My husband's father, counted an upright man as men go, had a certain fatal something in his character which counted borrowing, to promote visionary schemes, as always justifiable. He paid ordinary bills punctiliously, he knew how to deny himself, he managed other details of his business unwisely, but honestly; but he borrowed wherever he could find a lender, always certain that he could pay, always sinking deeper into the toils. How he darkened the lives of wife and children, how his sons were crippled for years to repay his loans, he never realized. Shall his son run the risk of passing to another generation this moral taint, for so it seems to us? My mother was a hypochondriac for years. I see her morbid tendencies strongly repeated in myself. After thirteen years of nervous suffering, more or less imaginary, a diseased fancy can accomplish much evil; cancer developed and the end came. I have thought the problem out over and over again—my heart fighting against my conscience and good judgment. I will never take the responsibility of bringing into the world a little one in whose brain or body may be implanted the seeds of such mental or physical ill.

Balanced against these unpalatable facts are exceptionally good family histories and unusually happy conditions of parenthood. Yet the little child I so long for might be born blind or a cripple, or, worse still, mentally or morally diseased. Life might be so hard for him that he would lament the day that gave him birth.

A SPINSTER.

NEW YORK CITY.

*Motherhood as Social Service*

THE "Childless Wife" questions one's right to destroy social usefulness "to produce children who are, at best, experiments." But is not that social usefulness experimental? Are we not ourselves experiments? She mentions that the laws of heredity are "but slightly understood and scarcely at all to be controlled," which suggests the possible wisdom of putting faith in them. It is almost incredible again that an intelligent woman should regard the rearing of children as the postponement to another generation of service to society. It is rather the only real provision that any woman can make for the continuation of that service indefinitely. Again, the risk of health and life is regarded without intelligence. The writer speaks as if we all possessed the elixir of life; as if we all were not hourly on the threshold of death. To avoid childbearing for such a reason is to fear to run lest you stumble; to fear to eat lest you be poisoned; to fear to perform any other natural function of the body lest it lead to unexpected results. I heard a specialist with a large practice state not long ago that "no woman was ever pulled down by having too many children." He explained that breakdowns were the result of associated causes, usually arising from ignorance in the care of children, unnecessary overwork, or some similar condition. Such breakdowns are quite as likely to befall the childless woman as the mother of a large family.

ANNIE NETTLETON BOURNE.

NEW HAVEN, CONN.

*The Right Kind of Girl*

FROM early childhood THE INDEPENDENT and *St. Nicholas* were my favorites among the papers and magazines on our library table. The *St. Nicholas* has been discarded as too youthful, but THE INDEPENDENT still retains its former place in my affections. As your constant reader I have been greatly interested in THE INDEPENDENT's articles on the marriage relation.

In the cases I know—of seven of my girl friends who have married—it has been planned that there shall be from four to six children, and their plans have been carried out. Of all the women I know, these have the most devoted husbands and the happiest home life.

The men of this generation who belong to the thoughtful, cultured class are not brutes! I have not married, because among my lovers has not come one to whom I have felt especially drawn. When he comes he will belong to the same class as the husbands of my friends. And we will go on our way together, living for each other's best welfare, and that of posterity.

In the meantime I am happy and busy in my

chosen work—enjoying my childhood's home, reading along favorite lines and taking little journeys into the world, trying to learn the things that will best fit me to be a wife and mother and suitable companion for my ideal husband.

If he does not come I'll do as the little girl in Alma Tadema's verses proposed:

"I'll buy a little orphan girl,  
And bring her up as mine."

AN AMERICAN GIRL.

AMSTERDAM, N. Y.

*To the Reader with "Ordinary Acumen"*

PROBABLY in all the range of human experiences there has never been promulgated a more mischievous lot of ideas than those set forth under the general heading of "Race Suicide."

If these ideas came from a less elevated personage than the chief magistrate of a great nation they would be less harmful; or if this chief magistrate had arisen, as some of our Presidents have, from the so-called lower classes, one could be more tolerant of his fanatical vaporings. One might suppose that he had some experimental knowledge of his theories. But, born of an old, respectable and wealthy family, with strength of body and brain as his better inheritance, what does he know of the privations and worries that fill the days and nights of the less able, less hardy poor man, father of six, or even two or three children?

The casual observer, noting the pale, stooping, broken-tooth, carelessly dressed woman, dragging about a big department store doing a bit of shopping with a baby in her arms, and perhaps two others, too young to be in school or to be left at home, clinging to her skirts, can see at once that these children, or at least two of them, would better have been left unborn. The mother, thus encumbered, drags on in a miserable state that can scarcely be called life. She is simply too much alive to putrefy. But there is no hour of rest for her body and no peace of mind if she has any conscience concerning the prospects of her children. This kind of woman is too ignorant to manage these matters differently for herself, or she is under the domination of crude religious doctrines that forbid putting any impediment in the way of her ability to multiply and replenish the slums where she lives.

This woman is a type of the class that will draw the most harmful results from this senseless glorification of large families. Tho groaning under the weight of care, tho there is no increase of substance as the years go and the children come, tho these children are not more than half what they should be at birth and

continue to deteriorate because of lack of proper housing, nutritive food and sufficient clothing, yet the improvident parents, under the sanction of the head of the nation, continue to increase and multiply and replenish—the charitable institutions, the hospitals and the prisons.

Considering large families where circumstances are comparatively comfortable, they are not unconditionally desirable. The fallacy that an only child is sure to develop selfishness was long ago relegated to the limbo of other moss-grown mistakes. There is nothing in his surroundings to make the only child selfish. He doesn't know the meaning of the word. Everything in the house is his, and he is habitually royally generous to his friends.

No parents of large families, excepting those possessed of great wealth, can hope to give their children what is now considered a liberal education, and the man or woman who starts out nowadays without education is but poorly equipped for any respectable station in life.

Any person with ordinary acumen will readily understand how harmful this new doctrine of the large family may become.

MARGARET HOLMES BATES.

NEW YORK CITY.

### *Another Letter from "Henry's Wife"*

THE "Childless Wife" is a monstrosity in life and a yellow freak in journalism. Also, she doesn't tell the truth. And what does she mean by saying that married women "do not belong" to themselves? I have been married a long time, and I never had the idea suggested to me in my life; neither have I heard it from other women; neither is there any sense of her hateful creature belligerence in our sense of self-possession. And she says that women stay with their husbands because they have children and are financially helpless. That is a libel. *We* stay with our husbands because we love them, and because our sense of honor and self-respect is founded upon a proper understanding of the marital relation. And what

does she mean by setting herself up as a worker in social reform and settlement homes? She is virulent. She ought to be banished from society. She can do the country more harm in a day preaching her vulgar and selfish doctrines to young women who come under her influence than the worst man in New York can do in a lifetime. Two women have appeared in the pages of THE INDEPENDENT whom I never wish to meet in life. They are the "Bachelor Maid" and the "Childless Wife." I'd as soon be thrust into a room with some unimaginably hideous deformity. I have that sort of repulsion toward them which one has toward something infinitely suggestive of psychic unsightliness, if there is such a thing. They have an uncleanness of the mind which sounds moral, but which is not.

"HENRY'S WIFE."

### *A Letter from the Author of "Why I Do Not Marry"*

I noticed the Childless Wife's article, and I would like to know who she is, but any way please tell her that "The Bachelor Maid" thinks it the best article on the matrimonial subject that has ever appeared in THE INDEPENDENT. It is *sound sense*, presented in a most interesting manner. It so precisely expresses my own ideas that I'm glad I did not waste my time by sending you either of the two articles on "My Ideal Married Life," which I have written (and torn up) since Christmas.

"THE BACHELOR MAID."

### *We Shall Stop Now*

I HAVE taken THE INDEPENDENT for a good many years, but if you continue to publish such articles as "Why I Have No Family," which I consider un-Christian and immoral, and in spirit a hindrance to the building of new American homes, I shall ask you to discontinue sending me THE INDEPENDENT.

M. G. D.

OBERLIN, OHIO.

# Literature

## Recent Shakespearean Literature

IN spite of some threatenings of reaction, admiration of Shakespeare, both critical and uncritical, continues substantially unabated. There are, of course, extremists in this as in every other matter, whose enthusiasm for his work is so excessive that they are unwilling to allow him a hand in it. Such a man is Mr. Stotsenburg, whose sincere, tho ambiguous tribute,<sup>1</sup> runs to the length of five hundred handsomely printed octavo pages and contains a good deal to interest the student of human error.

Among the expressions of a saner, if less exuberant appreciation, Dr. Bradley's deserves first mention. His *Shakespearean Tragedy*<sup>2</sup> is an excellent example of sedate English critical scholarship. He is himself professor of poetry at Oxford, and his volume is composed of the substance of his lectures there and elsewhere. By general method he is an Aristotelian. Not only does he adapt the Stagyrte's dramatic prescriptions as far as possible to modern conditions, he also adopts essentially the same sort of semi-technical treatment. It is characteristic of Aristotelian criticism the world over that it assumes the craftsman's point of view in preference to the amateur's. It turns over materials and *procédés* and scrutinizes them as a professional author would do with an eye to their availability and effect. Dr. Bradley is not a playwright himself, but in this respect his criticism is not unlike Lessing's. After a brief examination of the conception and structure of Shakespearean tragedy, where his debt to Aristotle is particularly conspicuous, he confines himself to a discussion of the characters and almost exclusively to disputed and doubtful points. Now, not only is Dr. Bradley an Aris-

totelian by conviction, but his mind is naturally very systematic, orderly, and even a little formal. And hence this particular disposition of spirit, while it renders his exegesis clear, safe, and consistent, does also, in connection with the method and subject, give his book a rather dogmatic, positive, argumentative cast. Where the moot-topic is vital, as in the case of Hamlet's character, or even curious, as regards the "double time" of "Othello," there the discussion is interesting, if not always fruitful. But where there is no important matter in question, as with "Macbeth," it drags. In any case, however, it is always reasonable, moderate and dignified, and in its respect for some other authority than the critic's personal liking, exemplary. [And yet there is one slight excess which threatens, like every excess, to become a danger. And that is the tendency to regard a play as an actual occurrence rather than an imaginative invention, to require of it the exact consistency of reality, and to reason upon its substance as tho it were fact, not fiction. It is by such a kind of inference that critics have drawn strange and preposterous conclusions about the Iliad because in the tenth year of the war Helen is still unfamiliar with the faces of the Greek princes. And such questions as "Where was Hamlet at the time of his father's death?" come pretty close to treading on the same treacherous ground.]

In view of the recent revival of interest in the Elizabethan sonnet, Dr. Beeching's edition of *The Sonnets of Shakespeare*<sup>3</sup> is nothing less than opportune. With reference to Shakespeare's contribution to this literature Dr. Beeching's main positions are briefly as follows: Relying mainly on the strength of verbal coincidences as between the sonnets and the plays, he takes issue with orthodox opinion in assigning to the former a date something later than the 1593 or 1594 usually assigned them, and in casting

<sup>1</sup> AN IMPARTIAL STUDY OF THE SHAKESPEARE TITLE. By John H. Stotsenburg. Louisville: John P. Morton & Co.

<sup>2</sup> SHAKESPEAREAN TRAGEDY: Lectures on Hamlet, Othello, King Lear, Macbeth. By A. C. Bradley. New York: The Macmillan Co. \$3.25.

suspicion upon the identity of their "patron" with the Earl of Southampton. He differs with Mr. Lee, moreover, in minimizing the conventional element engaged in their production and in magnifying the personal, if not the "autobiographical." In regard to these positions it may be remarked, in the first place, the argument from parallel phrases or turns of expression is very uncertain and in default of any more definite evidence hardly furnishes sufficient justification in its present form for unsettling the usually received chronology, or for reopening the patron dispute as between Pembroke and Southampton, which is largely an affair of dates. In the second place, tho Mr. Lee does, it must be confessed, generate a certain amount of opposition by the cocksureness of his judgments, yet Dr. Beeching seems scarcely to make sufficient allowance for the sonneteering fashion of Shakespeare's day and for the very plausible distinction between Shakespeare as a "professional" playwright and Shakespeare as a "literary" artist. At the same time his discussion is always fair, always suggestive, and tho it may seem to do little more than inspire doubt, it is yet valuable in relieving the uncertainty of even the happiest conjectures of this nature and the necessity for a cautious, tolerant spirit in such a sort of scholarship.

A second edition and numerous reprints of Mr. Mabie's *Shakespeare*<sup>4</sup> attest the continued popularity of that convenient manual, or rather companion, of Shakespearean reading. The new edition is provided with a new preface. The other features to which the book owes its success remain unaltered.

Of something the same general nature is Mr. Jenks's *In the Days of Shakespeare*,<sup>5</sup> tho more elementary and better suited to young students. For the purpose for which it is intended—that is, as a literary substitute for the textual and verbal approach to the subject which has hitherto prevailed—it is to be commended.

## The History of the Standard Oil Company

"THE American Beauty Rose can be produced in its splendor and fragrance only by sacrificing the early buds which grow up around it."

These words, quoted from an address by John D. Rockefeller, Jr., on the Trusts, are placed with a certain grim propriety on the fly leaf of Miss Tarbell's *History of the Standard Oil Company*.<sup>\*</sup> The words themselves make the keynote of the book, for the Standard Oil Company is the American Beauty Rose of commerce, and the story of its growth in splendor and fragrance is the story of the systematic sacrifice to the great oil system of the buds of other men's livelihoods pruned as relentlessly as any gardener ever cut buds from the stalk of a rose.

It would seem that a two-volume history of a business enterprise written by a woman ought to be as dry as chips and as ineffectual as dry. Miss Tarbell's success, for she has achieved a very distinct success, is in having made her story in its logical simplicity and directness as fascinatingly interesting as it is disagreeable, and in having overcome what men have been accustomed to regard as the natural limitations of her sex in her actual grasp of an exceedingly complex business subject. The note of fairness and of historical impartiality is one hard to sustain in writing on a subject which tends so strongly to arouse the sympathies and passions. Miss Tarbell has successfully avoided the great danger which detracted from the value of Mr. Lloyd's widely circulated book, "Wealth Against Commonwealth." She has preserved her position as historian and has not abandoned it even temporarily for that of the prosecuting advocate. By so doing she has gained with her readers power and conviction without losing interest. The actual facts regarding the means through which the Standard Oil Company built up its immense system need no coloring. They needed simply to be collected, arranged in logical order, and left to speak for themselves. This Miss Tarbell has

<sup>\*</sup> THE HISTORY OF THE STANDARD OIL COMPANY. By *Ida M. Tarbell*. New York: McClure, Phillips & Co. 2 vols. \$5.00.

done. The book is one of peculiar timeliness. The air is full to-day of talk about legislation for the trusts, for the irresponsible corporations which operate under loosely drawn charters, for the regulation of railroad rates. There is always a tendency in the great cities among a very considerable class to regard such movements and discussions as mere outbursts of unreasoning and unreasonable popular emotion. Miss Tarbell's book, written as it is in a temperate and judicial spirit, should do much to arouse the conservative and reactionary, to suggest to them that back of this wave of popular emotion there may be reason, and to convince them that there may be times in the history of a people when to do nothing is worse than to make mistakes. On the railroad rate question the book is a very distinct and valuable contribution. The Standard Oil Company, as Miss Tarbell shows us, is in its main outline directly traceable to unjust if not illegal rebates received from competing railroads—rebates which enabled the Trust to grow rich, while at the same time destroying its rivals. The history of the Standard Oil is not yet fully written. What that history shall be is one of the great problems before the people to-day. Miss Tarbell's service, and it is a great one, is making clear to the casual reader as well as to the student the menacing greatness of that problem, its ever growing importance, and in furnishing facts necessary for its comprehension, and, let us hope, its ultimate solution.

### Peters's Early Hebrew Story

THE fundamental question which the reader asks of the reviewer about a book is whether it is good or bad, worth reading or not, whether it may serve to fill in a few otherwise idle hours, or will furnish the mind with fresh ideas and stimulating knowledge. We can very heartily commend the book\* before us. It is thoroughly readable, pre-eminently scholarly and entirely trustworthy; it is replete with valuable archeological knowledge; it has all the marks of an accomplished exegete, and its conclu-

sions are in harmony with those of many able scholars of the present day. Moreover, there is a marked and agreeable reverence for the Holy Scriptures, such as we sometimes miss in the work of those who deal with the Bible freely and frankly.

The volume is made up of six lectures given at the Bangor Theological Seminary on the Bond Foundation. That the lectures were well received by their auditors is shown by the minute of the Faculty, quoted in the volume, from which we cite a single sentence:

"The broad and ripe scholarship, the fresh knowledge of details, the constructive temper and the reverent Christian spirit which were always manifest gave these lectures an exceptional worth, not only for the student body, but for the large company of thoughtful people who heard them."

The period covered in the book is roughly from the Creation to the Conquest; or, in other words, Dr. Peters has traversed the narrative portions of the Hexateuch, dealing most fully, however, with the book of Genesis. The author has made use of a wide range of archeological lore to explain Hebrew stories and institutions. The recent contributions from Egyptian research, and especially from the excavations in Babylonia and Palestine, are made to give forth their light. With this knowledge at hand the Hebrew stories are accounted for and explained.

Dr. Peters regards most of the Hebrew institutions as of foreign origin, the Israelites purifying and adapting them to their own life and to the conceptions of their purer religion. The stories are not historical in the narrow sense, nor are they mere baseless legends and myths. Myths there are, and legends, too, but always with the object of bringing out a religious significance, a moral lesson or a historical fact. The narratives about individuals are not biographies, but stories told to explain the history of clans and tribes. They are not true of the individuals, but they are true of the clan or tribe, and so we have in the lives of the patriarchs, for example, good historical material. But its value depends upon the right interpretation.

There is an index to the volume, but it is far too meager. In a lecture one

\* EARLY HEBREW STORY. *Its Historical Background.* By John P. Peters, D.D. New York: G. P. Putnam's Sons. \$1.25.

cannot give many references, but when the lectures are published the author might well aid the student by pointing out sources of further information. Thus a part of the inscription of Merentpah is given on page 50, but there is no hint that the author quotes only a portion of the inscription, and there is no indication of the authorship of the translation, nor a reference to a fuller exposition of this important text. Dr. Peters interprets the obscure story of the circumcision of Moses's child, as several other modern scholars have done; the significance was in the circumcising of an infant. Among other peoples and among the earlier Hebrews, the rite was practiced at the marriageable age. Moses purposed to change this custom and have the rite performed in infancy. This is a very important matter, and Dr. Peters's explanation is clear, though very brief. But there should be some references to other writers who have dealt with the same subject. It may be added here that if the story of the circumcision at Gilgal (Josh. 5) is correct, it would appear that Moses's innovation had made little headway during his lifetime.

It is to be regretted that the author has employed a new form of the divine name. Throughout the book we find "Yahaweh," instead of the more familiar Yahweh, which is now generally used. It is very likely that Dr. Peters is right in that his rendering implies a slight vocalic sound after the "h"; but a full vowel there is as far from accuracy as none at all. Many students of the English Bible are badly puzzled by the use of Yahweh; it will not relieve their difficulty to offer another form.

## De Profundis

*De Profundis*\* is one of the orchids of literature. It grew out of sorrow and repentance, in the sunless atmosphere of a prison its roots were watered with tears—yet it is of an exotic and poisonous beauty; it is pitiful; it is pathological. A poet inheritor of many Christian centuries cannot become an unconscious

Pagan. He who tries to be is a fool or insane, or both. The hideous outcome of such an attempt which led into the depths from which this tortured cry comes is proof of such impossibility. This is the spotted flower of a decayed culture. Even the prayers, surely sincere, cannot forget to be literary. He poses in his prison garb as he did in his sunflower days; he practices various and opposite postures before the mirror of his own mind. He talks much about "the reality of sorrow" and "the revelation of suffering," but from a life devoted to the cultivation of artificiality he had become incapacitated for seeing and describing reality. From the depths he cries into his Art. "I have got to make everything that has happened to me good for me," he says, but his desire is merely that there may come into his art

"a deeper note, one of greater unity of passion and directness of impulse. If I can produce only one beautiful work of art I shall be able to rob malice of its venom, and cowardice of its sneer, and to pluck out the tongue of scorn by the roots."

He lived long enough to produce "The Ballad of Reading Gaol," but whether that very remarkable poem or the present book will serve the purpose as he hoped the future alone can decide. He spent the three years of his life after his release in Paris, not in poverty and neglect, as we used to be told, but in the enjoyment of a comfortable income, evidently finding a French *café* more congenial as a hermitage than the desert solitude which he anticipated while in prison:

"Nature, whose sweet rains fall on the just and unjust alike, will have clefts in the rocks where I may hide, and secret valleys in whose silence I may weep undisturbed."

A penitentiary is supposed to exist for the purpose of making penitents, and altho the Prisoner of Reading Gaol cannot be called a penitent in the strict sense, his disgrace and humiliation brought to him for the first time an insight which he should have acquired by a less painful process. He reads the Greek Testament with naïve wonder at its significance and finds therein a Christ, not the orthodox one surely, but one who reveals to him the lessons of humility and pity:

\* *DE PROFUNDIS.* By Oscar Wilde. New York: G. P. Putnam's Sons. \$1.25.

"People have tried to make him out an ordinary philanthropist, or ranked him as an altruist with the unscientific and sentimental. But he was neither the one nor the other. Pity he has, of course, for the poor, for those who are shut up in prisons, for the lowly, for the wretched; but he has far more pity for the rich, for the hard hedonists, for those who waste their freedom in becoming slaves of things, for those who wear soft raiment and live in Kings' houses. Riches and pleasure seemed to him to be really greater tragedies than poverty and sorrow. And as for altruism, who knew better than he that it is vocation not volition that determines us, and that one cannot gather grapes from thorns or figs off thistles?"

As he had sought ever to see the mystical in life and art and nature, it is only a mystical Christ which could appear to him in his prison:

"His miracles seem to me to be as exquisite as the coming of spring, and quite as natural. I see no difficulty at all in believing that such was the charm of his personality that his mere presence could bring peace to souls in anguish, and that those who touched his garments or his hands forgot their pain; or that as he passed by on the highway of life, people who had seen nothing of life's mystery saw it clearly, and others who had been deaf to every voice but that of pleasure heard for the first time the voice of love and found it as 'musical' as Apollo's lute; or that evil passions fled at his approach, and men whose dull, unimaginative lives had been but a mode of death rose as it were from the grave when he called them; or that when he taught on the hillside the multitude forgot their hunger and thirst and the cares of this world, and that to his friends who listened to him as he sat at meat the coarse food seemed delicate, and the water had the taste of good wine, and the whole house became full of the odor and sweetness of nard."

As a self-revelation, for it is sincere even in its manifestation of his fundamental insincerity, this little book ranks with the Confessions of Rousseau and the Journal of Amiel. It is superlatively egotistical, and this suggests the question whether the candid disclosure of any one's inmost feelings would not inevitably appear so to others. The humility of which he boasts gives evidence of its sincerity for the reason that it is based on an exaggerated idea of his own importance as a leader in esthetics:

"I was a man who stood in symbolic relations to the art and culture of my age. I had realized this for myself at the very dawn of

manhood, and had forced my age to realize it afterward. Few men hold such a position in their own lifetime, and have it so acknowledged. It is usually discerned, if discerned at all, by the historian or critic, long after both the man and his age have passed away. With me it was different. I felt it myself, and made others feel it. Byron was a symbolic figure, but his revelations were to the passion of his age, and its weariness of passion. Mine were to something more noble, more permanent, of more vital issue, of larger scope."

With this opinion of the value of his work during his days of popularity it is the irony of fate that he will be remembered chiefly by the two thin volumes of poetry and prose which resulted from his disgrace and punishment. Both from its style and as a study in abnormal psychology *De Profundis* is one of the most noteworthy and interesting books that have appeared for a long time.

**The Color Line: A Brief in Behalf of the Unborn.** By W. B. Smith, Professor of Mathematics, Tulane University, New Orleans. New York: McClure, Phillips & Co. \$1.50.

The crux of this book lies in a series of statements arguing the negro's inferiority, carefully culled data in support of these statements, and finally several conclusive assertions relegating the negro to oblivion—all this rather clumsily combined and not over-free from sectional animosity. The extinction of the negro is to the author a certain calamity, while deportation finds here learned and biased support. The author has evidently been quite anxious to give his book the air of a scientific treatise. The attitude of the South toward the negro is thus stated: "The color line must be drawn firmly, unflinchingly," and because, otherwise, "as a race, the Southern Caucasian would be irreversibly doomed." After devoting 260 pages and marshaling several hundred quotations to prove the negro's inferiority, this latter statement seems both inconsistent and impotent. Professor Smith's book contains no new thing and presents old facts with decreased force. He has not made one group study; his data, tables and even his deductions are quotations—and these are not faithfully nor unbiasedly compiled. As to this much-mooted color line, it was once remarked that the great

chasm between black and white is only skin-deep, and the South has certainly tried to fill it up, for there is a regular percentage of negroes who annually cross it. *The Color Line* is neither a contribution to our knowledge upon the race problem nor will it help us to approach it with freedom and fairness. It is only valuable as an effort to substantiate the South's treatment of the negro. We should not recommend the book to the exact or esthetic reader, since it contains neither scientific accuracy nor literary excellence.

**An Angel by Brevet.** By Helen Pitkin. Philadelphia: J. B. Lippincott Co. \$1.50.

The author enjoys unusual advantages who undertakes to tell a story of New Orleans. No period of the city's history, and without much exaggeration it may be added, no class of her people, white, black, Creole or Anglo-Saxon, is without a peculiar and legitimate claim to romantic interest. Under such circumstances it would be a sorry writer indeed who could not excite some interest with a tale of New Orleans. Miss Pitkin has selected as the groundwork of her story a feature of the city's life which enjoys the two-fold advantage of being in itself extraordinary and a field hitherto almost unworked. That the old savage belief in the voodoo rites still lurks at the bottom of the devotions alike of the negro reverently telling beads in the dusk of the cathedral and the one shouting in the "uptown" Methodist watch-meeting will probably surprise and surely hold the attention of the reading public; to be told that this same superstition has a hold as well upon the blue-blooded and polished Creole will put a severe strain upon its credulity. Yet the testimony of those in a position to know is that Miss Pitkin has not transcended facts. Her development of this fruitful theme is, however, most unequal. Between really clever episodes rich in "local color"—the conversation of the group of callers in the chamber of their kinswoman, Madame de Marigny, is a deliciously realistic bit, if you know the feminine Creole—are long-drawn-out and exceedingly thin ethical discussions and descriptive passages which are mere

words, and very extraordinary words at that. The entire book, indeed, is full of affectations, not only in choice of words but in their collocation.

**The Illini.** A Story of the Prairies. By Clarke E. Carr. Chicago: A. C. McClurg & Co. \$2.00.

The reason for writing an historical novel is usually supposed to be the desire to impart historical information in a more delectable form than that demanded by the jealous mistress, History. If, therefore, the historical novel fails on the artistic side, if it fails to hold the attention by its plot or its matter, it might as well—indeed, it might better—have kept within the stricter limits of the regular history. Mr. Carr's *The Illini* is a story of early Illinois, in which Lincoln and Douglas and other celebrities appear from time to time, in character that is true enough and in action which is historical enough, but nothing is told of them which is not told elsewhere, and the story is not sufficiently interesting to have any advantage over the ordinary historical form. Mr. Carr would do well to use his knowledge of local history and pioneer conditions in a volume of personal reminiscences.

**Art Thou the Man?** By Guy Berton. New York: Dodd, Mead & Co. \$1.50.

Novelists cannot nowadays complain of any limitation of their choice of subject matter. The theme of this novel is one not hitherto treated outside of Krafft-Ebbing's "Psychopathia Sexualis" and the yellow journals. But it is here handled with reserve and the book is not to be classed with the ordinary detective novel, the sole interest of which is the tracking of the criminal. Mr. "Berton's" newspaper experiences in Denver have supplied him with the material for descriptions of high life in that city and studies in the psychology of crime. The ordinary reader would wish the hero a little more normal, that he might carry our sympathies with him as he moves on to the awful final catastrophe. The gloom is not lightened by any gleam of humor, but the style has the force which comes from a lurid intensity of feeling.

**The Four Doctrines with the Nine Questions.**  
By Immanuel Swedenborg. Translated  
by Rev. John Faulkner Potts. New York:  
American Swedenborg Printing and Pub-  
lishing Society.

This is the first volume of a new edition of Swedenborg's works, revised and in part newly translated from the Latin, to be published in 28 or 29 volumes. It is well printed and strongly and flexibly bound. The Swedenborgians are said to circulate more literature in proportion to their membership than any other denomination, and one can believe it when he sees their generosity in supplying public libraries with free sets of their great leader and in distributing booklets of selections to individuals. To make people read him is another matter; still if there is any one who is not acquainted with Swedenborg it is certainly his own fault.

### Literary Notes

THE translations of Eugene Sue by Daniel De Leon mentioned last week are published by the New York Labor News Company.

....The new edition of Baedeker's Guide to Northern France from Belgium to the Loire, excluding Paris, is imported by Charles Scribner's Sons (\$2.10).

....The question often asked by laymen, What is the difference between the Roman Catholic and Protestant Bibles? is answered in a way to be understood by any one in the three essays for which Miss Helen Gould offered prizes, and which are published by the Bible Teachers' Training School, New York. 50 cents.

...."The Russian Peasantry," by Stepniak, the well-known author of "Underground Russia" and "Russia Under the Tsars," is republished by E. P. Dutton & Co., New York, in a very light and convenient form at \$1.25. There is no better or more reliable work on the lower classes of the Russian empire in popular form than this, and its timely appearance is fortunate.

....In his privately printed volume, entitled "Arcady in Troy," the Hon. George B. Warren has set forth something of the charm of wild flowers and of the delight that has come to him from their cultivation in a city garden. Mr. Warren has grown wild flowers for forty-six years. He has had a unique experience that has probably not been paralleled in American horticulture, but if after reading his present *brochure* there should fail to be others to follow in his footsteps, it would certainly be

exceedingly surprising. The volume was printed at the Merrymount Press, Boston, and has an engraved title-page in Malachite green. The illustrations are in photogravure.

### Pebbles

THE path of civilization is paved with tin cans.—*The Philistine*.

....The New Thought is that peculiar proclivity to explain the thing before you understand it.—*The Philistine*.

....Once there was a man who mixed sawdust with the meal that he fed his hens. He thought they would never know the difference. But they got even! When the man set the eggs, half the brood hatched were woodpeckers.—*Elbert Hubbard II*.

Oh, tradesman, in thine hour of e e e,  
If on this paper you should c c c,  
Take our advice and now be y y y,  
Go straight ahead and advert i i i.  
You'll find the project of some u u u;  
Neglect can offer no ex q q q.  
Be wise at once, prolong your d a a a,  
A silent business soon de k k k.

—*The Journal of Philology*.

AFTER READING A CHAPTER BY HENRY JAMES.

And after Angelina, laying down

The Book—that is—she often thought it so;  
Had recognized, as one might say, a frown  
(Could she translate the answer Yes and No?)

Had taken up the, as it were, effect

Of, Angelina's training had been such  
That, yet, however harsh and circumspect—

Even her father deemed it overmuch—  
One does these things unconsciously, I think.

Thus in proportion as we don't we do;  
So pausing rather vaguely on the brink  
She wondered, was it by, and if so, to?

For Angelina Hale was not that kind

Of girl, and it would be unfair to say  
With such an intuition in her mind

As these, those—does it matter either way?—  
Which she had, of a purpose, I suppose;

And they do have so many ways to choose,  
A point which, she remembered, last arose

The day she left her arctic overshoes,  
And then, of course, that doesn't count for one

Whose very instinct (*is it wrong to try?*)  
Since, yes, what other, lesser souls have done,  
For which, with what, is oftenest done by.

And thus reflecting, Angelina Hale.

Reviewed the thoughts that she had read  
about,

Then with a smile triumphant, wan and pale,  
Sank back upon her pillows, quite fagged  
out.

—*The Critic*.

## Chicago's Railroads and New York's Subways

CHICAGO elects Judge Dunne, and thus insists upon municipal ownership and operation of its street railways without any delay that can be avoided. The second city in the United States declines to defer the enforcement of its declared policy by making any further concession to the railway companies.

The settled purpose of the people of Chicago has repeatedly been shown at the polls. At the recent election all the candidates for Mayor and all the party platforms demanded municipal ownership. There was only a question as to the method by which the railway property should be acquired and the time when the power to operate should be exercised. The defeated candidate, Mr. Harlan, proposed that an offer should be made to the companies. Some of the franchises have expired, others have but a short time to run, parts of the system are now operated under Council licenses and other parts rely upon long-term franchises the validity of which is questioned. The Harlan offer would probably have permitted a renewal or a commutation of all franchises for a short and uniform term, conditioned upon a thorough improvement of the property and service, with municipal ownership to come at the end of that term; rejection of the offer to be followed by aggressive municipal competition in subways and on the surface. But the people would grant no renewals and would hear of no delay. Judge Dunne will strive earnestly to obey their mandate—by purchase, by condemnation, by municipal competition, or in any other feasible way. There are many obstacles in his path, but his aim will be to acquire the railways, and to operate them, for the people at the earliest possible moment.

This is an undertaking of great importance. No other American city has

sought thus to exercise its rightful powers in its streets. The first experiment is to be made in a city of 2,000,000 people, where the existing companies are capitalized at \$117,000,000. Fortunately, the work can be taken up and carried on in Chicago without increasing the city's debt or taxes. Under the Mueller law, certificates (or income bonds) may be issued to a maximum of 10 per cent. in excess of the cost of the railroad (whether purchased or constructed) and these will be a lien on the service receipts, being also secured by mortgage and by a contingent grant of a twenty years' franchise in case of foreclosure.

This movement in Chicago is mainly a popular revolt against robbery and the corruption that made robbery possible. A part of the argument by which Judge Dunne and others support municipal ownership rests upon the experience of many cities in England and other foreign countries, with evidence as to reduction of transportation charges and some other economic advantages gained there by the public. But it is not chiefly for economic reasons that Chicago has protested against the control and exploitation of its street privileges by private corporations, nor will such reasons account for similar revolts that may, and will, take place in other American cities.

The history of these Chicago companies is one of almost unequaled municipal and legislative corruption, and of unscrupulous financial manipulation that has drawn from the public great profits upon poor service. In St. Louis, thanks to Prosecutor Folk, the bribers and the bribed have been exposed and brought to justice. In Chicago and at Springfield they have escaped punishment, but the people have determined that hereafter they shall have no opportunity to bribe and steal, so far as the street car service is concerned.

Some predict that when Chicago regains possession of its streets and is

operating its car lines, the cost of transportation will be as high as it is now. We think it will be less, and that the service will be much more satisfactory; but even if it is not, there will be a great gain in the prevention of much of that corruption which menaces municipal administration in so many American cities, and by means of which great private fortunes are dishonestly heaped up, frequently to exercise a demoralizing influence in a broader field.

Municipal ownership is continually suggested and promoted by the greed, the corrupt intrigues and the dishonesty of corporations to which public franchises have been granted or by which such franchises have virtually been stolen. Honest men who are familiar with such parts of the history of municipal franchise corruption in the United States as have come to public knowledge, and who still hesitate to intrust municipalities—the people's governments—with the powers and privileges which have been so wickedly abused, must admit, it seems to us, that in many cities the change would be decidedly beneficial, even if all the disadvantages which they are accustomed to associate with municipal ownership should be realized. They should see that the most demoralizing and menacing conditions associated with franchise exploitation are of comparatively recent growth, owing mainly to the recent great increase of private wealth and corporate power, the suppression of competition and the creation of corporate alliances that cover broad fields of operation.

The time is opportune in Chicago, where so many franchises have expired or soon will terminate, and where the subway field has not yet been touched. In New York we have only begun a vast system of subways, and there is great danger that the beginning—not satisfactory in its relation to public and municipal interests, but for the shortcomings of which there was some excuse—will now be followed by grave errors that will confirm great private corporations in the possession of the entire subway network for a hundred years to come. The people of our greatest city should enjoy the profits of

this subway transportation. Why should they tax themselves for the enrichment of men whose fortunes are already immoderate, and whose connection with municipal franchises has already been marked by greed and the devices of "frenzied finance"? Why, also, should they submit to the extortionate pressure of the combined lighting companies?

At all events, they should save the new subways for themselves and their descendants. To the Rapid Transit Commission they cannot reasonably look for help. Even the Elsborg bill, which touched only the edge of the grand opportunity, has been rejected by a large majority in the State Legislature. They can get no aid at Albany. But they have their ballots and they can organize for the coming municipal election, and they can make a forcible platform upon the greatest local issue of the hour in New York. That issue is the control of the new subways. Shall it be given for all time to come to the incorporated multi-millionaires, or shall it be kept for the people themselves?

••

## Malthusianism and Race Suicide

THAT we are far from the goal of scientific prevision in the realm of social phenomena is sensationally asserted in current discussions of "race suicide." It is asserted that "race suicide" has made scientific ducks and drakes of the famous "Malthusian Law."

In all civilized countries the birth rate is rapidly declining. The decrease is greatest in the educated classes. The alumni of the older American universities like Harvard, and the alumnae of the colleges for women, are nearly at the bottom of the birth rate curve. The researches of Professor Cattell and of Professor Thorndike, of Columbia University, have demonstrated that at the present rates of marriage and reproduction the college-bred family becomes extinct in the seventh generation. Irresponsible denials of this unpleasant truth, like the absurd claim of President Thomas, of Bryn Mawr, that a delay in the age of marriage does not appreciably affect the birth rate, produce only smiles

among the statistically informed. They are not worth the trouble of serious rejoinder.

Yet it is less than a century since the Rev. Thomas Robert Malthus published the first edition of his "Essay on Population," in which he undertook to prove that while subsistence increases in an arithmetical ratio, population tends to increase in a geometrical ratio, and that unless the human race by prudence restrains its tendency to multiply the equilibrium of population and subsistence must be maintained by the positive checks of war and famine. For more than half a century the Malthusian doctrine, tho hotly controverted by writers of socialistic sympathies, held its place as a cardinal principle of orthodox political economy. A majority of educated men entertained no doubt that the chief obstacle to general happiness was the recklessness of the poorer classes in contracting early marriages and burdening themselves with large families. It was the Malthusian law that suggested in Mr. Darwin's mind the hypothesis of natural selection through a struggle for existence.

About forty years ago, however, a turn in the tide of scientific opinion on Malthusianism was observed. Mr. Herbert Spencer had pointed out that individual evolution is antagonistic to rapid multiplication, and that a high development of the cerebrospinal nervous system is necessarily at the cost of reproductive energies. Various economists and statisticians here and there were questioning whether at the present time highly civilized populations were actually tending to increase in a geometrical progression, and it was positively known, through the researches of statisticians like Levasseur, that in France at least the birth rate was beginning to fall. Twenty-five years ago Mr. Henry George in "Progress and Poverty" made a vigorous attack upon the whole Malthusian philosophy, which greatly influenced popular thinking.

At the present time not only the older centers of high civilization, like France, and the centers of a later civilization, like New England, but also the newest countries, like Australia, exhibit the phenomenon of a rapidly diminishing repro-

duction. A thorough statistical study of birth rates in New South Wales, which has just come to hand, is one of the most significant contributions to our knowledge of this subject yet made. In 1880 the Australasian birth rate was 38 per thousand inhabitants, and the average number of children for each family was 5.4. In 1901 the birth rate in New South Wales had fallen to 27.6 and the average number of children in each family to 3.6.

It is impossible to doubt that the principal cause of this decline of birth rates everywhere is to be found in an economic motive. The desire to improve material conditions leads to a delay of marriage and to the prevention of births. There is, however, reason to believe that, as Professor Cattell and Professor Thorndike are convinced, a factor of physiological failure has entered into the phenomena. Statistics of miscarriages and still-births are notoriously imperfect, but a considerable mass of data points to the conclusion that the proportion of failures to bring forth living children, after conception, is alarmingly and increasingly high in the educated and luxurious classes.

Do these disquieting facts show that the attempt to establish scientific generalizations in the realm of social phenomena is futile? Must we admit that Malthus's conclusions were absurd, and that the famous Malthusian law, wholly discredited, is one more example of hopeless contradiction between theory and fact? Is it true that to confess acceptance of Malthus's reasoning is to label one's self a back number?

There could be no more discouraging demonstration of the superficiality of much reasoning that passes for scientific than is afforded by the very general admission that these questions must be answered affirmatively. Editorial writers, statisticians and professors of political economy are daily speaking of the Malthusian theory as "discredited" or as "overwhelmingly disproven" by statistical facts; and, unhappily, in so speaking they are revealing their own inability to grasp the problem in its entirety.

For, as a matter of scientific logic, a declining birth rate is the most convinc-

ing demonstration that could be imagined of the essential truth of Malthus's formula. Malthus never asserted that population *increases* in a geometrical progression. He asserted that it *tends* to increase in the geometrical ratio except when kept down by positive or preventive checks. It is restricted to-day, as all admit, by the prudential—or preventive—checks. Why? There can be but one possible answer to this question. Population is prudentially restricted because the Malthusian law holds true; because, if it were not so restrained, economic betterment for the mass of mankind would be impossible. So far from showing that scientific prevision in social phenomena is impossible, the declining birth rate is one of the most remarkable verifications of scientific prediction ever seen. While denying the Malthusian law in words, the Western world has acknowledged its truth in deeds, which confess that unless the prudential check is brought to bear upon population the positive check of a high death rate, due primarily to economic distress, certainly will be.

### Lifelets

THE late Jules Verne about a year before his death created something of a sensation by saying that the novel had reached its hight and would soon be displaced from its present position of influence and popularity by new forms of literature. Whether the fact that his later romances had not sold as well as his earlier had anything to do with this pessimistic view of the outlook for his trade, there is much to indicate that he was right. It is true that there are more novels written and read than ever before, and there is no decline in quality, whether we consider the average or the exceptional. But the habitual readers of fiction, notwithstanding their conspicuousness and vocality, form only a small and continually smaller proportion of the total number of readers. Most men and many women prefer to come into closer touch with reality and seek it, often in vain, in the newspapers. Consequently fiction is undergoing process of fission; the cleft between the realistic and roman-

tic novels is widening. The former are becoming more nearly a transcript of life, and the latter, no longer tethered to earth, are soaring into the ether of the imaginary and impossible. In the same way the old-fashioned melodrama is differentiating into the drawing-room comedy and the burlesque opera.

When you propose to tell a story to children they interrupt at the first sentence with the question, "Is it a true story?" As we evade or ignore this natural and pertinent inquiry they finally cease to ask it, and we blur for them the edges of reality until it fades off into the mists. The hardest part of the training of the scientist is to get back the clear sight of his childhood. But nowadays our educators do not do quite so much as formerly to encourage the mythopeic faculty of children, and it has been found that their imagination can be exercised by other objects than the imaginary. Consequently the number of readers who are impatient of any detectable deviation from truth is increasing.

Besides this, most people—perhaps all—are more impressed by the concrete than the abstract. The generalized types of humanity as expressed by the artist in painting and sculpture, romances and poems do not interest them as much as do individuals. A composite photograph of a score of girls is very beautiful, but one is not apt to fall in love with it, notwithstanding the stories in which this has served as the theme. The scientist has a very clear and definite conception of kinetic energy when it is expressed by the formula  $MV^2$ , but he is more forcibly struck by it when he is hit on the head with a club. Formerly botanists used to talk a great deal about species and types; later they turned their attention to varieties, and now the men who are making the most progress are experimenting with one plant and a single flower of that one. The candidate for a Ph.D. watches a single ameba under a microscope and writes his thesis on one day's doings of its somewhat monotonous life. The man who can describe the antics of a squirrel in a tree has all the publishers just where he wants them. The type of the naturalist, the ideal statue of the sculptor, the algebraic formula of the physicist and the hero

and heroine of the romancer have a symmetry, universality and beauty above that of any individual and in a sense they are truer, but their chief value is not in themselves but in their use as guides to the better understanding of the individual, from which they originate and to which they return.

To these two forces tending to develop new forms of literature, the love of truth and the interest in the concrete, we must add one other, the spirit of democracy, the discovery of the importance of the average man. This, after all, is the most profitable branch of nature study, the study of *Homo sapiens*, and of his wife, who, in this country at least, usually belongs to the species *sapiens*. Wild adventures, erratic characters, strange scenes and impossible emotions are no longer required even in fiction. The ordinary man under ordinary circumstances interests us most because he is most akin to us. In politics he has gained his rights and in history and literature he is coming to be recognized. We realize now that a very good history of France could be written, better than most of the old-fashioned kind, without mentioning the name of Louis XIV or Napoleon.

The resultant of these three forces gives us the general direction of the literature of the future. It will be more realistic, more personal and less exceptional. The combination of these qualities is found in the autobiography, which, as Longfellow said years ago, is what all biography ought to be. It has always been a favorite form in fiction, from "Apuleius," "Arabian Nights" and "Robinson Crusoe" to the present. Now when we publish a "Life and Letters" we lay the emphasis on the latter. A great deal of fun has been made of those who preferred to read the love letters of the Brownings to the "Sonnets from the Portuguese" and "One Word More," but who will say that the verdict of the future will not vindicate these readers rather than their critics?

One other characteristic of the modern reader must be taken into consideration, his love of brevity. The short story is more popular than the novel, the vaudeville sketch than the drama. We have then a demand for the brief auto-

biography, the life story in a few pages. Since this form of literature seems likely to become a distinct type we venture to give it the provisional name of the "lifelet." We can show its relation to other literary forms most succinctly by this equation:

lifelet: autobiography:: short story: novel

The short story is older than the art of writing, but it is only recently that it has attained a perfection and definiteness of form which has caused it to be recognized and studied by rhetoricians. The lifelets now being written are like the average short stories of fifty years ago in crudity and indefiniteness of aim, but already we can see something of the laws and limitations of this new literary type. It really demands as much literary skill as any form of fiction, but when it is strictly autobiographical this is likely to be lacking. However, the number of persons who can write fairly well when they have the material is great and increasing with the spread of education. It has been said that every one's life contains the material for one novel. It would evidently be more plausible to say this of the lifelet.

Altho this is the first time we have expounded our theory of the subject, our readers know that THE INDEPENDENT has devoted more attention to this branch of literature than has any other magazine. We have published the life stories of representatives of most of the nationalities which are forming our population and of the workers in many lines of industry. These two groups will before long be sufficiently complete for publication in book form. Besides this we have often made use of the lifelet in the discussion of current problems, as in this number. We believe that many of our readers have found them an agreeable and profitable substitute for fiction; at least we hope so, for it is much more trouble to get them than short stories. We have used two methods in obtaining them; first and preferably, to have the story written out by the person who lived it; second, in the case of those too ignorant or too impatient to write, to have the story written from an interview and read to and approved by the person telling it. In its literary construction the same general rules apply as to the short

story, and condensation, elimination, subordination and selection are necessary in order to make it readable and truthful.

## The Death Roll in Industry

WE read with horror of carnage in battle, while the carnage constantly going on in industry affects us but lightly. The glory and the tragedy of great conflicts, wherein masses of men contend for supremacy, wherein whole regiments are sometimes virtually annihilated, appeals powerfully to the imagination; but the slow, relentless killing and wounding of men, women and children in times of peace we are prone to take as a matter of course. There is now a casualty here, now a score of casualties there, with now and then a "General Slocum" disaster with its nine hundred dead. But such incidents, either singly or as a whole, we are prone to look upon as inevitable happenings in an ordained system of society, and we reserve our tenser emotions for the more dramatic slaughter attending armed conflict.

Yet the killings and woundings entailed by modern industry far outnumber the casualties of armed warfare. Whatever may be said for the system of capitalist employment, there is at least this to be said against it: that it takes small regard of human life. The slave owner and the feudal baron protected the individual life, because it was valuable to them. But under the capitalist system the employer accepts no responsibility whatever for the maintenance and protection of the laborer. The laborer is to the employer a "hand," to be hired and discharged at will. If he is injured or killed it is, as a usual thing, no loss to the employer, for another is ready immediately to step into the victim's shoes. And in all times since the beginnings of capitalist industry the employers as a class have vigorously fought every measure, so long as it involved expense, making for the protection of the workman at his task.

Every year in America, between 64,000 and 80,000 persons are killed and 1,600,000 seriously wounded. We cannot definitely say what proportion of these casualties is directly due to purely

economic causes dependent upon the prevailing system of industry. But when one considers the great range of preventable causes of casualties, among which are boiler and mine explosions, unguarded machinery, unprotected grade crossings, defective couplings on cars, and adulterated food, drink and medicine, he finds that there are not many categories remaining under which casualties can be accounted for. Roughly, one may hazard the guess that for the whole number of casualties, four-fifths are due to preventable causes, and that the indifference to life inherent in the careless mode of production is alone responsible for them.

This terrific destruction of life is, of course, far greater in some industries than in others. The general belief that the factories furnish the greater part of it may or may not be true; the figures are so unreliable as to give no adequate light upon the subject. But for the railroads and trolleys there is an approximate basis in the yearly reports of the Interstate Commerce Commission. It is not pretended that these records are complete; they are, as a matter of fact, notoriously incomplete. But they are at least suggestive. For the year ending June 30th, 1904, the interstate roads killed 9,984 persons and wounded 78,247. The awful battle of Gettysburg, which plunged every section of the United States into mourning, showed a far lower record of casualties. In three days of desperate conflict both armies suffered a loss of but 5,662 killed in battle and 27,203 wounded. But the interstate roads furnished but a part of the traction casualties of 1904. Estimating from what figures are available, the State roads added in 1904 some 975 killings and 7,500 woundings, while the trolleys contributed some 1,340 killings and 52,169 woundings. Here is a total of 12,299 dead and 137,916 wounded to contrast with the records of losses in three of the bloodiest battles of the Civil War—Chancellorsville, Chickamauga and Gettysburg, with 12,857 killed in battle and 69,408 wounded.

The easy-going citizen reads of this slaughter with hardly a shudder. He accepts it as a necessary part of the daily struggle for bread. For it is a slaughter

attended with none of the dramatic trappings of war, and thus makes small drafts upon the emotions of the onlookers. The victims go to their death singly or in small groups, with no blare of trumpets, no waving of flags, no appeals to their sense of glory or of patriotism. They are struck down, like cattle in the shambles, helpless and unprotesting. And the world looks on, not wholly indifferent, it is true, but passive and indisposed to apply an adequate remedy. It is too busy to bother. An earthquake in India would stir more horror.

### Twisting Scripture

TWISTING the lion's tail has gone out of fashion on the Fourth of July, except where the green flags wave with the red, white and blue; but twisting Scripture is still a frequent practice, exercised for either amusement or disputatious advantage. And whether it be the Scriptural joke or the Bible argument, it is the ministers that most indulge in it.

Admirable opportunities have been given for this practice by the discussion over the Rockefeller gift to the missionary colleges in India and Japan. We select a few we have heard:

Why should not the money be received, no matter what is the character of the giver? Did not Jesus know the character of the woman of the town who poured the fragrant profit of her shame on his feet, and did not the great Teacher of all ethics accept her gift as a sufficient evidence of her penitent faith, and declare it more agreeable to him than all the feast and courtesies of the Pharisees who had entertained him?

Yes, but had she not repented, and did not Jesus say, "Thy sins, which are many, are forgiven thee"? It may be all right to receive the money, but the Bible parallel does not hold unless there is something to match the tears and repentance with which the woman who was a sinner washed the Lord's feet.

Then there was the great feast which Matthew, the publican, made for our Lord, and that other feast of Zaccheus, a chief of the publicans, and rich, surely a sinner, a man belonging to a class with the worst reputation for rapacity, who

had got his great wealth by farming the taxes and compelling people to pay more than was demanded, and then defrauding the Government in paying what he had robbed from the people. And did not Jesus, when he saw the man curiously interested in him, solicit an invitation to his house for himself and his disciples, and when this disreputable plutocrat was glad to receive Jesus and his tramp church of disciples to dinner and lodging, and contribute the expense to this missionary board, did not Jesus not only receive the gift, but did he not also say, "To-day is salvation come to this house"? And why should the American Board be any stricter than the Master?

All true; but it is also true that Zaccheus said, "The half of my goods I give to the poor, and if I have defrauded any man, I restore him fourfold." If the parallel holds, if the restitution is made where possible, and deeds worthy of repentance are done, then the conclusion also holds, and the gift is acceptable to God and man. Is it said that in the present case the willing gift, with many others, is evidence, that must be presumably received, of a right purpose? We do not argue it.

Scripture is quoted to tell us of the strict command to the Jews that every offering must be "without spot or blemish"; that not an animal lame, or blind, or otherwise imperfect could be received at the temple; and if not a blemished lamb, why tainted money?

Yes; and equally it must be a male. But would not the priests sell a lamb or doves for good silver to any comer, whatever his character, without asking questions, and did they not require the half shekel from every worst man in Jewry?

Then there is that other overworked passage: "Judge not that ye be not judged." "How shalt thou say unto thy brother, Let me pull out the mote that is in thine eye, and behold there is a beam in thine own eye?" And the question is asked, in modern phrase, What right has the Board to judge the character of a wealthy giver? Are not the ministers guilty of the same offenses when they take rebates from railway tickets and clothing stores? Are not

their own church members stockholders in Standard Oil or in worse things?

Be it so, but nevertheless we can judge, and do judge, and no one judged more severely than did Jesus, who said that it was easier for a camel to go through the eye of a needle than for a rich man to enter into the Kingdom of Heaven. And the same Jesus said this who also loved one rich young man, and told Zaccheus that salvation had come to his house.

Then there was that shocking trust which we are told Jesus condemned and wrecked. It was a combination of clerics and laymen who had illegitimately acquired an exclusive franchise for changing money and selling cattle and birds and fine flour and oil on the temple streets. They were a monopoly, an ancient meat trust and oil trust, who got rich by fleecing the people even on the pretense of piety. Did Jesus go to them and ask them, rich men who could afford to do it and liked to be seen giving, to help his college of disciples? Not a bit of it; he knocked out their bank counters and with a whip he drove them and their cattle out of the temple area, telling them they were a den of thieves. That was the kind of "judging" he did, and that was what he did with their money.

True; but it was their business methods he attacked, and not their worship or their benevolence. When he saw them pouring their money into the treasury all he said was that the poor widow's mite was of far greater value.

It is easy to find a Bible text to fit any desired lesson. But that is not the right way to use the Bible. We might about as well take the method of some when in doubt, which consists in opening the Bible at haphazard and following the first text the eye falls on. The Bible is for principles, for inspiration, to help and guide enthusiasm for righteousness; but what is right in any given case must be decided by cool, sound judgment, and not by bibliomancy.

#### Sham Corporations

by Judge Grosscup:

"I know of one corporation that organized

recently under the laws of New Jersey, with an authorized capital of \$40,000,000. For some reason this must have looked high, even to the promoters, for only \$10,000,000 was issued. After a little while these \$10,000,000 were reduced to \$2,000,000, whether from some scruple of the stockholders or some business expedient, I do not know. All I do know is that a little while after that the corporation landed in a bankruptcy court, with assets all told of \$25,000, presumably acquired on the credit of the corporation after its organization, for the current liabilities exceeded these assets."

Consider this case. No assets to begin with, only a name with an authorized capital of \$40,000,000. On those big figures, with big promises, they sold worthless stock, deceiving the buyers, and finally went into bankruptcy and could show but \$25,000 of property, all stolen. What right had New Jersey to authorize such a swindling scheme? Why should one sort of corporation, called a national bank or a trust company, be under strict government supervision for the protection of the community, and not other corporations? We show too much mercy to sham corporations. Publicity is the word. One third of the wealth of the country is now held by corporations. An insurance company is supervised and controlled by law; why should a street railway company be allowed to ruin its investors by the diversion of its profits? Why should laws make it easy to capitalize corporations by artificial inflation, except to fleece the buyers of stock or bonds?

#### Professor Scharf

A beautiful case of self-obliviation for a cause has been presented for the last two months by Professor Scharf, who acted as lobbyist for the Catholic Indian schools at Washington. It is not yet forgotten that he was reported by several members of Congress to have urged them to vote for legislation favoring these Indian schools, and to have presented to them a list of twenty or thirty Republican Congressmen from doubtful districts in which, through the agency of priests, the Catholic vote would be so turned as to assure their election if they would vote as desired. This Professor Scharf represented himself as authorized to speak for the Catholic authorities, or was cer-

tainly so understood by those whom he attempted to influence. He was also spoken of as a Professor in the Catholic University at Washington. But when his proceedings were made public and were sharply criticised, the superior Catholic authorities denied that he represented them; Cardinal Gibbons declared that the man had no authority from him; the Bureau of Catholic Indian Missions knew nothing of him or his proceedings; he was reported to have no relation to the Catholic University; and the Catholic papers with almost one voice repudiated him as a busybody who had injured a good cause by meddling where he had no business. Professor Scharf, if he is Professor anywhere (a musician, we believe), might have defended himself if he had thought best, but for the sake of the cause he was silent. We, therefore, will say a word for the under dog. We have happened to find in the Report of the Director of the Bureau of Catholic Indian Missions, dated April 8th, 1904, the following—and it is all:

"AN ACKNOWLEDGMENT.

"The Bureau is indebted to Prof. E. L. Scharf, of Washington, D. C., for very valuable services which he has rendered the cause of the Catholic Indian Schools."

There is no indication what the nature of those "very valuable services" was. If they were not the very services since repudiated it would be well to indicate what was their character.

**The New Guinea  
Massacre**

It was to be expected that Mr. Poultney Bigelow's account of the murder of ten German Catholic missionaries in New Guinea would not be agreeable reading and that it would be in some degree controverted. We have a letter from Daniel P. Cahill, editor of *The Lourdes Magazine*, of Chicago, who says:

Three things distinguish the literary creations of Mr. Poultney Bigelow:

One is—They are interesting;

Another is—They convey a clear idea of his objects to the reader;

The third is—His conclusions disagree with the facts.

We can take the first two for granted; the third will require proof.

Let us refer to Mr. Bigelow's recent article, "The Murder of Ten Missionaries," printed in your issue of March 23d. Suppose we skip his introductory statement and get down to the nub of the complaint. On the second page Mr. Bigelow states:

"But to come back to our massacre; it was in July of 1904—the news did not reach San Francisco until January 18th, 1905, for there is no cable to Herbertshoehe, the capital of German New Guinea, and even if there had been one it would not have helped us, *for the German Roman Catholic authorities had agreed with the German Governor that they would both maintain silence until such time as the authorities in Rome and Berlin had had an opportunity to compare notes and make public what they desired the public to believe.*"

We presume Mr. Bigelow knows whereof he speaks, but this is a pretty bold statement to make without offering proof. But it really is not true—dare we speak so plainly—for seventeen days before Mr. Bigelow landed at Herbertshoehe a full account of the massacre was printed in the *London Tablet* (November 5th), and this account was from the pen of Bishop Couppé, Vicar Apostolic of the district in which the astounding event took place. This, you will note, was two and one half months before the news reached Mr. Bigelow at San Francisco.

To an onlooker it would appear that Mr. Bigelow's conclusions are miles away from his facts.

We have transmitted Mr. Cahill's comment to Mr. Bigelow, who replies as follows:

What your correspondent, Mr. Cahill, says is true enough, so far as he is permitted to see. But he sees only what the eminent Bishop wished him and others to see—and it was my business in New Guinea to see what, for obvious reasons, it was desirable to conceal—at least from an official point of view.

The Governor of German New Guinea was surprised and chagrined at the action of Bishop Coppee in making public a statement in regard to the massacre because, according to said Governor, it had been agreed to maintain official silence until Berlin and the Vatican had discussed the matter.

Mr. Cahill regards the statement of Bishop Couppé as a final historic statement of the massacre. Mr. Cahill is welcome to his view. My experience with official statements leads me to a different conclusion. The true statement regarding this massacre is obviously damaging to the German authorities in those waters—indeed, to all those in power over the natives.

I landed in San Francisco from New Guinea during the first week of January of this year, and after landing, there appeared a sensational

account in one of Mr. Hearst's papers—made up mainly from hearsay.

If Mr. Cahill chooses to take equal trouble in search after the truth I shall with pleasure provide him with ample means to verify in New Guinea what I sign in Boston.

#### Emperor William in Morocco

The visit of Emperor William to Morocco will not in the least weaken the agreement of France and Great Britain as to that country. It will only appear as if the Emperor of Germany had attempted to interfere with the predominance of French influence, and had failed. Germany has no further rights, except to demand equal trade privileges with the most favored nation, and that France is ready to allow and even insist upon. Equally Italy is not easily disturbed by the Emperor's visit or his appeal to Italy to stand by the Tripartite Alliance. More serious is the appeal reported to have been made by William to the Sultan that the bond be strengthened between the Moslem realms. This is hardly less than scandalous. It would be an incitement to a holy war in Africa, and a challenge to the Sultan of Turkey and the Shah of Persia to massacre as well their Christian subjects, not to speak of the disturbance threatened against the British Government of India. Great Britain is charged by Turkey, Germany being her backer, with having ambitions in Arabia, not merely on the Persian Gulf, but even in the region of Mecca, where great caravans go yearly from Cairo; and equally Great Britain is charged with hindering the construction of the German railway down the Euphrates Valley to Baghdad and Koweit; and here, again, Germany is in league with Turkey. And the collapse of Russia leaves Germany a free hand with her ambitions, and the same is true of Great Britain.

#### The Earthquake

It is an old legal formula which speaks of unavoidable accidents as "by the act of God." Of all accidents those by an earthquake, occurring in the processes of nature, seem to be most clearly thus designated, and yet no more so than death by old age. The terrible earthquake in Northern India has destroyed thousands

of lives—we know not as yet how many. Earthquakes have been scientifically studied only for a few years, and in this study Japan takes the lead, as earthquakes are frequent there. Minor shakings of the earth's crust occur almost every day, but it is only the serious dislocations that are noticed, except in seismological observatories. In 1891 nearly 7,300 perished from an earthquake which was accompanied by a great tidal wave; but in 1703 nearly 200,000 perished in the city of Jeddo, and half as many in Pekin in 1731. In the famous earthquake at Lisbon perhaps 50,000 perished in 1755. The United States has been comparatively free from these disasters, altho we recall the Charleston earthquake, and one in Missouri, and a number in California; but in none of these cases has there been any very great loss of life. The chief cause of earthquakes is the dislocation of the earth's strata, due to changing pressure on the earth's crust; and this change of pressure is due, perhaps, to the increased or decreased weight of the earth's crust, as hills are worn down and sediment carried elsewhere, just as the accumulation of miles in depth of ice at the poles affects the level of the ocean and the shape of the earth. When the crust breaks under this change of pressure, the sudden movement will shake the strongest buildings. And then we learn that the solid earth and the firm mountains afford no symbol of immobility.

#### Queen Alexandra on War

The *Gaulois*, one of the most conservative papers in Paris, prints an interview with Alexandra, Queen of King Edward. What she says of war is touching and true:

"Your talk, as men, is of war, but we women speak always of peace—peace in every nation, peace between all nations.

"I was educated in the school of a king who was before all things just, and I have tried, like him, always to preach love and charity. I have always mistrusted warlike preparations, of which nations seem never to tire. Some day this accumulated material of soldiers and guns will burst into flames in a frightful war that will throw humanity into mourning on earth and grieve our universal Father in heaven."

Most true, and yet two mighty armies

and two mighty fleets are this day trying to destroy each other, to the misery of a million homes; and the greatest nations of Europe are pointing their cannons at each other from the casemates on their frontiers. We believe the women would order this matter better.

**Compulsory Mathematics** It is compulsory Greek that the teachers talk so much about, and Oxford and Cambridge lately had a campaign of dons much to the discomfiture of the revolutionists, who pleaded the example of Germany and the United States. It is true that our American universities have generally made Greek an optional study; but we raise the question why mathematics might not equally be made an optional study in Cambridge University, which is its central fortress, necessary to all wranglers. There are a multitude of people who find it almost impossible to learn algebra or geometry even. Common ciphering exhausts their capacity. But they can appreciate Greek and culture and art and literature. They are compelled to study analytics and conics, and they forget all they have memorized on their way from the recitation room. They ask us, Who remembers his Greek? - We ask equally, Who remembers his algebra? Who could repeat the demonstration of the Pons Asinorum? Who even can cipher out the cube root, or the square root of a line of digits? The argument that we forget Latin or Greek applies equally to mathematics. And yet we are not ready to allow that a cultivated man may never have gone beyond fractions in his school studies.

The city of Boston last year spent \$3,566,170 for the net ordinary expense of its public schools, and in addition \$2,114,851 for new school buildings. Leaving out the cost of buildings, the ordinary expenses were more than the entire outlay for school purposes in 33 States in the year 1900-1. Not one of the South Atlantic States spent as much, nor one of the South Central Division, except

Texas; but every one of the twelve North Central States, from Ohio to Kansas, spent more, with the exception of the two Dakotas. Of the Western Division, from Montana to the Pacific, only California exceeded Boston.

We published March 30th the statement from Salt Lake City advices that at a public meeting in the Mormon Tabernacle a few days previous "President Joseph F. Smith admitted that at Washington he had given false testimony when he said he had never received revelations," because he thought the Senate Committee were "trying to put him in a trap." We have letters and newspaper clippings from Utah which protest that President Smith only denied at Washington that he had received special formal revelations, but not that he had been favored with divine inspiration.

It can hardly be otherwise; the seamen in the Navy would not desert in such numbers if they were not ill-treated. Six hundred blue jackets deserted from the warships at Pensacola the other day. They don't desert in that way from British or German vessels, and it is not their food or their pay that explains the matter. It is the unreasonable severity of the discipline, we believe. This is the chief problem which now confronts our Navy.

Senator Smoot kept his promise not to vote for polygamists at the Seventy-fifth Conference of the Mormon Church in Salt Lake City last week. He left the State conveniently on sudden business for California, and so did not have to add one to the two negative votes against "sustaining" the First Presidency and the Twelve Apostles.

That perennial Deceased Wife's Sister bill has for the seventh time passed the British House of Commons by a vote of 149 to 64; and for the seventh time it will be defeated by the Lords and Lord Bishops of the Upper House. That Upper House sadly needs reconstruction. It is a worse block than is our Senate.

## The Equitable Controversy

ADDITIONAL charges and counter-charges continue to be made by both the Alexander and Hyde forces in the controversy now raging in the Equitable Life Assurance Society. Interesting statements continue to be given out, first by one side and then in rebuttal by the other. The definite settlement of the unfortunate dispute seems to linger persistently, and so far as surface indications go the disputants are as far from final harmony as ever. At a meeting of the directors of the society held on April 6th the two-year plan of mutualization proposed by the Crimmins Policyholders' Committee was adopted, at least to the extent of agreeing to the policyholders' representation on the basis of 28-24. The proposed control of the Executive Committee by a majority of policyholders' directors did not meet with the same success, but was referred to a special committee, which was to have reported on Saturday, but because of the importance of the task of naming the new directors the report of this committee was deferred. Further meetings of the directors will not be held pending the readiness of the Nominating Committee, composed of Senator Depew, August Belmont, Alvin W. Krech and Cornelius N. Bliss, to render its report. An Investigating Committee, made up of Cornelius N. Bliss, D. O. Mills, H. C. Frick, E. H. Harriman, Brayton Ives, James J. Hill and M. E. Ingalls, has been appointed. The resolution appointing them charges them with the duty of "thoroughly investigating and reporting upon the present management of the society."

It is stated that the committee will examine in detail not only charges against Mr. Hyde reflecting upon his conduct as an officer of the Equitable, but also the methods that have been used in conducting the present campaign, deemed by the board to be injurious to the society. A new policy of silence has been adopted, and if the

animosities continue it is likely that somewhat less will be heard about them in future. The more interesting incidents that have been brought out during the past week have been disclosures regarding certain loans, aggregating over \$2,000,000, obtained from the Equitable by Edward H. Harriman, a member of the Board of Directors; the sale to the society for \$135,000 of certain interests in renewal premiums by Gage E. Tarbell, second vice-president of the Equitable, and the allegation by Mr. Hyde that James W. Alexander has injured the credit of the society of which he is president by his course in this controversy. Injunction proceedings have been begun which seek to restrain the amending of the company's charter so as to provide for mutualization, and the end is not yet. Advertisements offering to purchase policies in the Equitable Society have made their appearance in the daily press. Official figures given out are to the effect that the new business of the month just closed was the greatest for that month in the society's record.

We can only repeat what we have said before—namely, that the present scandal has gone too far to be hushed up and that if the Insurance Department of the State of New York does not make the necessary impartial, thorough and public investigation, recourse ought to be had to the Legislature.

REFERRING to the recent boiler explosion in the shoe factory at Brockton, it is interesting to note that there was no negligence on the part of the maker of the boiler, the owner of the boiler, or the inspectors of the Hartford Steam Boiler Insurance Company. The boiler experts testified that the defect was a crack which had slowly developed on the inside of the outer lap of the plate, and which was covered entirely by an inner lap and gave no sign of existence. It could not have been determined without cutting the boiler open and laying open the seam.

# Financial

## From New York to Boston

PRESIDENT MELLEN'S frank remarks before a committee of the Connecticut Legislature show that the purchase of a controlling interest in the Ontario & Western by the New York, New Haven & Hartford Company was not entirely satisfactory to the New York Central, and that the Central's elaborate surveys for a competing line to Springfield (and Boston) were not made merely for exercise. "Why," he asked, "do you suppose such a survey was made? Do you think it was the possibility of the large local traffic of the territory such a line would serve, or was it to influence the disposition of certain property [the Ontario & Western] acquired by our company recently that had the effect of putting coal from the mouth of the mines into the furnaces of our factories without the interposition of any other authority than that held by the officials of your home road?" It appears that three routes have been surveyed and that the surveyors are still at work. In Boston the prediction is made, apparently with some confidence, that the New Haven Company's Ontario & Western shares will be transferred to the Central. Prominent capitalists are directors of both the Central and the New Haven, but the influence of the Central in the New Haven Company may be less than that of the Pennsylvania, which owns 10,000 shares of New Haven stock, has its president in the New Haven board, and will before long have direct connection with the New Haven lines by means of tunnels and the projected road from Long Island across the upper end of the East River. Some are impressed by current reports that the New Haven seeks an independent entrance to New York by a subway leading to the station that the Pennsylvania is to make at Thirty-fourth street. Possibly there is behind the scenes an interesting play for position and future advantage in the richest railway district of the country. President Mellen admitted last week that he was seeking to remove some of the difficulties that lay in the way of "negotiations for a surrender of Ontario & Western control." He was trying, he said, to establish such relations with the

New York Central that it would be unnecessary for his company to keep this coal road. His company had bought the Ontario & Western purely for protection, and protection might be had either by retaining the property or by disposing of it upon conditions which would secure protection in another way. This seems to foreshadow a settlement by the sale of the coal road to the Central.

DURING the last five years the Pennsylvania Railroad Company has paid \$1,614,087 in pension allowances to retired employees.

....Daniel F. Appel has been elected Secretary of the New England Mutual Life Insurance Company, in place of S. Franksford Trull, deceased.

....All the colonies of Guatemalan ants that were imported into Texas last fall to fight the boll weevil perished during the winter, but the experiment will be repeated.

....To meet trolley competition, gasoline motor cars are to be used at various points on the Union Pacific, and also on the Southern Railway in the neighborhood of Augusta, Ga., and Charleston, S. C.

....The announcement of a forthcoming issue of \$100,000,000 of preferred stock by the Union Pacific, apparently for "the acquisition of the stock of other companies," excites curiosity. Some think it points to the acquisition of the New York Central; others look for the purchase of St. Paul or Atchison.

....Japan recently ordered 152 locomotives; 77 of the Baldwin Company in Philadelphia, 25 of the Atlantic Equipment Company in New York and 50 in Scotland. Those built in this country will be forwarded to the Pacific Coast by rail. The Baldwin order is the largest of the kind ever given here by a foreign Government.

....Dividends announced:

Am. Car & Foundry Co., Preferred,  $1\frac{3}{4}$  per cent., payable May 1st.

U. S. Rubber Co., Preferred, 2 per cent. and extra  $1\frac{1}{2}$  per cent., payable May 15th.

Rock Island Co., Preferred, \$1.00 per share, payable May 1st.

Greene Consol. Copper Co., 4 per cent., payable April 20th.

VOL. LVIII

NEW YORK, THURSDAY, APRIL 20, 1905

No. 2942

## Survey of the World

### The President's Vacation

Mr. Roosevelt hunted wolves and jack rabbits for four days in Oklahoma. His camp was at Panther Springs, on the Red River, 14 miles east of Frederick, and the hunting was confined to a tract 36 miles square, leased by Captain Burnett from the Kiowa and Comanche Indians. Twenty troopers of the regular army were encamped near at hand. The people of the Territory were governed by the President's expressed wish that none of them should intrude and prevent him from getting the rest which he sought. When the party returned to Frederick, on the 13th, they had killed 18 wolves, and Mr. Roosevelt's face was finely tanned. The journey to Colorado was uneventful, altho the special train narrowly escaped collision with a runaway freight. The President was met near the State line by the Governor, who gave him an official license permitting him to hunt and kill all sorts of game. At Pueblo he was greeted by 5,000 children, who gave him a "Big Stick;" at Trinidad there were as many more, and at the Colorado Springs station 10,000 people had assembled. He reminded them that he could not hunt with a brass band, and asked them to treat him as he had been treated in Oklahoma. "If a lot of newspaper men come into the hunting grounds after me," he said, "I shall have to go home. I promise that if anything of earthly interest happens the news of it shall be sent out." On the 15th he started from the railway for the camp, which is 23 miles southwest of Newcastle. This town is 12 miles west of Glenwood Springs, where Secretary Loeb will remain, and from which a telephone line has been extended to a

point within a mile or two of the camp. On his way to the hunting grounds Mr. Roosevelt shot a black bear. He is accompanied by Dr. Lambert, Philip B. Stewart (in charge of the expedition) and several guides. There is much snow in the mountains, as the season is unusually late.

### An Open Door on the Isthmus Route

Secretary Taft has decided that so far as the Panama railroad is concerned there shall be an "open door" on the Isthmus. This decision is not without interest to the transcontinental railroad companies, which up to the present time have controlled the railroad and its rates. On the 10th, representatives of Chile, Peru, Ecuador, Bolivia and the Central American countries urged him to end the railway and steamship monopoly in Isthmian transit, pointing out that the present very high freight rates and the exclusive contract with the Pacific Mail Company (which the transcontinental railroads control) hampered commerce and diverted South American trade to Europe. Owing to the exactions of the railway and steamship monopoly, the rates to New York from the West Coast of South America by way of the Isthmus are in some instances even twice as great as the rates by way of Cape Horn. There is a similar difference in rates to and from Europe. This has been clearly to the disadvantage of trade with the United States. It was pointed out that the maximum distance to New York by way of the Isthmus was 4,500 miles, against 11,000 by way of the Cape. The present exclusive contract with the Pacific Mail Company, which is distinctly in favor of a combination, will be an-

nulled on July 12th, and the rates will be reduced, possibly by as much as 50 per cent. The same rate will be given to all shippers. Our Government owns the railroad and three steamships plying between Colon and New York. Connection is made on the Pacific side with the steamships of the Pacific Mail Company. This company gives notice that it must have exclusive preferential rates (for American ships) or it will withdraw from the service. Therefore the Government may find it necessary to go into the steamship business between Panama and San Francisco. It is expected that the Government will double-track the road and adapt it to commercial uses, as well as to the needs of the Canal Commission, aiming to earn only a fair interest on the investment. Dividends heretofore have been 33 per cent. The coming changes are not acceptable to the transcontinental roads, whose through rates have been maintained in part by their control of the Isthmus route and by the very high rates established on it. Their through rates may be affected by the coming reduction.—Contracts for the employment of 2,000 Japanese and 2,000 Chinese coolies upon the canal route will soon be made. It is held that the contract labor law does not apply to the Isthmus. There is some interest in the question whether the eight-hour law is applicable, for an enforcement of it would very largely increase the cost of the canal. About 5,000 men are now at work. It will not be necessary to decide for two years to come whether the cut shall be made at the sea level. For the adoption of the sea-level plan special authority from Congress is required.

#### Trust Investigations

The grand jury considering the evidence in the case of the Beef Companies, at Chicago, has indicted four employees of one of the companies upon the charge that they obstructed the officers of justice by sending certain other employees to Canada. One of these refugees, Edward S. Fish, was found in Canada by a disguised detective, who induced him to cross the line and make a visit to Detroit, where he was put under arrest. Fish has testified before the grand jury. Six other persons, heads

of departments in the companies, are in Montreal. Secret service agents have procured for the grand jury six trunks full of records relating to the Etna Trading Company, which is said to be a corporation by means of which a combination was made with respect to certain branches of the business. In an application for a writ impounding them for the use of the jury the District Attorney asserted that the trunks "contained important evidence tending to show a violation of the law and of the restraining order of the court." There was a sharp advance last week in the price of beef at wholesale and retail. This is ascribed by the packers to an increase in the price of cattle.—Commissioner Garfield has arrived at Topeka and is engaged in his investigation of the oil business in Kansas. It is announced that independent producing companies controlling three-fourths of the Kansas output have decided to invest \$7,000,000 in constructing a pipe line to Kansas City and in building a refinery there.

#### Brief Notes on National Topics

Before leaving Washington for the Southwest the President signed several orders amending the civil service rules. One of these takes out of the excepted class the 360 cashiers and finance clerks in the post offices of the country. These places will hereafter be filled by promotion. Another provides that persons employed in the immigration service who are stationed in Canada or Mexico shall be appointed only through competitive examination.—Governor John G. Brady, of Alaska, has been informed that he must resign unless he gives up his connection, as director and promoter, with a mining company that advertises extensively.—In a recent public address at Washington Rear Admiral Melville (retired) said that we ought to purchase from Denmark, France and England all of their possessions in the West Indies, or to exchange the Philippines for them; we should secure peaceable possession of every strategic point in the West Indies that bears upon the military defense of the canal or concerns the maintenance of the widest possible interpretation of the

Monroe Doctrine.—Pursuing his policy of retaliation for what was virtually a rejection of the treaty of reciprocity by our Senate, Premier Bond has moved in the Legislature of Newfoundland for the adoption of a bill providing for the forfeiture of any American fishing vessel found within three miles of the Newfoundland coast with bait, supplies or outfit purchased at any Newfoundland port. The bill has been passed in the House by a vote of 19 to 6.—The number of persons indicted in Oregon for conspiracy to steal public land was increased by fifteen last week. Among these new defendants are State Senator Booth, his brother (Receiver of the Roseburg land office), and the Rev. Stephen W. Turnelle.—Senator Burton, of Kansas, has been reindicted, owing to the Supreme Court's order for a new trial on account of a technical error in procedure.—After about two years' delay the nineteen prominent stock raisers in Nebraska who were indicted for fencing and using Government land are to be tried. One of them is a millionaire and the Secretary of the American Cattle Growers' Association.—It is said by friends of Governor La Follette that if the Wisconsin Legislature fails to pass a Railroad Commission bill that will meet the demands of the Republican platform he will decline the office of Senator and make another appeal to the people of his State.—In a case involving the right of trial by jury the Supreme Court has decided unanimously that the Constitution extends over Alaska because that Territory has been incorporated into the United States as a part thereof.—It has been discovered that under the recent order making age a disability, pensions have been granted to about one hundred applicants who were members of organized regiments that were never in the service of the United States. This was permitted by the Board of Review, but it is not yet clear whether it was due to carelessness or something worse.—It is understood that at the coming session of Congress Speaker Cannon will assent to the creation, for the city of Washington, of such a Public Buildings Commission or Park Commission as the President desires to appoint, and that due provision

for the Commission will be made by both the House and the Senate.

**Municipal Ownership in Chicago** Chicago's new Mayor, Judge Dunne, has appointed Clarence Darrow Special Corporation Counsel, to have full charge of all litigation concerning the street railways. Mr. Darrow was counsel for John Mitchell and the coal miners during the proceedings before the Anthracite Strike Commission. Capitalists controlling one of the railway companies say that they will gladly sell to the city if they can get their price. Mr. Carnegie sends to the Mayor the following message:

"Tell Judge Dunne not to stop until every public utility that can be made the subject of private monopoly has been placed under the control and operation of the city. I take it as a great compliment to Scotchmen and to Glasgow that he should select a Glasgow expert to tell the people about the operation of municipal ownership."

In a long interview, Charles T. Yerkes (now in London), formerly the controlling capitalist of the Chicago railway companies, predicts a failure of the city's undertaking. "Chicago," he says, "can no more run street railways successfully than you can take wings to-morrow and fly to heaven." Glasgow would now be better served, he asserts, by private owners. The politicians of that city, "while ignorant, are honest, but the politicians of Chicago are the worst in the civilized world," and the cars and power-houses will be manned, he thinks, by their followers. But Chicago "needs the lesson" and can get it in no other way. He is glad that the city "is taking the direct path to disillusionment." He asserts that municipal ownership in London and elsewhere in Great Britain is a failure and is "synonymous with incompetence, extravagance and disaster."

**Discrimination in Freight Rates** The Interstate Commerce Commission is about to resume its inquiry concerning the use of private car lines. Owing to complaints of shippers about the methods of such lines, the Michigan Central has ordered 500

refrigerator cars. It has repeatedly been suggested that the companies ought to displace the private cars on their roads by similar cars of their own. The Commission decided last week that in the cases of two short "industrial" roads in Illinois the division of the through rates was clearly disproportionate and amounted to the giving of unlawful rebates. In another case (against the Lake Shore road) the Supreme Court decided that the Commission could not compel a company to furnish data as to tonnage, earnings and receipts per ton on grain, coal or lumber carried in carload lots.—Wide circulation was given last week to reports from Washington that there was a sharp difference of opinion between Attorney-General Moody and the two attorneys (ex-Attorney-General Harmon and Mr. Judson) employed to prosecute the Atchison, Topeka & Santa Fé Railroad Company for paying unlawful rebates to a favored coal corporation. It was asserted that they desired to prosecute the company's officers with all possible vigor, because the latter had not only violated the law, but had continued to do so in defiance of the court's restraining order; and that Mr. Moody thought their program was too severe. This is the case with which Secretary Paul Morton may be connected by reason of his recent position as a prominent officer of the Atchison Company. Mr. Moody now denies that there was such a disagreement. It is reported that the question considered at a conference between him and the two attorneys related to the possible acquirement of immunity by a railway corporation owing to the testimony of its responsible officers (before the Commission or in court) as to violations of law, or because of the production, as evidence, of its books, showing such violations.—It is the opinion of Comptroller Tracewell, of the Treasury, that the Government has been promoting and profiting by a violation of the law against rebate discrimination. In connection with irrigation work in the West the Southern Pacific granted large concessions in freight rates to contractors for the transportation of their machinery and supplies. These con-

cessions were officially brought to the notice of contractors by the Government, in order that they might make allowance for them in their bids. In an official decision the Comptroller holds that the Government cannot lawfully make any agreement with a railroad company that certain contractors shall enjoy rates lower than those which other shippers must pay. The assertion that by these concessions the Government would save more than \$100,000 a year is, to his mind, a cogent reason why it should not be a party to such discrimination. Secretary Hitchcock does not agree with him, but at his suggestion the question has been referred to the Attorney-General. The Government may lawfully receive concessions in rates upon its own property, but the Comptroller holds that in this case it accepts or procures such concessions for private persons, the contractors. Those who criticise his opinion point out that these concessions were openly made and advertised; that there was practically no competitive traffic of the same kind and that there was nothing to suggest the secret rebates that are granted for the profit of some shippers and the injury of others.

**The Philippine Islands** Pedro Roxas and several other wealthy natives have been arrested and are held in custody on a coastguard ship for giving supplies to ladrones in Luzon. It appears that in return for the supplies and other aid the bandits agreed that the contributors' herds and other property should be free from attack.—The cars of the new trolley system in Manila were started on the 10th by Commissioner Forbes. There are forty miles of track, and there were only eight miles of the original horse-car line.—Proceedings for the forfeiture of the franchise of the telephone company doing business in Manila have been begun by the Commission, because the service is poor and the wires are improperly placed. The city will probably invite bids for a new franchise.—Capitalists and railway men in Chicago are said to be completing plans for investing in 700 miles of new railroad, under the provisions of the law

which empowers the insular Government to guarantee interest on the construction bonds.—It is expected that the Governor-General of Australia will invite Secretary Taft and his party to visit that country, the expense of the journey to be paid by the Australian Commonwealth.—The first complete census of the islands has just been published at Washington, in four volumes. It is estimated that the population (now 7,635,426) is a little more than four times as great as it was 100 years ago. The average age is 23.9 years (against 26.3 in the United States); the average family consists of 4.7 persons; more than one-half of the inhabitants can neither read nor write; the average farm is only  $8\frac{1}{2}$  acres, and the great agricultural resources of the islands have "scarcely been touched." In 1902 the death-rate was 63.3 per thousand, and in 1903 it was 47.2; but these were cholera years, and it is thought that the normal rate is about 32. Statistics for fifteen years show an average birth-rate of 48. Wages have practically been doubled since the beginning of American rule. Pauperism is almost unknown, except in times of pestilence or after the destruction of crops. During 1902 only 1,668 paupers were maintained at public charge.

#### The Italian Cabinet and Railroad Policy

The new Cabinet under Signor Fortis has presented its program to the Italian Parliament and it has been accepted, altho not very enthusiastically. The new Premier announces that he will carry out the policy of his predecessor, Signor Giolitti, which was approved by the people in the recent general election. The new Cabinet contains five new men, none of them of any prominence or marked ability. Like the preceding Zanardelli and Giolitti Cabinets, it is almost entirely composed of members of the Left, but is not sufficiently radical to placate the Socialists, who will oppose it strongly by obstructive tactics. Signor Tittoni remains as Minister of Foreign Affairs, which implies a continuance of the policy of a closer relation with France without breaking off with the Triple Alliance. Signor Fortis promises reforms in taxation and the protection of a sound financial situation and

the strengthening of the defensive resources of the country, especially of the navy. The most important and most difficult task proposed is the nationalization of the railroads, in which the plan proposed by Signor Tedesco will be followed, altho the clause making it a penal offense to strike may have to be dropped on account of intense opposition of the railroad unions as manifested in the recent "passive resistance" of the employees. The reason for the assumption of the railroads by the State is stated to be that it is impossible for private enterprise to manage railroads under modern political and social conditions. The railroad conventions will expire on June 30th, when the Government will take over the management of the Adriatic, Mediterranean and Sicilian lines, leaving most of the lines of the old "Southern Company" for further consideration. There will then be 10,560 kilometers under Government control and 2,050 kilometers in private hands. Altogether \$200,000,000 will have to be expended by the Government, about half of it immediately, to buy out the present companies. The roads are to be improved and extended and more rolling stock purchased in the expectation of a great increase in the traffic, to be paid for directly out of the treasury. A Council of Administration in Rome will have the general control, and subordinate boards of directors will have charge of the divisions of the roads. A great improvement in the condition of the employees is promised. Their income tax will be reduced from 9 to  $7\frac{1}{2}$  per cent., promotion will be more rapid and the employees will have a share in the profits of the railroads. A sum of \$320,000 will be expended annually for pensions to their widows and orphans. All disputes will be settled by arbitration. Each branch of the railroad service will elect a council of its own and the presidents of these councils will form a committee to treat with the administrative board. In case these cannot agree the matter will be settled by a special board of arbitration, composed of a Councilor of State, two legal representatives, two representatives of the railroad administration and two of the labor organizations. The railroad employees evidently think that they

can gain more by keeping up their fighting organization than by any Governmental favors, and a general strike was ordered on April 17th, which will seriously inconvenience the Easter tourists as well as general business. The Government will endeavor to keep at least one train a day running on the principal lines by means of cavalry patrols along the track and soldiers at the stations and on the cars. Premier Fortis has made the following announcement to the Chamber of Deputies:

"We still hope with persuasion to bring the railway men to reason, but if these means are insufficient I declare the Government knows its duty and how to accomplish it with the approbation of the Cabinet, trusting to have the approval of the public, which wishes to prevent arrogance by the railway men. I can state that public order will be maintained everywhere, and also that the public will be served within the limits of possibility. The Government feels that it has the moral and material strength to accomplish what it considers to be its right and duty."

#### Famine in Spain

A terrible famine prevails in Andalusia on account of the long continued drought, and it is impossible to supply all the starving with food. Bakers' stores in the towns have been plundered and a mob of hungry peasants in attempting to capture the military granaries at Lebrija, near Seville, set them on fire and destroyed them. The King has reduced the duties on corn and flour during the distress. Wagons distributing bread were attacked by the starving people along the roads and much of the food wasted. In Barcelona the unemployed made a riotous demonstration against the festivities of carnival while 40,000 people are starving. The Bishop of Malaga, preaching in the Cathedral of Madrid, denounced the selfishness of the rich and declared his willingness to sell the episcopal jewels to provide food. The Government has established municipal bakeries, but the measures for the relief of the famine sufferers are altogether inadequate. Rain has at last come, but too late to save the cattle, many of which have died of starvation.—In Madrid a water reservoir in the course of construction fell on April 8th, crushing several hundred persons. The cause of the disaster was the

giving way of the pillars supporting the cement vaulting. As the engineers and workmen had both reported the work unsafe, the Government is blamed for it, and processions of thousands of workmen and women bearing black flags made a demonstration near the place on the following day and came into collision with the police.—Señor Cañalejas, president of the Academy of Jurisprudence, recently delivered an address before that body, which the King attended, on the deficiencies in Spanish army hygiene, calling attention to the fact that the mortality was twice as great as in the French army, and giving his own observations on the causes of the terrible death rate in the Cuban hospitals during the Spanish-American war.—The Nozaleda incident seems to be closed by the appointment of Father Nozaleda to a position in the Sacred College at Rome. He was appointed to the archbishopric of Valencia, but was not able to enter upon the duties of the office on account of the bitter opposition of the people, who accused him of being a traitor to his country because of his friendliness to the Americans after the surrender of Manila, where he was Archbishop. The Government exerted all its power in his favor, but was not able to overcome the opposition. The editor of *El Pais* was sentenced to imprisonment for three years and to pay a fine of \$5,800 for slandering the Archbishop.—The Pope and the King of England are both reported to have consented to the betrothal of King Alfonso with the Princess Patricia of Connaught.—The final results of the elections give the following as the composition of the Cortes: Conservatives, 358; Liberals, 109; Democrats, 101; Republicans, 37; Carlists, 17; Romerists, 8; other groups, 20. This insures the stability of the present Conservative ministry.

#### The Hungarian Crisis

The efforts of the Emperor Francis Joseph to effect a compromise with the Hungarian nationalists have proved in vain, and after 17 days spent in Budapest in attempting to find some ground of agreement and some man who could organize and maintain a Cabinet he has abandoned the hope and returned to

Vienna. The large majority against the Tisza Government in the last election has strengthened the Opposition and they are determined not to support any Ministry unless great concessions are made in the way of Hungarian commercial, linguistic and military independence. It is now two months since the Tisza Government was discredited and the Emperor has had personal interviews with leading men of all parties, but no one has been able to form even a transition Cabinet. At one time it appeared that a compromise was possible, for Franz Kossuth as leader of the coalition of the Opposition had come to an agreement with the Emperor that the question of the use of Magyar as a language of command in the army be postponed for two years and that the ordinary appropriations and legislation necessary for the regular number of Hungarian recruits be passed. On the other hand, the Government was not to ask for an increased number of Hungarian recruits and not to demand for two years the payment of the extraordinary army appropriation of \$90,000,000 voted by the delegations at the last meeting. On presenting this to the Executive Committee of his party Kossuth found it impossible to gain their consent to it, for the extremists would not allow a postponement of the language question. Kossuth himself repudiated the compromise when he discovered that all but \$15,000,000 of the extraordinary appropriation had been already pledged by the Government in authorized contracts. The Emperor believes that the extreme limit of safe concessions has been made. "For the sake of the Austro-Hungarian monarchy, for the sake of the dynasty and, above all, for the sake of Hungary herself I cannot and will not give way," he is reported to have said. At the re-assembling of the Hungarian Chamber of Deputies two motions were made by Franz Kossuth, both of which were adopted by a vote of 188 to 86. The first provided for the annulment of the Daniel law and the complete effacement of all mention of it from the records of the Chamber. This law restricting debate was forced through somewhat illegally by Count Tisza in order to put a stop to the dilatory tactics of the Opposition. The second motion provided for the ap-

pointment of a committee of 21 to draft an address to the King on the constitutional solution of the crisis. This will urge parliamentary reform, the extension of the franchise, reform in taxation, economic independence and the use of Magyar and of distinctive badges in the Hungarian regiments. A motion of censure was also passed against ex-Premier Tisza for having raised the pension of the late President of the House, Perczel von Bonyhad, from \$1,600 to \$3,000 for carrying out his dictatorial policy. The Chamber then adjourned till May 3, when the discussion of the speech to the throne will begin. After the conclusion of the debate Count Tisza will retire definitely and may be succeeded temporarily by Minister of Finance Lukacs or Minister of Commerce Hieronymi.

#### Disorders in Russia

The Revolutionary Socialists continue their propaganda by means of papers and tracts, and of demonstrations at the funerals of persons killed by the police in street riots. The identity of the assassin of the Grand Duke Sergius has been at last established. His name is Kalaieff, and he is the son of a Warsaw police inspector. He was a student in the University of St. Petersburg, but was expelled in 1899 for taking part in political demonstrations.—Maxim Gorky, the author, or as he is called in the indictment, "Alexis Maximoff Peschkoff, an artisan of Nizhni-Novgorod," is charged with treason on the basis of a document found in the residence of Eugene Kedrine, an advocate of St. Petersburg, which was written by Gorky, according to the prosecution, for publication, with the intent to overthrow the Government and create disorder. Among the incriminating passages are the following:

"Emperor Nicholas was informed of the character of the workmen's movement and of the peaceful intentions of his late subjects, the innocent victims killed by the soldiers, but, notwithstanding this knowledge, he allowed them to be massacred. We therefore accuse him also of having caused the killing of people who in nowise provoked such measures.

"We declare that such an order of things cannot longer be tolerated, and call on all citi-

zens of Russia to enter into an immediate and relentless universal struggle with the autocracy."

It is not likely that Gorky will ever be tried, as he has been permitted to go to the Crimea for his health.—The Putiloff Iron Works in St. Petersburg are closed. The discontent among the workingmen is increasing and order is maintained with difficulty by Cossacks in the streets. Sixteen Cossack regiments recently mobilized and ordered to the front have been recalled and stationed in industrial centers.

#### The Russian Fleet

The report that several of the principal battleships of the Baltic Squadron were missing when it passed Singapore is now thought to be erroneous. Russia has seven battleships and Japan four or five. In cruisers the Japanese are superior. Admiral Rojestvensky has continued steadily northward up the coast of China by the main trade route unmolested by the Japanese. No attempt is made at concealment except that no lights are shown. By April 17th the Russian fleet had reached latitude 17 north going toward Formosa, where it is supposed the Japanese await them. The position of the Japanese fleet has, however, been carefully concealed. The Russian hospital ship "Orel" put in at Saigon, French Cochin China, on April 13th and remained 36 hours, taking on board 900 tons of coal, besides food and medicine. Part of the Russian ships were reported to be in Kamranh Bay, Cochin China, but the reports differ as to their number. Another portion of the fleet was seen April 16th in Turan Bay, 350 miles north of Kamranh Bay. The Japanese have captured a number of colliers.—The situation in Manchuria appears virtually unchanged. The Japanese are slowly moving northward with the left wing under General Oku and the right wing under Generals Kuroki and Kawamura in advance of the center, which is on the railroad and under the command of Generals Nogi and Nodzu. Russian estimates give the Japanese strength at 475,000 men. Official returns give the total Russian loss in killed, wounded and prisoners in the battle of Mukden as 107,000. A Japa-

nese column is reported approaching Vladivostok through Northern Korea. Kirin is likely to be attacked from the east and south at any time, as a large Japanese force is reported to be pressing north on the Russian left.

#### The Moroccan Difficulty

It is reported from Tangier that the Sultan of Morocco has definitely rejected the French reform proposals and that the embassy of M. Saint-René Taillandier will be forced to leave Fez. Whether this is true or not there is no doubt that the recent visit of the Emperor William of Germany to Tangier has decidedly checked the extension of French influence in Morocco. The German Government will lose no time in making itself solid at the court of the Sultan. Without waiting for the arrival of Dr. Rosen, who has been appointed Minister to Morocco, the Chargé d'Affaires of the German Legation at Tangier, Count von Tattenbach-Askold, will proceed at once to Fez to negotiate a commercial treaty between Germany and Morocco. According to French opinion Germany received little satisfaction in her attempt to induce the Powers to interfere in Morocco to protect their commercial rights against French aggression. With the possible exception of Austria all the countries followed the example of the United States in refusing to interfere. M. Delcassé will not resign his position as the French Minister of Foreign Affairs, for he has the support and confidence of the Government, notwithstanding the fact that his African policy is not working smoothly. He has, however, approached Prince von Radolin, the German Ambassador at Paris, for the purpose of coming to an agreement with Germany on the Morocco question.—On April 9th the rebels supporting the Pretender attacked the town of Ujda from three points. The Sultan's troops were driven southward and were in a critical position when Lieutenant Mongin, in charge of the French frontier forces, opened fire with artillery and rescued the Moroccan soldiers. This may be the beginning of an aggressive military movement of the French for the penetration of the country from Algeria.

# The Church and the Reward of Iniquity

BY THE REVEREND WASHINGTON GLADDEN, D.D., LL.D.

MODERATOR OF THE CONGREGATIONAL COUNCIL

I AM opposed to the reception of the money offered to the American Board by John D. Rockefeller primarily because I do not think that the money thus offered rightfully belongs to the man who offers it.

Mr. Rockefeller's fortune has recently been estimated by a man who is reputed to be a financial authority in Wall Street as approximating one thousand million dollars. All this has been gathered within a generation. No intelligent student of commercial affairs believes that any such amount of money could be accumulated in so short a period by fair and honorable means. The bulk of the fortune raises a strong presumption against the legitimacy of the means by which it has been acquired.

It is claimed by some of those who advocate the acceptance of the money that no proof exists of its having been illegally acquired. The ignorance of some of these apologists is almost equal to that of Mr. Rockefeller himself. No witness ever placed upon the stand in any court has displayed an ignorance so comprehensive and far-reaching and colossal as that which Mr. Rockefeller, under oath, has revealed respecting his own business.

It is worth while in passing to illustrate this point, for it throws light upon this entire subject. "The South Improvement Company" was one of the schemes invented by the Standard Oil magnates by which the railways were used to plunder their competitors and enrich themselves. The organization and the methods of this company were abundantly proved in court, and the company was driven out of business. A few years afterward, before a Committee of the New York Legislature, Mr. Rockefeller, under oath, took part in the following colloquy:

"There was such a company?"

"I have heard of such a company."

"You were not in it?"

"I was not."

Mr. Lloyd appropriately adds: "So help me God!" On the same day another of the former trustees and one of the closest associates of Mr. Rockefeller, being asked by a Congressional Committee who made up that South Improvement Company, named as among them the principal members of the Standard Oil Company and at the head of them all stood the name of John D. Rockefeller.

Again, when Mr. Rockefeller was asked by the New York Legislature whether the companies under his management had not had more favorable rates from railroads than other refineries he replied:

"I do not recall anything of the kind."

"You have heard of such things?"

"I have heard much in the papers about it."

(*Testimony, Trusts, New York Senate, 1888, p. 420.*)

And again, under oath, he made the following reply:

"Do I understand you that they [the Standard Oil managers] have not sought in any way to make the operation of refineries outside the Trust so unprofitable that parties would either come into the Trust or have to abandon the business—has anything of that sort been done?"

"They have not; no, sir, they have not."

All this must be borne in mind in reading the statements now made in behalf of this system by its officers and by the attorneys under whose advice such testimony was given. It is evident that their memory is not at all to be depended on.

But if they have forgotten nearly everything, there is no good reason why the rest of us should forget. The mass of evidence which has been spread before the country by investigating committees of Congress and of the State Legislatures, and in the records of courts, makes the confessed ignorance of men who are called to be public teachers rather inexplicable. It is impossible here to reproduce this

testimony. It has been summarized by Mr. Lloyd and Miss Tarbell, and either by abundant citations or by the reproduction of documents opportunity is given to every reader to verify the statements made. To represent either of these books as based on "mere rumor" is to exhibit gross ignorance or something worse. They are carefully digested evidence, and they put it within the power of every intelligent man to find out whether they are true or not. I will refer to only two or three facts which bear directly upon the legality of the methods by which this fortune was heaped up:

In 1885 a transaction was investigated before the Federal District Court in this city in which it was proved that the Standard Oil Company had, by methods of its own, coerced the receiver of a railway into carrying its oil for ten cents a barrel, while it charged its competitors twenty-five cents, and paid over to the Standard the extra fifteen cents of its competitors' money. The contract was annulled by the court, the receiver was removed from office; the upright judge, in delivering his decision, applied to the transaction such terms as these: "Abhorrent," "dangerous," "gross," "illegal and inexcusable," an "unparalleled wrong." And added: "A judge who would tolerate such a wrong or retain a receiver capable of perpetrating it ought to be impeached and disgraced from his position."

This is the characterization by a court of a kind of business which the Standard Oil Company carried on for several years. Mr. A. J. Cassatt, of the Pennsylvania Railroad, testified before the New York Investigating Committee "that in eighteen months the railways had paid to the Standard the sum of \$10,000,000 in rebates." (Hudson's "Railways and the Republic," p. 84.) It was after this that Mr. Rockefeller swore that his company had never, no never, received any favors whatever from the railroads.

Thus it was, by a method characterized in court by such strong words as those of Judge Baxter quoted above, that the foundations of this vast fortune were laid. With such a power accumulated and ready to be wielded in the destruc-

tion of its rivals, the Standard Oil Company marched on, conquering and to conquer.

During the decade between 1882 and 1892 "Standard Oil" was organized as a "Trust," in which were included a large number of corporations. In 1892 the Supreme Court of Ohio pronounced this "Trust" illegal and ordered it dissolved. It must, then, have been illegal through the entire period of its existence. The court did not create the law, it interpreted it. The money which was made in all that decade was made in contravention of the law. The fact that ten years elapsed before any one was found with courage enough to apply the law does not make its gains for that decade legitimate. It was disobeying the law all that time and presumably knew it. The able lawyers employed by it were showing it how to evade the law.

In 1898 and 1899 an attempt was made by the Attorney-General of Ohio to find out whether the order of the court dissolving the Trust had been obeyed. The company was ordered to produce its records, and about that time sixteen boxes of books were taken from the Standard offices in Cleveland and burned. These books, the officers of the Standard contended, were not the ones wanted by the court. "Then produce the ones we want," replied the court. But they never were produced. For what reason? Because, said the officers, if we produced them we might incriminate ourselves. Here is the statement made by the Secretary of the Standard Oil Company of Ohio:

"Because the books disclose facts and circumstances which might be used against the Standard Oil Company of Ohio tending to prove it guilty of offenses made criminal by an act of the Legislature of Ohio, passed April 19th, 1898;

"Because they disclose facts and circumstances which may be used against myself personally as an officer of said company tending to prove me guilty of offenses made criminal by the act aforesaid."

When these gentlemen come into court and swear that their own books prove them guilty of criminal practices, I submit that we have something more than mere "rumor" and "gossip" tending to show that their money has been illegally acquired.

It is not needful to multiply these proofs of flagrant lawlessness. These are all matters of record. Even those to whom no gains are discredited unless they have been gotten illegally might, I should think, find some reason for scruple in the facts which I have cited. And the insistent patter of some talkative people that the objection to this money is based on mere suspicion or hearsay may as well stop here. The people who are making these objections have some knowledge of the facts with which they are dealing. All these legal proceedings in which judgment has fallen upon the Standard Oil Company have taken place within a stone's throw of the place where I am writing.

But the doctrine that no gains are infamous but those which have been condemned in court is hardly worthy of Christian teachers. How large a part of this enormous fortune has been gained by the direct infraction of the law I do not know. But a great deal of the rest of it has certainly been won by methods which, if legal, are utterly indefensible. This system has always employed astute lawyers whose function it has been to find ways of doing injustice without incurring legal penalties. I suppose that most of its operations in later years have been those for which no legal remedies have yet been found, but they are none the less oppressive and accursed. In the April number of *The World To-Day* Mr. Charles A. Prouty, of the Interstate Commerce Commission, makes this statement:

"Railways assert and most people assume that the principal evil is the rebate. In the past this has been true, but the Elkins bill and other causes have largely abated this abuse, and railway self-interest can be relied on to check it still further in the future. *Discrimination in the published rate itself is likely to be much more serious than the rebate. The great Trusts and monopolies exercise to-day such control over railway management that they can adjust rates in their own interest. The Standard Oil Company no longer accepts rebates—it makes the rates themselves; and the discriminations in its favor are worth enormous sums annually to that monopoly.*"

This is not rumor or guess work; it is the testimony of an officer of the United States whose business it is to deal with

the entire problem, and it presents a tremendous fact. The power which it describes is the power under which this gigantic aggregation of capital has been built up. It is a power which may be and which often is used for the oppression of the whole people. It is the most dangerous enemy now threatening industrial freedom. Its heavy hand is felt in every direction; it dictates to railway officials the terms of transportation; it controls a large part of the mining wealth of the nation; its sway in the realm of finance is despotic, giving it the power to ruin the credit of those who do not bow down to it.

It is not merely on account of what this gigantic power has done in the past; it is on account of what it is doing to-day that it ought to be counted a public enemy. The story of the last few months in Kansas reveals its nature and its motive quite as clearly as anything it has done in the past. It is now, as it has always been, an oppressor of the people. Its methods of robbery are more genteel and much more cowardly than those of the highwayman or the pirate, but they are not less flagitious. The man who, upon a railway directory exerts his influence to establish rates or policies by which he aggrandizes himself by despoiling his business competitors is, in the sight of God, just as truly a robber as the man who puts his pistol to your head in a dark alley. Unless the people can learn to discern and punish these cryptic injustices which are woven into the very fabric of our modern industrial system, there will soon be no hope for liberty here except as the result of a revolution.

Is it necessary to argue that the wealth which has been heaped up by these organized piracies does not rightly belong to the men who have it in their hands? It is not rightfully theirs. Therefore they have no right to give it. And what they have no right to give we have no right to take. That is the everlasting truth, and wo to the Church that blurs it with sophistries and refuses to hear and heed it.

But are there not others equally culpable, men cry; why single out this case for special condemnation? Because, I answer, this is the clearest, the most conspicuous, the most aggravated case.

It is a case, as I have shown in this article, in which investigation has been thoroughly made, and concerning which the truth is known. The operations of this system have been more daring, more lawless and more successful than that of any other aggregation of wealth. Because this is the arch-enemy he is the first to be attacked. If the Church is ever going to array itself against the power of Mammon which threatens to undermine morality, paralyze religion and overthrow liberty, this is the time to bear her testimony. Settle this question the right way and it will be comparatively easy to deal with those that follow. Settle it the wrong way, and you have established a precedent whose influence upon the life of the Church will be deadly.

I must own that many of the arguments which I have heard in favor of the acceptance of this gift have revealed a confusion with respect to the primary principles of ethics that is astounding. Has the worship of money completely blinded our eyes? We hear men contending that the Church has no right to refuse any gift, no matter from what quarter it may come. "Any money is good money," men say. "It is stupid to cavil about money. The worst man's dollars will go just as far in saving souls as the best man's." They would have taken Judas's thirty pieces of silver, I suppose, and used them for missionary purposes. Even the Sanhedrim could not quite do that.

The astonishing statement has been frequently made that the Church has always received all money laid upon her altars, from whatever source. It might be well for such moralists to refresh their ethical perceptions by turning to Deut. xxiii, 18, or by listening to this testimony from Uhlhorn:

"As the Church would have no forced gifts,

so it would have none from persons who did not in spirit belong to her, who did not give from love or from property rightly acquired." ("Conflict of Christianity with Heathenism," page 199.)

Certainly if any ethical principle respecting property is clear, it is the principle that property which is not rightfully held cannot be rightfully given nor rightfully received. "The partaker is as bad as the thief" is a maxim whose validity it is not best to dispute, even in the interest of missionary revenues.

The secular newspapers, so far as I have had opportunity of judging, and I have seen a great many of them, are generally clear on this point. It is the "religious" papers that surprise me. Says the *Memphis Appeal*:

"Captain Kidd was a pirate. If he had quietly dropped into a New England town some night and left a lot of stolen goods with a 'fence' to be disposed of, the 'fence' would have been liable under the law. If on the other hand he had made his way to a parsonage, told the minister who he was, and said that he wanted to make him a present of 10,000 Spanish doubloons to build a new chapel, what would be thought of the preacher who could accept that which it would be a crime for the fence to receive? Certainly if it is illegal and immoral for a private individual knowingly to receive stolen goods, it is immoral and improper for a religious organization to do so."

There are many other phases of this question, some of which I have tried to treat elsewhere. I trust that the discussion is going to result in a great awakening of the conscience of the American Church with respect to its relations to ill-gotten riches. Most certain it is that the wealth which has been won by wickedness can be only a curse to him who has won it and to them who covet it. The more of it the Church gets the feebler will be its life, and the wider and deeper the gulf between it and the millions of the honest working people.

COLUMBUS, OHIO.

# The Correspondence on the Rockefeller Gift

BY JAMES L. BARTON, D.D.

[The following is the statement by Secretary Barton, of the American Board of Commissioners for Foreign Missions, addressed to the corporate members of the American Board, containing the correspondence as to the Rockefeller gift, and it has not elsewhere been published.—EDITOR]

IN order to a clear understanding among all parties of the history of the gift of Mr. Rockefeller to the American Board, and also to correct impressions made by a brief interview with myself which has been widely distorted and misunderstood, the following statement is made, accompanied by essential correspondence in the case. This statement deals only with correspondence and activities centering in the rooms of the Board and does not include reported potent influences from within the family itself calling Mr. Rockefeller's attention to the American Board, its work and its needs.

The first intimation coming to an officer of the American Board that any one in Mr. Rockefeller's family was or could be interested in the American Board or in mission work outside of his own denomination was received through a letter to me from John D. Rockefeller, Jr., bearing date April 17th, 1902, in terms as follows:

"In a recent conversation with Mr. John R. Mott regarding his views of the general missionary field and impression of missionary work derived from his recent trip he spoke of you as familiar to quite a degree with the conditions of foreign missions. If you are to be in New York within the next few weeks, and find it convenient and agreeable, it will give me much pleasure to see you for a few moments in my office for a little talk on this general question."

This resulted in an interview as suggested, held in the office of Mr. John D. Rockefeller, Jr., on the 23d of April of that year. During this interview, in addition to general conversation upon the work of the American Board, I set forth the operations and needs of the higher collegiate institutions of the Board located in nine different countries of the

world. The great need that I emphasized was of permanent endowments in order that the treasury of the Mission Board might be relieved of an annual contribution to those institutions.

Nothing having come of this conference, on April 14th, 1903, I wrote Mr. John D. Rockefeller, Jr., as follows:

"When in response to an invitation from yourself a few months ago we had an interview about foreign mission work, you fully discharged all obligations to me and the Board I represent. I say this that you may understand that upon our part no claim is supposed to exist. I do make bold, however, to ask if you will be willing, and, if willing, able to grant me some time during this month a brief interview upon the subject of the status, organization and specific work of the American Board of Commissioners for Foreign Missions?"

A reply was received from John D. Rockefeller, Jr., to that letter, stating that his father "is not prepared to consider a contribution to the work of the American Board of Commissioners for Foreign Missions," and expressing the fear that a conference would be unfruitful.

On Sunday morning, October 18th, 1903, I presented the work of the American Board in the Congregational Church of Montclair, N. J., Rev. Dr. Bradford, pastor. The confidential agent of Mr. Rockefeller, Mr. F. T. Gates, who is a regular attendant of that church, was in the audience, and after the service we were introduced by Dr. Bradford, and brief conversation ensued regarding the work of the Board that had been presented. This conversation has no other significance than that I there became personally acquainted with Mr. Gates.

On December 22d, 1904, I wrote to Mr. F. T. Gates the following letter, which is quoted entire:

"I am taking the liberty of sending you under another cover a little booklet recently issued by the American Board containing a brief statement of each one of the eighteen collegiate institutions organized and maintained in different foreign countries. I would call your attention to pages 5 and 6, which report the local body controlling each individual institution.

"There is any amount that might be said of the value of these institutions to the countries and people where they are located. The number of students is somewhere about four thousand, and the influence of the graduates and pupils in these schools as they go out among their peoples is simply boundless. Some of these institutions are in need of money for buildings, and all of them for endowment. The total amount required is astonishingly small viewed from the standpoint of their influence and the work they are doing and the number of students which they reach. I should be glad of an opportunity to make further explanations along this line.

"My purpose in writing you is to ask if you think there would be an opportunity of bringing these institutions to the attention of Mr. Rockefeller with a view to securing from him funds for endowment, in whole or in part? I shall be very glad of your advice in the matter. I do not believe there is a case which comes to his attention which is of greater importance or one that offers opportunity for investment of money where good would be more permanent and far-reaching than that offered through these eighteen collegiate institutions connected with the American Board of Commissioners for Foreign Missions.

"I am also sending you under another cover a copy of the last annual report of this Board that you may understand its organization and the scope of its work."

Mr. Gates replied, under date of December 23d, as follows:

"I beg to acknowledge your letter of December 22nd. Any letter which you might care to write, addressed to Mr. Rockefeller at this office, would receive the careful attention of those whose business it is to prepare and to present for his consideration questions relating to his philanthropic work. It would probably not be convenient for Mr. Rockefeller to arrange for a personal interview. He has found it necessary for many years to conduct his philanthropic work through his son or through persons appointed for this purpose—by correspondence.

"The question of endowing institutions of learning under the general control of American missionary societies in foreign lands has been presented often and urgently to Mr. Rockefeller's attention. He has not hitherto

thought it wise to endow missionary societies, nor for the present generation of Americans, either directly or indirectly, to attempt the permanent endowment of schools in foreign lands. The question of the current expenses of such institutions or of the erection of necessary buildings involves other considerations, and for such work he has sometimes made contributions."

Under date of December 28th I sent a statement of specifications to Mr. Gates, but addressed to Mr. John D. Rockefeller. This statement is too long to quote in full, but a sentence or two from it may make its import and purpose plain. Preliminary to the statement of specific needs calling for support I said:

"I take the liberty herewith to present to you a few imperative needs in connection with the great work of this Board in several of its missions and which cannot now be supplied from the regular income of the Board. If these several sums can be secured a necessity will not be created for a similar grant again; in most cases it will reduce rent, expenses and present cost, while greatly enlarging the efficiency of the work accomplished. I will add that all this work is under the direction and care of this Mission Board; it is an integral part of its work and is administered with the economy, precision and efficiency with which all the operations of this Board have been conducted during the ninety-four years of its well-known history. The special and immediately pressing needs to which I would earnestly call your attention are the following:"

This was followed by a detailed statement of ten specific needs in connection with the higher educational institutions and the publication, medical and individual work of the American Board in India, Mexico, Japan, Ceylon, Turkey, Bulgaria and Spain, with a total amount required of \$163,000. I said in conclusion:

"In no case is money asked here for any institution or work that is not well established and which has not become a part of the regular and permanent work for which this Board stands."

On January 19th of the present year a telegram was received from Mr. Gates stating that he would be glad to confer with me upon the subject of my letter whenever I should be in New York and find it convenient. I was in New York Monday night, the 23d of January, and had a conference with Mr. Gates and another confidential adviser of Mr.

Wouldn't It Be Embarrassing to Some of Our Prominent Citizens?—"Wait a Minute! How Did You Make that Dollar?"—From the *Chicago Tribune*.

Rockefeller at their office, beginning at 11 o'clock on Tuesday, the 24th of January. This conference was continued for about an hour and a half in the office, and adjourned for the evening to Mr. Gates's home in Montclair, N. J. During this conference the ten objects set forth in my letter of the 28th of December were gone over with minute, painstaking detail, and the policy of the American Board in regard to its foreign work was thoroughly discussed. The needs of these various institutions were set forth and the work they were doing.

Under date of February 11th, Mr. Gates wrote:

"In reply to your letter of December 28th, 1904, I am authorized by Mr. John D. Rockefeller to say that he will contribute to the American Board of Commissioners for Foreign

Missions the sum of one hundred thousand dollars (\$100,000), to be used for the following objects and to be apportioned among them according to the discretion of the Board."

Here followed a list of six of the ten general objects covered by my letter of December 28th, concluding with the statement that

"Mr. Rockefeller will pay this money as actually required by the Board for expenditure for the respective purposes."

This letter of Mr. Gates was received on February 13th and on the next day, the 14th, was reported to the Prudential Committee at its regular meeting.

Regarding acknowledgment of the gift Mr. Gates wrote:

"There is no reason known to me on Mr. Rockefeller's part why you should make any

distinction in the acknowledgment of this contribution from Mr. Rockefeller than if it had been made by any one else."

Up to the 14th of February, when the gift was announced to the Prudential Committee, I believe only three members of the committee knew that any appeal had been made to Mr. Rockefeller or to his agent. Some of the other officers of the Board had been consulted in regard to various steps of the correspondence and interviews, but the same general rule was followed in this case that is followed in all similar cases. For this reason, when the matter was brought to the committee on the above mentioned date, it came as a complete surprise to nearly all of them.

I never had any question whatever regarding the propriety and even duty of soliciting help for the needy institutions and work of the Board from Mr. Rockefeller, as from other people of means who are members in good and regular standing in Christian churches.

In all of the correspondence and con-

ferences with Mr. Gates only one question was considered, and that was, Will a gift to the work of the American Board accomplish the maximum amount of permanent good to the world? This question was studied for hours with maps, in the light of history, methods and policy. Only the highest motives known to Christian men entered into the discussion. Had any lower motive been hinted to me by them I would have withdrawn from the negotiations at once, and had I broached a lower motive to them I have every reason to believe that I would have been asked to withdraw.

In soliciting and in accepting this gift neither the Prudential Committee, the officers and members of the American Board, nor pastors and members of our Congregational Churches assume any obligation whatever to advocate the cause of or defend any individual or corporation, nor is any one by this gift to be restrained from absolute freedom of speech according to the dictates of his untrammelled conscience.

BOSTON, MASS.

## The Babe and the King

BY LOUISE DUNHAM GOLDSBERRY

IF I were a queen in a golden crown  
And Thou came by,  
A baby a-dream in her bosom,  
My jewels, my queendom, my bright gold crown.  
For a kiss on Thy palm I would lay them down;  
I'd lay them all down and I'd follow away  
That maid-mothered Babe in her bosom!

If I were a beggar in roadside dust  
And Thou came by,  
A King going down to his crowning;  
Oh, sweet to my lips were that beggar-crust,  
Oh, blest were my feet in the happy dust;  
For sunned in His shadow I'd fare me away,  
With the King going down to His crowning.

ALEXANDRIA, VA.

# Wagner's Home on the Lake of Lucerne

BY WILLISTON HOUGH

[In all probability more has been written and printed about Richard Wagner than about any other composer of music who ever lived. There are many biographies of him in various tongues. Yet despite all the writing about him one of the most interesting periods of his life, and one of the most important in view of the amount of creative work accomplished in it, has been kept in comparative obscurity because the two or three persons who were closely associated with the Wagner family during that period had, or fancied they had, good reasons for veiling from the public their information concerning the domestic life of the master. That period embraced the six years between Wagner's banishment from Munich and his final settlement at Bayreuth in 1872. Altho King Ludwig of Bavaria had been compelled by his subjects to banish his favorite, he showed his continued good-will by granting him an annuity of nearly \$4,000 and by paying him several secret visits. The money enabled Wagner to live in comfort in a quiet retreat after his own heart, which he found at Tribschen, a beautiful little promontory that juts into Lake Lucerne. For many years after Wagner left Tribschen no stranger was permitted to see the interior of the house; hardly, indeed, to enter the gardens. Mr. Hough was the first visitor allowed to make photographs of the interior of the villa, or of the grounds, and the only one who ever secured from Colonel am Rhyn his personal recollections of the man and the time. Inasmuch, therefore, as most of the facts are not known to any one else ever likely to reveal them, the following intimate account of Wagner's domestic life during the important years from 1866 to 1872 is unique as well as highly interesting. The Wagner-Liszt correspondence, which threw a flood of light on Wagner's earlier life, ended just before the Tribschen period began.—EDITOR.]

"You know how dearly I love the Lake of Lucerne; the Rigi, Pilatus, etc., are indispensable remedies to me and my blood."—*Letter to Liszt of March 25th, 1859.*

THE six years (1866-1872) of Wagner's quiet retirement at Tribschen,\* on the Lake of Lucerne, were unquestionably the happiest of his life. The long period of storm and stress preceding his friendship with the young King of Bavaria, in 1864, brought a succession of failures and disappointments that would have crushed any but the most heroic spirit; and the closing years at Bayreuth (1872-1883), full as they were of the triumph of his artistic genius, were yet darkened, and indeed the composer's life shortened, by the financial failure of the earlier plans for the national festivals.

At Tribschen alone, then, Wagner

\* Tribschen is an entailed estate which has belonged since 1792 to the Am Rhyn family, of Lucerne. The present head of the family, Herr Oberst Walther am Rhyn, Colonel fédéral, IV Army Corps, was Wagner's landlord, and on terms of the most friendly intercourse with him throughout the latter's tenancy. His almost intimate knowledge of the composer's daily life at Tribschen has long remained, for political and personal reasons, a sealed book. The writer is therefore under great obligations to the Herr Oberst, not only for permission to see the interior of the villa and to take a number of photographs of the house and grounds, but particularly for placing at his disposal so interesting a store of unpublished reminiscences. In addition he has, of course, carefully collated such published materials as there are relating to those years, and believes that he has been able to correct two or three widely circulated errors.

found more than momentary peace and security, and there he first found domestic happiness; while the idyllic charm of the lovely spot lying amid inspiring scenery, the stimulus of the marked successes that had finally come at Munich, and particularly the firm reliance on the support of the King for the realization of his great hope to stage the *Nibelung* dramas, brought him a power for work which filled these years with an amazing creative activity.

For to this period we owe the greater part of the "Meistersinger;" the third act of "Siegfried;" the orchestral sketch of the entire "Götterdämmerung;" the "Kaisermarsch," written to celebrate the victory over the French and the founding of the Empire; the "Siegfried Idyl;" the extensive "Memoirs," not yet published; three of his most important essays, including the profound study of Beethoven; and, in addition, the commencement of the publication of his "Collected Poems and Prose Writings," the editing of which must have cost an enormous labor.

The situation of the now historic villa is upon a point of land jutting into the lake on the south shore, about a mile and a half from Lucerne. The little promontory is pleasantly wooded, and on one

side slopes gracefully down to the water's edge, where there is an eastern frontage on a small bay; on the other, an abrupt bank, rising to twenty or thirty feet in height, and densely grown with shrubs and trees, gives an agreeable effect of privacy to the grounds. There is a profusion of flowers and an ample orchard on the southern slope, with a stretch of undulating meadow beyond. Opposite, the north shore of the lake is dotted with villas sleeping in the sun. The spot is profoundly restful; the level bosom of the lake greets the eye through the trees in an expanse of shimmering silver; the water ripples gently on the shore; there are inviting paths and half-hidden seats where the quiet and peace are deeply felt; the distant Alps do not

intrude, tho a sense of their dreamy companionship is never lost.

The house stands upon an elevation some three hundred feet from the lake front, and is a plain, commodious, old-fashioned structure. It has undergone few changes since Wagner lived in it.\*

\* A small balcony has been added at the front, to which glass doors give access from the upstairs drawing-room. The doorway through which Wagner dictated the score to Hans Richter has been walled in. A number of windows, permanently closed at Wagner's wish, have been reopened; two others, on the north side, he had caused to be walled in. Mr. Henry T. Finck is, of course, in error when he says ("Wagner and His Works," Vol. II, page 182, note) that Triebtschen is the property of an American (*Vid. supra*, page 1, note). The facts are that Triebtschen was leased from 1878 to 1888 to Mr. Willis Fleming, an Englishman, and again, from 1889 to 1891, to Mr. John Iselin, of New York. It is, however, true that during this period the premises were strictly inaccessible to visitors, since both these gentlemen refused admittance not only to the house but even to the grounds.

Tribschen Villa as it Appeared at the Time Wagner Lived in it. Presented by Herr Oberst am Rhyn

The Villa from the East Front as it Appears at the Present Time

Fireplace of the Private Salon Built at Wagner's Request

The composer's study was a small room on the first floor, opening on the south from the dining-room and communicating with the room occupied during working hours by his secretary, Hans Richter. There were two southern windows, the one nearer the piano being permanently darkened. The light in this room was always much subdued. The decorations were frequently changed, but the walls were last hung with green damask, the figures being bunches of red roses.

Here Wagner had his books, a few favorite pictures, an upright piano and a writing-desk. The piano stood against the wall near the door communicating with Richter's room. During composition this door was opened, but a portière was drawn across the entrance. Wagner often sat long in silence, meditating or jotting down his ideas in pencil, then he molded the still plastic phrases by the aid of the piano, and when a passage was ready he called out: "*Richter, pass auf!*" and played the passage, while Richter wrote it down from the piano dic-

tation. The young amanuensis sometimes sat by the hour waiting for his cue.\*

Communicating with Wagner's study on the other side was the principal drawing-room. The walls of this pleasant salon were hung with dark red satin, with curtains to match. Nearly in the center of the room stood a Bechstein grand. A wall-cabinet, a table and some chairs used by the composer still remain.

Opening off from the north side of the drawing-room, and communicating with the dining-room by an archway, was a small, narrow boudoir, which Wagner called the "*Galerie*," and which contained his principal pictures, the presents from King Ludwig, and other souvenirs.

Of chief interest on the floor above was Wagner's private salon, to which only his most intimate friends were invited. The furnishings were the most elegant in the house. Yellow

satin with figures in lilac covered the walls and also the ceiling, where it was draped from the center to a lower line at the sides, like the roof of a marquee tent. The curtain hangings were of the same material. Here also there was a grand piano, which was placed in the corner between the two windows.

In this room, on September 4th, 1870, Siegfried Wagner was christened. The ceremony took place in the late afternoon; the room was arranged to resemble a garden of palm trees, and was dimly lighted with candles; a beautiful service in silver stood upon a table draped in red velvet; at the moment the ceremony was performed soft strains of music floated up from the rooms below. The young Siegfried had as his godfather H. M. King Ludwig II of Bavaria, and as his godmother the Countess Caroline Waldbott-Bassenheim.

\* Richter was many months at Tribschen. As is well known, he copied the score of the "*Meistersinger*," and must have copied considerable portions of the "*Siegfried*" also. Presumably only the simpler phrases were communicated to him by direct dictation, the longer passages probably being written up afterward from the pencilled sketch.

Adjoining the private salon, and above the "Galerie," was a suite of two small rooms occupied by King Ludwig on his visits to Tribschen. The King was repeatedly Wagner's guest, particularly in the years 1866 and 1867, but always under the strictest incognito.

On the south, and above the studio and Richter's room, were Wagner's bedroom and boudoir. The composer's dressing-room was across the hall and next the King's suite. The furnishings were very dainty and somewhat feminine. Pink satin covered the walls, and over this was the finest Swiss embroidery. The toilet table also was draped in pink, and on either side were red wall-lamps.

In addition there were rich silk and satin bed covers in different shades for the several sleeping-rooms, and, more significant still, yards and yards of satin or brocade merely disposed upon chairs, or wherever the luminous and brilliant colors would be most effectively displayed.

The artist himself habitually dressed in satin or velvet, and the costumes he preferred for the morning hours were decidedly elegant, if somewhat fantastic. Catulle Mendès found him on one occasion in a morning suit of golden satin embroidered with pearl flowers, while the costume he usually wore at home is described as consisting of a black velvet coat, knee-breeches of gray satin, silk stockings, embroidered yellow slippers, flowered satin waistcoat, fashion of Louis Quinze, a large green silk scarf, tied *papillon*, and of course the famous black velvet beret cap, which he was almost never without. In the late afternoon, when he generally walked to town, he wore a black velvet coat and waistcoat, with knee-breeches, usually of gray. The children, too, were always dressed in the same rich materials, and had plumes for their caps.

Wagner's immoderate taste for costly draperies has been much commented upon. Apparently it was not a meaning-

Pieces of Furniture Used by Wagner

less indulgence in luxury, nor, in the matter of his costumes, due mainly to personal vanity. More probably it was a requirement of his esthetic nature; for he seemed to depend in no small degree for artistic stimulus upon his own dress and upon the colors and texture of the hangings of his studio and living rooms. The color-scheme in particular had to harmonize in its effect upon his feelings with the character of the work he had in hand; and, consequently, it was often necessary to change it *in toto* when he took up a new composition.

This involved the frequent repapering of his study and other rooms, and a complete change of the hangings. For this purpose the pictures, too, were often rearranged; but as often they were not touched at all. With the quaint eccentricity of genius, the fastidious and extravagant Wagner not infrequently gave orders to paper *around* but not *behind* the pictures; and when the house was finally vacated no less than six layers of superimposed wall-paper were found in the study cut out around the spaces where the pictures had hung! Significant also was the circumstance that, with all the luxury, there was but one change of linen in the house; so that when the King's visits were impending it was necessary to send off post-haste to the Am Rhyns for a loan.

Of kindred psychological interest is the marked preference Wagner manifested at this time for subdued lights. It of course suggests itself that he found that he was more sensitive to images of sound when the sense of sight was but slightly stimulated. A nearer explanation would be that he merely preferred the artistic effect of soft lights, and perhaps derived from the agreeable and soothing sensations a stimulus in his creative work similar to that supplied by costly fabrics.

In view of the amazing productivity of the quiet years at Tribschen a special interest attaches also to the disposition of the composer's day.

When Wagner first settled at Tribschen he seems to have performed the stupendous day's works with which he is credited by several writers, on the authority apparently of a single unnamed wit-

ness. That is, he rose early, and, as a rule, worked uninterruptedly until five o'clock! Later, however, when he had his family about him, the day was more humanely divided. His light breakfast of coffee and rolls was served at nine, then followed a short promenade in the garden, often in company with Frau Cosima; whereupon he went to his study and worked until two or three o'clock, sometimes taking a glass of wine with a biscuit in the interval, more often nothing at all. His day's work over, he dined "*mit gutem Appetit.*" And he "lived well," a statement illustrated by the added detail that he had "two or three kinds of wine a day!"

After dinner, in good weather, the artist went down by the lake and sat for an hour upon a rustic seat beneath the spreading branches of a mammoth tree; his huge black Newfoundland dog "Russ" usually sharing the siesta with him.

At this post he was occasionally disturbed by the curious, who came and waited in small boats for his appearance. If he saw that he was watched he always moved quickly away. His sensitive nature shrank with unusual dread from the intrusions of strangers, and any actual aggression he repelled with brusque severity. Thus, if he were spoken to upon the highway by some over-ambitious person, as not infrequently happened, his response was likely to be harsh in the extreme.

At five o'clock, skies permitting, Wagner walked to Lucerne, accompanied by "Russ." There he got his letters, did miscellaneous errands, and then resorted to a quaint old *café* in the narrow Furrengasse, kept by one Dubeli, where he was a recognized habitué, and was usually to be found with his glass of beer at a table by the corner window. Hans Richter also frequented Dubeli's, and was either merely saluted in silence by the master or greeted with a cheerful nod, and the words, "*Richter, zu mir!*", according to the composer's varying moods.

In a similar manner Oberst am Rhyn relates that in making an afternoon call he infallibly knew the state of the master's temper by the words in which he was invited to come in. If Stocker, Wagner's

The Frontage on the Bay

trusted servant, came back with the invitation to await the composer in the drawing-room and have a cup of coffee with him, Am Rhyn knew that no busi-

ness or matter of importance could be discussed on that day. If, on the other hand, he was invited to the dining-room to have a glass of champagne, he forth-

with understood that his host was in a good humor.

Decidedly the most important event in Wagner's life at Tribschen was his marriage with Cosima von Bülow. As is well known, his first marriage was not a happy one. The sympathetic comprehension, the spiritual companionship, the loyal daily protection from all harassing intrusions of the outside world, which Wagner so craved and so greatly needed, came to him first in the person and passionate devotion of Cosima Liszt. The atmosphere of peace and perfect sympathy which he thenceforth enjoyed was of incalculable value in his creative work. Yet for his ultimate achievement the importance of this union extended far beyond the range of domestic influences; for the eventual success of the Bayreuth festivals, indeed their continuance at all after Wagner's death in 1883, was mainly due to the energy, devotion and great executive talents of Madame Wagner.

The ceremony of the marriage of Richard Wagner and Cosima von Bülow took place August 25th, 1870, at the Protestant church in Lucerne, Frau von Bülow becoming a Protestant for the purpose.

One of the earlier biographers tells us that Wagner's joy in his children knew no bounds, and that he never could do enough for the little perpetuators of his race. He ordered whole pieces of heavy silks and hundreds of ells of garlands of roses to deck their rooms with. Of the young Siegfried he wrote in an oft-quoted letter to Frau Wille: "He prospers together with my work, and gives me a new, long life, which *at last has found a meaning.*" The beautiful "Siegfried Idyl," composed in honor of Siegfried, and performed as a surprise to Madame Wagner on the child's first birthday (June 6th, 1870),\* mirrors the depth of the master's peace and happiness, and has been forcibly called the "most expressive page in his autobiography."

Had it not been that the crowning ambition of Wagner's life—to stage the great trilogy, and at the same time to establish the national festival plays—found

a hopeful outlook in the national enthusiasm aroused by the Franco-Prussian War and the creation of the Empire, there can be little doubt that the composer would have elected to spend the remainder of his days amid the rural peace and domestic happiness of his Swiss home.

And tho the eventful arena to which he transferred his household gods in April, 1872, has come to be permanently identified with his achievements as an artist, and is, in fact, the site of the realization of his great project ("*Hier wo meine Wädhne Frieden fand*"), the fact remains that for the underlying creative work we are largely indebted to the quiet years spent in retirement on the shores of the Lake of Lucerne.

Two spots in the grounds at Tribschen, intimately associated with Wagner's life there, remain to be mentioned.

The approach to the villa of the driveway from Lucerne is by an avenue of splendid over-arching chestnuts, which on the one hand passes beneath the protection of a wooded slope, and on the other is bordered by the warmth and brightness of a rose garden. Here Wagner and Frau Cosima used frequently to walk up and down on fine mornings before he went to his task; or, as often, they sat upon a rustic bench at the end of the avenue near the house, where there is a view of the garden and of the green sward descending to the lake. As a source of delight to him, Frau Cosima was wont to appear on these morning walks in the garden with her wonderfully luxuriant hair flowing over her shoulders.

The other point of special interest is the secluded pathway which meanders in a peculiarly enticing manner up and down and along the steep wooded bank bounding the north side of the little promontory. All the enchantment of woodland seclusion lurks in the little natural balconies at the turns in the path, whence, as from some hidden coign of vantage, there are lovely glimpses through the trees of the lake below, or of the verdure of the opposite shore. Along this pathway, unobserved, and solicited by the many voices of nature, the master loved best of all to stroll and to linger. It was his "*Lieblingsspaziergang.*"

NEW YORK CITY.

\* W. J. Henderson is therefore doubly in error when he says, "In 1871 Wagner composed, in honor of the child and to celebrate his wife's birthday, the popular 'Siegfried Idyll.'" ("Richard Wagner: His Life and Works," page 134.) It may be added that the facts have long been very difficult to ascertain. See "*Die Musik*," Vol. VII, p. 132.

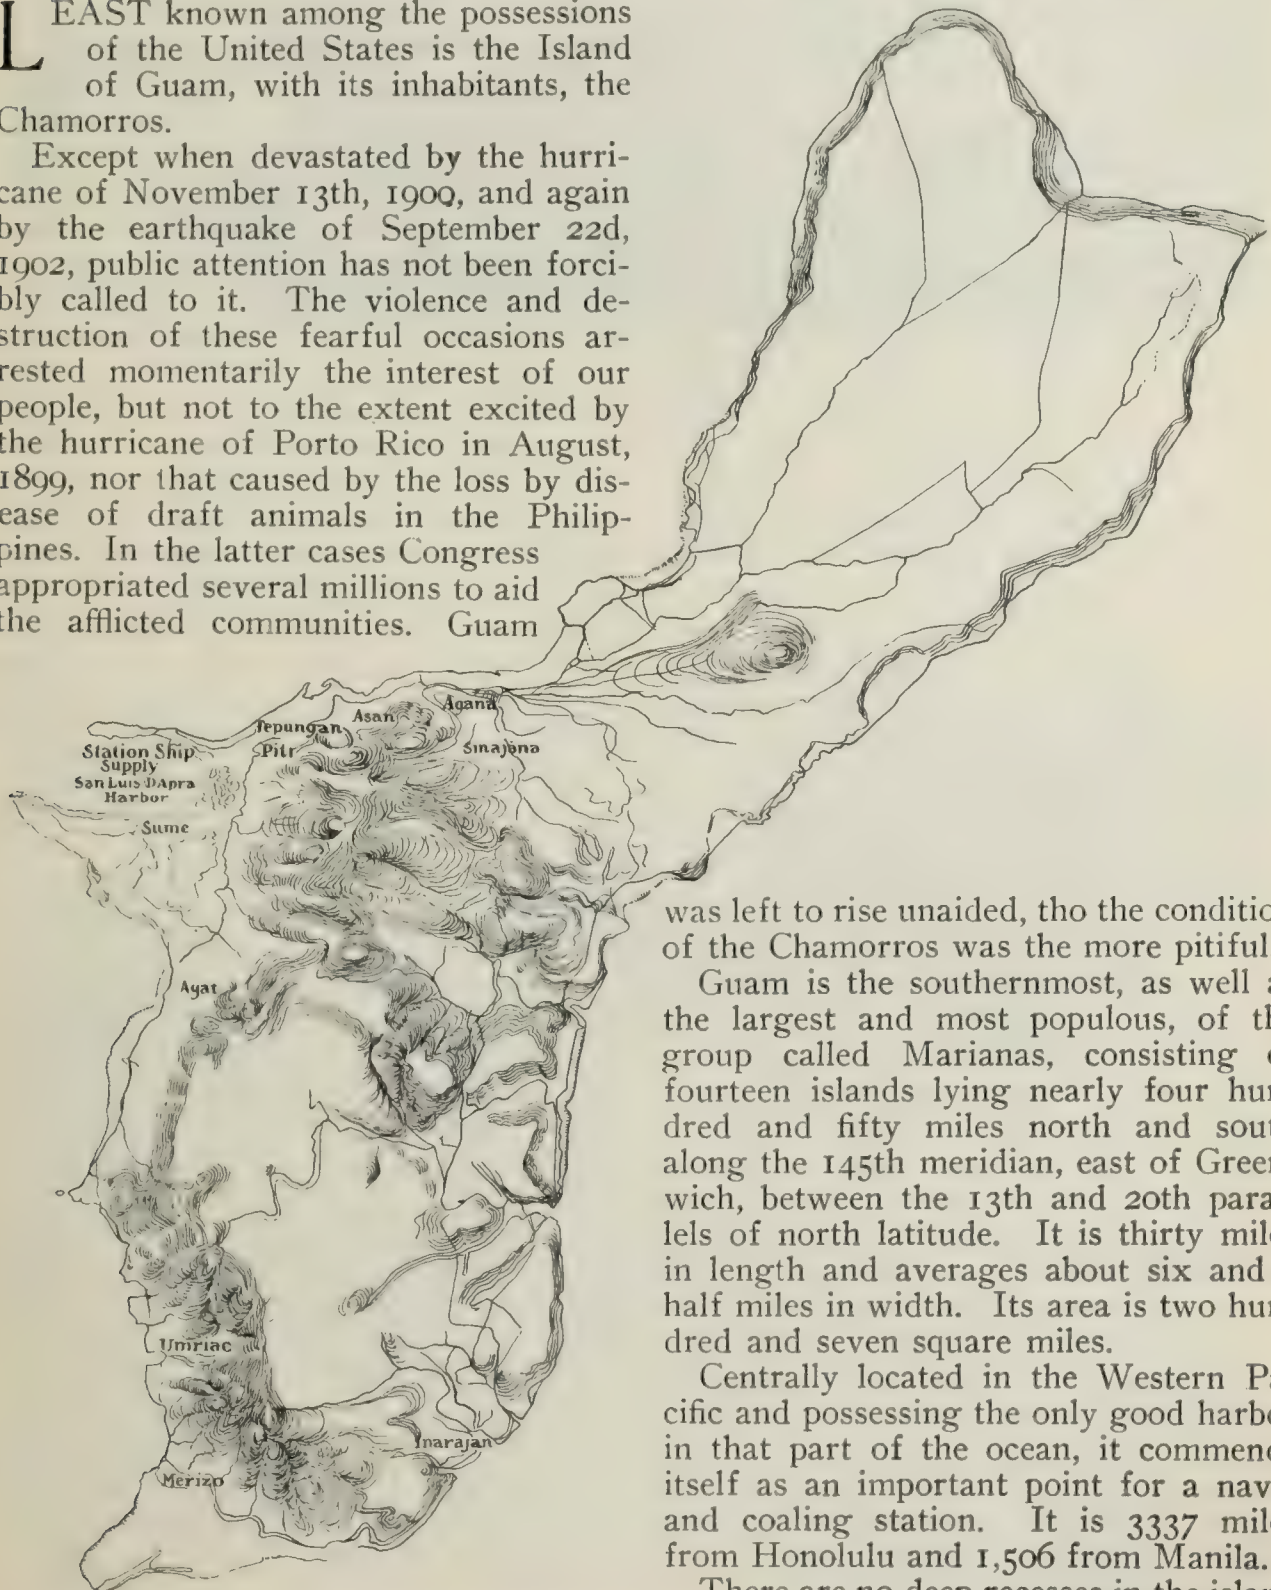

# The Present Condition of Guam

BY COMMANDER GEORGE L. DYER, U. S. N.

[The following article by the American Governor of Guam brings the affairs of our smallest insular possession up to date. Our readers will remember that every Governor of Guam since it became a possession of the United States has written such an article for THE INDEPENDENT. We shall conclude this article in a subsequent issue.—EDITOR.]

**L**EAST known among the possessions of the United States is the Island of Guam, with its inhabitants, the Chamorros.

Except when devastated by the hurricane of November 13th, 1900, and again by the earthquake of September 22d, 1902, public attention has not been forcibly called to it. The violence and destruction of these fearful occasions arrested momentarily the interest of our people, but not to the extent excited by the hurricane of Porto Rico in August, 1899, nor that caused by the loss by disease of draft animals in the Philippines. In the latter cases Congress appropriated several millions to aid the afflicted communities. Guam

was left to rise unaided, tho the condition of the Chamorros was the more pitiful.

Guam is the southernmost, as well as the largest and most populous, of the group called Marianas, consisting of fourteen islands lying nearly four hundred and fifty miles north and south along the 145th meridian, east of Greenwich, between the 13th and 20th parallels of north latitude. It is thirty miles in length and averages about six and a half miles in width. Its area is two hundred and seven square miles.

Centrally located in the Western Pacific and possessing the only good harbor in that part of the ocean, it commends itself as an important point for a naval and coaling station. It is 3337 miles from Honolulu and 1,506 from Manila.

There are no deep recesses in the island except at the harbor of Apra. A coral reef, barely covered at low tide, incloses the island. The surface is divided into

The Island of Guam. From a Survey Made Under the Direction of Civil Engineer Leonard M. Cox, U. S. Navy

The Public Square at Agaña. Government Houses at the Left. Marine Barracks in the Middle. Old Spanish Fort Indicated by "X" on Top of the Hill

two distinct parts by a ridge, varying in height from 700 to 1,300 feet. The northern half is a large plateau from 300 to 600 feet elevation. From the interior the slope is gradually upward to the sea, where it terminates in high, steep, forbidding cliffs. The eastern exposure of the northern half is so abrupt and the coral reef so near that the waves break almost ceaselessly against the precipitous coast. The southern part is mountainous, with several valleys and small streams. On the west the ridge drops rapidly to a low shelf, not much above the sea level, which extends from the city of Agaña south and upon which the majority of the inhabitants of the island have their dwellings. This narrow strip is very fertile.

The soil is composed mainly of disintegrated coral. It is shallow and red owing to the presence of oxide of iron. Vegetable mold has accumulated in the forests and valleys, and in damp, swampy places it is quite rich. There is not much stone suitable for the purposes of construction, but from the limestone found in the hills and the coral taken from the reef two grades of lime are manufactured. The pure, disintegrated coral found everywhere, called "casajo," makes a hard, smooth surface and is valuable for the construction of roads. There is no known mineral wealth of any significance in the island. Some indica-

tions of iron ore have been found and there is a tradition that coal excavated here was once tried on a steamer. It is also said that gypsum exists.

Much of the northern plateau is heavily wooded. Of the valuable hard woods it is estimated that there are of Ifil (*Eperua decandra*), Palo Maria (*Calophyllum inophyllum*), and Chopag (*Ochro carpus obovalis*) at least two million dollars' worth. This is all difficult of access and exists only in sufficient quantities for use in the island. There are wild bread-fruit trees of large size, banyans, ironwood, numerous kinds of ferns and several varieties of palms, the most valuable of which is the cocoanut. The pulp of the nut, dried, is known commercially as "copra." This is the principal article of export. Rice, sugar, coffee, cacao and tobacco are cultivated, but not in sufficient quantities to supply the necessities of the people. The principal crops, corn and sweet potatoes, are raised only for home consumption.

The principal animals are horned cattle, including the *carabao*, or water buffalo. A few small horses are raised from imported stock, and some American horses and mules have been brought here for the use of the Naval Station. Goats are found running wild and there are sufficient hogs, chickens and ducks for the use of the natives. Besides the domestic animals there are deer, wild hogs,

ducks, curlews, snipe and pigeons. In the shallows of the reefs are many varieties of eatable fish, but, except several kinds of lizards, no reptiles are found. Mosquitoes, flies and centipedes abound and occasionally scorpions of a harmless kind are seen. There are large fruit-eating and small insect-eating bats. Fruit-eating doves of several species and a great variety of brilliantly marked birds exist. A little Chinese partridge has been introduced recently. There are several species of land crabs, the most interesting of which is the robber crab (*Birgus latro*), which feeds on cocoanuts. Its flesh is highly prized.

Guam lies on the dividing line between the northeast trade winds and the monsoons of the China Sea. From December to June the prevailing winds are from the northeast. The nights are cool and the air is frequently refreshed by showers. From July to December southwest winds, accompanied by heavy rain showers, are frequent. Hurricanes may occur at any time and are much to be dreaded. Earthquakes are frequent. They are not gen-

erally violent, but there have been very destructive ones. The mean annual temperature, about 81 degrees, varies little.

The population of the Island of Guam, as determined by the American census in 1901, was 9,686. It is now 10,300. These are mostly gathered in the capital, Agaña, and in the villages of Anigua, Asan, Tepungan and Piti, lying on the west coast of the island, on the road from Agaña to the harbor of Apra. Across the bay, southwestward from Piti, is the village of Sumay, where the cable station of the Commercial Pacific Cable Company is located and where a large tract of land has been bought by the Government for purposes of a Naval Station. Continuing down the coast on the west side are the villages of Agat, Umatac and Merizo and, on the southeast corner of the island, the village of Inarajan. The sole interior village is Sinajaña, about one mile south of Agaña. All of the people of the island live in these towns.

Agaña, the capital, lies on a low, sandy plain on the seaside, having an elevation

One of the Principal Native Houses in Agaña, Ruined by the Earthquake. The Coping of the Well for the Use of the Family is Seen in Front of the Steps. Similar Steps to Those in Sight Lead to the Bottom

of about three feet near the beach and eleven feet at the foot of the hills. A sluggish stream, the Agaña River, with a fall of only four feet in its course of two miles, flows through the town for the last three-quarters of a mile and serves jointly as a laundry, bath and open sewer. The inhabitants do not drink this water, because it is brackish from the sea. They dig wells in the town, striking water at from three to six feet. The height of the water in these wells does not vary materially between the dry and rainy seasons, because the ground water maintains itself approximately at the level of the river and the sea. This ground water, tapped by the wells, is nothing but the rain which has fallen in the town and sunk directly and very rapidly through the sand to the general water level beneath. The sand is not flint; it is only finely divided coral, limestone and shell. The rain, soaking through, dissolves a great deal of this lime, and the well water is therefore very hard.

Agaña has no surface drainage. It has no sewers except the open river. The excreta of men and animals are deposited over the whole surface of the ground, and the rain washings percolate directly into the general body of ground water tapped by the wells. This water is therefore nothing but drainage or sewage water. The wells are only openings in the surface which give access to it and are responsible for a constant and general epidemic of a loathsome disease, the lumbricoid worm. In a clean community, supplied with proper water, there is an occasional patient, generally a child, inhabited by two or three; but in Agaña is a state of things which probably cannot be matched anywhere else in the world. The lumbricoid worm infests the intestines of nearly every inhabitant. The eggs deposited by one person on the ground are soon afterward in the bucket of water dipped up by another from a well. Persons of all ages, from three months to eighty years, have these parasites in very large numbers. It is quite common for a victim to have from fifty to a hundred full grown worms. As irritants and carriers of infection they are responsible for intestinal inflammations which cause an important part of the death rate. It is a condition that is en-

tirely remediable and its existence constitutes a reproach to us who have been in charge of these helpless people for eight years. And how shall we answer for the responsibility that will rest upon us if cholera or typhoid makes an accidental entry here? It would decimate the entire population. A proper water supply is the simple and complete remedy and could be easily obtained.

The majority of the houses in Agaña consist of a wooden box perched on wooden piles three or four feet from the ground. The roof is thatched and is renewed every two or three years. There are, however, many houses with stone foundations and tiled roofs, and since the Americans came corrugated iron, used as roofing on the public buildings, has been more or less adopted by the well-to-do natives.

The dress worn by the people consists of a shirt, worn outside, trousers and straw hat for the men, and a skirt and a short chemise for the women. On festive occasions the well-to-do dress very much as Europeans in this climate.

There is an excellent macadamized road from Agaña to Piti and dirt roads, passable for the native carts in the dry season, extend into many parts of the island. These are supplemented by trails, over which the *carabao* can generally make his way at any season. All parts of the island, therefore, are very accessible and its development only waits the expenditure of a little money by the Federal Government to make the roads suitable for traffic. Owing to the fact that disintegrated coral exists everywhere the best of roads can be very speedily and reasonably made.

The resources of the Island of Guam are insignificant. The tariff was established by Executive Order of February 1st, 1900; but, in view of the decisions of the Supreme Court, it is questionable if this tariff, based on Executive Order, can be much longer maintained. The island can, under no circumstances, be regarded as a modifying influence in the economics of the United States. Owing to its small size, its generally shallow soil, its great distance from the Pacific Coast of the United States and the small number of its inhabitants it can never produce or manufacture enough of any

one article to affect the American market. Aside from its physical insignificance, its primitive inhabitants are probably the most exclusively agricultural of any people in the world. It is convincing evidence of this devotion to agriculture that, tho excessively fond of fish food and with the sea teaming with fish just outside of the reef, with another island inhabited by people of the same race and language only forty miles distant, they are neither fishermen nor boatmen. There are no deep-sea native boats in the island.

There are no manufactures, nor is there material for any.

The exports for the fiscal year ending June 30th, 1904, actually produced in the island, are as follows:

|  |                   |
|--|-------------------|
| Copra (dried cocoanut).....  | \$9,440.02        |
| Bêche de Mer (dried sea slug, eaten by the Chinese).....             | 295.00            |
| Coffee .....   | 141.00            |
| Lumber (harpoon poles, taken out by a visiting American whaler)..... | 72.00             |
| Total .....  | <u>\$9,948.02</u> |

Of this amount only \$1,014.75 went to the United States, \$942.75 in copra and \$72 in harpoon poles.

The normal imports of the island for the fiscal year ending June 30th, 1904, were:

|                     |                 |
|---------------------|-----------------|
| Japan .....         | \$37,640.72     |
| United States ..... | 31,907.93       |
| Hong Kong .....     | 3,862.81        |
| Singapore .....     | 1,413.53        |
| Philippines .....   | <u>1,070.95</u> |

Total .....

\$75,895.96

The gross normal receipts of the Insular Treasury in any fiscal year, under the existing tariff, may be estimated at about twenty thousand dollars; but of this sum, the sole support of the Government, more than fifty per cent. is derived from the duties imposed under the provisions of the Executive Order. The other sources are a land tax of one-half of one per cent., a heavy poll tax, fines, fees for licenses for the use of firearms, passports, planting fish weirs, marriages and tapping cocoanut trees.

Manner of Roofing a Native House. This is All Prearranged so as to be Rapidly Finished when the Work is Once Begun

A Piece of the Macadamized Road Leading from Agaña to Piti, on the Harbor

The land tax of one-half of one per cent., while apparently small, is all the land owners can bear. It has already resulted in the abandonment of a number of pieces of property, and there are authentic instances where land has been offered for sale at prices absurdly below the appraised value.

The increase in the cost of living in Guam since the American occupation amounts to several hundred per cent. The Spaniards subsidized a line of steamers from Manila and fixed a schedule of reasonable freight rates, so that Guam was regularly and economically provided with supplies. At present there is no line of merchant steamers from any point. Five schooners, of less than 150 tons burden each, call on voyages to and from Japan and impose very high freight rates.

The army transports call once a month on the voyage *out* from San Francisco to Manila, but not on the return trip. The naval transport calls irregularly twice a year. No merchandise for the natives is permitted to be brought in these ships.

Under Spanish sovereignty only about one-fifth of the expense of the Government was borne by the island. Since the

cost of administration is now about five times as great as then, the result is that, approximately, twenty-five times as much money must be raised by local taxation as before the Americans came.

The island Government is struggling to make both ends meet with very much underpaid but fairly efficient native officials. In a number of cases it is forced to ask gratuitous service from minor employees. The Insular buildings are inadequate, unfurnished and not in good repair. There is but one suitable school building in the island and that is not properly equipped. Under present conditions the Government of the island is faced continually with the probability of not having enough funds to meet the necessary expense of the present economical administration.

The change of sovereignty in the Island of Guam, due to its isolation, has imposed additional functions and expenses upon the Insular Government, the Supreme Court and the segregation and maintenance of lepers and criminals, for example, which, in other and more favorably situated territories, have always been regarded as a proper charge upon the National Government.

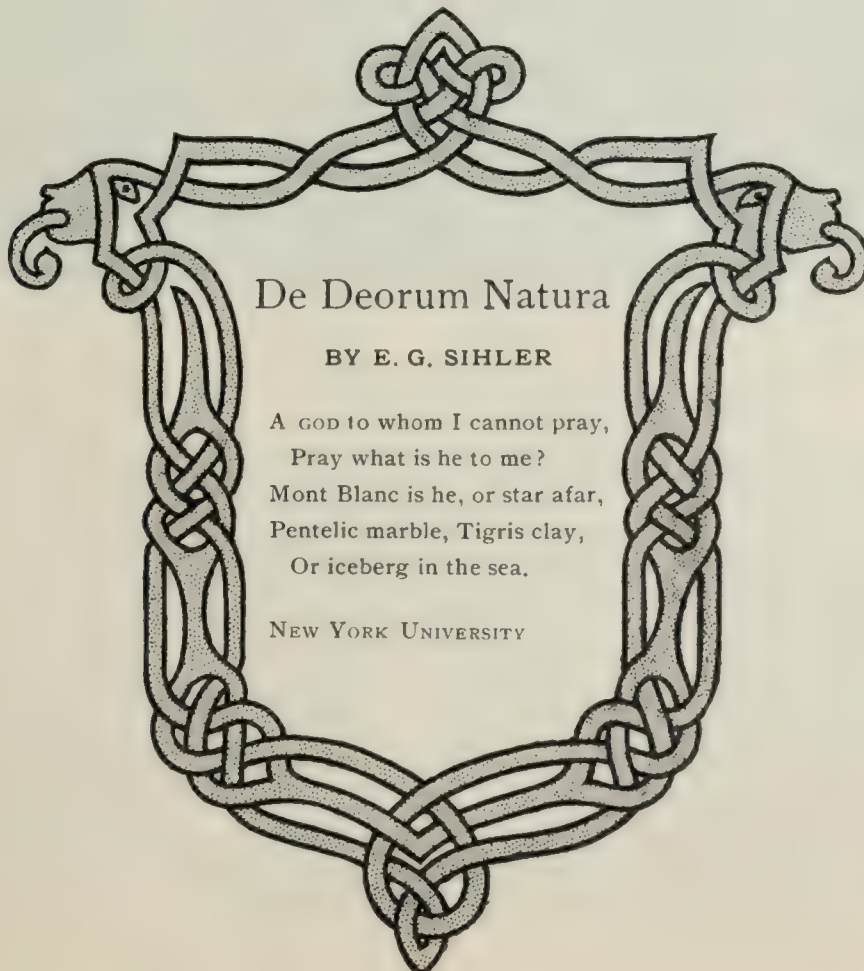

The administrative staff of the island consists of the Governor, a naval officer, who is also the Commandant of the Naval Station; one line officer, three medical officers and a paymaster, all of whom have important duties connected with the civil government. There is a company of marines, consisting of about one hundred men, commanded by a captain, assisted by two lieutenants.

There are three classes of courts: The courts of the Justices of the Peace, of which there are four in the island, from which all cases can be appealed to the Court of First Instance, which sits in Agaña. Criminal cases originating in this court are subject to revision by the Supreme Court, and all civil cases may be sent up to it on appeal. The Supreme Court was established by the American authorities. The Governor has usually been the Judge. As Congress has never legislated for this island, there is no provision for an appeal to any of the courts of the United States. The Judge of the Supreme Court is the only American in the Insular Judiciary at the present time.

The administration of justice goes on without friction. The natives are well behaved, tho somewhat given to litiga-

tion. The city of Agaña is governed by a Mayor, called the Gobernadorcillo. He is also the warden of the jail and chief of the Island Constabulary. The latter consists of a body of fifteen uniformed natives, who are the jailers and police of town and country. The outlying towns are also controlled by Gobernadorcillos and all are divided up into districts, which have a sub-official in charge called a Teniente (Lieutenant). The people are accustomed to this system, which is fairly effective. The law which prevails is the Spanish law which was in force in the Philippines, modified somewhat, but not extensively, by Executive Orders of the several American Governors. Until funds are available to properly and thoroughly reorganize the Insular Government it would be most unwise to change that which effectively controls the inhabitants and to which they are accustomed. Certain fundamental principles recognized by the Constitution of the United States, however, but not formerly recognized here, have been introduced into the law, so that when Congress does finally legislate for the island there need be no violent transition in this respect.

AGAÑA, GUAM.

## Theodore Perry Shonts.

Theodore Perry Shonts, the new chairman and executive head of the Isthmian Canal Commission, was born in Crawford County, Pa., but when he was four years old his parents moved to Centerville, Iowa. He was graduated at Monmouth College in 1876. Having studied law, he began to practice, but was induced to take up the work of railway construction by his father-in-law, ex-Governor Drake, of Iowa, who had large railroad interests. At first he was superintendent of a construction company of which ex-Governor Drake was general manager. After serving for several years as general superintendent of the Indiana, Illinois & Iowa Railroad Company, he became general manager of that company in 1886, and was made president of it in 1898. It was in that year that Paul Morton (now Secretary of the Navy) and Mr. Shonts obtained control of the capital stock of this road. They were about to extend the road to Detroit and Toledo when, to prevent competition, the Vanderbilt interests bought them out, each gaining a profit estimated by the Western press to have been \$1,000,000. Thereafter both became interested financially in the Toledo, St. Louis & Western road, of which Mr. Shonts is now president. The selection of Mr. Shonts for the chairmanship of the Canal Commission is said to have been due to the earnest recommendation of Secretary Morton. He is not an engineer, but is thoroughly familiar with railway construction work and management. He is a millionaire, and his annual income is said to exceed \$100,000. His father and mother, each of them more than eighty years old, are living near Chicago. In a long interview Mark Morton (a brother of the Secretary) describes him as "a lion-hearted man," and narrates the experience of a contractor who called upon him in his office at Chicago "to get even with him," and was promptly and thoroughly thrashed. "The chairs were broken, and the room looked as if a typhoon had swept through it." Mr. Shonts's salary as chairman is \$30,000. He will go to the Isthmus in May.

# Victor Emmanuel III

BY ALFREDO BACCELLI

[Signor Baccelli has recently been Under Secretary of Foreign Affairs, and two years ago was the spokesman of the Foreign Office in such matters as the Macedonian revolt, Italy's interests in Africa, etc. His father, Dr. Guido Baccelli, who was then Secretary of Agriculture, is an eminent physician and attended Prinetti, Minister of Foreign Affairs, in the illness which compelled his retirement. Alfredo Baccelli is the author of half a dozen books of poetry and has under way some works of fiction. He is still a Deputy, besides being a Commendatore—altogether one of the distinguished men of Italy of the younger generation.—EDITOR.]

VICTOR EMMANUEL III is not tall, but his straight, upright figure and broad, full chest denote great physical strength. For that matter his grandfather was not much taller than he is. His complexion is fair and he has the azure eyes of his mother. His grave and penetrating look, as well as his broad and open forehead, is indicative of a strong and thoughtful intellect and energetic will.

One of the predominant qualities of his mind is his great and unaffected sincerity. After his extended travels in the East, when he was Crown Prince, he was asked why he had not written a book on subjects to which he had devoted such careful and minute observation, and he answered: "I could not write it, because I could not tell the whole truth." This answer reveals the man.

While always dignified and courteous, Victor Emmanuel never allows himself to be trammelled by the formalities of etiquette. When, after the horrible assassination of his father, the body of King Humbert the Good was brought to Rome, it was found impossible to dissuade Victor Emmanuel from passing through the whole city on foot and following the beloved corpse even to the tomb in the Pantheon.

The King is serious-minded and industrious, acute and clear-sighted. Strength of reasoning, correctness of judgment, a capacity for sagacious reflection and an intuitive knowledge of facts are the dominant qualities of his intellect; far more so than vivid imagination or playful and poetic fancy. Nevertheless, he is by no means destitute of artistic taste, as, perhaps, his father was, and I have heard very often phrases from his lips that gave evidence of considerable esthetic appreciation. I also recall his

criticisms on a public building which had turned out a failure artistically and his smile on looking at the medallions upon which his likeness was reproduced not very successfully.

He has been accused of being rather parsimonious, and this has been sometimes the occasion of loud complaint, especially on the part of those who would like to see his income spent unreasonably and wastefully. But I do not see why a King, because he happens to have a great deal of money, should, more than any other head of a family, throw his money out of the window.

If he is parsimonious in his household expenditure, he can, on the other hand, be royally generous when there is a question of succoring misfortune or coming to the aid of any good cause. For example, not to cite more recent instances, tho he may not have, perhaps, on the birth of the Crown Prince, doubled the salaries of his servants and employees, salaries which for that matter are, as would naturally be expected, much higher than the salaries of this class of persons in the rest of Italy, he donated a million lire (\$200,000) to the *Cassa Nazionale de Previdenza* for infirm and aged workmen.

In the matter of public morality he is, and always has been, most inflexible, and every one is aware of the sternness with which he expressed his opinion when he was Crown Prince in relation to the moral questions involved in the administration of certain public departments; it will be remembered that there was much political excitement on the subject at the time.

The admirable results that originated in these qualities—qualities valuable in any man, but especially valuable in a King—must be attributed principally to

his happy natural disposition, and, in a secondary degree, to the wise severity of the method adopted in regard to his education, the aim of which was to make him learn something about everything and everything about something, a system of mental training absolutely needed by him who must stand on the apex of that grand pyramid of men, a nation.

A very seasonable and amusing book has been written on the education of the

good or bad the Prince was obliged to go through all his athletic exercises every day. Once when he was shivering with cold in a shower Professor Morandi expressed the opinion that he ought to be excused from his riding lesson in the open air. The Colonel answered that should we ever be at war the Prince would have to ride, no matter how cold and rainy it was, and that therefore such effeminacy now was out of the question.

Victor Emanuel III, King of Italy

young Prince by Professor Morandi, his instructor in the Italian language and literature.

Colonel Osio, who died recently, was intrusted with the duty of superintending a work that was so vitally connected with the destinies of the Italian people, and devoted himself to his task with military and perhaps also excessive severity.

The Prince was compelled to study a great variety of subjects with exemplary assiduity, and if he was occasionally negligent, like all boys, in mastering his lesson, reprimands of a very rough and downright character were not spared him. Thus whether the weather was

One day King Humbert remained much longer than was his custom with his Ministers at the bi-weekly conference for the signing of decrees. As a consequence the hour for luncheon was put off again and again in a fashion that aroused the gravest apprehensions in the Prince, who was waiting for it anxiously in company with his mother and his own formidable appetite.

In such a crisis one forgets to reason, and Victor Emmanuel, despite the austerity of the principles in which he had been reared, could not refrain from telling the Queen, in popular phraseology, how awfully hungry he was. The Queen

took up the "Divina Commedia" of Dante and opening it at the celebrated canto of Count Ugolino, who, as every one knows, was starved to death in a tower with his little sons, said to him: "Read that and your hunger will vanish."

The Prince was subjected at the close of every year to a genuine and vigorous examination, just like the pupils in the public schools. The examination questions were chosen by lot, and good or bad marks were given him according to his answers. The Board of Examiners consisted of his professors, two generals and the Minister of War. At first he used to assume an air of carelessness in presence of these ordeals, and one day, after pointing with his finger to the little table at which he was to take his seat and to the big table in front where the examiners were to sit, he said, sportively, to Morandi: "Wouldn't one fancy already that your big table was putting questions to that little table?"

But in reality he never appeared at one of those examinations without considerable trepidation: "If I were to cut a bad figure," he has confessed, "I should feel like throwing myself out of the window."

Possibly it was this stimulus of self-love that made him a student and rendered every one of his examinations a pronounced success; we are told of one of his mathematical demonstrations which was executed with such marvelous freedom and skill that old General Ricotti, the presiding examiner, was deeply affected.

But it would be wrong to imagine that the logical and reflective qualities of Victor Emmanuel's intellect, his fondness for the exact sciences and the severity of his education have lessened in the slightest degree the exquisite tenderness of a heart to which affection is natural. Morandi tells us of the deep emotion and love with which the young Prince embraced Colonel Osio on the day when the seven years' guardianship of that rigid disciplinarian had terminated. One day the Queen mother said: "My son has never caused me a sorrow."

When the time came for the Prince to choose a life companion he never for a

moment allowed power and riches, or luster of family, or diplomatic convenience to influence him; he selected a Princess whom he deemed alone worthy of his love, because of the transcendent goodness of her heart, as well as because of her virginal beauty.

It is always when the news of a calamity comes upon him unexpectedly that the heart of the King is revealed; and all Rome still remembers how, in the first days of his reign, when the terrible railway disaster of Castel Giubileo was announced to him, he hurried at night in a public conveyance, as he could not have his own carriage at once, to the spot where the catastrophe occurred, and how unstinted was his aid to the injured, both in word and deed.

Does not this young King, rushing across the city and country alone during the night for a humane and noble object a few days after his father had died by an assassin's hand, seem to have given, by the spontaneous and affecting simplicity of his act, noble evidence of possessing a soul at once kindly, energetic and fearless?

Victor Emmanuel is also a sportsman. Like his father and grandfather he is fond of hunting and is an excellent marksman. There is no longer an austere Colonel Osio to restrict him in this pastime. He used to say that the Colonel must have had a secret understanding with the wild boars and pheasants of Castel Porziano, as he regards his hunting as one of the grave concerns of the State.

Altho Victor Emmanuel hunts in summer in Piedmont and in winter at Castel Porziano, he also goes sometimes to his dearly beloved island of Montecristo, a solitary bit of land upon which the hot Tyrrhenian sun beats and against whose shore the Tuscan Sea dashes sullenly.

When Crown Prince he was often accustomed to betake himself with his august consort to this little island in his yacht, "The Yela." Here the care of his modest country house and of the geraniums in his little flower garden afforded him real pleasure.

But hunting is not the only sport to which Victor Emmanuel is addicted. He is known all over Italy for his keen interest in automobilism. He is a finished

King of Italy Reviewing Troops

chauffeur, and it is related that once when driving from Castel Porziano in the automobile of Prince Strozzi, also a renowned devotee of this sport, he himself took a hand in managing the machine, after putting on the chauffeur's mask, and was highly amused by watching the policemen who were eagerly examining the street in expectation of the King's passage, who saw him pass, naturally without recognizing him, and who continued their rounds up and down waiting for an event to happen that had already occurred.

The King's profound knowledge of numismatics is also a matter of popular notoriety. His fondness for collecting coins had a very humble origin: having by mere chance found a *soldo* of Pius IX in his hand, he felt interested and kept it. The collection was increased by several other coins of his own and by seventy copper coins which his father gave him. Very soon afterward the number grew rapidly, until it amounted to more than 50,000, all minted in medieval or modern Italy, for he was circumspect enough after a time to come to the conclusion that if his collection was to be of value he should limit and specialize his researches.

He has paid considerable attention to this collection since he has ascended the throne, when his other duties have left him leisure, not for the sake of his own

selfish pleasure, but because he hopes to be able to give some time or other to Italian numismatics a work which it does not now possess: a *Corpus Nummorum Italicorum*.

But we must not suppose that his devotion to sport or his interest in numismatics diverts his mind from his arduous and lofty mission. He is not a Nero, neglecting the cares of the State in order to recite verses, carve a statue or wrestle with an athlete; still less is he a Claudius, abandoning the destinies of the Roman Empire in order to plunge into Etruscan philology.

Endowed with a healthy and harmonious mental equipoise, Victor Emmanuel has learned how to give all things their due proportion and to assign to them the degree of importance which belongs to each severally.

As a statesman and a shepherd of the people his temperament is controlled by three dominant characteristics: an intelligent concern for the national economy and in a special manner for agriculture, a liberal and democratic administration and a cautious and loyal treatment of foreign political questions, united with a loving and jealous care for the army and navy.

Victor Emmanuel III has, indeed, been always exceedingly interested in agriculture, which he regards as the most potent source of Italian riches. He is

thoroughly grounded in the more important questions connected with it, and I shall never forget the minute accuracy he showed in discussing with me the failure of the attempt to plant a colony in the Montelliano forest, which land was divided into lots and granted to the peasants, with the aid afforded by an agrarian savings bank. Unfortunately there is never lacking in such cases a person who buys back the lots from the farmers and amalgamates them into an extensive estate. On another occasion he discussed with me the question of reforestation with singular clearness, being at the same time rather sarcastic about the young plants forwarded by the Ministry of Agriculture, which very often did not grow at all.

That Victor Emmanuel is animated by liberal and democratic sentiments is proved by all his acts; by his ardent and loving care for the poor, his carefulness in the selection of his Ministers, the tenor of his personal life, the increase in the number of social laws, which have become more and more numerous during the last few years. It will suffice to cite

those on labor accidents, on the labor of women and children, on the *Ufficio del Lavoro*, and on the *Cassa Nazionale di Previdenza*, which cares for aged and infirm workmen.

He had a strong affection for Giuseppe Zanardelli, and when the latter, from an excessive feeling of delicacy, wished to tender his resignation because of the eventual significance which an indecisive vote of the Chamber of Deputies on the nomination for President might have, he refused to accept it, and I shall always remember the gentle smile with which he expressed his determination to a group of supporters of the Government who happened to be present on one of these days at a court dinner party, a dinner party which we jestingly termed the funeral banquet.

Few persons are aware even in Italy how eagerly and diligently Victor Emmanuel gives his personal attention to the direction of foreign policy.

I have heard more than once the success of some fortunate diplomatic movement attributed to this or that Minister, while in reality it should be exclusively

Elena, Queen of Italy, and Retinue

attributed to the King. He makes it a point to read all the most important reports of the ambassadors and ministers plenipotentiary, and holds frequent conferences with the Minister of Foreign Affairs. The Minister Prinetti has often said to me, after one of these conferences: "The King is a superior man."

The position of Italy to-day is peculiarly fortunate. The alliance with Germany and Austria-Hungary has been renewed with full reciprocal confidence

Catholic ruler to visit the King of Italy in his own Rome, and has thereby destroyed forever the Vatican protest, already rendered vain, for that matter, by the history of nearly half a century.

When taking the oath in presence of the two Chambers he said: "Fearless and secure I ascend the throne. . . . Having been reared in the love of religion and of country, I invoke God to witness my promise that, from this day henceforth, I devote my heart, soul and

King and Queen of Italy Motoring

and as a guarantee of peace; the traditional friendship with England has become closer and more cordial; our amity with France has been restored with real impulsive affection, and our relations with the great American Republic have grown more and more numerous and sympathetic. Italy is not a source of suspicion to any one, and her gradual advance is viewed by all with friendly eyes.

Victor Emmanuel has now reigned four years, and he has already seen in his capital the King of England, the Emperor of Germany and the President of the French Republic, who came as a

life to the grandeur and prosperity of the fatherland."

The hearts of the representatives of the nation palpitated; a long ovation rose from hundreds of breasts. From that moment King and people were united by one single sentiment, and the dear and sacred blood of Humbert and his heart, renewed in his son, consecrated that solemn compact forever.

The glorious auspices of goodness and wisdom which signaled the dawn of his reign have not diminished. May God protect the future of Italy and of its King.

ROME, ITALY.

# Literature

## The Evangelistic Movement

THE recent revival activity in Great Britain and America can be studied profitably in three books representative of the good and evil, and of the hopeful and discouraging features, which the movement exhibits. Mr. Dawson<sup>1</sup> stands for the strong, earnest preaching of vital religious truth, with direct endeavor to win men to the obedience of God and the keeping of his commandments without violence to biblical scholarship and in fullest sympathy with the present beliefs of intelligent men in theology, in philosophy, and in science. Mr. Campbell<sup>2</sup> illustrates the influence of the evangelistic movement upon the regular preaching in the churches, and his sermons are directed pointedly and vigorously toward very real and particular sinners as they revealed themselves to him in frank confession. Mr. Torrey's<sup>3</sup> war chariot is still in the swamp whither the hosts of the Lord fled in panic at the first approach of modern biblical criticism, and he handles his bow and arrows with holy zeal, verily thinking he is doing God service, but totally ignorant of the real battles of the times. His *Talks to Men* on "Why I believe the Bible" attempt to prove that the Bible is infallible because Jesus healed the sick and quoted Moses, and from his insistence that one must accept every statement of the Scriptures or give up all faith in Christ and all use of the Bible it is not difficult to see why some of the leading pastors of England have said that more harm than good was done by his revival meetings. Mr. Dawson, on the other hand, is a frank liberal, and he declares that "when to its deep knowledge liberal theology adds the burning faith begotten of vital spiritual experience, it will become the greatest power

for evangelism the world has ever known." His story of his transformation from an expounder of truth in a general sort of way, with a turn toward philosophy and letters, into an ardent missionary is as fascinating as it is instructive. His sermons are models of manly appeal to the thinking people of to-day. The discourses of Mr. Campbell, Minister of the City Temple of London, are noteworthy, in that each was called out by some confession or appeal for pastoral help, and a brief statement of the particular case in mind precedes each sermon. The lectures on the methods, aims and prerequisites of *Evangelism*,<sup>4</sup> delivered by Rev. G. Campbell Morgan before various theological seminaries, will be valuable to many, for they are built on a wide and successful experience. The Welsh revival is being watched with interest by all who hope to see here a similar awakening of the consciences of the people, and it is convenient to have brought together a number of newspaper accounts of the movement.<sup>5</sup> It is evident, however, that the conditions in Wales are so exceptional that a religious impulse here would take a very different form and we cannot imitate the methods used there, if, indeed, we can speak of methods in anything so spontaneous.

## Paris and the Social Revolution\*

THE revolutionist is a type of men that we have, like the poor, always with us; some say only so long as we have the poor will we have them, but that is to disregard the tendency, probably existing latent in all men but virulent in some, to revolt against the conventions and institutions of society, both the necessary

<sup>1</sup> *THE EVANGELISTIC NOTE.* By W. J. Dawson. New York: Fleming H. Revell Co. \$1.25.

<sup>2</sup> *SERMONS PREACHED TO INDIVIDUALS.* By Reginald J. Campbell. New York: A. C. Armstrong & Son. \$1.25.

<sup>3</sup> *TALKS TO MEN.* By R. A. Torrey. New York: Fleming H. Revell Co. 75 cents.

<sup>4</sup> *EVANGELISM.* By G. Campbell Morgan. New York: Fleming H. Revell Co. 50 cents.

<sup>5</sup> *THE STORY OF THE WELSH REVIVAL.* By Evan Roberts, Arthur Goodrich, Campbell Morgan, W. T. Stead and others. New York: Fleming H. Revell Co. Paper, 25 cents.

\* *PARIS AND THE SOCIAL REVOLUTION. A Study of the Revolutionary Elements in the Various Classes of Parisian Society.* By Alvan Francis Sanborn. With Illustrative Drawings by Vaughan Trowbridge. Boston: Small, Maynard & Co.

A Contrast in Funerals

From "Paris and the Social Revolution." Small,  
Maynard & Co.

and the unnecessary. They are individuals that, like the molecules of a gas, move in straight lines unswayed by others and so resist the social pressure tending to conformity. In Paris all theories culminate and become vocal, so Mr. Sanborn could not have chosen a better place to study the type in all its varied manifestations. He has an intimate knowledge of unknown Paris and an unrivaled acquaintance with revolutionary literature, reputable and disreputable, classic and ephemeral.

He sweeps with wide net, catching many queer fish, many of them doubtless surprised to find themselves in each other's company. His anarchists range from dynamiters and advocates of theft, murder and arson to non-resistant vegetarian idealists. There is plenty of picturesque material, and he makes the most of it. Ordinarily it would be no com-  
ment to an author to say that his quotations are the best part of his book, but in this case it is, for they are so numerous, and well-chosen and are gathered from such diverse and often inaccessible sources as to form a valuable library of revolutionary literature. He even quotes an anarchistic sentiment from the editor of THE INDEPENDENT, thereby placing him in the mixed company of George Eliot, Voltaire, Jesus Christ, Walt Whitman, Bakounine, and Dr. Parkhurst, all on the same page.

Mr. Sanborn begins by professing the most conservative, even medieval, per-

sonal opinions, but he ends with a revolutionary peroration. Notwithstanding his prefatory disclaimer there is no disguising the fact that he looks forward with pleasurable anticipation to the new revolution, when the third estate, the bourgeoisie, which got its innings in the first revolution, shall be in turn evicted by the fourth estate, the proletariat; when the "Marseillaise" shall be dethroned by the "Internationale." The conservatives who still shudder at the name of socialism will be interested to read of those who look upon the socialists as hopelessly unprogressive and antiquated.

The exposition of the philosophy of anarchy is followed by the description of its four methods of propagation, oral and written, by example and by deed. The rest of the book is taken up with sketches of life in the Latin Quarter and Montmartre, and with a discussion of the spirit of revolt in literature, art, music and drama. He shows that anarchistic ideas find expression not merely in the freak magazines and obscure journals, but that, advocated as they are by many of the brilliant writers of the day, they gain admission into conservative reviews and are presented on every page. With Anatole France, Paul Adam and Octave Mirbeau in France, he classes Björnson, Ibsen, Strindberg in Scandinavia, Tolstoy and Gorky in Russia, Gerhardt Hauptmann in Germany, Gabriel d'Annunzio in Italy, Bernard Shaw in England, and José Echegaray in Spain as literary leaders in the worldwide revolt against prevailing social conditions. In justification of the use of the word "revolution" he quotes M. Clemenceau's advocacy of Barrucand's scheme for free bread:

"It is high time we knew whether, at the degree of civilization to which we have attained, we can continue to tolerate that men, women and children die of want—in a few months from the exhaustion induced by insufficiently remunerated work, or in a few hours from downright hunger. Our republican and monarchical conservatives—all excellent Christians—answer 'No,' but continue to act 'Yes.' Eighteen hundred years after the Christ it is a revolution for Christians to prevent the death of their fellows by slow and rapid starvation. Well, then, let us inaugurate this revolution."

## Two Books on Ferrara

It is generally unfortunate for two books on the same subject to appear simultaneously, as one of them often suffers in comparison with the other. So far is this from being true of the two works on Ferrara now before us that the one does but whet the appetite for the study of its larger and more important companion.

*The Story of Ferrara*<sup>1</sup> by Miss Noyes is not only a graphic summary of the history of the House of Este, but is also well adapted for a guide book to Ferrara, for it contains a detailed account of its streets, buildings and pictures, and these are illustrated by charming pen drawings by the sister of the author, Miss Dora Noyes. So comprehensive is the writer's grasp of her subject that her little volume might well be called a microcosm of the Renaissance. It is hard to do justice to Miss Noyes's exquisite style and to the penetration which comprehends the significance of the motley manifestations of the vivid, passionate life of the fourteenth and fifteenth centuries. It was a time of paradoxes. On one side we see the unnatural crimes of Alexander and Cæsar Borgia, on the other the piety, as excessive, of a Saint Lucia, the culture of an Isabella d'Este and, most strange of all, the character of a Lucrezia Borgia.

Through all she makes us realize the joyousness of life in the springtime of the modern world, a joyousness which displayed itself in gorgeous pageants and endless amusements. Across this bright scene the shadow of Savonarola fell. "For this light-hearted, corrupt city bred the sternest and saddest spirit of the age." We also catch a glimpse of the great poets, Boiardo, Ariosto and Tasso.

After the death of Ercole d'Este the ascendancy of his house, which had lasted 400 years, neared its end. Ercole was, all things considered, the greatest ruler Ferrara ever had, and it is the period of time covered by his reign which forms the subject of Mr. Gardner's present volume.<sup>2</sup> He gives a slight sketch of

<sup>1</sup> THE STORY OF FERRARA. By Ella Noyes. Illustrated by Dora Noyes. New York: The Macmillan Co. \$2.00.

<sup>2</sup> DUKES AND POETS IN FERRARA. By Edmund G. Gardner, M.A. New York: E. P. Dutton & Co, \$4.00.

Ercole's father, Niccolo III, "a fat man, jolly, given up to lust," but blended with his medieval ferocity were the first germs of Renaissance culture. He also gives a short account of the reign of Leonello and Borso, which was called the Golden Age of Ferrara. There was something in the character of these two princes, "perhaps derived from their beautiful Sienese mother, that differentiated them from their predecessors and successors of the House of Este"; but the magnificence of Ferrara was attained under their brother Ercole. With consummate skill Mr. Gardner relates the interdependence of the States ruled by his kinsmen and descendants, and untangles the story of their alliances, intrigues and wars, and also of their relations with Rome. It is something of a feat to have made the squabbles of Italian cities interesting.

The greatest blot on Ercole's character is his uniting with Savonarola to bring Charles VIII of France to Italy. Their correspondence on the subject savors of treachery. The religious aspect of the time is given with great vividness. There had been a revival of the cult of St. Catherine of Siena to fight the corruption in the Church and in society. It was accompanied by various hysterical manifestations; many nuns received the stigmata, "while the Borgia was every day crucifying Christ anew in Rome; women appeared all over Italy, robed in the black and white habit that St. Catherine had worn, bearing in their bodies . . . the wounds of Christ's Passion."

Mr. Gardner hopes to add three more volumes to his history of Ferrara, which are to contain a complete account of Ariosto, the Protestant Duchess Renata, the poet Tasso, and the enforced surrender of the Duchy to Pope Clement VIII. The first one of the series is of such absorbing interest that we shall watch with eagerness for the appearance of the next volume.

**The Principles of Relief.** By Edward T. Devine, Ph.D., LL.D. New York: The Macmillan Co. \$2.00.

Since the publication of this book Dr. Devine has been appointed to the newly created chair of philanthropy in Columbia University. He is now the General

Secretary of the Charity Organization Society of the City of New York, and is the author of "The Practice of Charity." He is one of the most devoted workers among the poor in Greater New York and is unquestionably one of the leading experts in questions of charity in this country. His latest book is divided into four parts. The first is an analysis and criticism of the principles of relief, in which such problems are discussed as the standard of living, the elimination of disease, the housing problem, the breaking up of families, the dependent classes, intemperance, industrial displacement and the essentials of a relief policy. The second part is a digest of seventy-five illustrative cases taken from the records of the Charity Organization Society, showing how the foregoing principles should be applied. The third part is an admirable historical survey of the history of charity from the time of the English Poor Law to the present, and part four contains an account and criticism of relief at the Chicago fire, the Johnstown flood, the Paterson flood, and Baltimore fire and the "Slocum" disaster, and the industrial distress in New York and Indianapolis in the winter of '93 and '94. The book as a whole will be a standard to all charity workers and professional philanthropists, but while not exactly over technical it is too heavy for the average reader, and will probably not interest him to any great extent. No exceptions can be taken to any statements or conclusions of the book, except, of course, by the socialists, who consider "relief" merely a palliative and no remedy at all for our social ills.

**Photography for the Sportsman Naturalist.** By L. W. Brownell. New York: The Macmillan Co. \$2.00.

This is the age of popular nature-study, when many men who would be mighty hunters go forth, not with repeating rifles, but with cameras quick enough to catch the lightning flash. More and more the old hunting is passing from the interests of men; and to-day the hunter who returns from an expedition with a set of good negatives arouses greater enthusiasm than he who has a bag full of dead and mangled game. The most

fascinating hunter's tales of the twentieth century are not those of a Gordon Cumming, who slays animals ruthlessly, but those of the sportsmen photographers, who dare to snap the camera's shutter in the very faces of the fiercest wild animals. With such a tendency toward interest in hunting without slaying it is quite proper that *The American Sportsman's Library*, edited by Caspar Whitney, should devote a volume to photography for sportsmen. The volume before us is intended for the beginner in nature photography. The first chapter discusses the scope and usefulness of the art, and the second argues for the use of the camera by sportsmen, not necessarily to the absolute discarding of the gun. The next four chapters deal

with cameras and other apparatus and the technical matters concerning photographic manipulations. Then come eleven chapters, each complete in itself, describing the photographing of larger animals, smaller animals, birds' nests, birds and their young, insects, fish, reptiles, wild flowers, trees, both in the zoos and in camp and woods. The book is attractively illustrated from a large number of photographs.

**A Year's Wandering in Bible Lands.** By George Aaron Barton, Director of the American School of Research in Palestine. Philadelphia: Ferris & Leach. \$2.00.

Narratives of tours through Palestine are too numerous to mention, but this book has at least three features which

Nest and Eggs of American Crow

From "Photography for the Sportsman Naturalist." Macmillan

distinguish it from the ordinary. First, it has 150 new photographs, some of them very good, taken by the author and his friends, which are more useful than many pages of description. Second, Professor Barton has traveled further and knows more of the history of what he sees than the average tourist. Third—and perhaps we owe this to his being a Quaker—he does not gush and overflow with the forced expression of unfelt emotion whenever he stands upon a historic

**The Master Word.** By L. H. Hammond. New York: The Macmillan Co. \$1.50.

MRS. HAMMOND takes as the premise for her story the fact that the getting of children by white men and colored women is a crime, that it results in a third race whose interests, instincts and sensibilities differentiate them from both the others. The initial situation is not attractive, but it has much truth. And the book is worthy of attention because it is the first compassionate, intelligent inter-

Ruins of Baalbec. From Barton's "A Year's Wandering in Bible Lands." Ferris & Leach

and sacred site, as most travelers in Palestine are accustomed to do. Possibly there has been less of that sort of writing of late years because of the accident which happened to one of our most popular divines when his publishers carelessly allowed the eloquent description of his feelings as he stood on Mars' Hill and the banks of the Jordan to be printed before he reached these places. Professor Barton gives a straightforward account of his daily experiences in the form of letters home, containing much that is merely personal, but also much of genuine interest.

pretation ever written by any white person, North or South, of that pathetic class of men and women who suffer the loneliness and humiliation of a peculiar condition. Innocent themselves, they are immorally kin to two races and homeless in both. This handicap to the mulatto's moral and social life is the dramatic feature of Mrs. Hammond's story. And she pushes the problem of this girl's dual relationship to an ethical rather than a practical conclusion. And, after all, this is the best we can expect from a problem-solving novel. It is right in art to hold on to the ideal if in time we shall realize

it in reality. As a matter of fact the different phases of the race problem can be solved in but one way, that of living through them till adjustment has been reached. Meanwhile we should not give up the discussion. The problem will remain, of course, after we have gained fame and immortality showing how it should be solved. But the apparently important ethical conclusions of this generation will result in better moral abilities in the next. We do not find out God by searching, to be sure, but we get an idea of the general direction in which Heaven lies from our earthly diocese by this exercise of our faculties, and that is an important consideration. Just so neither the whites nor the blacks are ready to realize in their relationship to one another the "master word" of love. Each is appalled by monstrous possibilities which may be involved. But at last neither can escape the noble obligation. And Mrs. Hammond shows one way by which two women (one a patrician white, the other the mulatto child of her own husband by a colored woman) reached an altitude of racial adjustment to one another which was honorable and mutually beneficial. The book will not please white people North or South; it is too awfully right for a certain element in the South, too lacking in sentimentality for some people in the North; but it shows a profound compassion and understanding for the difficulties which those of mixed blood suffer. We simply observe, by way of criticism, that the loneliness of the nearly white colored girl—her mother was "three parts white"—can hardly be as extreme as is here represented, for those of mixed blood must have been numerous in the school she attended and taught. But the sympathetic attitude of the book merits all praise, and it is a story full of incident and interest.

**A Publisher's Confession.** New York: Doubleday, Page & Co. 60 cents.

All persons who have written a book not yet published or who hope to write and publish a book in the future will be interested in this, and if they all buy it it will have the largest circulation of any book of the century. So far, however,

from making a "confession" of crimes and misdemeanors, the anonymous author defends the publishers against the charges of stupidity, carelessness, commercialism and favoritism brought against them by unsuccessful authors. It explains fully the way a book is selected, printed, advertised and sold, and discusses the relations between author and publisher as they are and as they ought to be.

## Pebbles

A YOUNG doctor said to a girl: "Do you know, my dear, I have a heart affection for you?" "Have you had it lung?" she coyly inquired. "Oh, yes; I feel I will liver troubled life without you," he responded. "Then you had better asthma," she softly murmured.

### THE CORRESPONDENCE SCHOOL.

(Vide back pages of all the magazines.)  
Are you satisfied with your present salary?  
Why not learn how to charm the gallery?  
We teach the actor's art by mail  
With a guarantee that you cannot fail,  
As Armour & Co. have agreed to take  
All the raw hams which we can make.

Can you play a tune on a fine tooth comb?  
We train virtuosi by mail, at home.  
M. Pat de Reszke, the famed musician,  
Guarantees each pupil a fine position,  
As he has a method, which we control,  
Whereby each stick may become a Pole.

Poets made by mail. How can you be sure  
That you haven't a genius for literature?  
Our Mr. Reilly gives special care  
To every poet whom we prepare,  
And gives his personal guarantee  
That one of his poems shall be printed, free.

We will make your fortune here and now,  
Our Finance by Mail will tell you how.  
We guarantee the success of each  
And every pupil that we may teach,  
As our Mr. Morgan agrees to take  
All money that all of our students make.

If you are sickly and puny and pale,  
We teach you to lift a horse by mail.  
Have you had misfortune? Are you in jail?  
We teach you how to get out—by mail.  
Would you learn to write these ads? Don't fail  
To study our system—taught by mail.

## Tendencies of the Democratic Party

FROM the speeches made at the Jefferson dinners, last week, one can learn little about Jefferson himself (to whom all sort of opinions and policies were ascribed), but they do throw some light upon the dominant forces of the Democratic party and its tendencies at the present time. Altho no new candidates for the Presidency were clearly disclosed by the proceedings, in which old and defeated ones were heard at much length, the short and sensible address of Mayor McClellan, at the New York dinner, ought to commend him to the party as a man worthy to be considered. There was much truth and good advice in what he said, and some of it was found in his recommendation that conventions and candidates should conform more closely to the standard set up in the following words of Jefferson:

"When I first entered on the stage of public life I came to the resolution never to engage while in public office in any kind of enterprise for the improvement of my fortune. I have never departed from it in a single instance, and I have in multiplied instances found myself happy in being able to decide and to act as a public servant clear of all interest in the multifarious questions that have arisen wherein I have seen others embarrassed and biased by having gotten themselves in a more interested situation. Thus I have thought myself richer in contentment than I should have been with any increase of fortune."

These words, we are told by the reporters, led some of the listeners to look at Mr. Charles F. Murphy, the Tammany leader, who sat near the Mayor, and to recall the recent extraordinarily good fortune of an obscure contracting company, whose bids (not the lowest) for many million dollars' worth of work have been accepted by great railroad corporations that obtained franchises for the same after tiresome delay.

If the Mayor really has aspirations beyond his present office, it is unfortunate that he signed the Remsen Gas bill.

But let us turn to the indications of party division and party policy. Judge Parker and Judge Herrick, both of whom spoke at the New York dinner, were the only advocates of that conservatism which opposes the now dominant radicalism of the Middle West. We can best show the sharp disagreement by pointing to some of the utterances on each side. The party, Judge Parker said, must have real followers, attached to real and recognized principles. It was not enough that it should have "a collection of fads, many of them useless, and some of them dangerous." It had had too many of these. He complained because the misconduct of railroad officers who ought to have been prosecuted and "put behind prison bars" had been made "an excuse for further concentration of power by the Federal Government." This is his attitude toward the proposed regulation of railway rates. He condemned the notion that the Government "must either own the railroads or dictate to their owners the minutest details of their business," also the tendency to insist that "cities and towns must enter into the competitions of business." Judge Herrick, while less specific, spoke in the same vein.

But they stood alone. At the same dinner, Senator Newlands remarked that the meaning of the Democratic faith was that the Government (national, State or municipal) should own or control all public utilities. Congressman Rainey said that the Democratic party should lead in the fight for the control of railway rates. We must soon choose, he thought, between Government ownership of the railroads and railroad ownership of all the instruments of government. There was no room for conservatism. Speaking at another similar dinner on the preceding day, Mr. Rainey had bewailed the mistake of last year, when the party had yielded to conservatism and given executive positions to the representatives of Trusts. But it had passed the crisis, he said, and was once more in the right path.

So far as we can learn from the reports there was not a particle of Judge Parker's conservatism at the lively dinner of the Democrats in Chicago. Even in the presence of Mr. Bryan, Mayor Dunne was the chief figure. Comparing Democratic success at the recent municipal election with Democratic defeat there in November, he insisted that the party must take and hold advanced positions, must declare against monopoly in any form and special privilege in every guise. He was as confident that Jefferson, if living, would now stand with him as Judge Parker was that the same revered statesman would support his conservatism. Judge Dunne predicted a decisive Democratic victory in 1908 if the party should put in its platform "a ringing declaration in favor of Government ownership of interstate railroads, telegraphs and express transportation," and should also demand "the abolition of the protective tariff."

Mr. Bryan predicted that rate regulation would lead to the public ownership of our railroads. Ex-Congressman George Fred Williams, of Massachusetts, made a long speech, partly historical. The St. Louis convention, he said, had sold the party for a campaign fund and had even failed to get the purchase price. It had then suffered under the leadership of the fox, "shrewd, shifty, silent at the hen coop, swift to its hole." The party, he thought, should get rid of Judge Parker and its other Tories, nine-tenths of whom were profiting from the public business and exploiting the people. "Public ownership and direct legislation" were the words for his banner. No more "evasive platforms or elusive candidates" for him.

It is plain enough that the party is divided. It is also plain that the radical part of it is a large, growing and aggressive majority. Predictions as to what will be the policies of parties in 1908 cannot be made at this early day, but if there were to be a Presidential campaign next fall the Democratic candidate would be a man of the radical type, probably in sympathy with Mr. Bryan as to Government ownership of public utilities.

Mr. Roosevelt's demand for the regulation of railway rates and the super-

vision and restraint of corporations tends to keep in the Republican party some, especially in the West, who would be inclined to go with the radical Democrats if his attitude were more acceptable to corporate interests. So prominent a Republican paper as the *Chicago Tribune*, which opposed Judge Dunne, makes these remarks in an article upon the possible strength of a movement for Government ownership of the railroads:

"The farmers, who have been the conservative force in this country heretofore, will have a strong inducement to throw their votes in the direction of the ownership of railroads by the Federal Government.

"The men who have precipitated this issue are not the agitators and demagogues, but the monopolists of the stripe of Rockefeller, Morgan, Hill, Harriman and the other gentlemen who have attempted to control great properties and build up colossal fortunes out of the privileges of common carriers."

The East does not fully understand the views of the West on some of these questions. Those who desire to discourage a political movement for Government ownership can use their influence to the best advantage by supporting a policy of Governmental regulation and restraint and by insisting upon a strict and impartial enforcement of the laws.

## The President's Vacation

EVERY one else takes a vacation who can, and why not the President of the United States? A President must live a strenuous mental life in the course of his ordinary duties; let no man begrudge him a few days of complete seclusion for the enjoyment of that strenuous physical recreation which is so dear to him, and so refreshing

And he takes it hunting coyotes, grizzlies and mountain lions, riding or tramping all day, over mountains and through snow, in the delight of victory over robust difficulties, fighting the most savage and dangerous of our wild beasts. It is the nature of the man, the nature of that inherent pioneer spirit of those

"Who fought, and sailed, and ruled, and loved, and made our world,"

the men of the supreme Valhalla. It is

the same passion for doing difficult things which sends some, in a short vacation, to climb the Alps or to chase the clouds on balloons, and others for a longer term to hunt the elusive Pole, either North or South, or to traverse darkest Africa, or to brave the passes to inhospitable Tibet. The harder the task the more the unconquered spirit loves to vanquish it. And, given a stout body as well as a stout mind, a man wants, in their turn, to supple his muscles as well as his brain. It is the same ambition to do things, to do hard things, whether in statecraft or hunting grizzlies in the Rockies. Shall we not say it is the same ambition which sends the scholar into untried fields of research, the same gad-fly which drives the modern St. Pauls into new fields, to build new conquests of their faith not on other men's foundations.

The President's meeting with his Rough Riders may be counted as part of his vacation, but not his triumphant passage to the scene of his coyote hunt, for it was a strenuous succession of speeches and hand-shakings. It was a labor of Presidential statesmanship and duty, of good will to bring closer together the once dissevered portions of the country with the cement of common patriotism. Mr. Roosevelt is above all things a patriot, and a teacher of patriotism. Texas owes much to the nation, and Texas welcomed the Nation's President most royally. And not Texas alone, for the whole South sees that Mr. Roosevelt is President of no section or party, but of the whole country. Even Governor Vardaman is appeased and Mississippi and all the Gulf States wish to be friends with the President. It is good statesmanship to better the conditions in Porto Rico and the Philippines, to pacify Santo Domingo or Venezuela, to pierce the Isthmus and to maintain the Monroe Doctrine; but the best of all statesmanship is that which unites the hearts of our people. That Mr. Roosevelt does. The people like his sort of man. They recognize real manliness in him. From the way the people have flocked about him on his journey one might not wonder that the coyotes came to be caught alive, even as the 'coons and 'possums

dropped for Davy Crockett when he pointed at them.

So may the bears and mountain lions give good sport to our "Teddy" on his trip. And so let our older ex-President take his vacation fishing and duck shooting. One of these days, perhaps, when other ethics shall be developed, men will not kill for pleasure, for there will be no wild game to be slain, and they will hunt only for the hearts of the people. But ours is a good fighting age, and some sort of good fight and victory worthy men will always find.

### Gladden, Aquinas, Hillis and Job

WE publish this week the correspondence which led to the gift of \$100,000 from Mr. Rockefeller to the American Board's missionary colleges in the East, and also Dr. Gladden's fuller and most earnest protest against accepting the money. Dr. Barton makes clear what were the circumstances that led to the gift. It was he that carried on the correspondence for the Board, altho the first suggestion came from the side of the giver, and Dr. Barton says that he has never had the least doubt of the propriety of seeking and taking it. Dr. Gladden condemns the acceptance on the simple ground that Mr. Rockefeller is proved and known to have acquired his wealth by methods which Dr. Gladden believes to be as unjust as those of a vulgar footpad. That is a charge which is denied by Mr. Rockefeller's representatives, and it is to be hoped that it will result in a fuller investigation than we have yet had, for the public wants to know the Standard Oil's side of the matter. It is clear that new legislation as to competition by means of preferential rates shows that a higher standard of business morality is being developed. A general history of ethical evolution would make a most interesting contribution to human knowledge. Even in our own generation the accepted standard has risen, and it must rise still higher.

There is an interesting discussion of the principle involved which is older than printing and which has a curious bearing on the subject. Saint Thomas Aquinas raised the question what money could

be taken for charity. That depends, he said, on the nature of the money. Some money, he says, has been taken from others by robbery. Such money cannot be given or taken in charity. There is only one thing to do with it and that is to return it to the rightful owners. There is other money obtained by means in which both parties are equally guilty. Such money need not be returned, but should be given in charity. There is a third kind, like wages of shame, in which money has been fairly paid for favors criminally given, and such money, St. Thomas says, can be bestowed in charity. It is not clear that money wrongfully obtained but which it is not possible to restore comes in any one of these classes, but we judge that the Angelic Doctor would have no scruple in its bestowment upon the poor.

As an illustration of the kind of money that can be taken we select a story told by Dr. Hillis at the late meeting at Des Moines of the Congregational Home Missionary Society and published by that Society as a leaflet:

"At the mining camp in the Wind River country, Wyoming, I asked some men in the saloon if they would let me give an address there. One of the cowboys, playing cards, told me he would help if I would wait till he had finished his game of poker. The men piled the beer kegs on top of the whisky barrels. In an hour's time the saloon was crowded with a hundred and thirty-five miners, cowboys, women and children. The saloonkeeper's child cried bitterly, alarmed by the crowd. Its shrieks threatened my address. I heard one of the miners say, 'That little brat! Why don't she choke it!' My address had come to a crisis. So I said, 'I have one little niece, back East, about as old as that baby. I would give \$5 to hear her cry five minutes.' The saloonkeeper beamed on his babe, the babe forgot its tears in its mother's pleasure. When I was through the saloonkeeper said: 'Say, that was pretty good about the \$5, so I thought I'd give it to you.' And then, they all marched up to shake hands with me, and filled my pockets with \$150. With it I bought a hundred books, a hundred Bibles, a hundred hymn books and a full set of lesson helps, and I think that the equipment still found in the little mining camp of South Pass holds some record of an evening in a saloon twenty-four years ago."

Dr. Hillis, tho he knew well the mixed character of those saloons, seemed, then,

to accept St. Thomas's principle, or the dictum of Job:

"This is the portion of the wicked man with God, and the heritage of the oppressors, which they shall receive of the Almighty. . . .

"Tho he heap up silver as dust, and prepare raiment as the clay;

"He may prepare it, but the just shall put it on, and the innocent shall divide the silver."

## The Sadness of a Cemetery

ONE of the saddest sights in the world is a city cemetery. The plot of ground, which when it was a country field could easily be spared, becomes in time a part of a great city and surrounded by an overcrowded population, but through a traditionalism almost as inflexible as that we condemn in the Chinese it is kept to its original purpose. The lot stands empty, idle, useless, while all around it are tall buildings in which human beings are packed like cattle in a stock car. In one block there are 2,000 men, women and children; in another 4,000; but in this block there are none; it is a monopoly of the dead. Little children playing in the street, dodging the trolley cars and the drays, gaze wistfully through the iron bars of the tall fence, but the green grass is not for them, at least not while they are alive. They can derive such consolation as they can from the fact that when they are dead they may have their graves covered with it and in their turn excite the envy of living children.

To some extent the cemeteries do serve the purpose of parks, but not of the much more needed playgrounds. Their seats are used by the aged whose main interest is transferred to the other world, by the philosophical who can contemplate mortality with indifference and by lovers in whom life is so abounding that it banishes the very thought of death. But for most people such a direct reminder of the end of life is unpleasant and not always beneficial. "All men are mortal" is the major premise of many of the syllogisms in the books on logic and of all human syllogisms outside of books, but it is usually better tacit than expressed. If, however, it is thought that

it is salutary to be reminded of it the Egyptian method of passing around a small gilded image of a mummy at feasts would be a preferable substitute for the present custom.

It is calculated that for a city the size of New York the dead rob the living of  $17\frac{1}{2}$  acres a year. This means more people shut out from healthful suburban homes and packed the tighter in the tenements. The cemeteries are, in part, both directly and indirectly the causes of the diseases that fill them. We may in time be compelled to adopt the European practice of leasing graves for a period of 25 years, unless we choose a more rational way of disposing of the dead. There is much reason to believe that the latter alternative may be chosen. With the increase of culture and refinement the thought of the body of a loved one being slowly destroyed by worms and putrefaction becomes more and more offensive and intolerable. Our ancestors were fond of describing it in detail in sermons, poems and pictures, but we have no taste for such forms of homiletic art. Medical science, too, has taught us the dangers of our burial customs in spreading the germs of disease. Another and still more potent force acting in the same direction is the development of a more spiritual religion, a more perfect realization of what Christianity means. It was all right for the ancient Egyptians to embalm the body, because they believed only in this way could the immortality of the individual be insured, but it is absurd that we who profess to believe with Paul in a spiritual body should still maintain this heathen practice. We know that our bodies change constantly, and are completely renewed every few years, yet notwithstanding that the material is all different, the personality is the same. We realize that we have been tenants of many bodies in one lifetime, and we have no reason to think that the last one is more important to us than those we have already lost. To the Christian it is a mere discarded garment of flesh, and to treat it with the same or greater reverence than is paid to a living person is a practical denial of his faith. His religious sensibilities are shocked

by modern burial customs which imply that his hope of immortality is dependent on the preservation of the body from decay by the use of chemicals, metallic coffins and cement vaults. Every burial service is a lesson in materialism, notwithstanding the words of the preacher, for the world judges, and has a right to judge, by what we do, not what we say. Such a contrast between our faith and practice the enlightened conscience will not long endure.

So it is not surprising that the practice of cremation is growing all over the world, altho considering the persistence of all such social and religious rites it is surprising that its growth is so rapid. Without social prestige or ecclesiastical sanction, with little propaganda or popular attention to the subject, against the opposition of powerful vested interests and without municipal aid, cremation is steadily coming into favor. It is just twenty years ago that the first regular crematory of the United States was established in New York, and now they are in almost all the large cities. About 3,500 incinerations are now made every year in this country. As indicative of the progress of the movement the number of incinerations in New York City for the last ten years are of interest: 1895, 269; 1896, 330; 1897, 331; 1898, 466; 1899, 528; 1900, 602; 1901, 654; 1902, 647; 1903, 720; 1904, 841. The San Francisco crematory was founded only ten years ago, and has a much smaller population in its vicinity, yet in 1902 there were 974 incinerations.

The United States until recently led the world in this reform, but now France has surpassed it. Five years ago there were less than 300 incinerations in Paris; in 1903 there were 6,628. This includes, however, the bodies of paupers and suicides. A beautiful crematorium is now being built in Père-Lachaise. The first crematorium owned by a municipality is that of Hull, England, opened in 1901. Cremation is coming into vogue among the aristocracy of England, and many British peers have in recent years made provision in their wills for cremation. Columbariums have been erected on

several estates instead of family mausoleums. In Germany, notwithstanding the opposition of Church and State, which prohibit cremation in Prussia, Bavaria, Saxony and other States, there are 86 cremation societies, and the number of incinerations has doubled in the last five years.

The chief opposition to cremation has come from the Roman Catholic Church, and in 1886 Leo XIII prohibited it. The late Marquis of Bute, a British and Catholic peer, left peremptory orders to have his remains incinerated, but since this would deprive him of the rites of the Church, his family and executors appealed to the courts for release from the obligation, and it was decided that testamentary commands of this character are not binding. It seems, however, that the decree of the Pope against cremation is not universal and inflexible and irrevocable, for only last month Catholic priests in Augsburg conducted the usual religious services over the remains of General von Xylander before they were conveyed to Jena for incineration, and the Catholic papers say that this was done under instructions from high ecclesiastical authorities. Religious opposition to cremation is as foolish as it is futile. Religion cannot maintain its hold upon intelligent and spiritually minded people when it clings to gross and repugnant customs founded upon the crude materialistic ideas of our ancestors.

## The Awakening of China

CHINA has been asleep; she is now waking up.

In 1851, at the period of the death of the Emperor Tao-kuang, the Abbé Huc was traveling on the road to Peking, and sat taking tea at an inn on his way. In the company were some Chinese with whom he tried to get up a little political discussion. He spoke of the recent death of the Emperor, expressed his anxiety on the subject of the succession to the imperial throne, the heir to which was not publicly declared. The Abbé put forward all sorts of hypotheses in order to draw out those good citizens, but they

hardly listened and would not utter a word. When this apathy became provoking one of the worthy Chinese arose from his seat, laid his two hands on the Abbé's shoulders in a manner quite paternal, and said, smiling ironically:

"Listen to me, my friend. Why should you trouble your heart and tire your head with these vain surmises? The Mandarins have to attend to affairs of State; they are paid for it. Don't let us torment ourselves about what does not concern us. We should be great fools to want to do political business for nothing."

Fifty years is a short lustrum; but the Chinese apathy has already passed away. A few years ago there were only seven newspapers issued in all China for its 450,000,000 people; to-day there are 157 daily, weekly and monthly journals discussing public questions. The Rev. J. Darroch says that there is probably not a single Chinese family in any treaty port or in the capital which does not subscribe to one or more native newspapers. He computes that there have lately been printed in China, largely translated from European languages, 60 works on the science of education, 20 educational textbooks, 90 histories, 40 books on geography, 60 on government, 40 on law, 20 on the mutual relation of nations, 30 on political economy, 70 on mathematics, 50 on literature, 40 on philosophy, 50 volumes on light literature, 30 novels, 50 books on languages, 70 on health, 60 on science, 70 on drawing, 120 on the art of war (the largest on any one subject), 30 on agriculture, 20 on astronomy, 40 on mechanics, 30 on travel and 20 on mensuration. "Altogether," says he, "there are no fewer than 1,100 works on subjects which mean a revolution in Chinese thought."

This is a portentous revolution, but it is only part of the evidence. In fifteen provincial capitals colleges have been founded to teach Western learning. There are now 1,753 Chinese students engaged in special studies in Japan, besides those in Europe and America. Railroads are being constructed, or are already running, between the principal Eastern cities. The Imperial Postal Service, organized only a few years ago by Sir Robert Hart, now has 1,192 post

offices throughout the Empire. In 1903 there were 49,350,000 parcels sent by it and the next year they rose to 72,150,000. The newspapers and the post office help each other to stir China out of its isolated apathy.

And international travel is another important factor. The Japanese are everywhere, as political advisers, teachers and traders. Their concession at Tientsin is larger than that of any European colony. On the other hand, the Chinese are overflowing their own borders on every side. They are pouring into Korea and Mongolia and Russia. Alfred Stead said in 1903 that Russian statesmen of the greatest prominence admit the problem of coping with the Chinese influx into Siberia had more terrors for them than any international complications that might arise in Manchuria. In the United States there are 100,000 Chinese, 47,000 in Peru, 90,000 in Cuba and Porto Rico, 27,000 in Hawaii, over 40,000 in Burmah, 74,000 in Cochin China, 20,000 in Borneo, 40,000 in Australasia, 100,000 in the Philippines, 250,000 in the Dutch East Indies, 1,000,000 in the Straits Settlements and the vicinity and 1,250,000 in Siam, while 27,894 coolies were transported to South Africa in 1904, not to speak of those who were there before. All this is a new movement and one that means much for the awakening of China.

And now, following the Chinese war with Japan and the siege of Peking, comes this war between Japan and Russia. The defeat of Russia stirs and delights the Chinese mightily. What Japan can do China knows that she can do, give her a few years along the line of Western education and the development of an army and navy such as Sir Robert Hart has advised. The East Asian League has branches throughout Japan, Korea and China. Its President is Prince Inouye. Its purpose is the protection of China, the encouragement of wise reform in China and Korea, and the awakening of a patriotic pride. That includes, of course, the development of a military spirit as against foreign aggression. It is to be noticed that the larger class of books published in China this year was on military matters.

All these facts are what Europeans

and Americans in China are familiar with. They mean much for the future. China will be a greater Japan. Is it wise for the United States by its legislation to humiliate what will scarce more than a quarter century distant be the greatest military power in the world and our next neighbor across the Pacific? Is it not the duty and privilege of American teachers of science and religion in China to do all they can to counteract the effects of our rude policy toward the Chinese and to teach them a better Christianity than our nation practices? The missionaries in China are better American statesmen than are the men who build our political platforms or those who enact our laws in Washington.

### The Woman and the Hat

SOME think women, birds and butterflies belonged originally to the same species, and that they dived through the gates of Paradise about the time of the first flowering spring outside. And there is some artless evidence to prove the theory. Thus to this day a woman's sense of clothes and a bird's sense of wings are to the same effect. Consider the mere matter of veils. Women have a dozen different reasons for wearing them, but they are all ethereal. There is the woman who strives after the cloud effect. She spreads her white veil out over her hat and floats along with the half realized sensation of not being of the earth earthy. The one who hides coyly behind the gossamer wings of a face veil is only less elusive. And the one whose veil hangs down in two short withered wisps has merely a rudimentary idea of her own spirit. But they all try according to their respective fancies to suggest wings and immortality with an indefatigable energy in tulle and muslin. And by the law of evolution, which promises realization to continued effort, they will probably be the first of the human species to win the heavenly adornment. Nobody can tell now, indeed, how soon a girl baby may be born with web wings between her shoulders.

Another point of resemblance: Women's minds change with the seasons, just as birds do. A man will wear the same kind of clothes and do the same kind of

business the year round. But, whatever a chrysalis winter woman is doing, when the April buds begin to swell she lays it aside and begins to make clothes—romantic clothes which match the airs and moods and colors of the season. The dingiest little wren lady in a country parish will steal a while from her Lenten prayers to hem ruffles for her Easter dress. The mother with a house full of children takes time to plan one “with a little color in it.” The woman who has devoted herself all the winter to settlement home work in the city will neglect it to shop for “spring novelties.” The most peevish girl of your acquaintance may be exhausting herself sewing medalion butterflies on her white lingerie shirt-waist in order to give a corresponding suggestion of her personality. And by the time the redbird begins to call “Sweet! Sweet! Sw-e-e-t!” from his naked sumach bough they are all wearing violets on their hats.

Their esthetic development always begins at the top. They show their decorative ideas first upon their heads, and many never get beyond this rudimentary effort. It is only the woman whose taste for clothes has become a principle, not a holiday impulse, who cares as much for the appearance her feet make as she does about the way her hair is dressed. The latter never completes her personal simile. She is at infinite pains to frame the Cupid bow of her smile with becoming curls, but her mind does not extend far enough toward perfecting an idea to pray for prettily shod feet. And in many of them the decorative instinct is stronger than their sense of the fitness of things. Thus we often see the large woman who suggests nothing but heaviness dressed in a tarletan levity of style. And we are amused because we do not understand. She has followed her spiritual sense in the selection of a toilet rather than her common sense. When a poet has an inspiration he writes poetry, but when a woman feels this kindling sensation, very often her only means of expression is in clothes to match the idea. And she will create them whether they rime with her personality or not. Over there is an elderly matron who wears coquettish young turban hats set far back upon her gray head with a divine disregard for the

age and pallor of her face. And those who laugh at the incongruous effect do not comprehend that she is really making a naïvely unconscious revelation of her lovely, evergreen heart—upon the top of her head. It is the wrong place for such a demonstration, of course; but one should not fail to interpret correctly on that account.

Besides those who *know* “what to get,” women are divided into three classes on the dilemma of hats—those who want something “serviceable,” those who must have something “pretty,” and those who expect to get something “becoming.” The one who is looking for a serviceable hat must not be confounded with the gifted lady who buys one that really is “suitable” for all occasions, but this woman is recognized by the way she combs her hair. It is drawn back with no attempt to “friz” or conceal a “cowlick.” And she applies the word “serviceable” alike to baskets, churns and hats. Therefore the thing she selects always looks as if it could be used to hold peas when not worn upon the head. The trimming is invariably drawn across the staring face of it and fastens down flat. This kind of hat is never injured by getting wet and may be worn indefinitely without seeming to go any further “out of style.” If this woman had continued in the bird family she would have made her nest in a gourd or a tin can, she would have been drab colored, without so much as a scallop in the arrangement of her wings and tail feathers.

The women who wear beautiful hats as if they were born and bred under them are innumerable and satisfying, of course. But they are not the only ones who wear them. The first thing a newly rich woman thinks of as a rule is a fine house and a pretty hat. She may not know how to furnish the house, and the hat looks about as right upon her head as dew drops would be on a potato vine. But she has a sense of triumph in both which is not warranted by the general effect. And, after all, it is the same esthetic aspiration expressed in a mercantile form. To this class belong also those women who persist in buying pretty hats after they have faded and no longer possess the radiance of face or expression to correspond. Nothing can

be more pathetic when we understand that this apparently ludicrous contrast arises from the fact that the shriveling body holds a heart which continues to make these pretty ribbon-prayers for love and admiration. Originally these women belonged to the humming bird family. And if you watch the rhythmic bobbing of the innumerable flowers on their hats you will discover that their hearts still tick faster than a robin's.

But the woman who startles her friends oftener perhaps than any other is she who insists upon "something becoming." She is the despair of every milliner, and, to her own great misfortune, she often finds what she is looking for. We know a very intelligent woman who wears a hat which accents the warrior expression of her features to such an extent that when she appears on the streets she looks like a brigadier general in petticoats. The thing is *too* "becoming!"

But when we reach the question of what is considered becoming we approach one of the darkest mysteries in the mind of women. Can anybody explain, for instance, why elderly ladies so often wear a sheaf of jet lilies-of-the-valley on the dome of their black straw bonnets? What is the analogy between these twinkling black ornaments and the placid features beneath? Exactly why should the mind and character develop so that the girl of sixteen wears wild roses on her hat while the woman of sixty instinctively adopts the jet flowers? Or has mind and character anything to do with the phenomenon? If they did not wear these things what would they choose? And passing on from this enigma, why do women living in the country prefer hats with brims that turn down? Is it an instinctive expression of modesty? And if so, why do the same class of women wear such gaudily colored dresses? We know, of course, why all little girls want plumes on their hats; they care principally for an ambitious idea they have of adornment rather than for style. The same little girl will sacrifice her feathers for flowers later on in maiden time, but why is it after she marries that she ceases for a long time to take the same life-and-death interest she had before in hats? Were they connected in her mind with what Maeterlink calls

the "nuptial flight," which is the one trip abroad the queen bee makes; and that being accomplished, it no longer matters about the wings and tail feathers of her head gear? Surely these are problems too deep for the mind of a man to solve, but they are suggested by the season now upon us, when every woman one meets looks as if she just got her gorgeous head out of the winter chrysalis.

As Others See Us We are sometimes criticised for expressing radical views on the negro question, but no one can take exception to a mere quotation from a foreign journal of such standing as the *Européen* of Paris, which thus comments on the statement of the Governor of Louisiana that "no pretensions to the social equality or social recognition of negroes will be tolerated in Louisiana":

"Barbarous words, words of hate and folly, words which, alas! the majority of those who pretend to be of the race of Washington, of Jefferson and of Lincoln are ready to applaud! Words which ought to appear especially impious and blasphemous to those who profess the doctrine of Christ, who consider themselves disgraced by association with the unhappy people they have martyred and who now consign them to separate churches! Only one man in the United States has had the courage to affirm publicly that the negro may be the social equal of the white man, and this is Theodore Roosevelt, to whom much will be forgiven because he has dared to extend a fraternal hand to Booker Washington. We do not approve of the fusion of races, but we demand that the negro be judged impartially, according to his merits, and receive the hospitality of the whites as an equal and even in some cases as a superior. It may perhaps take centuries for Americans to consent to this; but has not the spirit of justice and of liberty even broken the chain of the ghettos? The people who live under the starry banner cannot be given the right to protest against the persecution of the Jews in Russia and the Armenians in Turkey until they have purified themselves of this ignoble sentiment of color prejudice. It is not enough to have liberated the negroes. They must also not despise them."

Liberty on Sale A most remarkable report, apparently on good authority, is that which comes to us from St. Petersburg that the chief men of the body of Old Believers have offered to

provide five hundred million dollars for war purposes, without interest, on condition that they be allowed full liberty of worship. But where could so much money come from? Is not Russia a very poor country? It is true that the peasants are poor, but the nobles and merchants are very rich, and it is said that the members of the Old Faith embrace the wealthiest portion of the population in Eastern and Central Russia. It has often been declared that the Orthodox churches in Russia possess enormous amounts of treasure, but the churches of the Old Faith have not been known to be so rich. Probably if the offer were accepted contributions would have to come from the millionaires. But if these Old Believers can make such an offer, one that might keep the war going for a year, what might not the Orthodox churches do if they were willing to despoil their shrines for the sake of their country, with any such devotion as we have seen in Japan? We generally think of fighting for one's liberty; to buy it somehow does not seem quite congruous.

**The Baku Massacre** In the light of the Armenian massacres nine years ago M. Meyrier, French Consul at Diarbekir, gathered a large number of Armenians in his offices and sent an appeal for protection against imminent danger to the French Ambassador at Constantinople, M. Cambon. The latter sent his dragoman at night to the Yildiz palace with the message that the head of the Vali of Diarbekir would pay for the death of the Consul. He did this on his own responsibility, not knowing that M. Hanotaux, Minister of Foreign Affairs, would sustain him. Instant orders came from the Sultan to stop the troubles. A similar case, with a different outcome, occurred during the recent horrible massacres at Baku. The Russian Governor had refused a guard of soldiers to protect the French Consulate, where more than forty Armenians had taken refuge. Surrounded and threatened by bands of Tatars, the Consul telegraphed to Paris, and received this answer: "You exaggerate." A second time he telegraphed and again the reply came from Delcassé: "Keep cool"; for

was it not by Russian connivance that the killing was done, and must not Russia be supported at the Quai d'Orsay? A protest to Constantinople might have quieted the Tatars in time, but now they are in revolt also against the Czar.

The New York Federation of Churches has been carrying on its religious census of this city. It finds the population to be 3,945,907; and of these 1,300,000 are Roman Catholic, 1,916,997 are Protestants, but of whom 1,087,762 are classed as neither members nor attendants of churches. The number of Catholic non-attendants is not given. There are also 725,000 Jews. The number who attend no religious worship is startlingly large. Nearly 28 per cent. of the total population are Protestants of this class, and if we were to add the non-attending Catholics and Jews we fear it would include a full half of all our people. Yet we believe that the cream and the salt are with the churchgoers. They nourish and preserve the whole body.

Mr. Leupp as Indian Commissioner can hardly do a better thing than to stop the hiring out of Indians to Buffalo Bill to cultivate savagery in his Wild West Show. We are sure he will not allow the bad practice to continue, if he is not controlled by those above him. It is a life most corrupting and tends to counteract the efforts of the Government for the civilization of the Indians. We observe that new engagements were not long ago made and that some Indians took their families with them, thus removing their children from school.

The dust of John Paul Jones is no better than any other dust, but the sentiment that honors gallant deeds justifies the search which Ambassador Porter has successfully made for his leaden coffin in an old Paris cemetery. Our Government will send a vessel of war, such as the old "pirate" never saw, to bring his body to Washington, that a monument may be raised over it on American soil.

# Insurance

## The Mutual Benefit Life Insurance Co. of Newark, N. J.

AN insurance company for which we have always had great admiration is the Mutual Benefit Insurance Company, an organization to which we wish to offer our hearty congratulation on its sixtieth birthday.

The Mutual Benefit was chartered by the State of New Jersey by an act approved January 31, 1845. It began business in the Newark Daily Advertiser Building in April of the same year. Its charter provided that "all persons who shall hereafter insure shall, while they continue so insured, be members of the corporation," and that twelve directors, a majority of whom shall be citizens and residents of New Jersey and members of the corporation, should have its management. The first policy issued by the company was dated May 6, 1845. Its first loss was reported on December 11, 1845, for \$5,000, and was paid in full on completion of proof of loss. After

FREDERICK FRELINGHUYSEN,  
President of the Mutual Benefit

The Company's New Building, in Process of Erection

1862 the company issued endowment policies, which contained a provision that in case of non-payment of premium they should stand good by their terms as paid up policies for pro rata amounts. The first president of the company was Robert L. Patterson, who was succeeded by the vice-president, Lewis C. Grover, in 1862. Other occupants of the presidential office in the order named have been Theodore Mackuet, Amzi Dodd and Frederick Frelinghuysen, who is the present president. On April 25, 1895, the company celebrated its fiftieth anniversary. On January 1st of that year the company had received on premium account \$161,145,251.71, and then had total assets of \$55,664,388.30. Since that time ten years have passed silently away. During this period the company has

THE LATE BLOOMFIELD J. MILLER

grown very pronouncedly. According to the sixtieth annual statement of the company, recently issued, the total assets on January 1, 1905, were \$91,840,745. This statement also showed a surplus of \$5,922,518. The company now has 155,009 policies in force, covering \$363,801,084 in total amount of insurance. During the past year the premium receipts have increased over a million dollars when compared with the figures of the preceding year. The total receipts have also increased as well as the assets. The Vice-President, Bloomfield J. Miller, who had been connected with the Mutual Benefit since 1867, died last week. Mr. Miller became Actuary of the company in 1871 and Second Vice-President in

1894, and succeeded James B. Pierson as First Vice-President in 1902. He was one of the chartered members of the Actuarial Society of America and served as its President in 1897.

The company will during the present year begin the erection of a new building to be constructed of white marble. It will have a frontage of 150 feet on Broad Street, the main street of Newark. The building operations will probably occupy two years.

### The New President of the Connecticut Mutual Life Insurance Company

At a special meeting of the Board of Directors of the Connecticut Mutual Life Insurance Company, held at Hartford on April 12th, John M. Taylor was unanimously elected President. Mr. Taylor, who succeeds the late Col. Jacob L. Greene in his new office, was born of New England ancestry at Cortland, N. Y., February 18th, 1845. He was graduated with the degree of B. A. from Williams College in 1867. He subsequently received from his *alma mater* the honorary degree of M. A. He was admitted to the bar at Pittsfield, Mass., in

## Ought to Be Repealed

THE present tax on the surplus and undistributed profits of the savings banks of New York should never have been imposed, and the Legislature ought now to pass by unanimous vote the pending bill for the repeal of the law under which it is collected. It was generally understood in the campaign preceding the November election that the act was to be repealed. Governor Higgins repeatedly promised that the Republicans would repeal it. The Democratic platform demanded repeal. "If any taxes heretofore levied, especially such as affect the savings of the people," said the Republican platform, "appear to be unjust or unnecessary, we favor such revision of the tax laws as will equitably correct such condition." This tax is inexpedient, unnecessary and unjust. Governor Higgins, in his message of January 4th, earnestly recommended repeal. The tax, he said, was one upon the depositors, and it tended to reduce the rate of interest. "Justice seems to demand," he continued, "that it be abolished, and that some more equitable method of raising the amount be resorted to." New tax bills, recently passed, leave no room for the plea that the money raised by this tax is needed. It is unwise to tax the small savings of the poor. In a special message Governor Higgins should urge repeal.

## The New Haven Road's Policy

FOLLOWING its recent purchase of the Hartford street railways (92 miles) for about \$3,500,000, the New York, New Haven & Hartford Railroad Company has now bought, for about \$4,250,000, the fine street railway system (93 miles) of Springfield, Mass. Discussion of a bill pending in the Massachusetts Legislature seems to show that a steam railroad corporation of that State has no power to make such a purchase. The New Haven Company now owns more than 600 miles of the best trolley property in New England. President Mellen confirms the report that his company is in alliance with the New York surface roads with respect to projected subways in the city, and that it will make direct connection with these

subways at a station north of the Harlem River, if the subway proposition of the company controlling the surface roads is accepted by the authorities.

CHARLES L. ROBINSON, who recently resigned as Assistant Cashier of the National Bank of Commerce, and who was connected with the Bank of Commerce and the Western National Bank for seventeen years, is now Vice-President of the Guardian Trust Company of New York, whose capital and surplus are a half million dollars each. On March 14th the deposits were \$2,966,409.52, and the total resources were \$4,018,755.37.

....At the recent annual meeting of the stockholders of the Eastman Kodak Company it was shown by the directors' report that after the payment of 6 per cent. on the preferred stock and 10 per cent. on the common, there had been carried to the surplus account \$1,057,781 for the year 1904, making the surplus accumulation for the two years of the company's existence \$2,156,236.

....Dividends announced:

Atch., Top. & Santa Fé R'way Co. (Stamped Adjust.), 2 per cent., payable May 1st.

---

(Continued from page 915.)

1870. He practiced his profession at Pittsfield for two years, incidentally interesting himself in local politics. He served as Town Clerk and filled the office of Clerk of the District Court. In August, 1872, Mr. Taylor went to Hartford to become the Assistant Secretary of the Connecticut Mutual Life Insurance Company. In 1878 he was elected Secretary, in 1884 he became Vice-President, and now, after thirty-three years of service, he has the highest office in the gift of his company. Mr. Taylor is the author of "The Memoirs of Maximilian and Carlotta of Mexico," and of "Roger Ludlow, the Colonial Law Maker," a delightful history of colonial days in Massachusetts and Connecticut. He is also an acknowledged authority upon insurance themes. A memorial brochure upon Colonel Greene, written by Mr. Taylor, will presently be issued.

NEW YORK, THURSDAY, APRIL 27, 1905

No. 2943

## Survey of the World

### The President's Vacation

Mr. Roosevelt's desire for seclusion has been respected, and very little news has come to the outer world from his camp in the mountains. Immediately after his arrival at the hunting grounds his activity was restrained by a severe storm, but it is known that since that time he has shot one grizzly, after a long and exciting chase. The bear weighed 400 pounds, and its pelt was brought to Glenwood Springs, where it will be transformed into a rug. On the 19th Secretary Loeb visited the camp, and the President signed the appointment of ex-Governor Atkinson, of West Virginia, to be a judge of the Court of Claims. The hunters will come out on May 14th. Sherman Bell, who became widely known while holding the office of Adjutant General in Colorado, says that, upon the President's invitation, he intends to visit the camp and to be with the hunters during the last week of their stay in the mountains. After breaking camp the President will be present at a dinner of the Denver Board of Trade and be a guest at the banquet of the Iroquois (Democratic) Club in Chicago. Mayor Dunne promises to give him a hearty welcome. "He is a good President," says the Mayor. "I think he made a mistake in the Panama affair, and he has taken some other steps which I don't approve; but he is a broad man and has the interests of the Republic at heart."

### An Unconstitutional Ten-Hour Law

By a bare majority the United States Supreme Court decides that the New York law limiting a day's work in bakeries to ten hours

(and a week's work to sixty) is unconstitutional. The vote was 5 to 4, Justices Harlan, White, Day and Holmes dissenting. In 1900 the law was enacted. Not long afterward Joseph Lochner, a master baker of Utica, was prosecuted and fined for permitting an employee to work more than ten hours a day in his bakery. Lochner's was a non-union bakery, and it was at the instance of the local unions that action against him was taken. Upon appeal the judgment of the court was affirmed and the constitutionality of the law upheld in the Court of Appeals by a vote of 4 to 3. Chief Judge Alton B. Parker delivered the opinion, copies of which were circulated by his party's committee in last year's campaign. The substance of it was that the legislation was a proper exercise of the State's police power for the protection of the public health. Justice Peckham delivered the opinion of the Supreme Court. Pointing out that the statute was not one merely fixing the number of hours that should constitute a legal day's work, but one absolutely forbidding an employer to permit any one to work more than ten hours a day in his shop, under any circumstances, he held that this was necessarily an interference with the right of contract between employer and employee. The general right to make a contract in relation to his business was part of the liberty of the individual protected by the Fourteenth Amendment. The police powers of a State had not been exactly described or limited by the courts. They related to the safety, health, morals and general welfare of the public. The Fourteenth Amendment was not designed to interfere with a reasonable and proper exercise of those pow-

ers. In many cases the Supreme Court had recognized the existence of the police power and upheld the exercise of it, as in sustaining the Kansas and Utah eight-hour laws, both of which made provision for emergencies. But there must be a limit to the valid exercise of this police power. In this case the limit had been reached and passed. As a labor law pure and simple the act was invalid, for there was no reasonable ground for interfering with the liberty of persons or the right of free contract by determining the hours of labor for bakers, who were able to take care of themselves and were not wards of the State. Clean and wholesome bread did not depend upon a baker's hours. There was no reasonable foundation for holding this to be necessary as a health law. The pretense that it was a health law was so slight as to give rise to "the suspicion that there was some other motive dominating the Legislature than the purpose to subserve the public health or welfare":

"It seems to us that the real object and purpose was simply to regulate the hours of labor between the master and his employee in a private business not dangerous in any degree to morals, or in any real and substantial degree to the health of the employee. Under such circumstances the freedom of master and employee to contract with each other in relation to their employment and in defining the same cannot be prohibited or interfered with without violating the Constitution."

In his dissenting opinion Justice Harlan said there were many reasons in support of the theory that more than ten hours' steady work each day in a bakery might endanger the health and shorten the lives of the workmen. If such reasons existed, the law should stand. "Let the State alone in the management of its purely domestic affairs, so long as it does not appear beyond all question that it has violated the Constitution." No more important decision, he said, had been rendered in the last century.—Both the passage and the annulment of the law were due to the efforts of Henry Weismann. As secretary of the bakers' union he procured the passage of it. After he became an employing baker his views underwent a change. Then he studied

law. As counsel for the master bakers he took an appeal to the Supreme Court and represented them there.—The union will continue to stand for ten hours, and it is predicted by labor leaders that 50,000 bakers will strike if the general demand for ten hours is not granted on May 1st. By the Supreme Court's decision the sanitary regulations of the New York law are not affected.

#### The Senate's Railway Rate Inquiry

The Senate Committee on Interstate Commerce

(Mr. Elkins, chairman) has resumed its investigation concerning the proposed regulation of railway freight rates, and has invited many prominent railroad officers and capitalists to give testimony. It is reported that there is a division on the Republican side of the committee, Messrs. Elkins, Kean and Foraker, it is said, opposing such legislation as is found in the bill recently passed by the House, and Messrs. Culom, Dolliver and Clapp supporting it. Last week testimony was given by Victor Morawetz, general counsel of the Atchison road and chairman of its Executive Committee, and by President Tuttle, of the Boston & Maine. They oppose the main provisions of the House, or Esch-Townsend, bill. A large part of Mr. Morawetz's statement related to the legal and constitutional questions involved. He also denied that the Atchison Company had given rebates to the Colorado Fuel & Iron Company. [The Atchison is about to be prosecuted by the Government upon the charge that it did give such rebates for several years.] The railroad companies, he said, violated the law every day by making what were virtually combination agreements to maintain rates. "There would be chaos" if they should not do this. President Tuttle asserted that rebates and unjust discriminations were things of the past, and that private car lines were a great blessing. Both these gentlemen expressed the opinion that the Commission had not been diligent and energetic in proceeding against violators of the existing laws. It is said that the committee will call upon Secretary Morton

for testimony. A report is published that Mr. Prouty intends to retire from the Commission and seek a nomination for Congress in Vermont.—The La Follette bill for a rate commission was passed in the Wisconsin House last week by a vote of 75 to 12. There is doubt about the passage of it in the Senate. If it should fail there, Governor La Follette may decline his election to the United States Senate and make another campaign in Wisconsin for the railroad legislation which he desires and to which his party is committed.

#### Municipal Ownership in Chicago

Negotiations with the Chicago street railway companies have been opened by Mayor Dunne with respect to a proposition that the companies shall at once improve their lines and sell the entire property to the city at a fair price. One conference has been held, and there is to be another, to ascertain upon what basis the lines can be acquired and all litigation avoided. If no satisfactory agreement can be reached, the Mayor may advise the construction of subways, to be used in connection with new municipal surface roads in competition with existing lines. Plans for subways provide for pipe galleries in which water pipes, gas pipes, and electric wires shall be placed. Bird S. Coler, formerly Comptroller of New York, and for many years a banker dealing in municipal securities, has written to Mayor Dunne offering to organize a syndicate for the purchase of the proposed Mueller street railway certificates. Among the leading supporters of Judge Dunne and his policy in the recent campaign was Joseph Medill Patterson, son of the editor of the *Chicago Tribune*, who resigned from the staff of that paper in order that he might freely work for the candidate whom it opposed. Altho he is only 26 years old, the Mayor has made him Commissioner of Public Works. Mr. Dalrymple, the General Manager of Glasgow's street railways, explains that his departure for Chicago has been delayed by a contest over a projected extension of the Glasgow lines. The extension—fifty miles of track—is opposed by certain railroads which the city does not own.

#### Panama Railroad's Freight Rates

The views of Chairman Shonts as to a reduction of freight rates on the Panama railroad from the high figures maintained by an exclusive contract with the Pacific Mail Company and the transcontinental railroads do not appear to have been in accord with those of Secretary Taft, who gave notice a few days ago that a sharp reduction would be made. In authorized interviews Mr. Shonts has said that nothing would be done that would "disturb the balance of transcontinental rates," and that "the monopoly which the Pacific Mail Company" was said to have "by reason of the contract" was "not a matter of great concern" because the advantages thus enjoyed were "not of such size as to play a part in transcontinental rates." In one of these statements he is represented as predicting that the present rates would not be altered, and that the Government would not "run the railroad in opposition to the railway corporations of the States." This is a matter in which the transcontinental railroads take great interest. At the end of last week it was again asserted in Washington that Secretary Taft's promise would be kept, and that the high rates would be cut down, not only in the interests of fair play, but also, it was said, because the present rates are maintained by an agreement that is in violation of the Sherman act, which was enforced in the Northern Securities case.—At last week's meeting of the Panama Railroad Company's stockholders (the stockholders being Secretary Taft) the road was turned over to the Canal Commission. Chairman Shonts was elected president, and Chief Engineer Wallace vice-president, and all the Commissioners were made directors. With them was associated Señor de Obaldia, the Minister from Panama. For double-tracking the road \$1,250,000 was appropriated. The company now owns and operates three steamships plying between Colon and New York. "We shall buy five or six more," said Secretary Taft. At this meeting the question of freight rates was not considered. Alfred Noble, consulting engineer of the Pennsylvania Railroad Company, has accepted a place in the Board of Consulting Engineers.

Great Britain's member of the Board will be Chief Engineer Hunter, of the Manchester Canal, under whose direction that waterway was made.—Lindon W. Bates, an eminent American hydraulic engineer, who has had charge of important projects in Europe and Asia, submits to the Commission a new plan for the canal, asserting that, while offering advantages equal to those of a sea level cut, it can be carried out for \$85,000,000 less, and for \$50,000,000 less than the cost of a canal at the thirty-foot level, and with a saving of some years in time.

#### Political Excitement in Cuba

Politicians and legislators in Cuba are already beginning the campaign which is to end with the Presidential election. One cause of excitement has been the forcible seizure, on the 14th, by six Nationalist (or Liberal) Congressmen, of the records of an investigation made two years ago concerning charges against Nationalist Councilmen and municipal officers in Havana. No action had been taken as to the charges, and the new Moderate Cabinet recently decided to look into the matter. Governor Nuñez was directed to produce the records. A clerk was carrying the papers to the President when he was attacked by the six Congressmen, who took them from him. One of the six is said to be a brother of the Governor. They desired, it is said, to prevent a political use of the evidence to the disadvantage of the Nationalist party. On account of this affair a Government employee named Andre has fought duels with two of the six Congressmen. The Nationalists have appointed a committee to explain the seizure to the President. Growing out of this controversy there was a movement for a public demonstration against the President. In connection with this movement the opposition of Gen. Maximo Gomez to President Palma was clearly shown. He declared that the Government was seeking to destroy free institutions for which Cubans had fought. After a conference with the President, however, the proposed demonstration was abandoned, and the complainants consented to assist the President in investigating the charges in ques-

tion. Owing to recent changes in party lines, the forces that will oppose President Palma are not yet clearly disclosed, but some observers expect that he will be defeated by a combination of the radical elements. Two possible candidates mentioned are Governor Nuñez and Governor José Miguel Gomez, of Santa Clara, who represents the bolting Moderates of that province. These have not yet consented to act with the Nationalists.

#### Laborers on Strike in Porto Rico

A strike of the sugar plantation laborers in the southern part of the island has been accompanied by several riots and has caused the courts to issue the first labor injunction ever granted in Porto Rico. There are 14,000 strikers. They demand an increase of wages and a reduction of hours. The cane-cutting season is at hand, and some of the planters assert that men who are willing to work are prevented from doing so by intimidation and violence. This is the allegation upon which Charles Hartsell, formerly Secretary of the Government, who now represents a French sugar company, procured from Judge McKenna, of the United States Court, an injunction directed against Santo Iglesias and twenty other members of the Federation of Labor. There have been riots at strikers' meetings in Ponce. Many shots were fired, several persons were wounded and the labor leaders were arrested. They assert that violence was provoked by the police, who sought, it is alleged, to break up peaceable meetings. Appeals for help have been made by the strikers to the Federation leaders at Washington.

#### The Philippine Islands

Hostilities have been resumed in the Moro country. The insurgents have been organized by a refugee Datto from Borneo. In a recent attack upon the city of Jolo they fired upon the quarters of the Officers' Club while a ball was in progress there. On the following day the secretary of Governor Scott was ambushed and killed. General Wood has arrived from Mindanao, and has given the Moros ten

days in which to surrender the hostile Datto for punishment.—Roxas and the other wealthy natives who were arrested in Luzon for giving aid to the ladrones have been released on bail. In the case of Roxas \$50,000 was required. The Government is censured by the native press for its prosecution of these men.—After long delay, an agreement has been reached for a settlement of the controversy over the lands of the Dominican friars. The question of the validity of the title to the three plantations in dispute will be submitted to arbitration in the Philippine Supreme Court. For the entire property about \$2,500,000 is to be paid.—Secretary Taft explains that the insular Government is to pay only the transportation expenses of the members of Congress who are to go to the islands with him, and that even on the Government transport they will pay for subsistence. Relatives of the Congressmen and other guests will pay all their traveling expenses. The Government's expenditures on account of the visiting party will not exceed \$10,000.

**The Italian Railroads** The strike of the employees of the Italian railroads to prevent the passage of a bill providing for Government ownership and management had exactly the opposite effect from that intended. The inconvenience to the traveling public during the Easter season and consequent loss to hotels and the tourist industries created so much dissatisfaction that the demand for the nationalization of railroads was immensely strengthened and the bill was passed by an overwhelming majority. Because of the efficient protection by the soldiers to engineers and men willing to work the roads were never at any time completely tied up, altho for several days only one train each way was run and that with considerable delay. There were some 12,000 English and American tourists in Rome and other Italian cities at the time when the strike was declared. Some of these were able to secure automobiles to Naples to catch steamers for home. Prince Ferdinand, of Bulgaria, who attempted to do this,

was stopped by a breakdown of the motor car on the way to Naples. Secretary Hay, who is reported to have completely recovered his health, was detained in Italy for a week on account of the strike. The members of the Chamber of Deputies, who wished to return home after the passage of the railroad bill, were sent by Premier Fortis by a special train to Civita Vecchia, the seaport of Rome, and conveyed by two warships to Naples and Genoa. The only conflict of importance occurred at Foggia, where a mob of peasants and strikers attacked the railroad station, stoning and shooting at the soldiers guarding it. One soldier was killed and many wounded. The troops returned the fire, killing three and wounding seven of the rioters. An attempt was made to wreck the express between Venice and Milan by means of a bar of iron on the railroad track, which fortunately was found in time. The railroad bill passed the Chamber of Deputies by a vote of 289 to 45, the Republicans and Socialists voting against it. It passed the Senate by a vote of 109 to 8, and was at once signed by the King. The bill was drawn up by Señor Ferraris, the Minister of Public Works, and its most noteworthy clause, and the one which aroused the opposition of the employees, is that which provides that all employees of the railways, whatever their rank or the nature of their employment, are to be considered as public officials. Those who voluntarily abandon or do not accomplish their duties, or accomplish their duties in a manner calculated to interrupt or obstruct the regularity of the service, are to be regarded as having resigned their positions, or as having been dismissed from their posts. This provision also applies to the railways which remain the property of private companies, as well as to the State railways. Señor Tedesco's bill, for which this is a substitute, made striking or interfering with the railroad traffic a penal offense. The railroads will not be actually transferred to the Government until the financial arrangements have been made. A fund of several thousand dollars has been raised by popular subscription and from the

hotel keepers and chambers of commerce for the benefit of the railroad men who did not go on strike.

✻

#### The French Cabinet

The effort of Emperor William to force M. Delcassé out of the French Cabinet has proved unsuccessful, and he retains his portfolio with the full support of the Government. Theophile Delcassé has for seven years been Min-

M. ROUVIER,  
French Premier

ister of Foreign Affairs in five successive Cabinets, and to his tact and efficiency is largely owing the strong, stable and successful foreign policy of France in recent years. By forming the alliance with Russia he secured France from the danger of an attack from

any foreign Power, and during the past year the close relations which he has established between France and Great Britain have given both these countries an opportunity of carrying out their foreign policies without interference, and by his series of arbitration treaties the probability of a permanent European peace has been much strengthened. The visit of Emperor William to Tangier was a direct blow at his Morocco policy, and it was unofficially threatened that Germany's acquiescence in the Anglo-French agreement in regard to Morocco could only be secured by the resignation of M. Delcassé. He has been the subject of attack by the Socialists in the Chamber of Deputies, who have always disliked the alliance with the Czar, and since the Government is dependent upon Socialist support it was questionable whether the new Premier, M. Rouvier, would support his Foreign Minister. Last Friday M. Delcassé handed in his resignation to President Loubet on the ground of ill health. He was, however, assured that it was the wish of every member of the Cabinet that he should retain his position, and at the personal

solicitation of President Loubet and Premier Rouvier he withdrew his resignation on condition that he have a perfectly free hand in foreign affairs. He is willing, however, to negotiate with the German Ambassador, and to give any necessary assurances that the principle of freedom of trade with Morocco will be assured to all nations. M. Rouvier declared in the Chamber of Deputies that Chancellor von Bülow had practically acquiesced in the Anglo-French convention, and that Germany in reopening the question, which France had regarded as settled, was endeavoring to secure commercial advantages at the present crisis, when her ally, Russia, is enfeebled by war. The German papers consider that France's agreement to maintain an "open door" in Morocco is unsatisfactory and demand an international conference. In the meantime the disorder in Morocco is increasing, and in the western coast region the tribes are in revolt and communications by land are interrupted. The French official papers deny that M. Saint-René Taillandier has been requested to leave Fez, and claim that the Moroccan Government has already acceded to the plan of the reforms recommended by France in its general outlines.

✻

#### The Cretan Difficulty

Prince George of Greece, High Commissioner of Crete, is in an exceedingly embarrassing and unenviable position. After having returned from a tour of the capitals of Europe, where he petitioned in vain to the Powers to permit the annexation of the island to Greece, he finds himself obliged to suppress by force of arms an insurrection aiming to accomplish the same object which he so earnestly desires. The numbers of the insurgents have been augmented, and there are thought to be at least 10,000 in the movement, which includes many men of prominence and ability, among them the President of the former Revolutionary Assembly, M. Sphakianakis, who took a prominent part in the negotiations with the commanders of the international fleet in 1897. He was appointed by Prince George to a post in his first

Government, but soon after resigned and has since been in private life. The officers in charge of the military contingents of the Powers upon the island have had interviews with the insurgent chiefs Manos and Foumis, and have urged them to desist from violence on the ground that it would tend to delay and defeat their own cause. On the part of Greece also an effort is being made to suppress the agitation in favor of union. Premier Delyanni has requested the Greek newspapers to observe the greatest moderation, because if a conflict occurs between the revolutionists and the Cretan or international forces it will furnish an excuse for the Powers to continue still longer the present unsatisfactory conditions. He also advises Prince George to dismiss the favorites and counsellors who have made his administration so extremely unpopular, especially his private secretary, M. Pappadiamantopoulo. In the Chamber of Deputies Premier Delyanni announced that the Cretan Government refused to give any aid or support to the agitation of the Cretans for union with Greece. The Cretan Assembly was opened April 20th by Prince George, and as soon as he had left his chamber the President of the House read the following proclamation:

"In the name of Almighty God, the Cretan Chamber of Deputies votes and proclaims the union of Crete and Greece, in which Crete will eternally form an inseparable part under the constitutional sceptre of the King of Greece."

All the deputies took the oath of allegiance to the Hellenic Constitution in the King's name and declared their confidence in Prince George. This resolution was conveyed to the Prince, and in reply he forwarded to them the statement of the protecting Powers that the union of Crete with Greece would not be permitted. It is generally admitted that such an outcome is ultimately inevitable, but if Crete throws off the nominal sovereignty of Turkey, Bulgaria would probably take the same action and occupy Macedonia; and a war in the Balkan States just now would be apt to involve all Europe. It is reported that a plot has been discovered on the part of the insurgents to kidnap Prince George and convey him to their headquarters.

#### Russian Congresses

The reform movement has extended to the Russian Church, and both clergy and lay members are freely discussing measures for its reorganization. A project is on foot in which Antonius, the metropolitan of St. Petersburg, is prominent, but which is said to have been instigated by Witte, to call a general assembly of the Orthodox Church to be held at Moscow, and to include lay delegates. This is said to be favored by the Government as a substitute for the Zemsky Sobor, or national assembly, demanded by the people, but the Czar has treated this like the other reform measures by postponing it to a more convenient season. His marginal note on the petition is as follows:

"I find it impossible, in the present disturbed times, to undertake a task of such magnitude, requiring calm consideration. Following the old example of the Orthodox Emperors, I intend, however, as soon as there is a favorable moment, to set afoot this great work and summon the Council of the Old Russian Church for a canonical discussion of questions of faith and ecclesiastical reform."

The object of the movement is to free the Church from the direct control of the State by placing it under the authority of a council of Patriarchs, as it used to be before the time of Peter the Great, who created the Holy Synod as a bureaucratic department to manage ecclesiastical affairs. Pobiedonostzeff, who as Procurator General of the Holy Synod has always exerted a great influence over the Czars, is strongly opposed to the proposed scheme, and there are rumors of his resignation. The Patriarchs by ancient right can communicate directly with the Czar.—A Medical Congress, comprising 1,300 doctors from all parts of European Russia, met in Moscow for the purpose of considering sanitary measures to prevent the threatened invasion of cholera. The meeting was at first prohibited, but was finally permitted by the authorities on the condition that the discussion be confined to purely scientific and technical subjects. The Congress, however, passed a resolution stating that the Government was so corrupt and inefficient that it would

be impossible to cope with a cholera epidemic unless there were fundamental reforms in administration. The resolution declared that an improvement in the economic conditions of the people was necessary as a basis for the preservation of health, and that for the future prevention of epidemics it was imperative to have radical changes in the tax laws, to grant an increase in the quantity of land allotted to the peasants, to satisfy the demands of the industrial classes and to grant all the concessions necessary completely to tranquilize the ignorant population, among whom otherwise it would be impossible to execute sanitary measures. Even the lives of doctors, the resolutions said, would otherwise be in danger. The proposals culminated in a demand for the immediate convocation of a Constituent Assembly on the basis of a universal secret ballot, without distinction as to sex, nationality, or religion. The Congress further demanded that the war be stopped as a sanitary measure to prevent the spread of Asiatic cholera.—A congress of barristers in St. Petersburg passed similar resolutions and were dispersed by the police.—The Association of Russian Journalists, of which Gorky, Korolenko, Gessen, Annensky and other authors who protested against the impending massacre of St. Petersburg are members, passed a resolution of sympathy for the mother of Ivan Kaleieff, the assassin of the Grand Duke Sergius, and expressed the hope that the time would soon come when Russian mothers would no longer be obliged to sacrifice their sons in the struggle for liberty.—The Czar sent to the Assembly of the Nobility of Kostroma the following confirmation of his intention to convene a Zemsky Sobor:

"My will regarding the convocation of representatives of the people is unswerving, and the Minister of the Interior is devoting all his efforts to its prompt execution."

#### The Russian Fleet

After ten days spent in refitting and coaling the Russian fleet left Kamranh Bay, in French Cochinchina, on Saturday. Japan made a vigorous protest to France against this use of the port of a

neutral Power and communicated the note of protest to the other Governments. The French Government professed its intention of maintaining neutrality, but explained the delay on account of the difficulty of ascertaining the facts from such a remote port. There is no telegraph, custom house or official establishment of any kind at the bay. In response to an inquiry in the Chamber of Deputies Premier Rouvier replied that:

"Formal, precise and repeated orders have been given to our agents in Indo-China to assure the absolute neutrality of France in Indo-Chinese waters."

It is explained that Admiral Rojestvensky refused to obey the orders of the Russian Admiralty to leave French ports in Madagascar and in Cochinchina and that his departure from Kamranh Bay was due to peremptory orders directly from the Czar. The French Government has sent orders to Saigon that the Russian cruiser "Diana," which took refuge there after the battle of August, must be prevented from joining the fleet. She has been repaired, but the French authorities will order the removal of indispensable parts of her machinery. The Russian fleet in Kamranh Bay is reported to consist of twenty warships and thirty-six transports. A daily commercial service of French, German and Russian ships has been running between Saigon and the bay for a week, and immense quantities of food, coal and other supplies have been sent to the Russians, greatly to the profit of Saigon and the farmers in its vicinity. Vice-Admiral Nebogatoff's squadron is expected to join Rojestvensky in a few days. It consists of the following vessels: The battleship "Nicolai," 1889, two 12-inch and eight 6-inch guns; the armored cruiser "Monomach," 1881, five 6-inch and six 4.7-inch guns; the coast defense vessels "Oushakoff," 1893; "Sevianine," 1894, and the "Apraxin," 1896, each with three 10-inch, four 9-inch and four 6-inch guns; the balloon ship "Russ," 1887; the repair ship "Xenia," 1900, and the hospital ship "Kostroma," 1889. It is officially announced that the Japanese fleet will assemble south of Formosa. Several Japanese vessels have been reported in the vicinity of the Philippines.

# Extravagance in Women's Dress

BY EDWARD ATKINSON, PH.D., LL.D.

[This article was written in response to a special request from us. Mr. Atkinson does not deny that he is something of a *faddist*. He believes that every reformer, in social lines, must have fads. A special fad of his has to do with economies in living, and his "Aladdin Oven" is one of them. His list of articles required for careful economy of a woman's dress was made after many inquiries and has been considerably discussed. The following is the list of articles needed, made to cover a period of four years: Eight hats, two outer garments (winter), two ditto, (summer), four shirtwaists (woolen), sixteen ditto (cotton), two ditto (silk), four shirtwaist suits (cotton), four winter skirts, eight pairs boots, eight pairs shoes (Oxfords), twenty-four hose, twelve corset covers, eight corsets, sixteen drawers (cotton), six undervests (winter), six ditto (summer), ten petticoats, eight nightgowns, eight pairs gloves (kid), eight ditto (cotton), four dozen handkerchiefs, eight pairs rubbers, two kimonos; accessories, one muff, two umbrellas.—EDITOR.]

I HAPPENED to be asked by the Hebrew Woman's Association of Boston to put before them the facts and figures proving that women occupied in pursuits that require a certain standard of dwelling place, of dress and food rather above that of women occupied in manual and mechanical pursuits, might secure these necessities of life in this city at an annual cost of from \$250 to \$300 each, if there could be found three or five women who would co-operate and share and share alike in the necessary work. I adapted my statement to what I assume to be the conditions of teachers, stenographers and other women in similar pursuits. I spoke in some measure from experience in my own practice as a youth, when beginning the work of getting a living, about sixty years ago.

I put before the Association the different facts in the cost of living, rating the cost of clothing computed on a period of four years at a minimum of \$260, or \$65 a year, or at a more reasonable estimate of \$340, or \$85 a year, stating how the extreme economy of \$65 could be attained. These figures were not based on mere hypothesis; they were proved by evidence and could be proved by reference to persons who are practicing on these lines, if it were fit to give their names without subjecting them to annoyance from constant inquiry. The statement, limited to an estimate of only \$65, without the context, has caused a good deal of discussion, much criticism, and has brought out a good deal of sustaining evidence. As a mere problem of the

cost of woman's dress the subject would be of little interest to economic students, but as a part of the larger problem of what constitutes what is called a "living wage" for men and for women it is one of great interest.

I am now asked by the editor of THE INDEPENDENT to treat the subject of "Extravagance in Women's Dress."

Why this limit? Why not also include men's dress? The only reason why men probably spend less than women on dress is due to the fact that it is not good form for a man to become conspicuous in his dress, while in some classes of society the more conspicuous a woman becomes by the use of color and texture the more well dressed she is assumed to be. This may be true if she knows how to dress in good taste, but quite the reverse when a woman without taste becomes conspicuous for the extravagance of her dress and her display of jewelry, which often creates a doubt in the mind of men whether she belongs to the *beau-monde* or the *demi-monde*.

Men suffer from a serious disability in being deprived the use of color. In this, as in many other directions, the time has come to organize men's clubs for the discussion of men's rights and equal opportunities. What more outward mark of a gentleman than the dress of only one or two generations since—the blue coat with gold plated buttons, the buff waistcoat, the ruffled shirt, the black tights, with the conspicuous bunch of seals attached to the watch carried in the fob, the silk stockings, the shoes with shining

buckles? What man now forced to dress for dinner or for evening entertainment in somber black, in such a way as often to be mistaken for the butler or the waiter, does not long for a return to the fashion that I have described, or even to the earlier fashions and the days of the cavaliers and their successors? What man has not a craving for color? What better evidence of this desire to decorate themselves in colors than is found in the processions of the Masons, the Odd Fellows, the Knights of Pythias and other such bodies. If men were not shackled by conventional rules in dress does any one doubt that they would be as extravagant as women? Diamond shirt studs, scarf pins and finger rings, vulgar in men, admired often when worn by women—why this discrimination? What finer dress of great distinction than the type worn by Washington? Can any one imagine him in the modern so-called full dress of society?

Now what is extravagance? I was once asked to give a talk before a woman's club on what constitutes luxury—about as puzzling as the present problem. I took as an example a woman's hat. The object of a hat is to cover and protect the head from exposure to weather, the bonnets of the women belonging to the Salvation Army meeting these conditions perfectly. Why not take off the letters, leave the blue ribbon, and then you have an absolute standard of a useful hat. Why is not anything beyond this a luxury? I can find no logical reply to this question.

If a woman can clothe herself in comfort, making a good appearance, suitable to the vocations that I have named, at a cost we will say of \$80 a year (a standard easily attained), is not any expenditure beyond that sum an extravagance? What logical reply can be made to this question?

Let us carry this process of reasoning a little further. If a piano movement incased in stained pine is as good a musical instrument as when incased in polished hard wood, is not the latter an extravagant waste of money? I have a German piano, one of the pianos in my house, of this type, incased in stained wood, but with fine tone and perfect action. Isn't it extravagant to have an-

other grand piano in a polished case?

But now let us look at the other aspect of this question. If these low cost standards were established, large numbers of the most skilful mechanics and expert women would be wholly deprived of their occupation.

The true reply is that expenditures well adjusted to income even on dress are fully justified. Men and women rightly obtain satisfaction from a well ordered, well cut and tasteful garment, inconspicuous, but marking the well-bred person; and even if the cost be many times more than the standard that might be established, all are entitled to the satisfaction obtained by such expenditures in due proportion to income.

The standard of low cost which I was asked to present to the Hebrew Association was one for women whose income compels strict economy. The Association consists of rich and poor, as they are called, but the object is to help those who have little means, or who have others dependent upon them, to get the most comfort and welfare by the least expenditure of money.

Now let us deal with the somewhat larger aspect of this question. If the annual product of this prosperous nation were equally divided, share and share alike, the proportion of the materials for shelter, food and clothing which each person would secure would not exceed what about \$225 a year to \$250 a year will buy at the retail or final price, at the points of distribution for consumption—that is to say, the average share of all that is produced is at or below the minimum sum at which I established the possibility of a comfortable living, \$250 a year.

Now all that we get in a material sense in or out of life is our bread and clothing. The whole organization of society, the railways, waterways, banks, insurance companies, ships, courts of justice, tip carts and tools, have been gradually evolved for the sole purpose of supplying bread daily, clothing and shelter to each family, or for providing for them in asylums if they are incapable of providing for themselves. At the rate of \$225 for each person (if that is the measure of all that is produced, and I think it is the maximum), then by so

much as some may consume more must others have a less supply. That is the necessary law and is in the nature of things. At that apparently low measure the value of our annual product is much greater than any other economist, statistician or compiler of the census has ever put it.

In the present year our population will number approximately 84,000,000. Multiply that number by \$225 a head and we reach the incomprehensible figures of \$18,900,000,000—nineteen so-called billion dollars' worth of food, fuel, fabrics and fibers at that valuation are brought forth from the earth for distribution. In that work 210,000 miles of railway are employed as one factor. In order that each man, woman and child might have a few boards over their heads, a few yards of cloth on their backs and about three pounds of meat, bread and vegetables on their table every day, this great system of railways has been brought into existence. Last year 1.6 tons, 3,600 pounds, of food, fuel, fibers and fabrics were carried over the railways 215 miles for every man, woman and child of the population. We shall construct about 10,000 additional miles in the present year, and it will be necessary to construct about 40,000 additional miles in the next four years to keep up with the demands of the increasing population. In addition to this railroad service, witness the extension of the electric tramways.

Yet while this great product measured in incomprehensible terms of money affects the imagination, it must be remembered that in a normal year 90 per cent. is consumed in the process of production, not over 10 per cent. is or can be applied to the maintenance or increase of capital. The application of this capital requires mental energy of the highest power and the capital must be under such control and direction. Without this control and direction the reproductive forces would not be developed, the increase of production would be stopped and people would begin to starve for want of the service of capital in meeting their wants. And yet capital so-called, developed in railways, mills, workshops and factories, sometimes called "fixed," is subject to most rapid destruction. The profit of each generation has consisted in saving

the waste of the previous one. At the present time that is true of each decade. The inventors and the scientists are the great destroyers of capital, worse than the moth or the rust that doth corrode the great steel structures. These pestilent inventors are constantly devising new and better methods, requiring less capital, for producing greater quantities of goods. The steam engine, but half worn out, must be put upon the junk heap to give place to the gas engine. The loom, still working at its best, must be thrown away to make room for the later invention by which one weaver can attend 16 looms against 8 of the older type. The canal must give way to the railway, and the money spent in deepening the channel had better be spent in filling it up and laying the rails where the water had sufficed. Even in the field the plow of the harvester, the best of its kind but a short time ago, must give place to a better one at a less cost; and so it goes on throughout all material production. If we stopped work and could consume all the capital that the hand of man has put into form for use on the surface of the land, starvation would begin in the first year, and before the end of the second year our domain would go back to the waste of the forest.

The effect of these applications of science and invention have brought about conditions of supply and demand of such a nature that decade by decade as far back as the statistics have been compiled, for over fifty years, it is proved that the men and women who perform the actual manual or mechanical work of production and who class themselves in the narrow phrase of the "working classes" have secured a constantly increasing proportion or share of a constantly increasing product for their own use and enjoyment, or an equivalent of this increasing share of an increasing product secured in terms of money.

On the other hand, the share or proportion of the annual product falling to capital, altho increasing in the aggregate from the greater and greater abundance, has become relatively less and less in proportion to the whole.

Competition is the active force by which these ends have been attained and will continue to be attained, because it is

the motive implanted in human nature.

It is the comprehension of these facts developed in the records of the past that gives light and life to the figures of the census and the statistics of trade to him who has the statistical imagination and who comprehends the abundance of the means of human welfare, of which these figures are but the symbols. From these facts and figures he may reason that consumption is limited, while production is unlimited.

Altho the physical energy with which the earth is endowed is a fixed quantity which must be conserved, there is no limit to the development of mental energy or to the power of mind over matter.

What, then, is extravagance in woman's dress? The only logical reply is by the standard of the bonnet of the woman of the Salvation Army, if the mere saving of money is the object of living and is not compulsory. But this problem may only be solved consistently with the comprehension of the true motive of life of each woman and correlatively of each man. The ignorant rich of vulgar aim will flaunt the finery in personal display not only in dress but in all the acts of life, offering very bad examples to the ignorant and the poor, who, in their effort to emulate them, waste their substance in tawdry finery of the same type and not less vulgar than the costly finery of the ignorant rich.

Women of intelligence, refinement and taste can supply shelter, food and clothing in adequate measure at the figures which have been proved and established.

The paradox comes in at this point. The women who possess the intelligence and faculty to supply their wants at this low cost in money may be assured by the application of the same intelligence and faculty so large an income that they will not be compelled to practice such close economy in the cost of living unless others are dependent upon them. They will apply their intelligence to spending more, there being no merit in mere saving for the sake of saving. What more pitiable person does one ever meet than the man or woman who makes saving the end, and not the means, of spending intelligently.

On the other hand, those who need to practice intelligent economy the most and

to apply the strictest rule in the cost of living because of their small earnings have not the faculty to practice true spending of their limited incomes. If they had they would be able to earn more. There is more need of instruction in spending than in saving money, not only among the poor but among the prosperous, and to that end my facts and figures were put before the Hebrew Association.

"How, then," some anxious philanthropist asks, "are we to ameliorate the condition of the poor?" One reply might be, "By beginning with the amelioration of the condition of the rich," which is a much harder job because a good part of the ignorance of the rich is wilful.

Another solution for those who would reform the world may be to keep up active competition in ideas no matter how crude they may be. This globe is a great crude mass of materials over which man holds a creative power. Man applies mental energy to giving new direction to forces and deriving the higher potential of human welfare as the ages pass to which there is no end. The mind of man is also a great mass of crude ideas from which experience is generated. In that consists the whole accumulation of true wealth. In the material world all the capital that exists in the richest country at one time rarely, if ever, exceeds in money value the valuation of two years' production. As I have said, if we all stopped work we should all starve within less than two years. Such is the beneficent law by which man earns his bread by the sweat of his brow, and in doing so develops mental energy and true manhood. By his work and his accumulation of experience he has raised himself above the level of the beast. But alas! the brute element is not yet wholly eliminated. This is proved to exist by the construction of battleships and other killing implements, by the existence of armaments and by the number of persons who wilfully devote themselves to the destructive pursuits of war and warfare, when there are so many higher inventions waiting for the right man.

In the material world we are constantly trying to overcome friction in our mechanism, and yet if there were no friction we should move nothing. The same

rule holds in economic science. If there were no cranks, no faddists, no one who proposes to reform the world by legislation; if there were no writers of essays and books on what is called "political economy," of which about ninety per cent. are written by men who have no knowledge of the facts and figures and have had no experience in the conduct of affairs, there would be no friction and no movement in social science. Hence the useful quality of all the organizations for changing human nature, and in that way altering and improving the condition of society; they are all useful, futile as their work seems to be.

It is under these conditions that even this treatise on extravagance in women's dress may excite a little more friction, a little more movement on the line of social

science, and perhaps a little more discussing, perhaps omitting the *dis*.

One aspect of dress has not yet been touched—an important one, in view of the Easter season. The sumptuous raiment of the Catholic and Russian churches, the impressive colors of the stained glass and the other instrumentalities appealing to the imagination and raising an aspiration toward the higher life, may even bring high thoughts into the heads of those overshadowed by the hundred dollar hat, to which reference had been made when you asked me to write this treatise. I have given you some of the ideas that pass in a devious way through my mind under the shadow of that hat which suggested to you the extravagance in women's dress.

BOSTON, MASS.

## The Present Condition of Guam\*

BY COMMANDER GEORGE L. DYER, U.S.N.

GOVERNOR OF GUAM

THE Island Treasury is officered by natives; only the Auditor is at present Paymaster of the Naval Station.

The people live in the towns and go daily to their ranches in the country. These ranches consist of small clearings, without fences, in which they plant corn and sweet potatoes mainly. There is usually a small shack, as a native hut is called, of the most primitive kind, where the proprietor and his family can live for short intervals.

The people are gentle and very religious. Like the Filipinos, they are anxious to learn English. Their methods of cultivation are the most primitive. Their wants are few and they lead lives of Arcadian simplicity and freedom from ambition or the desire for change or progress. They are like children, easily controlled and readily influenced by example, good or bad. The interests of the Naval Station and natives are in-

timately interwoven. The one, as an organization, cannot escape, or live far apart from, the other, and the efficiency of the first depends largely on the welfare of the second. It is, therefore, incumbent on us for our self protection and efficiency to give the natives such care as they are unable to give themselves, to see that they are kept healthy and free from contagion, and are afforded practical instruction in their sole pursuit of agriculture, and to educate them to occupy such positions as clerks, mechanics and intelligent laborers in the Naval Station that will eventually be established.

When highways are provided by the Federal Government the productive capacity of the island may be great enough to furnish eventually a revenue sufficient to carry on certain public services, such as the schools, and, possibly, to keep up the roads. At present it is insufficient for these purposes and, besides, is very precarious. The principal church of the island, first built in 1669, at present in a badly shattered condition due to the

\* This concludes the article by Governor Dyer begun in our last week's issue.—EDITOR.

View of West Part of Agaña. The Tall Chimney in the Middle of the Picture Near the Beach Belongs to the Ice Plant. The Shed Just to the Left is the Market. The Agaña River Parallels the Beach Just Beside the Market. The Line of Breakers Shows Outside Edge of Coral Reef. The Tide is Low

earthquake of September, 1902, is located on the public square in Agaña. For more than a century its great bell has tolled every morning at four o'clock, calling the people to matins and to their daily tasks. The church is a sacred possession, hallowed by the worship of generations. - The people could not be parted from it, nor from the daily observances connected with it, just where it stands.

The years of American occupation, years of incessant labor on the part of the American officials stationed here, have accomplished much in general progress, in spite of slender means; but infinitely more has been left undone through the utter inadequacy of financial resources, demanding immediate attention. One priest only remained on the island after the American occupation. He was the venerable Padre José Palomo, a native of the island, an upright, honest and consistent Roman Catholic, whose sympathy with the administration here and whose powerful influence with his devoted people have always been of the greatest assistance.

The medical officers had a hard fight to overcome the prejudice of the natives against medical treatment. When they were sick they would hide from the doc-

tors. The mortality among mothers and new-born infants was especially great, due to their lack of cleanliness. Their custom permitted neither mother nor infant to be washed. By perseverance and the continual evidence of their power to alleviate pain the medical officers gradually overcame this prejudice. In 1900 there were 328 births and 288 deaths, while in 1901 there were 435 births and 258 deaths, showing a marked increase in the birth rate and an equally marked decrease in the death rate.

On February 22d, 1900, a proclamation was issued by Governor Leary abolishing the pernicious system of peonage then existing, under which many unfortunates had been kept in practical slavery all their lives.

Food being extremely scarce, an old Spanish order was revived compelling every inhabitant to plant a certain amount of corn and other vegetables and to raise at least one pig and a number of chickens. The people were also compelled to learn to write their names, specimen signatures being furnished them on application. It is doubtful, however, if anything was gained by this.

Land laws, revenue laws, taxes, etc., were formulated and put into operation. On July 19th, 1900, Governor Leary was

relieved by Capt. Seaton Shroeder, U. S. N. Among the first important acts of the latter was the reorganization of the judiciary.

Dispensaries were established in the towns of Sumay and Agat for the free treatment of natives. Native nurses, paid by the Island Government, were stationed at these dispensaries to administer simple and emergency treatment. The medical officer from the station ship visited them twice each week, and at such other times as his presence was required. A law was promulgated directing all persons who practiced midwifery to present themselves at the Naval Hospital for a course of instruction, and, after successfully passing an examination, they were given a license to practice. It was made illegal to practice professionally without such license.

Then, on November 13th, 1900, came the devastating typhoon which resulted in the loss of the station ship "Yosemite." Practically all of the lighter frame houses on shore were thrown down and many were washed out to sea. Not one escaped uninjured. Some of the older stone houses were demolished and practically every building in town was unroofed. The sea rose twelve feet above normal level and completed the destruction begun by the wind. Crops were entirely destroyed and thousands of people rendered homeless and starving. Im-

mediate measures were taken for the relief of the unfortunate. The provisions on hand at the Naval Station and in the various stores were drawn upon to their utmost extent. Additional supplies were obtained from Manila. The fortunate presence and safety of the collier "Justin" rendered this possible. Daily issues of provisions were made to all in need of them. Altogether there were distributed about 65,000 pounds of flour, 50,000 pounds of biscuit, 50,000 pounds salt beef and pork, 20,000 pounds salt salmon, 20,000 pounds rice, 1,000 pounds sugar.

The effects of this typhoon forced the Governor to bend all his energies toward the rehabilitation of the stricken island. As far as the limited resources of the island would permit, he established schools with American teachers; but, unfortunately, from lack of funds, was unable to continue them for a very long period. A leper colony was established outside of Agaña, in which all the lepers were segregated. It was a measure which the safety of the Americans as well as that of the natives required. The latter saw no cause for it; they were accustomed to the care of their lepers and did not wish to be separated from them. The expense, however, of this new establishment and of its subsequent maintenance was forced on the Island Treasury by the American occupation.

A Party of Lepers at the Leper Station

Excavating the Boat Channel Across the Reef in the Harbor so as to Secure a Depth of Four Feet at Low Water

The public buildings, which were in a dilapidated condition, were repaired and necessary new ones were built. The road to Piti from Agaña was improved, bridges were rebuilt and roads leading into the country were started. Transportation was established between the landing in the harbor at Piti and Agaña. Animals and carts were brought here for that purpose. A post office was started.

Then came the earthquake of September 22d, 1902, which seriously damaged every building in the island, necessitating

another long period of rebuilding and rehabilitation.

Commander Sewell, who succeeded Governor Schroeder, had his hands full in following out the work of rehabilitation. He rebuilt the large school house in Agaña, but was unable, on account of a lack of funds, to start instruction.

The idea of having the American flag waving over a community of ten thousand people, and where there were no schools in which the English language was taught, seemed intolerable to each

new Governor, and with the very ready assistance of the Navy Department a way was again found to reopen some of them on June 13th of this year, in a way that has been effective without inflicting any hardships on the community, yet without any appropriation by Congress. American residents volunteered, temporarily, but they are insufficient. The limits of age for both sexes, from seven to twelve, had to be established to reduce the number of pupils, and it is impossible to take in the boys from twelve to fourteen until Congress makes some provision for the proper equipment of the schools and the employment of teachers.

The people of Sumay are better off than in the other towns, on account of the recent purchases of land in their vicinity by the Government, and they have contributed toward the erection of a school house there. The kind of instruction the scholars receive from the native teachers, in Spanish, is very indifferent, but as the teachers are only paid five dollars a month it has been considered advisable to keep up the school organization. The temptation is strong, however, to save to the Island Treasury even the small amount paid to these native teachers, and nothing really effective can be done until provision is

Placing Buoy to Mark End of Reef at Harbor Entrance

The main school at Agaña now has seven hundred and ten students of both sexes, about equally divided; but the boys have to attend only during the forenoon and the girls only during the afternoon. Schools with the American teachers who volunteered temporarily were established at Asan (49 pupils), and at Piti (68 pupils), also at Sumay (98 pupils). The scholars in all these schools are making good progress, but are not doing as well as they should, on account of the short hours necessitated by the lack of teachers. Schools taught by native teachers, in *Spanish*, exist in the towns of Agat (84 pupils), Umatac (32 pupils), Merizo (62 pupils) and Inarajan (70 pupils), due to the inability of the Island Treasury to hire teachers speaking English.

made by the home authorities for contract teachers, as the only ones available at present are members of the families of officers and employees of the Naval Station living in Agaña, who are not willing to live in the country and who are needed in the Agaña schools. These voluntary teachers, too, are liable to go home at any time, and thus break up the school organization.

A telephone service has been established between Agaña and Piti, to be extended as soon as means will permit. There are one hundred and twenty bicycles in daily use in Agaña and the suburbs. An arrangement has been made with the Meteorological Service at Manila for a weather station at Guam, which has done good service.

The harbor of Apra has been thoroughly surveyed for purposes of a Naval Station and for the location of fortifications. The inner rim of the harbor is filled with a coral reef, awash at low tide, which prevents a ship from anchoring near to the real beach. Passengers and freight are transported in light draft boats and lighters across the reef to the landing place by a channel which is now

other, insisting on cleanliness in living and the observance of sanitary rules. They have accomplished much and deserve a large share of credit for whatever advance the people have made.

Governor Schroeder built the first and only hospital in the island. This has been an efficient factor in the health of the community, but it is inadequate to its needs and requires such additions in the

The Reverend Father Palomo, Head of the Roman Catholic Church in Guam

being deepened so that it can be used at all tides.

An experimental farm on a small scale has been started and plants and seeds have been distributed to trustworthy natives for cultivating in all parts of the island.

One of the greatest boons that the islanders have received from the American occupation is the care and attention of the medical officers of the Naval Station, stationed here for that purpose. They have been true missionaries, visiting houses from one end of the island to the

way of further buildings and instruments as can only be furnished by the Federal Government.

Strong efforts have been made to enlist the necessary aid in providing a supply of suitable water for the city of Agaña. A site has been selected and careful and detailed surveys submitted for the construction of water works. They can only be provided for by Congress, as the sum of money required, tho not very large, is still far beyond the means of the Island Government.

Efforts have also been made to interest the Post Office Department to establish here an international money order system. At present all bills must be paid by remittances of silver in Mexican dollars to China and Japan, and such opportunities have to be taken for this purpose as present themselves.

The entrance to the harbor and the troublesome reefs within have been marked by conspicuous, well moored buoys, so that a proper anchorage may be reached at any time easily, and everything is being done which can be done without the aid of the home Treasury.

In the preparation of these articles quotations have been freely made from the reports of Surgeon Leys, U. S. N.; "Guam and Its People," by W. E. Safford, G. P. Putnam's Sons, New York, 1903; "The Island of Guam," by Civil Engineer Leonard M. Cox, U. S. N., *Bulletins of the American Geographical Society*, July, 1904; and the "Memoria Descriptiva é Histórica por Don Felipe de la Corte, Boletín del Ministerio del Ultramar del año, 1876," all of which are commended as delightfully entertaining and instructive.

I AGANA, GUAM.

## A Cap Maker's Story

BY ROSE SCHNEIDERMAN

[Miss Schneiderman led the women capmakers in their recent successful strike for the union shop. She is a small, quiet, serious, good looking young woman of twenty years, already a member of the National Board, and fast rising in the labor world.—EDITOR.]

**M**Y name is Rose Schneiderman, and I was born in some small city of Russian Poland. I don't know the name of the city, and have no memory of that part of my childhood. When I was about five years of age my parents brought me to this country and we settled in New York.

So my earliest recollections are of living in a crowded street among the East Side Jews, for we also are Jews.

My father got work as a tailor, and we lived in two rooms on Eldridge Street, and did very well, though not so well as in Russia, because mother and father both earned money, and here father alone earned the money, while mother attended to the house. There were then two other children besides me, a boy of three and one of five.

I went to school until I was nine years old, enjoying it thoroughly and making great progress, but then my father died of brain fever and mother was left with three children and another one coming. So I had to stay at home to help her and she went out to look for work.

A month later the baby was born, and mother got work in a fur house, earning

about \$6 a week and afterward \$8 a week, for she was clever and steady.

I was the house worker, preparing the meals and looking after the other children—the baby, a little girl of six years, and a boy of nine. I managed very well, tho the meals were not very elaborate. I could cook simple things like porridge, coffee and eggs, and mother used to prepare the meat before she went away in the morning, so that all I had to do was to put it in the pan at night.

The children were not more troublesome than others, but this was a hard part of my life with few bright spots in it. I was a serious child, and cared little for children's play, and I knew nothing about the country, so it was not so bad for me as it might have been for another. Yet it was bad, tho I did get some pleasure from reading, of which I was very fond; and now and then, as a change from the home, I took a walk in the crowded street.

Mother was absent from half-past seven o'clock in the morning till half-past six o'clock in the evening.

I was finally released by my little sister being taken by an aunt, and the two

boys going to the Hebrew Orphan Asylum, which is a splendid institution, and turns out good men. One of these brothers is now a student in the City College, and the other is a page in the Stock Exchange.

When the other children were sent away mother was able to send me back to school, and I stayed in this school (Houston Street Grammar) till I had reached the Sixth Grammar Grade.

Then I had to leave in order to help support the family. I got a place in Hearn's as cash girl, and after working there three weeks changed to Ridley's, where I remained for two and a half years. I finally left because the pay was so very poor and there did not seem to be any chance of advancement, and a friend told me that I could do better making caps.

So I got a place in the factory of Hein & Fox. The hours were from 8 a.m. to 6 p.m., and we made all sorts of linings—or, rather, we stitched in the linings—golf caps, yachting caps, etc. It was piece work, and we received from  $3\frac{1}{2}$  cents to 10 cents a dozen, according to the different grades. By working hard we could make an average of about \$5 a week. We would have made more but had to provide our own machines, which cost us \$45, we paying for them on the installment plan. We paid \$5 down and \$1 a month after that.

I learned the business in about two months, and then made as much as the others, and was consequently doing quite well when the factory burned down, destroying all our machines—150 of them. This was very hard on the girls who had paid for their machines. It was not so bad for me, as I had only paid a little of what I owed.

The bosses got \$500,000 insurance, so I heard, but they never gave the girls a cent to help them bear their losses. I think they might have given them \$10, anyway.

Soon work went on again in four lofts, and a little later I became assistant sample maker. This is a position which, tho coveted by many, pays better in glory than in cash. It was still piece work, and tho the pay per dozen was better the work demanded was of a higher quality, and one could not rush through samples as

through the other caps. So I still could average only about \$5 per week.

After I had been working as a cap maker for three years it began to dawn on me that we girls needed an organization. The men had organized already, and had gained some advantages, but the bosses had lost nothing, as they took it out of us.

We were helpless; no one girl dare stand up for anything alone. Matters kept getting worse. The bosses kept making reductions in our pay, half a cent a dozen at a time. It did not sound important, but at the end of the week we found a difference.

We didn't complain to the bosses; we didn't say anything except to each other. There was no use. The bosses would not pay any attention unless we were like the men and could make them attend.

One girl would say that she didn't think she could make caps for the new price, but another would say that she thought she could make up for the reduction by working a little harder, and then the first would tell herself:

"If she can do it, why can't I?"

They didn't think how they were wasting their strength.

A new girl from another shop got in among us. She was Miss Bessie Brout, and she talked organization as a remedy for our ills. She was radical and progressive, and she stimulated thoughts which were already in our minds before she came.

Finally Miss Brout and I and another girl went to the National Board of United Cloth Hat and Cap Makers when it was in session, and asked them to organize the girls.

They asked us:

"How many of you are there willing to be organized?"

"In the first place about twelve," we said. We argued that the union label would force the bosses to organize their girls, and if there was a girls' union in existence the bosses could not use the union label unless their girls belonged to the union.

We were told to come to the next meeting of the National Board, which we did, and then received a favorable answer, and were asked to bring all the girls who were willing to be organized to the next

meeting, and at the next meeting, accordingly, we were there twelve strong and were organized.

When Fox found out what had happened he discharged Miss Brout, and probably would have discharged me but that I was a sample maker and not so easy to replace. In a few weeks we had all the girls in the organization, because the men told the girls that they must enter the union or they would not be allowed to work in the shop.

Then came a big strike. Price lists for the coming season were given in to the bosses, to which they did not agree. After some wrangling a strike was declared in five of the biggest factories. There are 30 factories in the city. About 100 girls went out.

The result was a victory, which netted us—I mean the girls—\$2 increase in our wages on the average.

All the time our union was progressing very nicely. There were lectures to make us understand what trades unionism is and our real position in the labor movement. I read upon the subject and grew more and more interested, and after a time I became a member of the National Board, and had duties and responsibilities that kept me busy after my day's work was done.

But all was not lovely by any means, for the bosses were not at all pleased with their beating and had determined to fight us again.

They agreed among themselves that after the 26th of December, 1904, they would run their shops on the "open" system.

This agreement was reached last fall, and soon notices, reading as follows, were hung in the various shops:

" NOTICE.

"After the 26th of December, 1904, this shop will be run on the open shop system, the bosses having the right to engage and discharge employees as they see fit, whether the latter are union or nonunion."

Of course, we knew that this meant an attack on the union. The bosses intended gradually to get rid of us, employing in our place child labor and raw immigrant girls who would work for next to nothing.

On December 22d the above notice ap-

peared, and the National Board, which had known about it all along, went into session prepared for action.

Our people were very restive, saying that they could not sit under that notice, and that if the National Board did not call them out soon they would go out of themselves.

At last word was sent out, and at 2.30 o'clock all the workers stopped, and, laying down their scissors and other tools, marched out, some of them singing the "Marseillaise."

We were out for thirteen weeks, and the girls established their reputation. They were on picket duty from seven o'clock in the morning till six o'clock in the evening, and gained over many of the nonunion workers by appeals to them to quit working against us.

Our theory was that if properly approached and talked to few would be found who would resist our offer to take them into our organization. No right thinking person desires to injure another. We did not believe in violence and never employed it.

During this strike period we girls each received \$3 a week; single men \$3 a week, and married men \$5 a week. This was paid us by the National Board.

We were greatly helped by the other unions, because the open shop issue was a tremendous one, and this was the second fight which the bosses had conducted for it.

Their first was with the tailors, whom they beat. If they now could beat us the outlook for unionism would be bad.

Some were aided and we stuck out, and won a glorious victory all along the line. That was only last week. The shops are open now for all union hands and for them only.

While the strike lasted I tried to get work in a factory that was not affected, but found that the boss was against me.

Last spring I had gone as a member of a committee to appeal to this boss on behalf of a girl who had been four years in his employ and was only getting \$7 a week. She wanted \$1 raise and all legal holidays. Previously she had had to work on holidays. After argument we secured for her the \$1 raise and half a day on every legal holiday.

When the strike broke out, looking for

work, I went to this boss, and he stared at me, and said:

"What do you want?"

"You asked for a girl."

"You—you—I don't want you," said he. "Can't I have my choice?"

"Certainly," said I, "I could never work where I'm not wanted."

I suppose he expected me to revenge myself by keeping other girls away, but I sent him others till he filled the place.

He resented my having served on the committee, and so he did not want me, but I felt honored by the manner in which I was treated. It showed that I had done my duty.

The bosses try to represent this open shop issue as tho they were fighting a battle for the public, but really it is nothing of the sort. The open shop is a weapon to break the unions and set men once more cutting each other's throats by individual competition.

Why, there was a time in the cap trade when men worked fourteen hours a day, and then took the heads of their machines home in bags and setting them up on stands, put mattresses underneath to deaden the sound and worked away till far into the morning.

We don't want such slavery as that to come back.

The shops are open now for all union people, and all nonunion people can join the union. In order to take in newcome foreigners we have for them cut the initiation fees down to one-half what we Americans have to pay, and we trust them till they get work and their wages.

In order to give the newcomers a chance we have stopped night work, which doesn't suit the bosses, because it causes them to pay more rent when they can't use their buildings night and day. It costs them the price of another loft

instead of costing the workers their health and lives as in the old days.

Our trade is well organized, we have won two victories and are not going backward.

But there is much to be done in other directions. The shop girls certainly need organization, and I think that they ought to be easy to organize, as their duties are simple and regular and they have a regular scale of wages.

Many saleswomen on Grand and Division streets, and, in fact, all over the East Side, work from 8 a.m. till 9 p.m. week days, and one-half a day on Sundays for \$5 and \$6 a week; so they certainly need organization.

The waitresses also could easily be organized, and perhaps the domestic servants. I don't know about stenographers. I have not come in contact with them.

Women have proved in the late strike that they can be faithful to an organization and to each other. The men give us the credit of winning the strike.

Certainly our organization constantly grows stronger, and the Woman's Trade Union League makes progress.

The girls and women by their meetings and discussions come to understand and sympathize with each other, and more and more easily they act together.

It is the only way in which they can hope to hold what they now have or better present conditions.

Certainly there is no hope from the mercy of the bosses.

Each boss does the best he can for himself with no thought of the other bosses, and that compels each to gouge and squeeze his hands to the last penny in order to make a profit.

So we must stand together to resist, for we will get what we can take—just that and no more.

NEW YORK, March 22, 1905.

# Ritualism

BY THE BISHOP OF FOND DU LAC

[The Rt. Rev. Charles C. Grafton, D.D., was consecrated second Bishop of Fond du Lac in 1889. The diocese has some fifty parishes and over four thousand communicants. Bishop Grafton is recognized as a chief leader of the Ritualistic wing of the Protestant Episcopal Church. At the consecration of Bishop Weller as Coadjutor in 1900 the Ritualistic display was such as to attract much attention and criticism.—EDITOR.]

"Man is a ritualistic animal. He can't help being a ritualist if he tries."

**T**HIS was the gambit with which a somewhat enthusiastic ecclesiastic opened his after dinner controversial game with me.

"What," I said, "are you going to make out of that glittering generality?"

"Well this," he replied, "that all this Low Church talk against ritualism is mostly rubbish or hypocrisy. Ritualism enters into all the relations of society. You cannot go to a dinner party in a frock coat or into a fashionable restaurant in a shirt waist, tho the thermometer is at ninety. Ritual makes you put lights and flowers on your dinner table, use napkins, finger bowls and open the door for the ladies to make their exit."

"The controversies that have arisen about it," I suggested, "relate to its use in religion rather than its employment in society."

"Yes," he said, "and one of the hypocrisies of the debate has been the denial that Americans like ceremonial or ritual. Don't they? Why the lodge room is full of it, and of all the people in the world Americans cultivate flub-dub titles and love dress and parade."

"Then you don't think there is something silly in it, and it denotes a going back to the Indian's love of paint and feathers, that there is something unmanly in it, and it is a characteristic of an effeminate mind?"

"No, unless you are ready to admit there is something unmanly in an American saluting Old Glory when it is unfurled, the soldier presenting arms to it, the sailor touching his hat when he comes on quarter deck, the British peer bowing to the empty throne when he enters the House of Lords. But the other day several columns of the newspaper were full of letters from grand judges and high dignitaries as to the manner in which the

salute to the flag was to be given by a woman. They did not think it unmanly or beneath their dignity to try and solve the question. Some thought a lady should raise one hand in a military fashion, others that she should wave her handkerchief, others that she should make what the English call a bob courtesy. It was rather funny, I admit, but any way these worthies did not think the question beneath their consideration."

"I remember," I said, "once putting that argument about the empty throne to a Virginia Low Churchman, and he answered it by saying if he were a British peer he would not do such a thing. He regarded it as an act of idolatry. It was forbidden by the Second Commandment. It was like throwing incense on the stand before the Roman Emperor. It was only an excuse for bowing to the altar in church. He would have none of it. I did not find it a very convincing argument, altho I told him that being a Virginian gentleman, he would, I had no doubt, do what all gentlemen did. It had no effect upon him."

"Yes," said my friend, "you can't meet a certain class of Episcopalian churchmen with argument. If you get the better of them in an appeal to scriptural or ecclesiastical history, or ancient custom, or the canons of the Church, they don't give in, they simply get mad. This is very noticeable in England. It is only repeating what Englishmen have written of themselves, to say that as a nation they are insular, narrow-minded, somewhat dull, intensely self-conceited and obstinately pugnacious. This spirit shows itself in politics and also in religion. When the Low Churchmen found that they were beaten in the appeal to Scripture and the Prayer Book, then the baser sort took to appealing to the Britisher's ever latent prejudices, fear and hatred of Romanism. The agitators manufactured all

sorts of dire prognostications, invented no end of silly stories, concocted another popish plot, grossly perverted the teaching of leaders, like Pusey and Keble and Liddon, by vile insinuations about confession, tried to excite the fears and inflame the evil passions of the mob. In this work a man by the name of Kensit

meeting houses, or object to steeples as once they did. Our American Presbyterian brethren no longer object to organs or beautiful churches. The Congregationalists are adopting liturgical services and responsive saying of psalms. They are all in some localities taking sections of the Prayer Book of their old mother

BISHOP GRAFTON

made himself conspicuous. Americans are not half so bigoted. They do not so hold on to their inherited prejudices. An American, be he a churchman or sectarian outwardly, asks himself whether the thing proposed in politics or religion is a good thing in itself. If it is, he wants to have it. We can't forever run in the ruts of the past. And so our Methodist cousins no longer insist on building plain

Church. They have opened their shutters, pulled down the curtains and are letting in the daylight."

"For my own part," I replied, "I am hoping and praying that there may be signs of growing Christian fellowship and possible reunion. Let us not jostle the cup. It will overflow when it is full. God will work out the problem in his own good way. But I venture to reply

to something of yours about our sectarian friends. In my own belief it is the Episcopalians who first have got to be delivered from their bondage to bad traditions and throw open their hearts to the light, and get down on their knees before God. My experience is that the Protestant Episcopalian is often about the narrowest specimen of a Christian there is, and among Episcopalians it is the so-called old-fashioned High Churchmen who are the most 'sot' in their ways. It is a passing and diminishing class, but a disagreeable one to meet. When some fifty years ago I took Holy Orders they were in much evidence. In their Christian outlook the Churches of the Orient, the Russian, Greek and other Eastern Communion, were too distant to be of any practical consideration and were immersed in ignorance and superstition. The Roman Church had forfeited all claim to be considered a part of Christ's Church, and was overlaid with errors of belief and practice. The various Christian denominations about them were all of modern inception, had no valid ministry, no ordained means of grace, and their members when saved were saved through the uncovenanted mercies of God. The little Episcopal Church was alone the sole representative of the Church Christ founded; but, alas! there was a very considerable body of clergy and laity belonging to it who were Low Churchmen, and who had a most imperfect conception both of Christianity and the Church; the Church of Christ going back practically to the little handful of persons, and they were the Church!

"Now tho this class, along with the Calvinistic Low Churchman, has nearly passed away the narrow spirit remains. If with the enlarged views both of the Catholic and Broad Churchman, and the increased liturgical knowledge, a clergyman wishes to restore lights on the altar, or the full vestments for the eucharist, or the scriptural use of incense, these good people begin to whimper and find fault, and say: 'Oh, it was not so in our young days, and we don't like innovations, and it is all so Romish, and we shall have to give up our pews and go elsewhere!' Now vestments, lights, incense are not 'Romish,' but scriptural and catholic. But these persons keep up their

little foolish clatter, and cuckoo cry: 'It is all so Romish we don't like it. It was not so in the dear old Rev. B——'s time.' When Romaphobia seizes one, everything seems 'Romish.' I remember when the laymen had restored a church in my diocese and in place of a much worn carpet had laid a hard wood floor, a woman declared she could no longer attend the church. She did not mind the lights on the altar or the vestments, but that new hard wood floor she could not abide. 'It was so *Romish*.' It was just in imitation of the Roman Church in the town. It is not sectarians who, as a rule, are so bigoted or stand in the way of progress as a class of High Churchmen who make an idol of the Prayer Book and try to interpret it as if it were a complete manual of ceremonial, instead of a book given to an existing Church whose clergy were already instructed in ritual and needed only to alter from their accustomed ways when explicitly bidden to do so."

"You do not then, Bishop, object to ritual, and I do not see how you can when God gave such command concerning it in the Old Testament."

"And for that matter," I said, "in the New he took St. John up into heaven as he had formerly taken Moses, and the worship of heaven, where God is worshiped in spirit and truth, with its clerical service and lights and incense, became, when the Christian Church was free from oppression and able to act out her own life, the directory of the Church's worship. But as in the old dispensation the prophets were ever proclaiming the greater importance of the spirit over the rite, so it should be now. This the Roman Catholics and the Eastern Orthodox and Anglican Ritualist all alike acknowledge and strive to preserve for their people the right balance between the two."

"You said, Bishop, that a class of Low Churchmen in England appealed to passion and force; did they not, however, appeal in the last century to the law courts?"

"Yes, they did; and the Privy Counsel decisions were obviously decisions governed by policy and politics, and were contradictory. But not being Church tribunals, English Churchmen felt it their

The Celebrants at the Ritualistic Consecration of Bishop Weller as Assistant to Bishop Grafton, of Fond du Lac

duty to go to prison rather than obey them. The good Queen did not like the idea that her reign should be marked by a religious persecution, and so the case stopped and the prison doors were opened. It is a growing opinion that the Established Church in England should be as free to settle her own affairs apart from the State as is the established Presbyterian Church of Scotland. It is this that the Churchmen in England are striving for. The cause of ritual there is the cause of religious liberty and the readjustment of the relations of the Church and the State. In America we are, by God's good providence, free from such alliance.

"The Episcopal Church is different in many respects from that in England. It is more like the scriptural model. It combines the best principles of the Presbyterian, Congregational and Methodist bodies. Bishops, clergy and laity, all have their rights, and are protected in them. The bishops are elected, the diocese chooses for them a counsel of advice composed of clergy and laymen. The parishes choose their own rectors. There is a fair liberty in the use of ritual; the Prayer Book is the common bond of unity in doctrine. The law of service is the betterment of the social order, our bond of Christian fellowship."

FOND DU LAC, WIS.

# The Overwhelming Defeat of Russia

BY J. H. DE FOREST, D.D.

[At the request of the Y. M. C. A. Dr. De Forest is about to make a trip to Dalny, Yingkow, Liaoyang, Antung, etc., for the purpose of making addresses to the soldiers. As he will have opportunities of visiting these places under the most favorable circumstances our readers may expect something of unusual interest from him in the near future.—EDITOR.]

GRAND as were the score of victories from Kurenjo to Port Arthur, the recent two weeks' fight around Mukden puts all the rest in the shade. The great Russian army has been crushed, almost annihilated. It can never stand again before the troops of Japan. Peace certainly is in sight, or ought to be.

On the eighth of March, when a week or more of fighting had produced no startling changes, the news began to pour into the War Department. It was my good fortune on the morning of that day to be granted an interview with the Minister of War, General Terauchi, who then said: "We are within five miles of Mukden on the west, but the remaining distance is very hard indeed. We are within fifteen miles of Fushun, but what is left is exceedingly difficult." That evening the Minister of War gave a dinner in honor of General McArthur, who came over to make a visit to the front. All through that feast the wires were throbbing with the news of brilliant successes, but nothing was said until a special messenger had taken the news to His Majesty at the palace. Even then there was no announcement, but it was passed around among the guests as tho it were a mere topic for conversation.

The Minister of War said: "Our left wing is now north of Mukden and our right close onto Fushun, while the Russians before our center are in full retreat hotly pursued by our troops." In conveying this significant news, there was not a particle of joy in his face, no exultation whatever. It was as tho he were wholly indifferent to the greatest strategic movements of this war. Admiral Ito was just a little more like an American as he remarked: "There are 8,000 dead Russians on the ground covered by our center." Another officer with an eye to the cost of things said in a complaining voice: "It costs us a million a month to feed the 50,000 Russians

already on our hands, and now here's another batch of 50,000 or more that we've just bagged, and that will take another million." One of the generals gave me a figure of the operations in words worth recording: "Two weeks ago the battle line on the Shakhe, extending sixty or seventy miles, resembled a sort of crescent, with the horns pointing south, the Russian line following closely the same direction. Now the crescent's horns are pointed north and are approaching each other."

Yet at this feast in the War Minister's mansion, with several of our own veteran soldiers present, our Minister and other members of the Legation, and such war correspondents as Kennan and Egan, at a moment when the greatest battle of modern times was turning into a crushing defeat for Russia that ought to end the war, there was not a boastful word or look on the part of these soldiers of Japan, not a single shout for the victorious army, not an extra drop drunk in toasts, and not a word about indemnity to be wrested from the prostrate enemy. "*Kido iro ni arawasazu!*" ("Let not your face show either pleasure or anger") is one of the old precepts written deep in the hearts of the Samurai.

During those days the Capital was as quiet as tho there had been no war. You might meet scores of Japanese and converse with them, but not one would introduce the subject of the decisive ongoing battle. The bunting displayed was in pitifully small quantities. Extras were shouted on the streets by swift runners, but nobody seemed to run after them. It was taken for granted that Japanese soldiers would win every time, and the whole nation was at peace, confident in the power of the army always to do the impossible.

This battle is not yet over (16th). Yet see how everything goes like a piece of oiled machinery. I stood on a certain dock yesterday and to-day and saw 800

sick and wounded soldiers landed each day from the Mukden battle line of five or six days ago. A special messenger can go from Tokyo to Mukden in about four days. The sick and wounded can reach their native land from the battlefields in about the same time. Thousands arrive every day when these prolonged battles are on, and at the same dock where 800 landed, another 800 strong, healthy fellows are starting in another transport to take their places. Thousands leave every day for the front. There will be no cessation of military operations until terms of lasting peace are at hand.

The only bit of excitement I have seen during these days was when our transport left the dock. A few moments before starting, the gates were opened and the relatives of the outgoing soldiers were permitted to rush out upon the pier to say farewell to their boys. Old men, mothers, wives and children ran to see once more the faces they love. They tried to get close to the ship to pass in bundles of fruit and cake, but the police held them in a line twenty-five feet from the steamer, for they were too excited to be allowed to go near the edge of the dock. Those in the rear would have

pushed the front ones into the water.

These 800 outgoing soldiers are commanded by only two commissioned officers, and that simply shows how perfect the organization of the army is. Men from different camps and in different departments of service fill this ship without friction and without the possibility of a free fight. A fist fight or a stabbing affray has not been known in the Japanese army for years, so says one who was the second officer on the General Staff, and this same officer, taking these troops to the front, was severely wounded in the Shakhe battles of last October. A bullet entered his cheek bone and, sliding up under the left temple, was buried out of sight. A month later he was operated on in the Osaka Military Hospital after the position of the bullet had been ascertained by X-rays. The operation took about an hour, but recovery from the effects of chloroform took six hours. He emphasized this in his story, since he does not drink *saké*. *Saké* patients require more chloroform than total abstainers, and by some chance he got the hard drinkers' portion. But he was out of the hospital in another month and on duty.

# MUSIC

## ART AND DRAMA

### Richard Strauss's "Tallefer"

AT the third and final concert of its thirty-second season, given in Carnegie Hall on the evening of March 14th, the New York Oratorio Society provided an excellent performance of Dvorák's "Stabat Mater," which had not been heard here for more than twenty years, and also brought forward the most notable musical novelty of the year in Richard Strauss's choral ballad of "Tallefer," giving that work its first performance in America. The Dvorák "Stabat Mater," which was new to most of those who heard it, is a work replete with musical beauty—with the luscious lilt of smooth, sweet sound—but before the end is reached its linked sweetness long drawn out becomes cloying. After it the Strauss ballad sounded like the song of a strong man, refreshing and inspiriting.

"Tallefer" was composed in the winter of 1902-3 and bears the opus No. 52. It is a setting for chorus, soli and an orchestra of 102 players of a ballad by the German poet Ludwig Uhland, which recounts an old story anent an incident in the battle of Hastings (fought on October 14th, 1066), a slightly varied form of which may be found in Freeman's history of the Norman Conquest. In Uhland's version Tallefer (iron cleaver) is a young serving-man who pleases Duke William of Normandy by his sweet singing and cheerful bearing. He asks and receives knighthood, a horse, a sword, a shield, at William's hand, and when he rides forth the Duke's sister watches him admiringly from the tower. He sails to England with the Duke, and before the battle of Hastings begs the favor of being the first to ride against the foe. As he advances he inspires the Norman army by singing a song of Roland. Then he begins the battle by slaying two English knights. Af-

ter the victory Duke William honors him at a triumphal banquet, pledging Tallefer that his brave song shall ring in his ears forever.

It is a stirring ballad and Strauss has raised and intensified its power to a wonderful degree. The chorus sings the narrative, often in unison, often in the richest four, six or eight part harmony. Tallefer is a tenor, Duke William a bass and the Duke's sister a soprano. The enormous orchestra describes the action—illustrates, illuminates, irradiates the story. Words and music unite in an inextricable web, and the tale is unfolded and enforced with a direct, vigorous sweep. The action of the whole piece is vitalized. You hear the colloquy between the Duke and Tallefer. Then you see the new-made knight ride out. Beside his song you hear the trotting of his horse. You see the Norman host set sail for England. In the battle scene you are nearly overwhelmed by the torrent of sound, yet you distinguish in the roar the whizz of arrows, the tramp of the warring hosts, the hoof-beats of the horses, the calls of bugles, and above them all Tallefer's chivalric song.

Technically the whole fabric is built up around a central theme, which is a sturdy, simple melody of the folk-song type. This is proclaimed as Tallefer advances, leading the invading Normans, singing his song of Roland, and it grows in breadth and power until it swells forth as the final climax of the work.

But the proof of all music is in the hearing of it, and the hearing of this latest composition to come to us from the hand of Dr. Strauss was a pleasure unalloyed. Its beauty is of a fierce new kind, perhaps, but indisputably beauty.

In this short ballad (it occupies barely twenty minutes in performance) Richard Strauss has given to the world another

DR. RICHARD STRAUSS

masterpiece of delineative music, such music as no other man alive can write and none of the great dead ever did write. It is program-music in which the program is sung and nobody can mistake its meaning.

### Paderewski, Joseffy and Others

THE concert pianists we have always with us. More and more they are coming to find in America their happy hunting ground. This year they have been more numerous than ever before, and in one aspect the season just ended might almost be considered a long pianists' holiday. First came the fiery young Bohemian, Rudolf Friml, and the eccentric Russian, de Pachman. To them succeeded Josef Hofmann, Miss Aus der Ohe, Jose Vianna da Motta, Eugen d'Albert, Ernest Schelling, Harold Randolph, and several lesser lights. But the greatest of them all, Ignace Jan Paderewski and Rafael Joseffy, waited until the end of the season before appearing in New York, and then, to the regret of thousands of their admirers, each gave only one concert in this metropolis. Not-

withstanding the unusual number of capable players who had preceded them there was no valid reason for such continence on the part of these two great geniuses of the pianoforte.

Paderewski's single recital in Carnegie Hall was an extraordinary concert from every point of view. Probably most of those who heard him thought that he had never played so well. At any rate he again demonstrated his marvelous blend of strength and sweetness, his perfect sense of beauty, his enthralling charm of interpretation. His hands have not lost their cunning, and as the years go on his subtle emotionality and his powers of endurance actually appear to increase.

Joseffy, whose home is hereabouts, is not a prophet without honor in his own land. He is greeted with unstinted enthusiasm as often as he cares to appear. At a final concert by the New York Symphony Orchestra, under Walter Damrosch, he played the E minor concerto of Chopin in the way, that, according to all traditions, Chopin himself must have played it—with an exquisite beauty of touch that recalled "the lightness, delicacy, neatness, elegance and gracefulness of Chopin's playing, which won for him the name of Ariel of the piano."

### Tschaikoffsky

THE programs of the last concerts by the Boston Symphony and the Russian Symphony orchestras both included Tschaikoffsky's "Manfred" symphony. The scheme of the Russian Society also provided the "Overture Solennelle—1812," and the first performance here of "Night," a vocal quartet on a Mozartean theme, containing more of Mozart than of Tschaikoffsky, but a decidedly effective arrangement of a familiar melody. It is worthy of note that this Russian, more than any other composer, has dominated the concert season in New York this year. And he has stood the test very well. His music is justly among the most popular with present-day concert goers, and his later symphonies especially are just about the most moving works ever written in the sonata form.

Among all the "star" conductors im-

ported by the Philharmonic Society the Russian Wassili Safonoff has been the most successful. Four times he has packed Carnegie Hall to the doors by his wonderful reading of the "Pathetic" symphony. It is the present intention to ask him to come again next winter, but among the Philharmonic's governors some doubt has been expressed as to the wisdom of permitting him to conduct that work again. There need be none. The public will be glad to pay its money to hear him interpret the "Pathetic" as often as he will, and would delight to hear him conduct Tschaikoffsky's fourth and fifth symphonies also.

remarkable group of young women who can hold their own with any similar organization of male players in the country, indeed the work of these women surpasses that of most of the male quartets ever heard here—and that in the very exacting field of chamber music, where a nicer balance and consequently more rehearsing are necessary than in any other kind. For their purity of intonation, warmth, sonority and precision of ensemble Miss Mead and her associates deserve only gratitude and praise. Their concerts this year have been among the greatest delights of a season filled with music-making.

### A Quartet of Women

NEVER as composers, and seldom as executants, have the women equaled the men in music; and considering the whole field of music as a profession it is generally held that the women cannot stand beside their brothers. But in the Olive Mead String Quartet New York has a

### The Close of the Art Season

No other month of the winter brought out so complete a view of present day conditions in American art as April. With one of the best exhibitions of its kind seen here in years the Society of American Artists has been before us since March 25th and holds open until

A Girl Crocheting. By Edmund C. Tarbell. From the "Ten's" Exhibition at the Montross Gallery

May 1st. The average of technical excellence is high among the 479 works shown, and a few men have seemingly grown stronger during the year. In landscape Emil Carlsen, who is fairly wrestling frank truths from nature, won the Webb prize with "Night, Old Windham;" Hugo Ballin's "Pastoral" won the Shaw fund, Mrs. Coman's charming "September Afternoon" the Julia Shaw Memorial prize, and Louis Loeb's stately landscape, "Morning," the Carnegie prize. Snell's "Polperro," a beautifully atmospheric harbor scene in Cornwall, is one of the finer things. A far different harbor scene, Paul Dougherty's "Towers of Energy," is interesting in another way, showing our own great city from the river. That New York's "sky line" no longer fails in beauty the artists are rapidly learning. Hopkinson's "West Wind" and Elizabeth Curtis's "York River" are the strongest of the marines.

Alexander's portrait of Mrs. Clarence Mackay as a priestess of mysterious rites

holds the place of honor in the Vanderbilt gallery and will make interesting subject matter for the student of future ages who may happen to be interested in types of femininity of the twentieth century. "The Mother" and "The Butterfly" by Mr. Alexander are also in the exhibition.

Irving Wiles surpasses himself in a portrait of his wife and daughter, which but for an obtrusion of accessories, would be a claimant for praise as the best portrait in the show. Smedley, too, has painted more sympathetically than ever before in a portrait of his young son. Samuel Woolf has made strides in a year, as his portrait of President Finley shows.

Henri and Glackens are less well represented than usual. Hawthorne's "Boy with a Bowl" is a wonderful bit of brush work, and his "Laborers' Drinking" has the force he always shows. Burroughs is always one of the interesting men even when his experiments do

not quite succeed. The exhibition continues to give pleasure after repeated visits through its many quietly good things. As a bit of pure beauty the one small metal box with an enameled cover by Alexander Fisher, called "The Garden," is more exciting than many of the framed pictures.

### The Ten American Painters

THE best of the workers in higher key who were missing in the Fifty-seventh Street galleries were to be found at Montross's in the annual exhibition of the small group known as the "Ten." Mr. Weir sees deeper beauty every year. His "Reverie" and "Morning Sunlight," and even the less likable portrait of the man, with little or no anatomical construction, are full of a profound knowledge, enlarging constantly. It would be hard to find a better painted

The Junk Dealer. By Charles W. Hawthorne. At the University Settlement Exhibition

modern picture than Tarbell's "Girl Crocheting," with all the careful drawing in color of the little Dutchmen and the modern knowledge of light added. The place in this group left vacant by the death of John Twachtman, three years ago, has recently been given to William M. Chase.

## An Exhibition for the East Side

A REMARKABLY strong exhibition has been arranged for the enjoyment of the people in the neighborhood of the University Settlement and will remain open until May 3d, in the Neighborhood Guild. It was managed by the Art Workers' Club, that very active society of artists and models whose clubhouse is in Fifty-eighth Street. The exhibition consists almost entirely of figure works and pictures of New York City, and will be of even greater educative value than was that of last year, which was visited by thousands.

Hooper's "Cliffs of Manhattan," Birge Harrison's "Fifth Avenue in Winter," Shinn's "Cooper Union Fountain," Paul Cornoyer's street scenes, Jerome Myers's "Night on the East Side," Chase's "In the Park," Lie's "Dumping Ashes," Jean McLean's "Carting Snow," Dana Marsh's "The Tower-builders" and "The Structure" are some of the canvases that attest the artists' growing interest in the city. Mr. Shaw has lent seven works from his collection, including that fascinating "Green Gnome," by Sargeant Kendall, Benson's "Summer" and Walker's "Singers." Mr. Hearn has lent a fine Thayer, and his new "Horse Market, Bombay," by Edwin Lord Weeks. Mr. Lawrence lent a Mary Cassatt, and Mrs. Frederic Cromwell four pictures, including two of Chase's, but all the other pictures were lent by the painters themselves, who are watching with interest the reception their works receive in a section of the city

The Portuguese Fisher Boy. By Charles W. Hawthorne

not influenced by canons accepted elsewhere.

Hawthorne's "Junk Dealer" was painted not far from where it is now exhibited, and is a typical East Side character.

## The Davies Exhibition

ARTHUR B. DAVIES was another April exhibitor who made the month enjoyable for picture lovers. Mr. Macbeth showed the group of his works that had been prepared for Boston the month before. If you do not happen to love poetry in literature you will not love such work as Davies does in painting. He is the embodiment of such a rare spirit in art as Yeats, and as untouched by academic manners in questions of artistic thinking. Not in any sense a literary painter, but one whose sense of rhythm in color and line is so fine as to be unique. Such works as "The Encircling Wave," and

"The Illimitable Dawn," "Autumn, Flame and Passion," and the "Aurora, Hills of Dreams" are revelations of a power to visualize imaginative experiences of beauty all too rare even among dreamers. The color composition of these later works is in many ways different from those done prior to his exhibition of three years ago. These are done less according to dominant harmonies and often ring out in sets of strongly opposed colors not always so beautiful to eyes accustomed as ours are now to the "dominant tone."

### New Gallery Exhibitions

IN the work of Jonas Lie, at the new gallery in Thirtieth Street, another of the school of experimentalists was revealed. A man to admire in many ways tho, like all of this little set of men, not so original as his immediate friends proclaim him. He ought to do much in time, for he has greater variety of mood than some of his school.

Following his exhibition came that of his fellow craftsman, Van Perrine, who continues to study the Palisades. He is still enamored of what he seems to consider a discovery of his own, "Nature in her solemn and isolated grandeur," and as in a note affixed to the announcements of his exhibition there are strong objections made to "reiteration," one is surprised to find much of it in his work. His Palisades this year fail to be as compelling as they were last year, largely because we can't conceive of a man feeling eternally the same emotion in the presence of night and the storm. He seems to have crystallized that feeling of the solemn and isolated grandeur of the great rocky cliffs and to feel that always the same forcing of blacknesses will carry the same strength of conviction. One does not find that he has gained any deeper insight through the concentration, but this is not to say that he is not an interesting personality in our art. He is distinctly interesting even if he is never to give us more, and it is as futile to quarrel with this man for his mannerism as with Davies for his lack of drawing of the figure—only, the more we get of greatness in an artist the more we demand.

A Bookbinding by Miss Ellen Gates Starr in Green Morocco, with Inlays of Dull Blue and Dark Red, Owned by Mrs. Robert Hunter, N. Y.

### Bookbindings at Hull House, Chicago

A NOTABLE exhibition of hand-made bookbindings by Miss Ellen Gates Starr and her pupils was given at Hull House, Chicago, last month. Fifty numbers were shown, which included thirty-nine bindings by Miss Starr and eleven by Miss Mary Kelly and Peter Verberg, two of her pupils and associates. Miss Starr is perhaps the best known woman binder in the West. She studied at the Dove's Bindery, and the showing of her bindings, to which reference is here made, included examples of her best as well as of her most recent work. Some bindings with embroidered doublures were a feature of the exhibition. These are recent conceits on the part of Miss Starr, who has succeeded in securing pronounced success both with silk and leather as mediums upon which she has lavished her skill. One of her most attractive bindings was the "Fables of Bidpai," upon which she had massed a wonderfully rich all over design of gold tooled roses, with scarlet inlays, all on a light green morocco ground, with elaborately gaufered edges, in which the spirit of Orientalism had been delight-

fully caught. Another book bound by Miss Starr and shown by her in the Hull House exhibition was a Kelmscott, bound in white pigskin and blind tooled. This treatment produced a result that resembled old carved ivory. A third volume, owned by Charles L. Freer, of Detroit, the present owner of the famous peacock decorations, which Whistler made for his own house, was done in brown pigskin, with inlays of dark green. Other collectors who loaned books for this exhibition, bound by Miss Starr, were Mrs. Cyrus H. McCormick, John A. Spoor, Miss Waite, Mrs. S. J. Walker and Mrs. C. B. Pike, of Chicago; George G. Booth, of the Cranbrook Press, Detroit; Mrs. Robert Hunter, of this city; Mrs. Morris A. Black, of Cleveland, and Mrs. Frank Gates Allen, of Moline, Ill.

### The Drama

THE most important dramatic event of the month is, of course, the series of

plays in which Richard Mansfield, at the New Amsterdam, has exhibited his wonderful versatility. As the decrepit Ivan the Terrible or Baron Chevrial or the Gay Beau Brummel or in the alternating characters of Dr. Jekyll and Mr. Hyde he is equally convincing and impressive. No trouble or expense is spared in scenery, costuming and stage management, but this is all subordinated (as are also the other actors) to the one dominant personality. Such plays as "The Parisian Romance," "Ivan" and "Dr. Jekyll and Mr. Hyde" and "Beau Brummel" have no interest in themselves, but are adapted or have been adapted to Mr. Mansfield's style of star playing.

He showed his originality and enterprise this year by giving for the first time in English Molière's "The Misanthrope." It was a triple translation, from France to America, from rime to blank verse, and from the seventeenth century to the twentieth, but in spite of this it interested the audience even if it

As Beau Brummel

RICHARD MANSFIELD

As Shylock

Scene from Mrs. Fiske's Play, *A Light of St. Agnes*

did not captivate them. Mr. Mansfield's methods are in great contrast to the formal and symmetrical style in which the French present their classical comedy, and much of the intended effect is lost by the change. It was noticeable that in the last act, where the rimed couplets of the original were introduced, Molière's epigrams were more forcible than before. Mansfield's abrupt, snappish manner and dry voice are used with splendid effect in the portrayal of Alceste, the man who resolves to tell the whole truth regardless of consequences. It is a question whether the consequences of such a course would be any less disastrous now than at the court of Louis.

A similar revival at the New Amsterdam is that of Goldsmith's "She Stoops to Conquer," with Bellew as Marlow, Louis James as Hardcastle, Sidney Drew as Tony Lumpkin, Dodson as Diggory and Eleanor Robson as Miss Hardcastle. For a century and a third this comedy has never been long off the stage and the old jokes and traditional stage business never fail of effect on any audience. The word "horse-pond" and the pass-

ing of the loving-cup always excite palpitation of the diaphragm, and there never was a story which people were so anxious to hear as that of "Ould Grouse in the gunroom."

Boucicault's "London Assurance," once so popular, shows no such signs of perennial interest. It is already too old-fashioned to interest even when as well presented as it is at the Knickerbocker by Miss Jeffreys and her company.

It is well known that in dramatic matters we are inferior to France and Germany, but it was not so generally realized that we are also far behind Russia until this winter, when we have had presented here plays by two of the younger Russian writers, Maxim Gorky and Eugen Tchirikov. The latter was given by the St. Petersburg Dramatic Company, under the direction of P. N. Orleneff, and for natural and sincere acting and thoughtful interpretation has not been surpassed. Altho it was given in the Russian language it was more intelligible as a pantomime than many of our American plays. The condition of the Jews in Russia is the subject of Tchirikov's

play, "The Chosen People," and it ends with the distressing scene of a massacre. It is no wonder that the company was expelled from Russia for playing it. The conflict of ideas which forms its basis is between Nachman, the Orthodox Jew, who looks to Zionism for the regeneration of his race, and Boruch, who has become a socialist and lost his racial sympathies in a wider philanthropy. A brief quotation will give the line of the argument:

Leizer: I want to know, what will you wait for? You, such Jews as you and Boruch have nothing to wait for!

Nachman: This isn't so, Rab Leizer, they are also waiting . . . they are waiting for the time when there will be a paradise on earth, such as was in Mesopotamia. . . . But then there were only two—Adam and Eve—while now there are very many peoples: Germans, Frenchmen, Russians, Englishmen, Poles, Armenians, Jews! . . . You can't enumerate them all! . . .

Boruch: I simply said that faith alone is not enough. There are such things as history, economic forms; there are rich people and poor

people; there are people who have plenty to eat and people who have nothing to eat. And here you can't do anything with faith alone. . . . History does not concern itself with what Nachman is thinking, or with what he is believing in. . . .

Nachman: And is not your heaven on earth built upon faith? Can man live without faith? Every human being must believe in something. We believe in the regeneration of one nation, and you believe in the regeneration of all mankind. But wherein is your faith truer than mine? . . .

Boruch: Because it is based on a historical foundation, and not on a diseased fantasy of a crushed and oppressed man. . . .

Nachman: And you want to take away from this crushed man his last hope? That is his last hope, his last crumb of bread! You must not do it! You have no right! If you have found a new road, go there, but don't lead others after you, because you cannot know whither that road will bring you.

Izerson: Further than Zion!

Boruch: You may travel with us. . . . We'll bring you there! . . .

—From an unpublished translation by Herman Bernstein.

Rubek and Irene on the Mountain Top. From the Last Act of Ibsen's "When We Dead Awake." After Photograph by Byron

The Russian company are to play Ibsen's "Ghosts" and Dostoyevsky's "Crime and Punishment" in the Yiddish theaters on the East Side.

Another of the Irish plays of William Butler Yeats, "The Countess Cathleen," was given in New York by Margaret Wycherly. It was a very artistic production, admirable in stage setting, poetic in wording, impressive in theme and exquisite in acting, but it had one defect, a fatal one—the audiences were too small. A city with more Irish than Dublin gives no support to new Irish drama. Three thousand Irishmen came out to hear Yeats speak at the Academy of Music, but very few of them came to see his plays. The Neo-Gaelic movement does seem to move in this country. Fortunately we can read the Yeats plays if we cannot see them. "The Countess Cathleen" is a story of the famine in Ireland. Two demons disguised as merchants are buying the souls of the starving peasants, but the Countess intervenes by giving all her property to feed the poor and, finally, when her money is lost, she sells her own soul in exchange for those of her people which they had traded for food. But as the demons are about to depart with their prize an angel rescues her, declaring her act of self-sacrifice was the best deed of her life and entitles her to enter heaven.

We dislike to commend the three one-act plays written by Mrs. Fiske because it is announced that if she succeeds as a playwright she will retire from the stage. Nevertheless, there is no denying that they are very beautiful, played with great delicacy and naturalness, and enthusiastically received by those who are capable of appreciating the internal drama. They show the advantages of a well drilled stock company like the Manhattan over the star-and-sticks system. The scenes of two of the plays, "The Rose" and "A Light of St. Agnes," are placed in Louisiana, and the third, "The Eyes of the Heart," in France.

Ibsen's latest and last play, "When We Dead Awake," put on the New York stage in an experimental matinee, met with a success as unexpected as it is encouraging for the idealistic drama, and it was kept on for some weeks both afternoons and evenings. Irene has become a very real person, instead of a mere

symbol, to those who have seen Miss Florence Kahn in this part.

A thoroughly characteristic American comedy is the "Heir to the Hoorah"—somewhat farcical, quite sentimental, pure in motive, no problem, no thought, aiming at the average taste and hitting it exactly. As a study in manners it is chiefly interesting as showing the Easterners' idea of Westerners. No such miners and cowboys were ever seen off the stage, but their ignorance of the social ritual is so grotesque and so flattering to the supposed proficiency of the spectators that the audience is delighted.

"The Lady Shore," in which Miss Virginia Harned is the star, is a romantic but not a historical drama. The handsome hunchback Richard of Gloucester, the little princes in the Tower, King Edward IV, Jane Shore and many other historic characters appear in recognizable guise, but what they do is quite different from what is told about them in histories. Not very much can be said either for the text or the acting, which, tho generally good, is not remarkable; but, considered purely as a series of stage tableaux, it is well worth seeing. For gorgeous apparel and well drilled and picturesquely grouped crowds nothing better has been put on the stage even in grand opera.

How such a bright man as Zangwill could write so poor a play as "Jinny the Carrier" is a mystery. Its humor is so forced, its sentiment so farcical and its situations so impossible that not even the pretty ways of Miss Annie Russell and the good impersonation of an old man by Mr. Mellish could make it acceptable.

The return of William Gillette to New York in "Sherlock Holmes" was one of the theatrical events of the past month. This play is about as good from a histrionic standpoint as Conan Doyle's stories are from a popular standpoint, which is equivalent to saying that they are perfect. Mr. Gillette is thinner than he used to be, which makes him even a better Sherlock Holmes than ever. The play is certainly worth seeing by all people who like the exciting. The cast is good and Mr. Gillette is one of the best of living actors.

"Nancy Stair" is a dramatization by Paul M. Potter, of Elinor Macartney

Lane's novel of the same name. If the novel was above the average, the play is not. Miss Mannering is the only one in the cast of much distinction. Her beautiful side face and well modulated voice suit well her part, and her acting was all that could be desired. There is too much plot, however, in the play in proportion to literary or dramatic skill, but those who like to see "something doing," will not be disappointed. We never saw a play, however, in which the orchestra was brought into requisition on so little provocation. On every grave, gay and somber occasion the violins started their vulgar tremulo. We can stand music at 50-cent *table d'hôte* restaurants, but whenever the hero comes to the center of the stage or the heroine dies is too much.

We have a better opinion of our readers' intelligence than to afflict them in this department with any criticism of "musical comedies." Vaudeville we have refused to discuss for reasons other than inanity. But we must call attention to the new Hippodrome just erected and opened by Messrs. Thompson and Dundy, the creators of the New Coney Island. The Hippodrome is said to be the largest theater in the world, both in width of stage (it is some two hundred feet across) and in seating capacity, which is over 5,000. The house is, of course, too large for good articulation, but it is ideal for great spectacles as war scenes, pageants, ballets, circuses, etc. Messrs. Thompson and Dundy are

pastmasters of the art of amusing people and no one who comes to New York with an intelligence below Ibsen should fail to visit the Hippodrome. Nor must we forget Barnum and Bailey's Circus. Every boy and girl from six to sixty ought to see it. All the old tricks and acts and several new things "more wonderful" yet are to be seen.

### The Season's Best Plays

As a summary of the season we give the following list as being in our judgment the most noteworthy of the new plays which have appeared:

#### *Classical.*

The Marlowe-Sothorn Shakespearean plays.

Mansfield in his repertory.

Forbes Robertson in "Hamlet."

"She Stoops to Conquer."

#### *The Literary Drama.*

Ibsen's "When We Dead Awake" and "Hedda Gabler."

Miss Wycherly in Yeats's Irish plays.

Miss O'Neil in Aldrich's "Judith of Bethulia" and Sudermann's "Fires of St. John."

#### *Modern Comedy.*

Warfield in "The Music Master."

Crane in "Business Is Business."

Pinero's "Letty."

#### *Farcical.*

Shaw's "You Never Can Tell."

Ade's "The College Widow."

"Mrs. Temple's Telegram."

# Literature

## The Harriman Alaska Expedition

NEVER, probably, were so many cameras aimed so continuously and successfully at glacial fortresses among the Northern hills as when the steamer "George W. Elder" set out from Seattle, May 30th, 1899, to skirt the coast of Alaska and to get as near to the all-night sun of the Bering Sea as sixty days would permit. The steamer carried twenty-five men of science—that is, professors in universities, leaders in various branches of Government scientific work, artists, physicians and photographers—and, in addition to these, seven happy ladies of the Harriman circle. In two superb volumes\* from the De Vinne press is told the general story of ice-floes, islands, Indians, fox-farms, seal-hunters, salmon fisheries. A third volume on the Alaskan Glaciers is now added, and the rest of the sixteen will give the geology, zoology and botany of our Northern dominion.

In the first volume John Burroughs, in his homely and delightful manner, tells the story of the trip, now and then giving a hint, confirmed by his fellow-travelers, that he preferred land to the rolling waves, and was happy in the inter-island passages. He was happiest of all when he could foot it up the hills amid a gay profusion of the short-lived Arctic blossoms, with the minstrelsy of venturous birds to remind him of home. Other members of the commission report on the blue-fox, or the valuable silver-gray, on the wasteful salmon fisheries and canneries, the diminishing tribe of seal, the ice-rubbed forests of the canyons, on the ancient cedars, Norway pine and spruce, clothing the foothills of glorious mountains. The artists of the expedition add the precision of sunlight and the glow of color to snow-scenes and sunsets of wonderful beauty.

\* THE HARRIMAN ALASKA EXPEDITION, WITH CO-OPERATION OF WASHINGTON ACADEMY OF SCIENCES. Vols. I and II, on Alaska. By John Burroughs, John Muir, Geo. Bird Grinnell, William H. Dall, Henry Gannett, C. Hart Merriam, Charles Keeler, William H. Brewer and M. L. Washburn. Vol. III. Alaskan Glaciers and Glaciation. By Grove Karl Gilbert. New York: Doubleday, Page & Co.

How worthy of exploitation the far Northwest is becomes more apparent when it is remembered that west of the Klondike region is a land of glaciers, largely within the traveler's range, and only inferior in extent and grandeur to the inaccessible ice-fields of Greenland and the Antarctic continent—practically, therefore, the finest in the world open to all comers. The picturesque glacial streams of Switzerland become insignificant beside these rigid rivers of ice, which, as they grind their way along the estuaries, mark the hills in hieroglyph, crush the promontories into broken stone, as if mountains were only an accumulation for MacAdam, and enter the sea with the thunder of avalanches. What sort of tumuli and billowy ridges they leave behind may be seen in New England, in like accumulations, on which the dairy farmer pastures his cattle without any horrible nightmare of a mile-deep ice-cap over his head tossing the stones down. This glacial growth and decay are the story of the third volume, prepared by Prof. G. K. Gilbert, of the United States Geological Survey, who modestly describes his work as merely adding one more to the list of reconnaissances preliminary to a full study of the Alaskan glacial system. The Harriman expedition gave opportunity to study somewhat closely only thirty-four of the many hundred ice-currents that stream down over a stretch of land of from 15,000 to 20,000 square miles. Of this study the chief aim was to mark the phenomena of wasting, of the deposition of detritus, and of the advance and retreat of the ice-front. As a part of the plan, or as an offshoot of it, we have a tentative discussion of the origin of "Hanging Glaciers," "Pitted Plains," "Kettle Holes," such as on Cape Cod excite the curiosity of strangers and give rise among the native cape men to endless legends of "no-bottom" ponds. The value of Professor Gilbert's account is not so much in novel theories as in abundant illustration, by photograph and otherwise, of old theories.

## Letters of Ruskin

"It is with reluctance and question that I have brought myself to publish these letters,"\* says Professor Norton in his interesting preface; but surely all intelligent readers will be glad that the editor conquered both his hesitation and his doubts. Schopenhauer says somewhere that a letter is a far clearer revelation of the character of its writer than either the face or the spoken word; and certainly if there ever were human documents which give not merely their author's opinions but his actual self, we may find them in these two volumes. Mr. Norton is well within the truth in saying "No other series of his letters extended unbroken over so long a term of years, or was likely to possess so much autobiographical interest—comparatively little, indeed, as a record of events, but much as a record of moods and mental conditions." The first letter published was written in 1855 and the last bears the date 1887. The affection shown by Ruskin to his American correspondent is so intense and sincere that we cannot help regretting being at only one end of the telephone, so to speak; one feels sure that the other voice is constantly saying something which it would be well worth while to hear. Ruskin grappled this friend to his soul with hooks of steel, and it is easy to see why. Ruskin's brilliant and wayward genius found in Mr. Norton's friendship a necessary corrective influence, a sympathetic heart under the full control of a sane and calm judgment. Had Ruskin heeded more carefully the words of wisdom that the post from America brought to his door, the result in his earthly happiness and in his future reputation would have been far better for him and for us. John Ruskin would certainly have resented scornfully the accusation of being a dissipated man, but if there ever were an individual who lit life's candle at both ends and then set fire to it in the middle, it was the Sage of Brantwood. It is a highly tragic history of a human soul that these letters unconsciously portray; the love tragedies of Ruskin's life seem mere episodes compared with the reckless manner in which

this marvelously gifted man threw away and scattered to the winds his life stock of physical and mental energy. The terrible crash that came was so inevitable to all but the protagonist, that the letters, despite their illuminating comment on art and life, make very painful reading.

It is necessary at once for the reviewer to refrain from quoting striking passages in this correspondence, for nearly every page has something that ought to be underlined, cited and pondered long. Each letter is an eruption from a volcanic soul, white-hot with enthusiasm for good and hatred for evil. America, the Americans, and our Civil War he never understood, but his remarks on these themes, while curiously inoffensive, are thunderously dogmatic. From religion he dropped into bitter skepticism that tore his sensitive soul like a vulture, and from skepticism he dropped—or rose, if you like—into a spiritualism pitiable to a well balanced mind. Some one has said, "Stand on your head and the world will be upside down," and Ruskin certainly viewed life and man from an impossible attitude. His nature was so noble and sincere that his wildest denunciations fail to arouse our antagonism; we only shake our heads.

Is Ruskin one of the Immortals? Does he in truth belong to English literature? We fear that subsequent ages will negative these questions. His fame is almost visibly diminishing, and his works are less and less read by the rising generation. He lives in the hearts and lives of the men and women he has influenced, and in the process of heredity something of Ruskin will unconsciously be transmitted. But as a man of letters he is becoming dim, and the dust is already gathering on the books whose pages still glow—for the minority who read them—with the heart-throbs of a passionate lover of the Ideal.

## Three Suggestive Novels

THE human animal is remarkably versatile. He is the hero of all history and of all fiction. Thompson Seton and other fur-bearing authors, to be sure, often represent him in the guise of a bear or a wolf, but it is the human romantically imparted to the creature which makes

\* LETTERS OF JOHN RUSKIN TO CHARLES ELIOT NORTON. Boston and New York: Houghton, Mifflin & Co. 2 vols. \$4.00.

the tale unique. Every year ten thousand novelists present him in as many different combinations of conditions and circumstances, and we are never wearied by any new setting of a being so variable in character and temperament that he dominates alike the highest and the lowest conceptions of life. In his new volume of stories<sup>1</sup> Mr. F. Hopkinson-Smith shows him at what he calls "close range."

"On my desk lies a magnifying glass. . . . With it I decipher at close range such finger-work as the cutting of intaglios, the brush-marks on miniatures, etc. At the same close range I try to search the secret places of many minds and hearts. . . . In these magnifyings and probings the unexpected is often revealed; tenderness hiding behind suspected cruelty; refinement under assumed coarseness; the joy of giving forcing its way through thick crusts of pretended avarice."

This quotation from the preface gives the motive which inspired these stories. And when we consider how much that is perverse the average writer finds "at close range" in human nature we should be grateful for Mr. Smith's intaglio interpretations of a goodness which lies deeper even than cruelty, coarseness or avarice. And that which gives the tone of veracity to each story is the fact that it is a transcript from life, full of fleeting incidents with quickening heart touches which sermon honor, love and pity out of the most callous man. He has set down with humor, compassion and wit the real life that we live every day on the outside of story-books and made it refreshing with faith and virtue. The idea is that no man can become totally bad, because in the course of life occasions arise which call to him privately to do good and not evil. Mr. Smith's art consists in presenting occasions so commonplace that they are familiar to every reader, and in showing how they spring the impulse to serve, to give, to have mercy. This is the best form of fiction, because it is a hopeful form of truth, and this book merits particular attention because every story in it is conceived in that sort of wise kindness which those writers do not have who raise the scene of the hero's transgressions to a cameo elevation in character.

<sup>1</sup> AT CLOSE RANGE. By F. Hopkinson Smith. New York: Charles Scribner's Sons. \$1.50.

The things we have lived through are no longer realities. We cannot see them "at close range." This gives a glamor to the past which is always enchanting. It is to-day's sun shining upon what will become more and more distant, "like far off mountain peaks changed to clouds." And Mr. Justin Huntly McCarthy is one of the few writers who can cast the mind of his readers back into this fairyland of legends. Those who read "The Proud Prince" remember his radiant literary style and the characters that moved through the tale like strophes of color. And how in this story of a Dryad,<sup>2</sup> overlooked by time and theology in a forest

<sup>2</sup> THE DRYAD. By Justin Huntly McCarthy. New York: Harper Bros. \$1.50.

JUSTIN HUNTLY MCCARTHY

near Athens, who marries her mortal lover, he unites the age of mythology with the middle centuries of Christianity by a conceit as perfectly wrought out as it is intangible. The scenery is moonlit, star-spirited, as if there were a psychic relationship between all heavenly bodies. The conversation between the man and the Dryad is exquisitely adequate. And in addition Mr. McCarthy has done what few writers accomplish nowadays—he has presented Christianity from the spiritual and poetic point of view rather than from that which is rational or theological. The Christian lover is immortally like the pagan maid. There is less pigment than usual in his literary style, but it gives an almost miraculous suggestion of light and silence, shaded into forest greenness, with an occasional crowding in of contrastingly rude figures and more turbulent scenes.

We all come out of the country of childhood hallowed by experiences which can never be repeated. Recently it has found a chronicler in Sara Andrew Shafer. Last year her book, "The Day Before Yesterday," gave the first intimation of her gift in this most delicate of all biography writing. And now she has collected another volume of the tragedies, comedies and dramas out of that fair land which is beyond the chance of change,<sup>3</sup> because no grown up people can get back into it except they become as little children. It is no more difficult to write a fanciful sketch of a child than it is to compose a "Johnny bear" story; but to set down the life and laws which govern the commonwealth of a natural, healthy childhood requires the right kind of inspiration. But Mrs. Shafer comprehends the divine ingenuity of the childish spirit. She has laid her scenes in a quiet village, and filled every page of her story with those quaint marginal drawings of character which interpret children, and she has made a book for tired people which will recall to every one who reads it the best things they are able to remember of themselves.

**A Harvest of Chaff.** By Owen Seaman. New York: Henry Holt & Co. \$1.25.

The admirers of Seaman's parodies

will, after reading this new collection, take down from their bookshelves the well-worn copies of "Borrowed Plumes," and reread that in order to restore their confidence in the author. The earlier volume contained the most perfect prose parodies that have ever been written, not mere burlesques, but real studies in style. In the easier field of imitations in verse, such as are collected in this new volume of his contributions to *Punch*, there are many parodists who excel him, tho some of his Browning, Wagner and Kipling imitations are good.

**The Golden Hope.** A Story of the Time of Alexander the Great. By Robert H. Fuller. New York: The Macmillan Co. \$1.50.

Historical novels often give one the impression of being made up entirely from books, with the romance a very distinct and separate addition to the history. This one is harmonious in its blending of the two parts, and full of interesting developments. The book opens with the coming of Chares, of Thebes, and Leondas, of Sparta, to visit Clearchus, an Athenian. These three comrades suggest in their friendship Dumas's "Three Musketeers." There is the same love of adventure, of dashing bravery, of miraculous escape, as thrill the readers of the less ancient novel. Artemisia, betrothed to Clearchus, suddenly disappears. The oracle at Delphi is consulted, who gives hope that she may be found, and the three friends start out to rescue her. There are thrilling adventures, which serve to introduce the story of Alexander the Great and his wresting of the Persian Empire from Darius. All the men who made the wars and that period famous are introduced into the story, and the orators and philosophers also appear. Artemisia is saved from the clutches of the iron idol Moloch, just as she is to be sacrificed to save the city of Tyre. The book ends peacefully, and is one to absorb the attention from the opening chapter, that describes Athens in all its atmosphere of beauty, to the last one that brings us to the home of Clearchus and Artemisia, in Alexandra.

<sup>3</sup> BEYOND CHANCE OF CHANGE. By Sara Andrew Shafer. New York: The Macmillan Co. \$1.50.

**Food Preservatives.** Their Advantages and Proper Use. By R. G. Eccles. New York: D. Van Nostrand Company

Those of our readers who challenged the statement we recently made in an editorial that the dangers from the putrefaction of food were often greater than from the use of preservatives will learn something to their advantage if they read this book. The scare exaggerations of the newspapers and the occasional reckless generalizations of official chemists have created a popular prejudice against food preservation by antiseptics, which is to a great extent unwarranted by the facts, and it is a useful thing to have the opposite side heard and to have the evidence of the benefits of preservatives collected as in this book. It contains much special pleading, but this is justified by the excessive amount of special pleading that has been done, both in and out of court, against the use of preservatives. Dr. Eccles ingeniously turns the tables on his opponents by showing that the highest death rate from stomach troubles is found in those States where preservatives are prohibited by law, but there are obviously too many other and unknown factors for such statistics to have any evidential value. He subjects Dr. Wiley's experiments on the Washington clerks to sharp criticism, and holds that they are invalidated because the subjects knew when they were being dosed and had "symptoms" accordingly, altho not the right ones, and because the doses of the chemicals were excessive. To get from ordinary preserved food as much salicylic acid as was given in these experiments a man would have to eat from 15 to 45 pounds of catsup, jam and jelly a day. Professor See's pupils took for a long time without any perceptible effect upon the health a quantity of salicylic acid equal to what they would have obtained if they drank five gallons of beer a day. A valuable part of the book is that devoted to showing how little evidence there is for the assumption, commonly made even by chemists, that the process of fermentation is so similar to that of digestion that whatever prevents the one must impair the other. The most thorough discussion of the question of preservatives and coloring matter is to be found

in the report of the British Parliamentary Commission, whose conclusion was as follows:

"The total prohibiting of preserving methods would clearly be likely to be attended with serious results to the public health, in that large quantities of food possessing highly nutritive value might in effect either be withheld from the poorer classes or be liable to be consumed by them in a condition of incipient putrefaction."

**The Ojibway.** A Novel of Indian Life of the Period of the Early Advance of Civilization in the Great Northwest. By Joseph A. Gilfillan. New York: Neale Publishing Co. \$1.50.

The Indian in literature has tribal characteristics as distinct and unlike as those of the Sioux and the Pueblo. There is the romantic Cooper Indian, dear to boyhood; the Garland Indian, intellectual and picturesque; the ethnologist's Indian, absorbed in myth and folklore and ceremonial. The new type with which Rev. Mr. Gilfillan makes us acquainted we instinctively feel to be the genuine, human Indian. To call the book a novel was a misnomer. It is rather a series of moving pictures in which we see real people doing real things. It is the work of a man who for twenty-five years saturated himself with the life of the Ojibway Indians. A complete mastery of their language and a single-minded devotion to their welfare gave him a most intimate understanding of the Indian's viewpoint. In spite of careless proofreading, conspicuous faults of diction and unfortunate lack of experienced editing, the story is told with such simplicity and vividness that we seem to be living the life of the dweller in a wigwam among the forests of Minnesota half a century ago. The loves, hates, brutalities, superstitions and aspirations, as well as the occupations, customs, merry-makings and hardships, are all markedly portrayed. There is no glamour, no Wild West show attitudinizing. The boy reader will not long to "play Indian" and the sentimentalist will be annoyed by his idol's feet of clay. But it is a sort of *ex cathedra* contribution to our knowledge of the Indian, and in its unsparing yet sympathetic veracity lies its novelty.

## The Misfortunes of a Great Life Insurance Company

REMARKABLE disclosures concerning the management of one of the world's greatest financial and fiduciary institutions have followed the attempt of President Alexander and his associates to secure the retirement of Vice-President James Hazen Hyde from his office and from control of the Equitable Life Assurance Society. The revelations already made by the contending factions in signed statements, discreditable and disquieting as they are, suggest that there is much remaining to be told. If there was a time when the interests of 600,000 policy holders could best have been served by conciliation, agreement, silence, and reform without publicity, that time has passed. There is now demanded, for the welfare of the policy holders and also in the interests of justice, a most searching public investigation, to be made by competent and impartial representatives of the people. Something more than the censurable methods and defective management of a life insurance company is involved in this affair. It is not only for the good of the company and for the protection of those who depend upon their contracts with it that such an investigation should now be made; it is also for the restraint of dangerous practices in American finance and for the promotion of sound public policy that this sore should be laid open to the bone.

We cannot enumerate and set forth fully here the various offenses which have been brought to light by official statements. We ought to say, however, that they do not affect the solvency of the company, whose assets and great surplus are more than sufficient to cover all its obligations. But nothing short of thorough reform can prevent a serious reduction of that new business upon which such a company must rely. It is because the stream of new

business has been checked by the disclosures already made that the company's general agents, assembling in New York last week from all parts of the country, by almost unanimous vote called for the resignation and retirement of Mr. Hyde. As to the present solvency of the company there is no question, but only by radical reform can it retain its high place among institutions of its kind.

Extravagance, enormous salaries, the payment of the cost of such entertainments as the Cambon dinner, and various lavish expenditures for little or no service—these are the least objectionable of the offenses which excite criticism. It is the influences which have been exerted to obtain control of the assets and surplus and to use that control for personal profit that must be denounced and subjected to remedial investigation. The public has come to believe, we think, that Mr. Hyde's admissions as to the operations of his "underwriting syndicates" in bonds and other securities sold to the Equitable touch only the edges of the area of such speculations. The names of his associates in these operations have not been disclosed, but they are believed to be the names of other officers and of directors of the company. As it stands, the admitted record is bad enough; it would be worse if inquiry should confirm an assertion made in the press that the profits of such unloading of securities upon the Equitable and its subsidiary companies during the last four years have exceeded \$10,000,000.

The leader of these underwriting syndicates has been that vice-president who controls the company by his ownership of a majority of the capital stock of \$100,000. It is by means of this ownership that he controls the Board of Directors, 37 of whom appear to have qualified by loans of his shares. It is a question whether they lawfully hold their offices. By law it is required that

every director shall be a stockholder; the company's charter requires that he shall be a proprietor of stock; but the deed of trust covering Mr. Hyde's shares provides that the trustees "shall hold and stand possessed of said shares" until the trust terminates.

Mr. Hyde's public statement as to his syndicate operations—in connection with his recent return to, or deposit with, the company of \$61,000 of his profits—has directed attention to the following provisions in the laws of New York:

"No director or officer of an insurance corporation doing business in this State shall receive any money or valuable thing for negotiating, procuring or recommending any loan from any such corporation, or for selling or aiding in the sale of any stocks or securities to or by such corporation. Any person violating the provisions of this section shall forfeit his position as such director or officer, and be disqualified from thereafter holding any such office in any insurance corporation."

In addition to the syndicate sales, it is admitted that many millions' worth of securities have been sold to the company by firms in which one or more of the directors hold controlling positions. As yet we have no record of underwriting sales to the Equitable's subsidiary companies, some of which are said to have been very unprofitable to the purchasers. It may be that the Shipyard Trust bonds should be included in operations of this class, for the malodorous Shipyard promotion was associated closely with one of these subsidiary institutions, whose officers are defendants in the suits of complaining investors. There were loans from the Equitable to directors; large purchases of securities from companies in which Equitable directors were officers. In various ways the great accumulations of a company holding \$400,000,000 of assets and \$80,000,000 of surplus appear to have been used for the financial support of large projects, some of which—such as the formation of Trusts and the further consolidation of railways—a great many people believe to be opposed to the public interest.

The Directors' Committee of Investigation asks President Alexander for all the facts that an earnest investigator would desire to have, but it is asserted that some members of that committee

have been directly and profitably interested in the loan or syndicate transactions which are subject to criticism. No consuming desire to investigate thoroughly has been manifested by the State Superintendent of Insurance, who seems to have been unable heretofore to discover any of the defects or offenses to which public attention is now directed. By neither of these agencies will a really public inquiry be made. Can it reasonably be expected that either of them will do the work which public interests demand?

We wonder whether it has occurred to Mr. Hyde and his older associates and advisers that his admissions and the evidence as to their operations tend to confirm the expressed belief of Western radicals of the Populist type that the accumulated savings of the poor are used to the disadvantage of the poor themselves by Eastern financiers and capitalists. For the public good and to shape public opinion justly, which is it better to do—to close and seal down the lid that has been raised over these operations with the Equitable policy holders' money, or to let the light in upon everything, and then to place these funds and this great fiduciary institution under proper control?

### The Morals of the Respectable

It is not easy just now to determine which way society is moving in matters of elementary morality. Many things point to an awakening of conscience in the hitherto indifferent and a new courage among fighters for righteousness, but almost as many things reveal a state of wickedness in so-called respectable circles that staggers one's faith in the moral progress of the race.

The protest that has been made by men like the Rev. Dr. Washington Gladden against the acceptance of Mr. Rockefeller's money by the American Board, mistaken as it may be in its logic, is a symptom of moral health. Only when the community possesses men that are alert to detect what they regard as wrong and bold to denounce it can we feel secure in our moral life.

Far more significant, as we think, is the extent of the new public opinion

upon the whole question of the methods by which some of the great fortunes have been made; for let us not forget that there are unnumbered thousands of men and women who, holding that the American Board, the University of Chicago and other worthy enterprises ought to take Mr. Rockefeller's money when it is offered to them, do not thereby indorse the methods of the Standard Oil Company. They have awakened to the fact that rebates granted to certain customers and not to others, by public service corporations holding franchises from the public, are wrong when judged by any moral standards that reasoning men can accept. It is not so very long ago that this particular moral judgment would have been impossible to the American people, just as a moral judgment against slavery would have been impossible at a still earlier time.

This is real moral progress—progress both in the development of sensibility and in the development of discrimination. It is like the moral progress that is marked in the evolution of Western civilization by the substitution of legal proofs based upon rational evidence for the ancient ordeals and compurgations. And yet the field in which such clear discriminations are not yet made by the public remains so enormous, and the scandals daily arising within that field are so shocking, that one hesitates to say that we are really getting ahead. It seems at times as tho we only changed the forms of good and evil, as we change our garments with the weather.

The methods of the respectable business classes in America to-day include such practices as this: Certain men among the directors of a great corporation organize a new corporation to construct or operate, or to buy and sell, and then, as directors of the parent corporation, make bargains with themselves as directors of the subsidiary corporation whereby enormous profits are diverted into their private coffers. While holding office in the directorate of one corporation they accept positions in the directorates of many other corporations, sometimes for the purpose of evading laws against combinations or pooling arrangements, and always for the purpose of obtaining inside information that will

enable themselves as individuals to "sell short" or take other advantage of any approaching turn in the stock market. As promoters they work up interests in half-civilized lands, not expecting, like straightforward and courageous men, to make the best of any misfortunes that may fall to their lot while taking risks, but expecting through any kind of misrepresentation or fraud to secure the backing of their national government and to commit the people of a great nation to a policy which may have in it no element of righteousness and every element of national dishonor and misfortune. These things business men do, and, what is more, when taken to task for them, they openly defend them as both necessary and right under modern industrial conditions.

Innumerable great scandals exist under these conditions, and sooner or later they are publicly exposed. Then the worst and most hypocritical phase of the morals of the respectable is revealed. The yellow journals, the "populist" organs, the "socialistic elements" are the first to make charges and to demand fuller investigations. Then the whole respectable contingent rises in righteous indignation and swears that the charges are infamous. Unhappily, in practically every case, they turn out to be true. The revelations of Erie years ago, the scandal of the Broadway Street car franchise, the story of Standard Oil have been more than paralleled by the exposure of the doings of the Gas Monopoly and the practices of the Equitable Life Insurance Company.

Two questions are germane: What do our respectable business men expect in the long run to achieve? Do they imagine that in the face of popular indignation and an increasing suspicion they can continue such practices and then restrain a rising tide of public opinion in favor of the public ownership of public service enterprises by stigmatizing such developments as socialistic and dangerous? Or will some slumbering germs of conscience in the respectable business classes themselves be awakened, and will reforms be accomplished through a real development of higher moral standards and practices?

## Religion and Religiosity

RELIGION and the forms of religion are not the same thing. The forms of religion have the same relation to religion itself that a man's clothes have to his body. The clothes may be very fine, while the body may be very sick. The forms of religion, its ceremonial, its worship, its buildings, its ritual, may be all elaborate and beautiful, while the body of religion behind them may have quite decayed. Beyond question the Bishop of Fond du Lac would insist upon this fact, while yet also insisting, as he does so brilliantly in his article this week, that ritual also is important and essential. Even Puritanism has its forms; even the Society of Friends hold to their drab.

This season of the year, when we Christians have just passed our Easter and we Jews have just celebrated our Passover, suggests the growing acceptance of the forms of religion and raises the question whether its under substance has been equally maintained. In a dozen States Good Friday is a legal holiday. The observance of Holy Week is constantly increasing in Churches that are not called ritualistic. Indeed, it would seem that in the country at large, and especially in our cities, the Episcopal Church, which makes more of forms and cathedrals, is making the most rapid growth of all the larger denominations of our Protestant communion. The social functions of Presbyterians and Baptists and Methodists are controlled and limited by the period of Lent and Easter. Men prefer to die and be buried in Lent, and maidens put off their weddings till after Easter Sunday.

So it might look as if we were becoming a very religious nation, but the question will arise whether the religion keeps pace with the religiosity. It is easy to gauge the religiosity, for it is visible and obtrusive; while it is difficult to gauge the religion, because that is a matter of the invisible spirit. Still it must have fruits, and "by their fruits shall ye know them." The difficulty is that the visible fruits of religion show themselves very largely in the forms of religion, just as a man's clothes fit his person, and yet are no part of his person. Still it is the per-

son that makes the clothes, and it is the religion that creates its forms, at least its essential forms. The shape of a person does not make all his clothes, only the essential ones, mostly undergarments; not the feathers and jewelry on the outside. The latter are beautiful, but have no necessary relation to the person. So religion will require certain essential acts, such as public worship, private or family prayer, deeds of benevolence that cost money; and the performance of such acts and the patronage of such church worship are considerable evidence of the real religion with which they are related. But, more clearly, the failure to perform these acts is generally a positive evidence of a lack of religion. The Federation of Churches tells us that in New York a full half of the Protestant population is not church-going. This is a pretty clear evidence that it is actually irreligious, and the case is much the same in other parts of the country. It is generally believed that, while the proportion of communicant members in our population is increasing, the attendance at religious services is decreasing, as other attractions draw people away on the Sabbath day.

We are slow to believe that religion is losing its hold on our people. The increasing number of communicants argues to the contrary. But the influence of religion appears chiefly in the higher moral standard required. We are applying our religion in fields which it was not expected to reach some years ago. We see things now to be wrong which our fathers did not condemn. Our duties to classes in society are getting better defined, the duties of the rich, the duties of rulers, the duties to children, to the poor, to prisoners, to the classes that can least protect themselves. These are fruits of religion as much as is church-going. And if the jewels and the feathers, the Lent and the Easter, are but the ornamental accessories of religion, they may give the beauty and attractiveness, as Bishop Grafton tells us; while we must also be careful to remember that religion may decay more and more, while the forms of religion take on greater and greater magnificence. The growth of ceremony and holy days must be watched to see that they grow out of

the life of religion and are not parasites sucking its spirit and robbing it of its life.

### Orville H. Platt

For a quarter of a century Connecticut has been represented in the Senate by two men of great ability and untarnished integrity. Mr. Platt entered the Senate in 1879 and General Hawley two years later. Their service was contemporaneous, and so was their death. Senator Platt contracted his fatal sickness while attending Senator Hawley's funeral. Both men of moderate means, who sought no wealth by advantage of their position, no breath of scandal ever touched them, and, close friends, they earned the fullest respect of their associates.

Senator Platt was a farmer's boy, born in Washington, Conn., where he died. He grew up strong and tall, with a form like Abraham Lincoln's. He had no college education, but passed from the academy to the study of law. He settled in Meriden, and soon entered actively into political life. He was Secretary of State for Connecticut as early as 1857, was for years in the State Legislature, and Speaker of the House. Those were stirring times, and he was an intense Republican, and while State Senator had the portraits of two Copperhead Governors removed from the State House, to which they were returned a few years later.

He grew steadily in ability and influence during the 26 years of his service in the United States Senate. He was not an eloquent orator, like Hawley, but he was a clear and forceful speaker, and gained a rank with Aldrich, Allison and Spooner as one of the leaders of the Republican majority. While devoted to his State he was more concerned for his country. He could even oppose what seemed State interests for larger values, as was seen when he worked hard for reciprocity with Cuba, altho the Connecticut tobacco growers were against it. On the death of Senator Hoar Mr. Platt was made chairman of the Judiciary Committee, and he was a member of the Finance Committee. Just before he died he had

been selected to preside over the Impeachment Court to try Judge Swayne. His name will go down in history in connection with the "Platt Amendment" which was incorporated into the Cuban Constitution.

Senator Platt had many friends, and he deserved them. The President admired him and trusted him. He had no personal enemies. Connecticut is much the poorer for his departure; she is the richer for his memory. In place of Senator Hawley the State has elected ex-Governor Bulkeley, whose chief competitor, Mr. Fessenden, will doubtless claim Senator Platt's seat. Does that quite look as if there were better days in politics?

### The Continuous Creation

WHEN Emerson delivered his lecture on "Farming" he announced as the specific glory of the farmer that in the division of labors it was his part to create. But even Emerson had no foresight to anticipate that evolution of agricultural life which has come about since his death, and which has been categorized modestly as Plant-Breeding. The phrase means that that cross-breeding which before Darwin's day brought about improved cattle and horses is now creating improved fruits and vegetables. It was held until recently that species were fixed and immutable; that they were as they always had been, and always must be. Darwin taught us better, and opened the first door of evolution.

To secure new sorts in the vegetable kingdom we have learned is always possible; and that we can mix the good qualities of two or more species in all sorts of permutations. Thousands of seedlings are thus produced by Nature, and thousands more, with greater accuracy, by our supervision. The chances are that every one who owns a garden hoes up and destroys cross-breds of more value than the varieties he carefully cultivates. One may hardly put down his foot in the country without treading out of existence the germ of some superb new fruit. The real horticulturist becomes fascinated with the possibilities around him, and he laments most of all that he has not land room to

allow every new berry or germinating tree to develop, until it shows what it is worth.

Charles Downing used to say that without doubt more Seckel pears, Green Gage plums, and Northern Spy apples—that is, fruits of this grade—had been destroyed than had been rescued from destruction. "Think what we may have already lost under the hoe, but think more cheerfully how many grand things we may yet create." The work of the farmer is more and more modifying itself to this business of creating. The Concord grape and the Delaware came about by accident, but these stimulated Rogers carefully to pollenize some hardy grapes with pollen from his hothouse stock, and lo! nearly one hundred sorts of new grapes enriched the world. The Herbert, the Gaertner, the Salem, the Lindley, marry the rich lusciousness of the Black Hamburgh to the hardiness of the Concord.

It was a little before 1850 that Rev. Mr. Goodrich, of Central New York, stimulated by the rotting of the potato crops, and the Irish famine, began scientific efforts to create new sorts that would be rot-proof. He gave us the Goodrich Early, the Calico, and the Cuzco. Then Bresee created the Early Rose; and since that time not less than one thousand new sorts of value have been originated. The process of elimination goes on as fast as that of creation. We shall never get the best potato nor the ideal apple, simply because we have learned that what we are to aim after is betterment, not perfection.

The reason that progress was not achieved faster by natural selection was that Nature had in view entirely different ends from ourselves. She prefers dull-looking fruits, because they can be more easily hidden from rodents and cattle. She prefers multitude to quality, because in that way she secures more seeds and surer propagation. She prefers thorns in order to protect her acquisitions. Human folk select for their gardens and orchards the very sorts that, if left to grow wild, would most easily perish. Scientific plant-breeding is accomplished at every step only by the application of mind and by personal supervision.

Where work creates it becomes a poem

and a passion. It is hardly forty years since plant-breeding became scientific; but already the number of new varieties is difficult to catalog—much more difficult to test and compare. State experiment stations have become absolute necessities in order to eliminate the poorer novelties. Thousands of farmers are growing dissatisfied with merely cultivating the old; they wish to link their lives and names with something new and better. This is a new kind of righteousness that does not content itself with what it inherits. The ideal farmer is the one who becomes a co-creator with Him who "planted a garden eastward, in Eden." It is easily within the power of every owner of a bit of land to give the world a nobler berry or vegetable. The man who started the Cuthbert raspberry was as much a human benefactor as a reformer of social laws.

We have a dozen men just now worthy of world applause and statues in a Hall of Fame—for their creative energy. Mr. Burbank has become most famous and deserves all the honor he has received. His name is as familiar in Egypt and Japan as it is in New York or Boston. However, he is by no means alone in this superb work of making something admirable out of the most humble and common. Mr. Munson, of Texas; Mr. Thompson, of Virginia; Mr. Beaver, of Kentucky, are workers along the same line, and are giving us equally good results. Our Secretary of Agriculture, James Wilson, has organized the forces of the American nation on a line of the most beneficent achievements ever conceived. He has in the field an army of co-operators, trained to increase the wealth of the country so fast that the extravagance of politicians cannot keep pace with them. He is dean of the Cabinet in more senses than one.

Mr. Burbank is a prophet as well as creator. He says that plant-breeding is still in its earliest infancy; that science sees better grains, nuts, fruits and vegetables:

"In new forms, sizes, colors and flavors; with more nutrient and less waste; and with every injurious and poisonous quality eliminated, and with power to resist sun, wind, rain, frost and destructive fungus and insects' pests; fruits without stones, seeds or spines;

better fiber, coffee, tea, spice, rubber, oil, paper and timber trees; and sugar, starch, color and perfume plants."

He thinks every one of these achievements and ten thousand more are within the reach of the most ordinary skill in plant-breeding. He insists that there is no good reason for continuing to produce poor fruit; but that better trees, producing better fruits, with regularity and certainty, can be secured by the art of man. When a farmer plants a corn grain, or any other seed, he should understand that already in those seeds is wrapped up not only a power of reproduction, but a vast power of permutation and evolution. All this, says Mr. Burbank, is not only for our time or race alone, but is a beneficent legacy for every person who shall ever inhabit the earth. To-day, with the progress made in turning weeds into fruit-bearing plants, grasses into grains, wild thorns into Northern Spys and Pippins, the earth easily feeds fifteen hundred millions of people, and cheerfully looks forward to a vast multiplication of that number; whereas the earth, before agriculture began its work of progressive evolution, could not support a population of fifty million.

"Thus with better and still better fruits, nuts, grains and flowers will the earth be transformed, man's thoughts be turned from the base destructive forces to the nobler productive ones, which will lift him to higher planes of action—toward that happy day when man shall offer his brother man, not bullets and bayonets, but fairer flowers, richer grains and better fruits."

In this way the wizard of horticultural progress links moral and physical results and foreshadows a world renewed by agricultural progress.

### Joseph Jefferson

WE are inclined to look to the past for the best examples of great acting; it has been the privilege of the present generation, however, to be brought close to the genial method of Joseph Jefferson, in whom were to be found all that spontaneous humor which characterized such comedians as John Gilbert, Brougham and Placide. Mr. Jefferson's death removes the last of these. His long life of seventy-six years carried him through

the rapid change of our national advance; he acted in barns and darkened halls for theaters; he followed in the trail of the Mexican War, and always, whether the days were dark or not, his nature was such as to meet necessity with a smile. This happy disposition was the legacy left him by three generations of actors before him, and it shone spontaneously in his work. There was a lovable quality to his "Rip Van Winkle" that had to be judged by other than art standards.

As a matter of dramatic history, there are many who will remember the Bob Acres, the Asa Trenchard, the Caleb Plummer and Mr. Golightly of this excellent actor—but it is with Rip Van Winkle that he will remain inseparable—as closely knit to the legend, one might say, as Irving, who first conceived it. Mr. Jefferson, in later years, may not have done much to warrant the assertion that his art was versatile, yet his early career showed him in many rôles of wide range. But always the dominate note was comedy—a humor tempered by a ripe sympathy with the serious—a species of comedy that struck below the surface and kept the heart healthy and the mind sound.

It was the sterling quality of the man as well as of the actor that helped raise the dignity of dramatic art. Mr. Jefferson may not have been an active reformer; rather was he an example of the Matthew Arnold precept: "Wouldst thou *be* as these are, *live* as they." He lived the life of a gentleman, and it told in his work. Geniality, kindness, warm-heartedness cannot be simulated, neither can refinement.

Mr. Jefferson was many-sided in his tastes; he was an artist of merit, as a canvas at the New York Metropolitan Museum of Art will show; he wrote in a natural and direct way, as his Autobiography bears evidence; he was an ardent angler, a taste inherited from his father, whose happiest days were spent perched near a stream, with a rod in his hands, and a whistle on his lips. Among his friends Mr. Jefferson had his whole profession, as well as literary men; he had likewise the public here and abroad. At the time of his death he was president of The Players, which at once links his

name with that of Edwin Booth—the two great American exponents of comedy and tragedy.

The actor's art is fleeting, yet is the *character* of his work permanent. By his death Mr. Jefferson, the actor, has passed into tradition. But art may gain new life through example, provided it is not tied down by it. William Winter, the veteran critic, who has witnessed the rank diminish, claims the rights of Lamb and Thackeray and Irving to live—for Joseph Jefferson. The quaint style of Elia is more tangible for us than will be the quaint style of Jefferson for future generations. Yet both are difficult to emulate, since they were both very near to human nature in their work. Tradition is sometimes hard to excel; present day drama and acting bear witness to this in comparison with the past. That is why Jefferson, one of our greatest comedians, will live.

### Seven Futile Years for Rachel

THE seventh Zionist Conference will be held this summer in Switzerland. For the first time the chair, draped in black, will not be filled by Theodor Herzl, who died last July. It will be a sad meeting, not simply on account of the death of that brilliant and enthusiastic leader, but also because the seven years' toil for the beautiful Rachel of a recovered Jewish kingdom in Palestine will be acknowledged a failure.

Israel Zangwill, the well-known English novelist and playwright and one of the most respected leaders of the Zionist movement, at a dinner which was given to him and his wife in London on the occasion of their late return from the United States, foreshadowed the imminent end of the noble dream of Theodor Herzl "to establish for the Jewish people a publicly and legally assured home in Palestine." He forewarns his fellow Zionists not only to give up definitely every hope of reacquiring the ancient home of their ancestors within this or the generation to come, but announces also with manly frankness his conviction of the utter failure of the East African project, the last trump card Herzl threw in despair upon the table of the Zionist Congress of 1903. He said:

" . . . We stand to-day at a great crisis in our movement. We had set out to acquire a publicly and legally recognized home in Palestine, and lo! after seven years' siege we found Palestine as impregnable as ever. Simultaneously with our becoming aware that a change of tactics was necessary, the British Government made us an offer of a territory in East Africa, in which we could enjoy a measure of autonomy. But our delay in sending out the Commission of Investigation was a serious blunder, and has led to a subtle transformation of the offer originally made to us to explore a large undefined area in British East Africa into a pastoral country suitable for cattle rearing and able to support a total population of some 30,000 on a settlement 300 miles from the sea. . . .

"The East African project is the only live issue now before the Zionist movement, for Palestine is entirely closed, one cannot say for how many years, to Jewish political immigration. It is not a question of working seven years for Rachel and getting Leah; it is a case of Leah or nothing."

So the plan, which they were foolish enough to think hopeful, to buy Palestine from the Sultan for a round sum, or charter it on a generous lease, has failed. It was predestined to failure not simply because Turkey could not consent, but also because Russia and France each wants Palestine for itself, and Germany now holds that she has pre-eminence rights. We said from the beginning that such a scheme was a misty iridescence. But there was another plan to buy Palestine piecemeal by the settlement of colonies. This also is a failure, according to Mr. Zangwill. He says that even if the gradual infiltration of Jews into Palestine could ever lead to any political autonomy, that road is closed, since Russian Jews are not permitted to enter into Palestine, and the new Pasha of Jerusalem has appointed Jewish officials to watch and expel any foreign Jew who stays longer than three months. And, moreover, the Jews already there are selling parts of their own settlements to some Franciscan monks for the building of a Catholic church.

There is, then, no way of crawling under or climbing over into the fold—or, to revert to the figure, Rachel cannot be had by her lover's purchase or by elopement. Even with the Charter obtained, there would remain the question of the present non-Jewish inhabitants of Palestine, who possess 98 per cent. of the soil

and constitute 88 per cent. of the population, there being only 78,000 Jews in Palestine out of a population of 650,000.

Zangwill, in concluding his remarkable speech, sums up his argument as follows:

"The door of Palestine is closed to us. Shall we weep outside it forever like our brethren at the Wailing Wall within? Or shall we do our best to accumulate political power and make of ourselves a nation elsewhere, whether in East Africa or—East Africa being found unsuitable—in some still better territory? Nobody has shown a better way of carrying out the Basle program, and if all such territorial ideas are rejected and the next Congress puts forward no practicable policy by which to achieve its aim, I think it would be just as hopeful for the Jews to return to their prayers for Palestine as to weary man and heaven with their annual outbursts of rhetoric. That is all I have to say."

So Mr. Zangwill is discouraged, and we only wonder that his faith held out so long. The American Jews have never accepted the scheme very enthusiastically. They think that the United States is a good enough Palestine for them. America draws them from Russia more than does Palestine, and a young Jewish girl in our issue this week suggests the reason why. They find here a comfortable living and freedom and equal rights with other men. So we fear that the seventh Zionist Congress will first set up a stone in memory of their late leader and then gather up all their speckled, spotted and ring-streaked flocks and silently steal away, bidding adieu to the last futile wooing year for the fair Rachel.

#### The Ten-Hour Decision

We may not be sure that the decision of the United States Supreme Court is wrong in declaring the New York ten-hour law unconstitutional, however much we may not like the working of it. A master baker was convicted for disobeying the State law and allowing his men to work over ten hours a day. The Supreme Court reverses the New York decisions, and declares that while the State can exercise police and sanitary authority, it cannot make these a pretext for interfering with the right of contract; and that it is not proved unhealthy to pur-

sue the baker's trade for more than ten hours a day. This is a very far-reaching decision. It applies to other equally healthy kinds of business. But the question will recur, notwithstanding the decision of the Supreme Court, whether ten hours is not as long as it is healthy for most men to be employed in any continuous physical labor. Will not longer hours shorten the life of the average man, and does not the police power of a State have the right to control hours of labor which will reduce human life? This is a question of fact which must be referred to sanitarians. To our mind the four judges who gave a contrary opinion have much basis for their dissent. A most famous legal authority thus set the rule for intellectual labor:

"Six hours in sleep, in law's grave study six,  
Four spend in prayer, the rest on Nature fix,"  
which his successor thus emended:

"Seven hours to law, to soothing slumber  
seven;  
Ten to the world allot, and all to heaven."

If six or seven hours is enough, as judges tell us, for intellectual toil, we should think that ten hours was enough for healthy physical labor.

#### More Railroad Ownership

With all the risk involved, municipal or national ownership of public utilities is growing. The latest is in Italy, where the bill for Government ownership of railways, which passed the Senate last Saturday by a vote of 109 to 8, has become a law by the King's signature. For if there are evils and dangers in public ownership the Italians have found the evils of private ownership more intolerable. The succession of strikes had worn out the patience of the people, and private ownership had failed to correct the evil. What is interesting is to observe that while here the tendency is to seek politically the favor of combined labor, such is not the case in Italy. There the legislators were almost a unit in opposing the demands of the railway men. Soldiers were put on the trains in their place, and the trains were run by military rule. Government ownership was the logical result. Now in a large part of Europe the Government owns the railways, and we hear no complaint that the

service is not reasonably cheap and efficient. Chicago is pledged to own its street railways, after the better fashion abroad, and we look to the time when all sorts of railways will as much be owned and run by the public as are now the common highways on which automobiles run.

**The Catholic Church  
and the Negro**

Some time ago a young priest engaged in the negro missions brought out a brochure in Latin on the wretched conditions of the Catholic negroes in the United States. It was printed for private circulation, and yet was widely distributed. Every bishop in the United States received a copy; many were scattered in Rome, and a copy was given to Pius X. The Pope read it carefully and punctuated the reading quite often with "*Terribile*." The writer paints as with a trowel the gross neglect of and un-Christian opposition to the negro, both within and without the sanctuary. He instances the public rebuke which a Catholic bishop gave the President of the United States for lunching with a negro who is as much white as he is black. Again he quotes the Vicar General of a Southern diocese, who declared that no negro is a fit subject for the priesthood, because every negro is illegitimate. The upshot was that Rome sent a scorching letter to the bishops of the United States. On their part, the archbishops of our country named a committee of three, Ryan, of Philadelphia, Ireland, of St. Paul, and Glennon, of St. Louis, to make a report in answer and perhaps in explanation. Meanwhile Bishop Byrne, of Nashville, Tenn., in a pastoral letter to his diocese reviews the whole question of the neglect of the negroes. Couched in classic English, carefully weighted in argument, moderate in tone and statement, this pastoral will furnish to the future historian a just bird's-eye view of the present relations of Catholicism to the negro. The same parties in Europe who secured the distribution of the brochure here referred to are about to bring out in French the Nashville pastoral. It will be widely scattered in Rome and elsewhere in Catholic Europe. We observe that a priest signing himself "J. A.," apparent-

ly Father Anciaux, of the Holy Family College at Langston, Okla., writes to a Kansas City Catholic journal asking why the three Archbishops have done nothing in this matter. It was promised that the missionaries working for the negroes should have the opportunity to be heard, but a year is nearly past and no action taken, and he wants to know "who put a stick in the wheel?"

**Crete** The action of the Cretan Chamber of Deputies in declaring annexation to Greece must not yet be considered too seriously. There is an international legislature that must be heard on that subject, the Powers which wrested Crete from Turkey and set up virtual if not nominal independence. Indeed, Greece ought to be deliberate about accepting the gift of Crete, much as she wants it. For Crete is still in name a part of the Turkish Empire; and just so Bulgaria is a part of Turkey. If Crete can become independent, so can Bulgaria, and she will be likely to proclaim it. But that is likely to mean war in several directions. Turkey is not so afraid as she was of Russia, and she is ready to make war with Bulgaria. Even if she did not, Bulgaria, with her complete independence, might think it the time for her to seize on the contiguous portions, at least, of Macedonia and end the troubles there, which would not only involve war with Turkey again, but even with Greece, which equally claims Macedonia; and that, again, would involve a terrible war in the nearer East, which might very easily include Austria and Russia, and no one knows how much more. The attempt of Greece to annex Crete might be the very worst sort of a firebrand.

Some of the purists are urging us again not to use *United States* as the subject of a singular verb, because our Constitutional fathers spoke of "*these United States*." Sure enough, and in those days the States had not got fairly welded into one. Political and grammatical conditions have changed since then, and now the United States *is* one country by law and war, as surely as the "*Pleasures of Memory*" *is* one book, and "*the wages of sin is death*," and physics *is* studied.

# Insurance

## Insuring Customers, Etc.

THE recent announcement regarding the United Cigar Stores Company and its intention to present every employee with an insurance policy suggests to *The Wall Street Journal* the idea of expanding this application of the insurance principle so as to provide the customers of a concern with insurance on the same general plan. If, substantially says the *Journal*, it is good business for a certain New York bank to distribute purses among its women depositors to encourage banking, why is not the insuring of a firm's customers equally good business? The idea has infinite possibilities as to expansion, among which the following suggestions from the *Journal* are worth considering:

"Some of our great venders of whisky might attach an insurance policy to each bottle, insuring the drinker against intemperance and a drunkard's grave. Railroad tickets might have coupons attached insuring against accident. The Brooklyn Rapid Transit might insure its patrons against loss of time by street blockades and loss of temper by bridge crushes. A restaurant might increase its business by giving insurance against indigestion. The idea might even be adopted in Wall Street. The promoter might give an insurance policy with every certificate of stock. Banks could insure their depositors and brokers their customers. We may even commend the idea to some of our 'court circular' contemporaries. They might insure their readers against loss occasioned by accepting their statements. On second thought, however, this would be impracticable. The risks would be too great."

## German Workmen's Insurance

DR. FRITZ KESTNER, in his *North American Review* article on Workmen's Insurance in Germany, has given some exceedingly interesting facts regarding his theme. According to Dr. Kestner, who is of the Imperial German Commission to the St. Louis Purchase Exposition, there are in the fatherland to-day 10,500,000 workers, of both sexes, who are insured against sickness, 17,500,000 carry accident insurance and 13,500,000 are thus protected against invalidity. The organization of the German Workmen's Insurance is not an insurance by the State, as it has often erroneously been

supposed abroad, but, to use the doctor's own words, is rather "an insurance by the interested parties themselves through the medium of vital corporations which are standing between State and individual, and which are charged with the execution of the insurance." The organization may be characterized as the exercise of social self-help organized on the basis of regulations bearing the character of public law. Among other benefits that have occurred under the German system has been an essential improvement of the national health. A great number of diseases formerly neglected for the sake of economy are now suppressed in the incipient stages by means of early consultations with the physician provided under the system.

## Smokers as Fire Hazards

ACCORDING to H. D. Davis, Ohio State Fire Marshal, tobacco smokers cost his State \$122,321 during 1904 for buildings and their contents destroyed through the agency of hot cigar stubs and pipe ashes. "Carelessness with matches" on the part of smokers caused additional losses. In his published report Mr. Davis states that 103 fires took place in Ohio that were attributable to smoking, and 298 originated through the careless use of matches.

Fires were started by cigar and cigaret stubs thoughtlessly dropped through sidewalk gratings under which rubbish and litter had been permitted to accumulate. Butts thrown into sawdust filled cuspidors and into waste paper baskets were also potent factors in fire losses.

Barn fires began only too frequently just subsequent to the departure therefrom of smokers who had enjoyed within their precincts the "solace of mankind."

Burning tobacco from a pipe is even more dangerous than is the thrown-away cigar end. The cigaret stump is also an exceedingly powerful agent for mischief as a fire starter. Smoking in bed is likewise a fire hazard that ought not to exist, but it does.

The vapor of gasoline explodes if it has contact with a lighted cigar, which develops a heat of between 900° and 1,000° F.

# Financial

## Banking Power of Trust Companies

THERE has been nothing more interesting in the recent history of American banking than the rapid growth of Trust Companies. Statistics which show this growth are summarized in a little book, *The Banking Power of the Trust Company*, published by the Guaranty Trust Company, of this city. In the last six years the number of such institutions in the United States has increased from less than 300 to more than 1,100, and their resources have been enlarged from \$1,110,000,000 to \$3,200,000,000. They now represent 23 per cent. of the country's banking power, against 9 per cent. fifteen years ago. During the last decade the deposits of the New York Trust Companies have grown from \$288,000,000 to \$1,045,000,000, while the increase of deposits in the city's national banks has been from \$555,000,000 to \$1,227,000,000—a gain of 262 per cent. against one of 121 per cent. This growth is due chiefly to the fact that while our banks hold their own place and do with admirable efficiency the work for which they were established, the Trust Companies meet certain demands of modern business by providing banking institutions that, as this little book says, combine under one roof many departments characterized by highly specialized management. The extent to which they share profits with depositors is shown by the fact that the companies in New York State paid \$25,954,000 to them in interest last year, or nearly three times the amount of the stockholders' dividends.

A noteworthy example of such institutions is the Guaranty Trust Company (John W. Castles, President), which is intimately connected with the Mutual Life Insurance Company. During the last ten years its deposits have increased from \$10,135,000 to \$62,000,000, and its surplus from \$1,500,000 to \$5,000,000. The little book of which we have spoken is a fine example of the printer's and the illustrator's art. Its pictures are especially interesting to the student of New York's early history, giving views and scenes of one hundred years ago in the

vicinity of the site of the company's present office, where the great building of the Mutual Life now stands.

THE Yale Corporation announced last week that hereafter an Investment Committee will take charge of all the university's investments. The committee is made up of President Hadley, Treasurer McClung, Otto T. Bannard, President of the New York Trust Company; Clarence Kelsey, President of the Title Guarantee & Trust Company of New York; Eli Whitney, and the Rev. Charles Ray Palmer, of New Haven.

...In addition to his instructive book on *The Accountancy of Investment*, to which we recently referred, Mr. Charles E. Sprague, President of the Union Dime Savings Institution and Professor in the New York University School of Commerce, Accounts and Finance, has published *Extended Bond Tables*, a very useful book of reference, in which are given, to eight places of decimals or the nearest cent (on \$1,000,000) the values of bonds at all ordinary rates of interest and for periods running up to 100 years.

...The New York County National Bank has issued an interesting little book giving the history of the bank during the past fifty years. The book is entitled *Through Fifty Years, the Story of a Bank's Progress, 1855-1905*. The second President, Francis Leland, elected in 1856, is the father of the present President, Francis L. Leland. For nearly fifty years the bank has been wisely and conservatively managed by father and son. The capital stock is \$200,000, the surplus and undivided profits are \$715,602, and the deposits are \$5,891,362. Beginning with an annual dividend of 4 per cent. the bank now pays 75 per cent. per annum in dividends. Three times it has paid an extra dividend of 100 per cent. and it has never passed a dividend.

...Dividends and coupons announced:

Am. Telephone & Telegraph Co., 5 per cent. Gold Coupon Notes, payable May 1st.

Am. Exchange Nat'l Bank, semi-annual, 5 per cent., payable May 1st.

Buffalo & Susquehanna R'way Co., 1st Mort. Coupon No. 4, payable May 1st.

VOL. LVIII

NEW YORK, THURSDAY, MAY 4, 1905

No. 2944

## Survey of the World

### Mr. Carnegie's Fund for College Professors

Immediately after the departure of Mr. Andrew Carnegie for Scotland, on the 26th ult., it was announced that he had created a trust fund of \$10,000,000 "to provide retiring pensions for the teachers of universities, colleges and technical schools in our country, Canada and Newfoundland." The fund is in Steel Corporation 5 per cent. first mortgage bonds, having a par value of \$10,000,000 and a market value of about \$11,500,000, and yielding an annual income of \$500,000. It has been transferred to a Board of Trustees, 25 in number, 21 of whom (the list beginning with Presidents Hadley, Eliot, Harper, Butler, Schurman and Wilson) are presidents of universities or colleges. The remaining members of the board are President Pritchett, of the Massachusetts Institute of Technology; T. Morris Carnegie, the donor's nephew; F. A. Vanderlip, vice-president of the National City Bank, New York, and R. A. Franks, Mr. Carnegie's financial secretary and president of the Hudson Trust Company, Hoboken, N. J. A corporation, to be known as The Carnegie Foundation, will be organized, and the first meeting of the trustees will be held on November 15th next. In his letter to the trustees (dated April 18th) Mr. Carnegie said:

"I have reached the conclusion that the least rewarded of all the professions is that of the teacher in our higher educational institutions. New York City generously, and very wisely, provides retiring pensions for teachers in her public schools, and also for her policemen. Very few indeed of our colleges are able to do so. The consequences are grievous. Able men hesi-

tate to adopt teaching as a career, and many old professors whose places should be occupied by younger men cannot be retired.

"I have, therefore, transferred to you and your successors as trustees \$10,000,000 5 per cent. first mortgage bonds of the United States Steel Corporation, the revenue from which is to provide retiring pensions for the teachers of universities, colleges and technical schools in our country, Canada and Newfoundland, under such conditions as you may adopt from time to time. Expert calculation shows that the revenue will be ample for the purpose.

"The fund applies to the three classes of institutions named, without regard to race, sex, creed or color. We have, however, to recognize that State and colonial governments which have established, or mainly support, universities, colleges or schools, may prefer that their relations shall remain exclusively with the State. I cannot, therefore, presume to include them.

"There is another class which States do not aid, their constitutions in some cases even forbidding it—viz., sectarian institutions. Many of these, established long ago, were truly sectarian, but to-day are free to all men of all creeds or of none—such are not to be considered sectarian now. Only such as are under control of a sect or require trustees (or a majority thereof), officers, faculty or students to belong to any specified sect, or which impose any theological test, are to be excluded.

"I hope this fund may do much for the cause of higher education and to remove a source of deep and constant anxiety to the poorest paid and yet one of the highest of all professions."

Trustees are to hold office for five years and to be eligible for re-election. They have full powers to manage the trust in every respect. By a two-thirds vote they may from time to time "apply the revenues in a different manner and for a different tho similar purpose to that specified, should coming days bring such changes as to render this neces-

sary, in their judgment, to produce the best results possible for the teachers and for education." No trustee shall incur any legal liability arising out of his trusteeship, and all traveling and hotel expenses incurred by them in the performance of their duties are to be paid from the fund. It was found by those trustees who assisted Mr. Carnegie in procuring needed statistics that 93 institutions would be entitled to derive benefit from the Foundation. These have in their faculties 3,900 persons, whose salaries amount to \$7,720,000, the average being nearly \$2,000. It is thought that professors will become entitled to the benefits of the fund at the age of 65, and that the allowance will be equivalent to half pay, up to the limit of \$2,400. A decision as to an apportionment of benefits to those institutions which have pension systems (Harvard and Columbia, for example) is still to be made. Questions remain to be answered, also, concerning others in which a certain number of their trustees must belong to some specified religious denomination.

#### The President's Vacation

Mr. Roosevelt has decided to shorten his vacation by one week. He had intended to remain in the hunting grounds until the 15th, but he now expects to leave them on the 8th. His engagements in Denver and Chicago will be kept, but with a change of dates. The hunters have had unexpectedly good fortune and have already reduced by ten the number of living bears in Colorado. Five of these were killed in two successive days. Mr. Roosevelt's plans were changed immediately after Secretary Loeb's visit to the camp, on the 26th ult., and apparently because of the pressure of business demanding his attention. The nature of this business has not been disclosed. While the impending inquiry as to charges against Assistant Secretary Loomis, relating to his conduct while representing the United States in Venezuela, may be one of the questions that call the President to Washington, it is thought that especial importance is attached by him to the approaching naval battle between Japan and Russia and to

the part which our Government may take immediately thereafter in efforts to restore peace. The British Ambassador has sailed for London, and it is said that both the French Ambassador and the German Ambassador intend to cross the Atlantic after further conferences with Mr. Roosevelt, for which they await his return to Washington. Approaching events may give him opportunities to exert great influence for peace, and to take advantage of these opportunities it may be necessary for him to return to the capital.

#### A Menacing Strike in Chicago

The controversy between the teamsters of Chicago and their employers has assumed menacing proportions and may in the near future involve all the organized workingmen of the city. It originated in the strike, some weeks ago, of the teamsters employed by Montgomery, Ward & Co., a mail-order house, the teamsters going out in sympathy with the firm's garment workers. The strike was against an "open shop." In the early days of the controversy there was much disorder. Eggs filled with biting acids were thrown at non-union workmen. In the Chicago newspapers was published what appeared to be conclusive evidence that ruffians were employed by the strikers to assault and maim non-union men and were paid in accordance with a regular schedule of prices for the various injuries inflicted. The employing firm offered to arbitrate with the teamsters alone, but rejected the demand of the teamsters that arbitration should also cover the grievances of the garment workers. On the 20th ult., an injunction against both the teamsters and the garment workers was issued by a local court. On the 27th the strike had so spread that it included 3,000 teamsters, owing to the action of large wholesale houses that discharged teamsters for refusing to deliver goods to Montgomery, Ward & Co. This policy was then adopted by the Chicago Employers' Association, which undertook to supply the strikers' places by the agency of an Employers' Teaming Association, recently incorporated in West Virginia. The President of this auxiliary Association is Mark Morton,

brother of the Secretary of the Navy and President of the National Salt Company. To support their contest with the strikers, the associated employers raised a fund of \$1,000,000. Federal authority became involved on the 28th, when Circuit Court Judge Kohlsaatt, upon the application of Mr. Morton's Association, issued an injunction forbidding the strikers to interfere with the non-union workmen by picketing or otherwise. On the following day 12 union men were arrested for disobeying the order, and a grand jury of the county indicted for conspiracy 12 of the prominent labor leaders of the city, including C. P. Shea, President of the International Teamsters' Union, and Charles Dold, President of the Chicago Federation of Labor. It was also recommended that a special grand jury be called to investigate the methods of the strikers. The railway express companies were crippled and foresaw that they would be unable to carry bullion between the railway stations and the United States Sub-treasury. Therefore, by order of the War Department, troops and army wagons were held in readiness at Fort Sheridan for such work. At the end of last week about 5,000 teamsters were out, and President Dold was threatening to make this "a supreme test of the forces of capital and labor" by drawing all the union men of Chicago into the controversy. During the week there was much rioting. On the 27th, three men were wounded, two of them fatally. On the 29th, five were shot and two were stabbed. One retail merchant was attacked while driving his own delivery wagon. He died of his injuries.—Peace has been restored in the building trade at New York by the adoption of a new arbitration agreement, under which 90,000 men are now working. Both sides appear to be satisfied. The agreement provides that union men only shall be employed.—Mine owners at Cripple Creek, Col., have sued the Western Federation of Miners and its officers for damages amounting to about \$1,000,000, on account of the recent labor war. They are defendants also in two similar suits brought by members of the union.—Wage increases as follows have been ordered within the last two weeks: 10 per cent. for 8,000 machinists and foundrymen in the Pittsburg district; from 5

to 10 per cent. for 5,000 employees in the Steel Corporation's tube mills; about 7 per cent. for gatemen and guards on the New York elevated roads and subway; from 7 to 20 per cent. for the 5,000 employees of the Colorado Fuel & Iron Company.

**Washington Notes** Negotiations between our Government and China for a new immigration treaty have practically been abandoned because it has seemed impossible to reach an agreement. The subject will be taken up again, however, after the arrival of Minister Rockhill at Peking.—It is reported that the President will recommend to Congress that our Government relinquish its right to the \$22,000,000 remaining due upon the claim for indemnity on account of the Boxer outbreak and that China has promised to set aside, for the education of youth at home and abroad, the sum which it has undertaken to pay annually in settlement of the claim.—Attorney-General Moody sustains the contracts approved by the Interior Department for special low rates on the railroads upon material and machinery carried for contractors engaged upon irrigation work. He holds that the law is not violated in cases where the Government receives the whole of the concession in rates. His opinion is not in agreement with Comptroller Tracewell's.—General Fitzhugh Lee died in Washington on the 28th ult. of apoplexy, having been stricken a few hours earlier while on his way to the capital from Boston.—During his recent visit to St. Petersburg Charles M. Schwab was successful in his negotiations for a contract to build several battleships for Russia. It is said that he has undertaken to make ships of much greater efficiency than any now afloat.

**Freight Rates by  
Way of the Isthmus**

An explicit declaration as to the policy of the Government concerning the existing monopoly of through traffic across the Isthmus of Panama has been made by Secretary Taft in a letter to James J. Hooker, chairman of a Shippers' Association in Cincinnati. The Government owns the railroad, with three

steamships that ply between Colon and New York, but it owns no steamships on the Pacific side, where connection for San Francisco has been made with the Pacific Mail Company, under an exclusive agreement with that corporation, which the transcontinental railroads control. Secretary Taft says in this letter:

"The policy of the Government in managing the Panama Railroad is to charge such rates as will pay for the carriage of the goods across the Isthmus, a reasonable return on the investment of the Government, and nothing more. It will permit no discrimination against or in favor of any of the connecting steamship lines. It may be that this policy will affect the transcontinental rates, as to those classes of freight that can stand the Isthmus trip, favorably for the shipper. However, Mr. Wallace, our chief engineer and a railway manager of experience, thinks that the proposed changes will not have much influence on transcontinental rates because he thinks that but a small proportion of that which goes to make up transcontinental freight can be carried by the Isthmus."

Rates upon the three steamships, he continues, will be made as low as possible, "consistent with paying a reasonable compensation for the carriage and the investment," the Government's purpose being to prevent the raising of rates for canal material by combinations:

"The Government is not running and does not expect to run a line between New York and San Francisco, or between San Francisco and New York; hence the relation of its policy to transcontinental rates is only indirect. The policy of the Panama Railroad Company heretofore, in view of its ownership of the three ships and the docks at Colon and its resulting ability to exclude from the New York and Colon business any other steamship line, has been to monopolize the trade between New York and Panama on the one side, while its arrangement for exclusive through billing between New York and San Francisco with the Pacific Mail Steamship Company produced a monopoly for the Pacific Mail on the other side between Panama and San Francisco on the north, and a monopoly for the Chilean and Pacific Steamship companies from Panama to the south. So far as the action of the Panama Railroad Company can break up these monopolies it is being taken."

He points out that the Government did not acquire the road for the purpose of affecting railway or steamship rates,

but because it was an indispensable instrument for the canal work. Holding the road, however, under a franchise requiring it to do a commercial business, the Government is under an obligation to do what it can to make just rates and prevent discrimination. "And this we shall do." But it is not safe, he adds, to predict what the effect of changes in rate conditions will be, because our navigation laws exclude foreign shipping from the trade between our west coast and our east coast by way of the Isthmus, and previous attempts to establish a competing American line on the west coast, even with the aid of the railroad company, have failed. If the time is now ripe for the establishment of such competition, the Government "will do nothing to hinder it":

"Nevertheless, it is possible that the position of advantage that the Pacific Mail has with respect to Mexican and Central American trade, and its ownership of a dock at Colon, may enable it to establish lines on both sides which will do all the through business and fix the rates without enjoying any discrimination in its favor by the Panama Railroad. If so, the Government could not prevent this, except by running a line from Panama to San Francisco for the purpose, which it cannot do.

"Mr. Shonts could hardly have been correctly reported in the interview you send me, because he fully agrees with the policy of the Government as I have outlined it."

On the canal route 8,000 men are now employed, 2,000 of these in policing the Zone and in sanitary work.

**Killed at a Texas Mass Meeting** Congressman John M. Pinckney and three other prominent residents of Hempstead, Tex., were killed on the evening of the 24th ult. at a mass meeting in that place, in an affray arising out of a sharp local controversy over the liquor laws. At a recent election the advocates of prohibition were successful, and the sale of liquor was forbidden. It afterward appeared that certain persons were violating the law and that the local police authorities did not restrain them. Therefore this mass meeting was held in support of a petition asking the Governor to enforce the law by means of the militia. While R. E. Thompkins, Mr.

Pinckney's private secretary, was speaking he was interrupted by H. M. Brown, a leading lawyer and opponent of prohibition. An altercation ensued. When Brown laid hands upon Thompkins, the Congressman sprang forward to protect him and was shot down by Brown. Mr. Pinckney lived but two or three minutes. His brother Thomas attacked Brown and was killed by the latter and those who stood with him. There were six bullets in Thomas's body. Brown also lost his life, and the fourth to die was John Mills, a leading Prohibitionist. Among the wounded were Brown's son Roland (who is under arrest) and Thompkins, whose address was interrupted. There was great excitement throughout the town, and war between the two factions that night appears to have been prevented only by the arguments and appeals of women. A special train brought militia from Austin.—At Mt. Vernon, O., last week, a negro named Copeland was saved from a lynching mob only by strategy. While one deputy sheriff restrained the mob for a few moments, another secretly took the prisoner from jail and carried him away in an automobile. Copeland had been traced by bloodhounds and was held for assaulting and murdering a white woman.—In the case against Thomas M. Riggins, of Alabama, a lyncher indicted by a Federal grand jury, the Supreme Court will soon pass upon the question whether the lynching of negroes in the South is not, in some instances at least, an offense against the Constitution and Federal statutes, the lynchers being actuated by race hatred.

#### Venezuela

Last Wednesday morning the startling allegation appeared in the *New York Herald* that Mr. Herbert W. Bowen, the United States Minister to Venezuela, had transmitted to the State Department charges of personal corruption against Francis B. Loomis, Assistant Secretary of State, Mr. Bowen's predecessor at Caracas and his present diplomatic superior. According to the *Herald* Mr. Bowen finds himself embarrassed in his proceedings to bring President Castro to terms because Castro possesses a check for \$10,000 paid by the Asphalt Trust to Mr. Loomis while he was representing the United

States in Caracas. It is further alleged that Mr. Loomis has received other money from the Asphalt Trust and that the details of the scandal are known at all the foreign offices in Europe, having been transmitted there by their respective diplomats in Venezuela. Still further allegations charge that Mr. Loomis bought up a claim against Venezuela for a small sum and accepted a commission to collect it; also that he contracted to bring about a settlement of the Venezuelan debt in return for \$1,400,000. Secretary Taft, who is in charge of the State Department during the absence of both Mr. Hay and the President, instantly got into telegraphic communication with the latter, and as a result Mr. Loomis was asked to submit in writing a statement in regard to the charges. This Mr. Loomis did, making an unqualified denial of everything and bringing the counter charge against Mr. Bowen that he (Bowen) was responsible for the leaking out of these charges into the public press. In the meantime the press of the whole country realized the gravity of the case and demanded of the President that he make a full, impartial and public investigation. Minister Bowen was therefore cabled to return to Washington at once and it is understood that he will leave Caracas so as to arrive at Washington before the 15th of May, about the time the President is expected to return from his vacation. These are the plain facts of the case, tho, of course, the papers have been filled with rumors and suppositions of all sorts, some true, some half true and many utterly false. It is admitted by the State Department that the President has been aware of these charges for some time. The prevailing opinion seems to be that as a result of the investigation either Mr. Bowen or Mr. Loomis will be compelled to leave the service.

#### King Edward Visits Paris

The King of England arrived in Paris from Marseilles on the evening of April 29th and he will remain for three days. Altho the visit is ostensibly unofficial, he will attend a dinner given by President Loubet at the Elysée Palace to the Diplomatic Corps, which will be made the occasion for a demonstration

to the world of the reality of the good feeling existing between the two Powers and of their intention to stand together in support of their Moroccan agreement in spite of the opposition of Emperor William. When King Alfonso of Spain visits France with an escort of Spanish battleships and cruisers a squadron of the British Channel Fleet will unite with the French to welcome him, and later in the season the French and British fleets will exchange visits.

#### Religious Freedom in Russia

The Czar has celebrated Easter Sunday, April 30th, by issuing a decree abolishing the restrictions on the freedom of worship in regard to the Dissenters, the Roman Catholics and non-Christian religions. Secession from the Orthodox Greek Church will no longer involve persecution or deprivation of civil rights. Children under fourteen years of age will follow the belief of their parents. Dissenters will be admitted to cadet and military schools and may be promoted to be officers. They will no longer be excluded from receiving official rewards, such as bravery medals. Mohammedan and other non-Christian subjects will have equal rights with Christians and will be no longer styled pagans. No concessions are made to the Jews, doubtless on account of their activity in raising revolutionary movements. The chief beneficiaries of the new decree will be the Old Believers, who refuse to consent to the reforms, such as the modernization of the liturgy, introduced by Peter the Great, and who have maintained their primitive faith unchanged ever since in spite of continuous and sometimes very severe persecution. They make the sign of the cross with three fingers instead of two and refuse to use intoxicating liquors, tobacco, tea, coffee and sugar. On account of their sobriety and industry they are more wealthy than the average Orthodox, and it was reported some weeks ago that they were raising millions of dollars to give to the Russian Government for the expenses of the war in return for the permission to worship according to the dictates of their own consciences. For the past twenty years the churches have been closed by the order

of Pobiedonostzeff, Procurator-General of the Holy Synod. Now the Old Believers will have the right to possess real and personal property and to establish monasteries and schools under the control of the Minister of Public Worship. They will also be allowed to print and circulate their books on religion. The number of Dissenters from the Orthodox Church affected by the decree is estimated from twelve million to seventeen million. Some of them, the Dukhobors, have been emigrating to Canada on account of religious persecution. The imperial ukase remits to the peasants some \$37,500,000, arrears of taxes and back payment for land given to them at the time of their emancipation. Easter Day passed with unexpected quietness. The anticipated riots did not take place and there was much less drunkenness than usual among the peasants. General Kozloff, ex-Chief of Police in Moscow and St. Petersburg, has been appointed Governor-General of Moscow. He is 68 years old and has been in retirement. He was very energetic in hunting down the Nihilists twenty-five years ago, and his appointment now is taken to indicate a policy of severe repression on the part of the Government. On May 1st in Warsaw a procession of workmen carrying red flags were attacked by soldiers and 31 persons were killed and many wounded.

#### The Revolt in Arabia

The capture of Sanaa, the capital of the province of Yemen, by the Arabs indicates that the Sultan has a rebellion on his hands which seriously threatens to deprive him of the control of at least a portion of Southern Arabia. Both the French and the Turks assert that the present disturbances are fomented by the English as part of Lord Curzon's expansion policy, but whether this is true or not, it cannot be denied that the British are most likely to profit by it, either by making of the mouth of the Red Sea a second Gibraltar, through the extension of their territory of Aden or by bringing the holy cities of Mecca and Medina under the protection of the Khedive of Egypt instead of the Sultan of Turkey. Last fall the Porte gave a reluctant consent to the British proposals to settle

the disputed extent of the "hinterland" of Aden by having the boundary delimited by a mixed commission of British and Turkish officers. Their report, which was accepted by the Porte, does not concede to the British all the territory they claimed, but extends their control in the direction of the Red Sea to Sheik Murah, only a few miles from Sheik Said, opposite the island of Perim, an English possession, thus strengthening the British power over Strait Bab-el-Mandeb. A railroad is to be built to the new frontier, a distance of about 80 miles. The first part to be built will extend from Aden to Nobet Dukeim, passing through the territory of the Sultan of Lahaj, whose consent has been secured by the promise of four per cent. of the net receipts and an annual rent of one penny per square foot for the ground covered by the line. The second section is through mountainous territory inhabited by turbulent tribes, whose co-operation may be more difficult to secure. The chief commercial value of the region is from the production of Mocha coffee. Last February circulars in Arabic and French were mysteriously distributed all over Arabia, calling upon the people to throw off the Turkish yoke and become an independent nation, with a constitutional government under a native sultan. In Nejd, Central Arabia, Ibn Rashid, a sheik who is faithful to the Sultan of Turkey, has been for months hard pressed by Ibn Saud, an ally of the rebellious Sheik of Koweit, and the column with mountain guns which was sent into the interior to his relief has not been heard from. In the south Sanaa, the capital, was besieged by the rebels under Sheik Hanid ed Din, a descendant of the Prophet, and the Sultan sent his aide de camp, Riza Pasha, with 6,000 troops and 250 camel loads of supplies, from Hodeida, on the Red Sea, to reinforce the garrison. But the troops were mostly Syrian reserves, who as soon as they were attacked by the insurgents south of Sanaa deserted to the enemy. Less than a thousand troops with fifty camel loads of supplies reached the beleaguered city in the evening of March 30th. The chief of staff, Izzat Pasha, was killed, and the insurgents captured seven guns and large stores of rifles and ammunition. The siege of

Sanaa was continued and on April 25th the city surrendered. The insurgents are now besieging Manakha, between Hodeida and Sanaa, and unless European battalions arrive in force sufficient to crush the rebellion it is likely to extend northward. The merchants and pilgrims to Mecca and Medina have suffered severely of late from attacks on the caravans and have appealed to the Khedive of Egypt for the protection which the Sultan of Turkey has failed to give them.

#### **The Russian Squadrons**

The Third Pacific Squadron, under Vice-Admiral Nebogatoff, has reached Indo-Chinese waters and probably has joined the Second Squadron of Admiral Rojestvensky, which has been waiting for it in the vicinity of Kamranh Bay. Most of the fleet left the bay April 22d, but remained outside while four converted cruisers and a torpedo boat destroyer were coaling inside. On the evening of the 25th the whole fleet of 52 ships sailed away. Its destination is not known, but it is thought that the next base will be the Chinese island of Hainan. The cable to the island has been cut, presumably by Russian agents. Part of the fleet has been in Honkohe Bay, 50 miles north of Kamranh. The fleet was reported May 1st lying off Port Dayet outside of territorial waters. There are only vague rumors as to the movements of the Japanese fleet under Admiral Togo. No engagement has yet taken place.

#### **The War on Land**

No important operations are reported from Manchuria except a rumor that the Japanese have left only a few troops on the railway to hold Linevitch in check while sending their main force in the direction of Vladivostok. Perhaps this report is what moved General Linevitch to make a reconnoissance in force by advancing three columns south toward Kaiyuan, 30 miles north of Tie Pass. Two of the columns consisted each of 5,000 infantry, 800 cavalry and a battery of artillery. The third, which was the western column, consisted of 1,500 Cossacks. The entire force covered a front of thirty miles, east and west. The Japa-

nese drove them back with a loss of 200 men. The Japanese casualties were only 38. The bridge at Mukden across the Hun River has been repaired and trains are now running regularly from Dalny to Tie Pass.—The Russian General Staff at Gunshu Pass have issued an official statement of the casualties of the fighting at Mukden February 19th to March 14th, to contradict the gross exaggerations which have been circulated. For example, the *Rasvet*, a Russian journal, edited by Prince Ukhtomsky, gave the total number at 175,000. According to the General Staff the losses amounted to 1,985 officers and 87,677 men. Of these some 55,000 were wounded, 15,000 killed, 7,000 to 8,000 known to have been captured and 10,000 to 12,000 are missing, several thousand of which were drivers and other non-combatants. A very large number of the wounded have returned to the ranks. Two Russian generals were taken prisoners. In evacuating Mukden and retreating to the northward the Russians lost thirty-two guns, of which three were mortars, three old type field guns with piston action and twenty-six quick firers. Of the siege artillery every gun and all the ammunition carts were sent north two days before the retreat began.—Ex-Premier Okuma in an address to the Progressive party stated that the Japanese wounded and sick, from the beginning of the war to the present number between 200,000 and 300,000. The deaths from disease and in action amounted to 50,000.

#### The Transvaal Constitution

Colonial Secretary Lyttelton has transmitted to Lieutenant-Governor Lawley the new Transvaal Constitution, together with the announcement that in the opinion of the British Government the time is not yet ripe to grant complete self-government to the Transvaal. The Legislative Assembly, or Volksraad, is to be composed of the Lieutenant-Governor, sixty to sixty-nine official members and thirty to thirty-five elected members. All the burghers of the late South African Republic are entitled to vote for members, as well as all the white males of British birth having capital to the value of \$500, or renting premises at not less

than \$50 a year. English is to be the official language, and all speaking in the Assembly must be in English, except that where a member does not understand English he may be permitted by the Lieutenant-Governor to address the Assembly in Dutch. All financial measures must be recommended to the Assembly by the Governor and no money can be appropriated without his approval. Negroes are not to vote, but special legislation against them cannot be adopted against the wish of the Governor-General. The Boers consider the new Constitution a breach of the treaty of peace made with the English at Vereeniging, May 31st, 1902, by which self-government was promised as soon as the country was in a settled condition. There are two parties in the Transvaal favoring working for self-government; the *Het Volk* ("The People"), composed of Boers, and a Responsible Government Association, which, altho composed of British, favors the policy of "trusting the Dutch." These two parties have now combined for opposition to the Government. The *Het Volk* concedes that Chinese labor shall be permitted for five years. The Responsible Government party agree to surrender the Government right to appoint and dismiss teachers, and to accept Dutch as the medium of instruction up to Standard IV; in the grades above this English will be used. Most of the Boer children, however, leave school on reaching Standard IV. The English papers criticise the agreement on the ground that the Responsible Government party in surrendering elementary education to the Dutch have given them more real power over the future of the country than the Legislative provisions secured to the British. Many of the Boers, disappointed in not seeing any chance for self-government and disliking to be kept under British control, are moving to German East Africa. Two committees who were sent by the Boers last year to spy out the land reported favorably, and this spring several thousand Boers will take up farms in the highlands of German East Africa, over one hundred miles inland from the Indian Ocean and 1,400 miles north of their former home.

# Power and Slavery

BY COUNT LEO TOLSTOY

PEOPLE, apparently with a clear conscience, join the police force, the department of collection of taxes, the army, not only by the order of the Government, but also of their own free will. They become policemen, investigators, procurators, soldiers, generals, ministers, Czars, and they all do this with apparently light hearts; at least, with entire outward self-confidence, they occupy themselves with taking away from other people their last cows for taxes, which is used for luxury, for murder; or they put people into prison, torture, execute them; or they devise and prepare methods of murder, and they reign amidst the poor over the property and the land which is taken away from them, and they are proud of it.

The so-called intelligent people, those who ought to show an example of the attitude which a sensible being should take toward violence, the learned, liberal, even revolutionary people are arguing and criticising, and preaching Freedom, the dignity of man. But they do all this until the moment when the whistle calls them to go under the yoke, and suddenly all arguments cease, all their liberalism and their talks of freedom stop. And they are dressed up in colored liveries; a gun or a sword is given into their hands, and the sergeant commands them to run and to jump, to stand and to turn around, to put on the cap and to bow and shout hurrah at the sight of the Czar, and, above all, to be ready, at the command of the sergeant, to kill their own fathers, and they, the liberals, the learned people—by the law of evolution—jump and bow to whomever they are told to bow, and they shout hurrah, and they are ready to kill with their guns anybody they are ordered to kill.

So that the same intelligent people, for whom it is most natural to strive toward harmonizing life with consciousness, these people are occupied with mixing up and distorting this consciousness.

It is clear to them that it is altogether unnecessary to argue the question of resistance of evil and how it is solved by Christianity. All this is mysticism. They must be the obedient slaves of slaves. . . .

To the man who has not yet awakened the power of empire consists of several sacred institutions which represent the organs of a live body, a condition essential to the life of man. To the awakened man it consists of so many people gone astray and yet ascribing to themselves some fantastic importance which has not the slightest reasonable justification, of people who accomplish their desires by means of violence. Senates, synods, courts of justice, the administration—to the awakened man all this consists of people gone astray, of corrupt people doing violence to other people; they are exactly like those robbers who hold up people on the highways and do violence to them. The age of this violence, the proportions of this violence, and its organization, all this cannot change the essence of the matter.

To the awakened man that which is called empire does not exist; and, therefore, there is no justification for all violence done in the name of this empire; hence his participation in such violence is impossible.

Government violence will be done away with not by any outward means, but by the consciousness of the people who have awakened to the truth.

It is not necessary to think of death, but one should live having it in view. Then all life becomes solemn, significant and truly fruitful and joyous. In view of death we cannot help working diligently, because death may at any moment interrupt our work, and because in view of death one cannot but do that which is necessary for all life—that is, for God. And when you work thus life

becomes joyous and there is no longer that scarecrow, the fear of death, which poisons the life of those not living in view of death. The fear of death is in inverse proportion to a good life. In a holy life this fear is null.

And such an attitude toward life and death can be trained. But we have not been trained thus, and therefore we must work hard with ourselves. A general religious education is possible. And what a blessing it would be!

YASNAIA POLIANA, RUSSIA.

## A Bit of Satsuma

BY BEATRICE E. RICE

**B**ENEATH the glass lid of a teak-wood curio table a cup and saucer of Imperial Satsuma rested upon a square of gold brocade. On the vellum tinted surface of the porcelain a glittering, fantastic little army wended its way across a hog-back bridge in effort to escape the onslaught of a golden dragon peering at it over the rim of the cup. The cup and saucer had belonged to a rare service, originally intended for a votive offering sent by the Princes of Satsuma to the court of Kyoto.

Only one other saucer and cup of like value and description could be found throughout the world, and these stood on a dust-coated mantel in the studio of an artist of renown beside a disconsolate looking monkey of old Yatsushiro ware. The monkey's first owner had been a Korean nobleman of the sixteenth century, who, regarding the clay image in the light of an idol, had worshiped before it. Alas! to what base usage may an idol be put! It served its present owner as a pipe rack.

Now *the* Demon—for there was a Demon and an emphasizing of the definitive article is necessary—belonged to a much admired and beloved family of two, mother and daughter; the latter velvet-eyed and houri-fair.

The family were anticipating the giving of a tea. The Demon, being possessed of long and furry ears, must have heard them planning the coming event for a fortnight, but he merely sat swaying and rocking, with eyes tightly closed, before the open fire, for his thousandth grandmother had been of Egyptian lineage,

hence his sphinxlike attitude toward society.

The morning of the day the tea was to come off the Demon sulked into the dining-room, with tail hanging at half-mast, it being probably the anniversary of the demise of one of his numerous mothers-in-law. He also had a madness with Mary, the maid, owing to the fact of her dusting him ignominiously out of the living room and apostrophizing him as "that red-haired devil of a cat," which was doubly insulting, as it bore more than a modicum of truth.

Catching sight of his ireful countenance peering between the Arab-cloth draperies of the doorway, Judith, the daughter of the household, exclaimed emphatically: "We'll have to shut the Demon up in the pantry, for Miss Livingston will be here this afternoon and she invariably goes into hysterics at the sight of a cat."

Perhaps the Demon heard her, but he displayed no outward signs of it, save that being in his normal evil state of mind he strode to the fireplace and glared with blazing orbs into the glowing embers of the grate, working his claws in and out, out and in, with a kneading movement indicative of his bitterness of mind, as he apparently pressed cabalistic designs on the silken surface of the Mohammedan prayer rug.

"What are you going to do for other cups and saucers? There are only two dozen perfect ones. We should have counted them before to-day, then there would have been time to order others." The mother of Judith let her fine eyes

take an inventory of the old pieces of china on the Flemish plate rack above the mantel.

Judith also regarded the carved bracket reflectively, her fair cheek resting on the palm of her hand; then mentally arriving at the solution of the problem, she rose up suddenly from her place at the breakfast table, dusted the crumbs from her dress with a graceful flip of the napkin, and proceeded out of the room, remarking over her shoulder that she would ask Mrs. Taka Matsu, the diminutive wife of the Japanese antiquary in the upper apartment, to lend her the necessary articles in question.

Having lived in many foreign climes Judith had become imbued with a remarkable and interesting collection of characteristics relative to people of each clime. Her disposition might well be described as septilateral, for many were the phases of demeanor she could assume on occasion. In calling upon Mrs. Taka Matsu, as a borrower of the latter's worldly possessions, her manner became at once so frank and captivatingly charming that the little *kiku* Princess fairly wiggled her small body in ecstasy of delight at the privilege of gratifying Judith's request, and was promptly fascinated into robbing teakwood table and cabinet of their most cherished contents, for the manner of the Japanese is to be polite.

"Doan mention it!" she twittered in reply to Judith's gracious acceptance of the bibelots. "Bud theese," tapping the Imperial Satsuma cup with tapering finger tips, "theese is a most bi-u-tiful piece. It is belong to my mose honorable husban'; for that I would say, please, Mees, return to me by theese evenin' before he shall come." Slanting admiring glances up into the flower-like face bending above her own sleek head, she placed the priceless pieces of porcelain in Judith's hands, and at that moment would have done likewise had they been the ears of the sacred Buddha. Nor would the girl have felt less compunction regarding the safety of that brazen image's appendages, for being of a luxurious nature she had no fear of the value of articles intrusted to her care.

"These were all she had," she announced to her mother upon returning to

her own apartment with Mrs. Matsu's bric-a-brac clasped to her breast. "She said something about all the other things being packed away because they were going back to Japan. Aren't they exquisitely fragile?" She held a rose soufflé saucer up between herself and the light. "But so awfully brittle. I could crush them between my fingers. This one"—picking up a cup of Imperial Satsuma—"was in a curio table on a piece of gold brocade. I fancy it must be quite valuable and I'm sure I've seen one just like it before, somewhere." Turning and twisting the cup about in her hand, she examined it thoughtfully until the Demon leaped upon the table and rubbed his side against it.

"Out upon you, wicked!" Judith swept him to the floor with a vigorous gesture and turned her attention to the other pieces of china, failing to notice the Demon's attitude of warfare as he swelled his tail to twice its normal size and trod proudly on tiptoes toward his plate of milk.

During the moments of suspense preceding the coming of the first guest of the afternoon the Demon did much toward making the maid's life one of refined torture, but just as the clanging of the brass knocker announced the presence of a caller he found himself seized by the back of the neck and dropped gently within the confines of the chilly pantry, where he promptly crouched by the crack of the door and emitted, without intermission, dirge-like yowls, while during the dismal outpourings of his pent-up feelings guests began to arrive in companies of twos and threes. Bits of conversation and laughter filtered through the keyhole, teaspoons tinkled silverly as they were placed beside the cups, and instinctively the Demon seemed to feel that his hour, as reckoned by the Orientals, must soon arrive.

"Merrrrrrr ——— ooooooow! m-m-m-mumer——yow!" he wailed with heartrending emphasis. The fur rose bristling along the crest of his spine and his wrath appeared to strengthen to a diabolical degree. Presently Mary, sent for a fresh supply of hot tea, entered the pantry with the samovar held high by its brass ears. Her hands being occupied, she attempted the feat of closing the

door with her knee just as the Demon slipped through the opening. An angry squall and hiss, as his plump sides were squeezed between the door and jamb, made known to her his escape.

Still smarting from this last insult he lounged into the drawing-room unnoticed by the assembled guests and meandered along behind the heavier articles of furniture. Undoubtedly it better suited the present *rôle* he affected to lurk within the jungle, sinuously weaving his lithe body between and around spindle legs of chairs, creeping and crawling beneath divans and finally settling down to a crouching position under an Egyptian tabouret, just as Miss Livingston received into her hand the Satsuma cup filled with hot bohea.

"Ah, thanks so much," she murmured, lifting the cup delicately between white gloved thumb and forefinger. "What a perfectly dear cup!" She paused with the bit of porcelain elevated to examine the exquisite detail of tracery decorating the egg-shell surface. The saucer, holding a tiny spoon, tottered unsafely on top of her muff, which rested in her lap. Beneath the tabouret the Demon eyed with glittering hypnotic orbs the golden dragon peering over the rim of the cup.

"Yes," said Judith, regarding the saucer with alarm for its security of position; "it is a cup of great value, I believe."

The Demon settled down to a more comfortable attitude, with paws folded under his body; a mystic calm seem to surround him. "Purrh! purrrrrh! purrrrrrh!!!!!" His soft sides swelled and contracted with his even breathing, and Miss Livingston's next remark to Judith was arrested by a sound gentle yet insistent—a sound that, despite the chattering of tongues in the room and fanfare of organs in the street, was distinctly apparent to the sensitive ear. From a human standpoint and to those unversed in the vocabulary of the Demon it would have been reckoned a pleasant rather than terrifying noise and a pretty accompaniment to a simmering pot and gurgling kettle.

"What *was* that?" Miss Livingston's face blanched to a sickly hue, and the hand holding the cup shook as with

palsy. On one side of her chair and then the other she looked, and, looking, encountered the steadfast gaze of two brilliant eyes. A scream of fright issued from her lips, the cup with its steaming contents fell to the floor with a crash, and, hurling the saucer after it in the violence of her movements, she rose to her feet.

"Mercy!" she exclaimed in a frenzy of nervousness. "It's—it's a——"

"Cat." Judith supplied the deficiency of expression with a force that had a personal element, and flushed pink with annoyance over the ruin that lay at her feet. Then, stooping, she picked up Miss Livingston's muff, card-case, and lorgnette, and, turning, followed that individual, who had scurried away to the door.

"So utterly tiresome the very prettiest of those borrowed cups should have been broken," Judith wailed, after the tea was over. "It's all the fault of that horrid cat." She shook her finger at the offending member of society, who defied her with ferocious aspect, waved his flame-like appendage and humped himself under the table just as Mary announced, "Mrs. Matsu would like to speak with you, Miss Judith." Directly on her heels, so to speak, trotted the little lady in a state of agitation as near hysteria as the Oriental temperament permits.

"Ah, mose honorable Meese," she addressed Judith in little gasps, "please give to me the cup which I mose desire. My husban' is distress and fu-ri-ous!" She clasped and unclasped her poor little hands in a mild display of nervousness. "Not for the worl' mus' I have give to you that cup."

"Which cup? You gave me several, you know." Judith perfectly understood to which cup her visitor referred, but wanted to gain time to think.

"The one I say is mose bi-u-tiful. Imperial Satsuma more oveah than two huner-en year ole. For that my husban' return to Japan; the mose noble Em-press"—here she made humble obeisance to the absent lady—"has deman' him."

"Gracious!" Judith's self-control almost deserted her. "And what will happen if he does not go to Japan?" There was something so ludicrous, even tho pathetic, about the fantastic little creature's

distress that Judith's risibles were stirred almost beyond restraint, making her beautiful eyes glint with merriment, tho she forced her lips to remain smileless.

"You wish laugh, eh?" queried Mrs. Matsu regarding her sorrowfully. "It is what you call im-pe-rat-ive deman'. If he go he will be made mose great nobleman. En when I say to heem, I give to you that cup he conduc' heemself like thees!" Suiting her actions to her words, she tottered and whirled wildly around the room, waving her arms, beating first her breast and then her head with her hands to imitate the irate condition of Mr. Taka Matsu. "It is not that *donna sans*, what you call em, husbands, of Japan tell all to their wives, and I am not know theese cup was deman' of the Empress (another low bow which threatened to dislocate her neck) an' I len' to you theese cup." Her small old-ivory tinted face looked strained and weary in the lamp light and touched the heart of Judith far more than any verbal appeal. Waiting to hear no more, she seized Mrs. Matsu gently but firmly by the arms and sat her down in the depths of a big arm-chair.

"Give her some tea and sweet things, *do*," she said to her mother, "and keep her entertained at any cost until I return. Tell her I loaned the cup to a friend." She disappeared from the room and dealt the Demon an indignity with the satin toe of her small slipper as she stumbled over him in the hall; but, being powerless to avenge the affront, he merely followed her with a look of resentment in his owl-like eyes.

\* \* \* \* \*

Before an open fire an artist of renown lounged comfortably. His long limbs were stretched to their full length, and his toes, incased in deerskin moccasins, rested on top of the low brass fire screen. Feathery rings of smoke from the bowl of his briarwood pipe hanging from his lips floated upward, forming misty halos above the head of a disconsolate looking monkey of clay standing on the mantel beside a cup and saucer of Imperial Satsuma.

It was evident that the artist's mood was one of reverie. His eyes just showed their line of color beneath half-closed lids as they gazed into the bed of

embers on the hearth, and he started to a sitting position with a provoked, 'Now who the deuce is that!' as a loud, imperative knock sounded on the door.

"Come in!" he called. "Don't pound in the panels to gain an entrance."

"I don't think I could if I tried," Judith responded, as she opened the door and stepped into the widening circle of firelight that spread out in the twilight of the room. Her cheeks glowed and her eyes sparkled beneath the hood of her scarlet cloak, which she had hastily thrown round her.

"Judith!" The artist of renown started from his attitude of easy comfort, removed the pipe from his lips and placed it in the arms of the monkey; then with his fingers he attempted to rake his disheveled locks into some semblance of order.

"I know, Kilian, it's awfully eccentric of me, but you said if I ever needed you, why—" the voice trailed off into silence.

"Yes, I remember. Come over here and sit down. The sight of you gladdens me." He led her to a chair near the fire and stood beside her. "Well, you did not finish your sentence."

"I don't exactly need *you*"—Judith's fingers were nervously arranging and rearranging the roses nestling on her breast—"but I think you have something that I want, oh, desperately."

"Really?" The man looked down upon her with a pleased yet puzzled expression. "And that is?"

"This cup." Judith rose from her chair, the better to indicate the desired article, and even lifted it in her hand for closer inspection.

"Umh!" The man pulled at the pointed end of his blond beard thoughtfully. "Do you happen to know the value of that special cup?" He stood near her, with his elbow resting on the mantel and quietly regarded her.

"Not as reckoned by dollars and cents, but it must be awfully rare, I should say, for Mr. Taka Matsu to go into a mild form of delirium over one just like it."

"Its rarity makes it the only other one of its kind in existence, as you will see by the mark. It was made by Sei nen Genki over two hundred years ago and was first owned by the Princes of Satsuma. The disappearance of this one

from the Flowery Kingdom cost more than one poor devil his life. The other cup is owned, I am told, by a collector of curios in this city."

"That must be the Mr. Matsu I have just been talking about. He did own one like it until this afternoon," and she proceeded to outline the story of the demolishment of the cup.

"How annoying!" said the artist of renown, unfeelingly. "I have been offered large sums for the cup I possess, but it could not be bought with all the wealth of the Orient. I will part with it only in exchange for that which I consider more priceless. I think you understand perfectly what I mean." His voice had sunk almost to a whisper, but a strange evenness governed the tone, and Judith glanced admiringly at him from beneath the silken veil of her downcast lashes.

"Yes," she said falteringly; "but then if you exchange the cup for that other article, does it not mean that the other *has* its price, and perhaps in time that might lessen its value in your eyes?" The crimson cloak had fallen, unnoticed, from her shoulders to the floor, and she stood, gowned all in white as she had been for the tea, the firelight accentuating the graceful lines of her figure, broadening and lengthening them until she looked like some fair high priestess, the cup within her hands signifying the sacrificial offering.

"If I searched the wide world over I could not duplicate that to which I refer any more than I could duplicate that fragile thing in your hands. Perhaps the comparison is not well chosen, but I merely wish to show you there is that in existence which has no equal and I regard as above *all* price." A silence filled with a thousand thoughts pervaded the room and Judith felt her heart beat rapidly beneath the flowers that rested above it.

"Of course," the man finally continued, examining a saké water bottle with elaborate interest, "you said, not long since, that you never intended to marry. If I remember the conversation correctly, you said you would not marry me if I chanced to be the only man living; but when you reflect that by so do-

ing—that is to say, in changing your mind—you might be the means of saving the life of Mr. Matsu—for of course if he returned to Japan without the treasured cup they would execute him—"

"Kilian, I beg you not to be horrid!" frowned Judith, with flashing eyes. "Why does he not stay in this country and save his head?"

Kilian, feeling that his attention to the water bottle rendered his argument a trifle weak, began pacing the floor, apparently in deep thought, with his hands clasped behind him. Yet beneath the cover of bent brows a spirit of humor twinkled in the depths of his eyes. "You see the little people of Japan have a high sense of honor and *if* the Empress has demanded the return of this man, and he has not yet become a citizen of our country, why, go he must, willy nilly, and if you do not return the cup to him, indirectly *you* will be the cause of his—"

"I know, I know!" The enormity of her responsibility concerning the saving of Mr. Matsu's head was reducing Judith to tears. "But, Kilian, there is something else I want to say. I am glad and *perfectly* willing to make the exchange you speak of"—her voice trembled with emotion, and she left her place by the mantel to pace slowly by the side of the man, her soft trailing garments leaving delightful little silken whispers in their wake—"and, Kilian, please stop one minute and look at me."

Immediately the man paused in his leisurely stride and gazed down upon the well-poised head so near to his shoulder.

"Well—then—" Judith stole a furtive glance up into his face and for courage she slipped one white hand appealingly into his—"I, I—will not have you think I am trading myself off for that miserable man's little cup, Kilian." Slender fingers tightened about his own. "I am glad the other was broken if only to make an excuse for me to come to you, and I'm going to marry you, Kilian, because I love *you*." The voice had ceased to tremble and was low and clear. "I love you, and not to save Mr. Matsu's head."

Perhaps it was a trick of the firelight,

but where there had been two shadows pacing back and forth, wavering, lengthening, nearing and separating, both shadows of a sudden seemed merged in one and that one merely accentuated the center of the circle of mellow light.

A few moments later and the studio was deserted of all signs of life.

The golden embers had died to white ashes in the grate and the monkey of old Yatsushiro was stood a disconsolate sentinel of the mantel shelf.

NEW YORK CITY.

## Germany's Next Emperor and Empress

BY THE MARQUISE DE FONTANOT

[As the date is now set for the wedding of the Crown Prince of Germany to the Duchess Cecilia, the following article on the young man and his future prospects is most timely.—EDITOR.]

**K**ING LEOPOLD in a remarkable speech delivered the other day to the delegations from the two houses of the Belgian Legislature laid stress upon the fact that Germany had undertaken the conquest of the sea—that is to say, of its supremacy. This carefully weighed assertion on the part of the most astute monarch of the Old World is borne out by the extraordinary

The German Crown Prince

enthusiasm with which the Kaiser has managed to imbue his countrymen concerning the navy—the one subject upon which all political parties in his dominion are united—and by the amazing growth of his Empire as a great maritime Power.

terest to study the character of the Kaiser's eldest son—whose marriage to Duchess Cecilia of Mecklenburg-Schwerin, after several postponements, is finally set for June 6—a Prince who may at any moment be called upon to

The Crown Prince William of Germany and his Fiancée, the Grand Duchess Cecilia of Mecklenburg-Schwerin, Receiving the Congratulations of the Grand Duchess's Family at Her Home, Castle Gebensande, on the Day of the Betrothal

When William succeeded to the throne the German fleet was a negligible quantity. To-day it is inferior only to those of Great Britain and of France, and at its present rate of increase not many years will elapse before the greatest military Power in the world will have become the second naval power, if not of the universe, at any rate of Europe.

The disposal of these forces on land and on sea is vested in the Kaiser, who alone controls and directs the foreign policy of the German Empire. True, he is supposed to require the consent of the Federal Council before proclaiming a war of offense. But he is allowed a free and unrestrained hand in the case of a war of defense, and past experience has shown so strikingly the elasticity of this phrase that his will may be considered as virtually absolute in such matters.

This being the case, it becomes of in-

terest to study the character of the Kaiser's eldest son—whose marriage to Duchess Cecilia of Mecklenburg-Schwerin, after several postponements, is finally set for June 6—a Prince who may at any moment be called upon to assume the place of his father upon the German throne. It is possible that William II may live for many years to come—that he may survive long enough to witness the realization of his magnificent projects in connection with the maritime strength of his Empire. He is a sympathetic, picturesque and always intensely interesting figure on the world's stage, whose disappearance therefrom would be deplored alike by friend and by foe. But sovereigns are after all but mortal, and not only subject to the same ills as ordinary citizens, but, moreover, exposed by reason of their exalted rank to so much greater peril of death by violence that assurance companies hesitate to insure them and class the majority of the Anointed of the Lord under the head of "dangerous risks." While, therefore, the accession of young Prince William to the German crown may be delayed for

years—years that will bring to him increased experience and moral poise—it is well to bring one's self face to face with the fact, especially in view of the persistent tho unauthenticated reports from Berlin as to his father's health, that he may become Emperor before twelve months have elapsed, perhaps in a few weeks—or even days—perhaps, indeed, overnight.

Of nations it has often been asserted that those are happiest which have no history. The same may be said of princes, and that is why so little is known abroad, or even at home, of the Kaiser's heir apparent. His life thus far has been singularly uneventful and has been signalized by none of those romances which too frequently, developing into scandals, play so important a rôle in the annals of European royalty. For the tales of his infatuation for certain actresses owe

at a country house where he spent a single day when in England. What with his rank, his courteous, unaffected manners, devoid of all self-consciousness, and even modest, and his sunny disposition, which causes him to look at the bright side of everything in life, he naturally finds favor in the eyes of the women, to whom, young and old, his attitude is characterized by a sort of boyish chivalry and deference, and he—he is but twenty-three—finds them all charming. But only two women can ever boast of having held his affections—namely, his mother, the Empress, whom he regarded as his feminine ideal until he met the other, namely, his fiancée, Duchess Cecilia.

Yet with all that he is neither a milk-sop nor a prig. Adept in all athletic sports, he is as fond of mischievous pranks as most young fellows of his age,

Another Picture of the Crown Prince of Germany and His Fiancée

their origin to the fertile imagination of the press agents of these ladies, and equally fanciful and groundless are the stories, widely circulated in America, according to which he is said to have lost his heart to a young girl whom he met

and has paid the penalty for them, when a boy, in the shape of spankings administered by the august yet muscular right hand of his imperial father, and since he has attained manhood, by "stubenarrest"—that is to say, confinement to his

quarters. But the offenses for which he has been thus punished have been very trivial and of a character to attract rather than to prejudice people against the young Prince, consisting, as a rule, of some laughable practical joke or some daring and even foolhardy equestrian feat. On one occasion it was for riding his horse up and down a great flight of marble stairs in the Park of the Palace of Sans-Souci at Potsdam, while at another time it was for winning a race over the most dangerous steeplechase course in Germany. He is passionately fond of horses and possesses over them, as over dogs and other animals, a curious influence, which enables him to teach them all sorts of tricks. Indeed, when still a boy, his trick ponies and dogs were the chief features of the very successful amateur circus entertainments which he was wont to give with his brothers and some young friends at Potsdam.

Considerably taller than his father, he may be said to take after his uncle Henry and his grandfather, Emperor Frederick, rather than after the Kaiser, in personal appearance. His hair and complexion are of a lighter hue and his expression is much more boyish and less set than that of William II at his age, which may be ascribed to the fact that his youth has been so much happier. Credited with a considerable amount of obstinacy, which he has displayed in connection with his engagement, that did not at first meet with the approval of his parents, it is a question whether he will ever give evidence of as much determination as the present Emperor. But, in view of the responsibility that awaits him as Germany's future ruler, nothing could have been better than his training. He may be said to have been educated under the immediate supervision of his father, who ever since the Prince was twelve years old has made a point of devoting every moment that he could snatch from his multifarious occupations to instilling his ideas and views into the mind of his firstborn. In talking and reasoning with him as a boy he would treat him as far older than his years, discuss with him, in fact, as with a man, and it is due to this that the Crown Prince is at the present moment in several respects wonderfully mature for his

age and really in a position to judge matters with a degree of experience and knowledge that is well nigh unrivaled in so young a man. Moreover, since leaving the University of Bonn, where he showed considerable strength of character in refusing to conform to the customs of excessive drinking for which the students there are famous, he has taken the trouble to make himself acquainted with the workings of all the great government departments at Berlin, spending weeks in each of them, so as to be able when he ascends the throne to exercise the same direct and personal supervision over each branch of the imperial administration as his father, instead of being obliged, like most other monarchs, to rely entirely upon Ministers and high officials.

Being a Hohenzollern and destined to inherit at his father's death, along with the imperial crown, the supreme command of the German army, which in time of peace numbers half a million and in war no less than three million highly trained soldiers, it is needless to say that the Crown Prince is, like his father, grandfather and great-grandfather, before everything else a soldier by inclination, tradition and education. At present he is doing duty as Major of the magnificent regiment of the Gardes du Corps at Potsdam, being very popular with both his fellow officers and men. He has been spared none of the terribly hard work and even drudgery that fall to the share of every subaltern regimental officer of the German army. Indeed, his tasks have been even more arduous than theirs, since his studies have covered so far wider a range. It may be taken for granted that on his marriage he will, like his father on a similar occasion twenty-four years ago, be promoted to a colonelcy.

Whereas Emperor William at the time of his birth stood sixth in the line of succession to the throne of England, there are to-day some thirty lives or more between the latter and the German Crown Prince, whose rights thereto, altho remote, nevertheless exist, as the senior of the great-grandchildren of the late Queen Victoria. Perhaps it is due to this that he is able to speak English without the slightest trace of a foreign

accent. This, however, and his seat in the saddle, are all that there is of the Anglo-Saxon in his composition, and his leanings toward Great Britain are far less pronounced than those of his father, who in certain respects gives striking evidence of the English blood that comes to him through his mother. Crown Prince William's inclinations are rather in the direction of Austria, of Hungary and of Russia, which is likewise the trend of the present policy of the Kaiser.

That his union with Duchess Cecilia is a love match pure and simple, differing in this respect from most royal marriages, which are so often based on political and dynastic considerations, rather than on those of inclination, is known at every court of Europe. For although the matrimonial alliances between the reigning houses of Hohenzollern and Mecklenburg have always turned out most happily, and the name of Queen Louise, who was a Mecklenburg Prin-

Crown Prince William of Germany

In fact, the Prince is so thoroughly imbued with his father's aims and projects, and so entirely in sympathy with him, that were anything untoward to happen to Emperor William his son might be relied upon to adhere to the course which he has marked out for him and to continue his policy without any change or interruption, not only in regard to the various great Powers of Europe, but likewise to the United States, the friendship and good will of which the Kaiser considers indispensable to the objects which he has in view. The entire training of the German Heir Apparent has been with the purpose that he should continue Emperor William's policy, and there is no reason whatsoever to believe that the Crown Prince will disappoint his father's expectations in this respect.

cess and the great-great-grandmother of both the Crown Prince and his fiancée, is still revered throughout Germany as that of the heroine of the War of Liberation, yet it is notorious that his parents had formed other plans with regard to his future. For while the young Duchess is charming and everything that the Emperor and Empress could desire as a consort for their son, yet the relations of her mother, the Grand Duchess Anastasia, with the court of Berlin have always been somewhat strained. By birth a Princess of the reigning house of Russia, the Grand Duchess is more Muscovite than Teuton in her sympathies. She has taken no pains to conceal her distaste for everything pertaining to the land of her adoption, spending as much as possible of her life abroad, with

the result that she has remained extremely unpopular in Germany. Moreover, her intense worldliness was not of a nature to commend her to the goodwill of either the Kaiser or the Kaiserin. Fortunately, however, she left the education of her daughters entirely in the hands of a most accomplished English governess, Miss Mary King, and, thanks to this, the young Duchess, while she has much of her mother's grace, elegance and brilliancy, has inherited none of her prejudices.

The Crown Prince met her at a ball, and, exceedingly fond of dancing, found in her not only an "almost divine waltzer"—the expression is his, not mine—but also a most witty conversationalist. He fell head over ears in love with her, and tho the political and dynastic advantages of the match were obvious and the young Princess quickly won the hearts of the Emperor and Empress, yet they hesitated on account of her mother from giving their consent until their son practically forced their hand by himself publicly announcing his engagement. Like the Crown Prince, the future Kaiserin is tall and willowy, fair-haired and brown-eyed, speaking English without an accent, devoted to outdoor sports, warm-hearted, unaffected and possessed of that consideration for the feelings of others which is the most gracious and fascinating of all forms of courtesy. Altho her

mother has remained an adherent of the national Orthodox Church of Russia, Duchess Cecilia has been brought up as a Lutheran, and as she is said to possess no little of that strength of character for which so many of the princesses of the House of Mecklenburg, notably the late Duchess of Orleans—whom the French revolutionists of 1848 declared to be the one "man" of the Orleans family—have been famed, and has, moreover, inherited the sunny disposition of her great-grandmother, Grand Duchess Alexandrine, there is every reason to believe that the marriage will prove a blessing to the House of Hohenzollern and to the German nation. Grand Duchess Alexandrine, by the by, was a sister of old Emperor William, survived him nearly four years, and when ninety was wont to ascribe her fondness for fun, laughter and gayety to the fact that her birth had taken place unexpectedly and inopportunistically at a court ball, in which her mother, Queen Louise of Prussia, had taken a rather too active part. Bent as is the Kaiser upon elevating his Empire into the greatest maritime power of the world, it is only natural that his subjects should hail as a good omen for the realization of his hopes and theirs the fact that his eldest son and heir should have sought his bride among those people whose forebears in olden times, in the days of the Vandal Vikings, gave the mastery of the seas to Germany.

## The Proposal

BY R. H. HESTER

My heart said to thy heart:  
 "Will you read with me awhile?"  
 Thy heart answered my heart:  
 "Yes; a very little while."

My heart said to thy heart:  
 "Will you walk with me a mile?"  
 Thy heart answered my heart:  
 "Yes; a very little mile."

And they read the little while,  
 And they walked the little mile;  
 'Twas the sweetest and the fleetest  
 That time did e'er beguile.

Then my heart said to thy heart:  
 "Will you make the mile the Way,  
 And the little while the Day,  
 That we may never part?"

Suspense was turned to happiness,  
 When, to mine pulsating madly,  
 Yours, tho hesitating sadly,  
 Safely, sweetly, answered "Yes."

TAYLORSVILLE, MISS.

# Remedies for the Southern Problem

BY ALBERT BUSHNELL HART, LL.D.

[This article concludes the one by Professor Hart printed a few weeks ago. Professor Hart occupies the chair of History at Harvard, and is one of the foremost American historians. He has traveled much in the South investigating its conditions.—  
EDITOR.]

IN a previous article the conclusion was reached that economic and social complications in the South, however distressing, were less cogent than psychological reasons in producing a state of irritation and apprehension in the South. Everybody down there is trying to find some way out, but there is no more agreement on the solution of the difficulty than on its occasion.

The first and most obvious remedy is to remove the supposed cause. This idea of deportation of the negroes was suggested more than a century ago by Thomas Jefferson and was later urged by Lincoln. An instant objection is that it is resisted by nearly every one of the nine million negroes, South and North alike. They no more wish to cross the ocean eastward than their ancestors did to come westward. The negroes in general are attached to their homes and would probably fight rather than add to the repeated failures of attempts to build up civilized communities of American negroes in Africa, which is the only region available for such an emigration. An equally strong objection is that the white people absolutely will not permit the negro to leave the country. When in 1889 attempts were made to draw negroes to Kansas the boats that were carrying them were stopped by armed men and the negroes were driven back with the shotgun. On the other hand, in a number of communities, especially in the mountains, the poor whites will not permit the negroes to come in; and, for that matter, there is a town of several thousand people in southern Ohio where no negro has ever been allowed to stop over night. Nevertheless, where the negro is there he stays; and for the very simple reason that without him or her there would be no breakfast in the big house, no wood cut for the fires, no cotton raised, no babies

dressed—for the real confidence of the whites in the negro race is shown by their almost universal practice of committing their little children to negro nurses. To deport the negro would mean the social disruption as well as the economic ruin of the greater part of the South, and the fierce and brutal advocacy of that method which one hears occasionally from Southern men is simply a piece of acting.

For there is no substitute in sight, since the South has never been able to attract foreign immigrants. The census of 1900 shows that the eleven States that seceded in 1861 have 11,400,000 native whites, 7,200,000 negroes and only 350,000 people of foreign birth, of whom two-thirds are in Louisiana and Texas, while the rest of the Union shows 45,300,000 native whites, 1,600,000 negroes and 10,100,000 foreigners. The figures explain themselves: most immigrants work with their hands and avoid regions where there is a poor opportunity for their children, and where handwork classes them with a servile race. The only foreign element now seeking the South is the Italian, some thousands of whom are to be found in the Mississippi bottoms; but their influx is likely to be checked when they discover that they, like the negroes, are to be excluded from the suffrage wherever they come to be in the majority or to exercise the balance of power.

A remedy not publicly advocated, yet practiced in some remote parts of the South, is peonage. It is not necessary to go to the length of some State laws which assume to legalize contracts by which the laborer agrees to work or else to accept a whipping and a bull pen; servitude is realized if they are deliberately kept in such a condition of debt and dependence that they cannot acquire land or move about freely. The testimony of people who have visited rural plantations

is that in many places great advantage is taken of the ignorance of the negro; that he is cheated in his efforts to buy land, that in some places he is a serf, tied to the land. Inasmuch as probably a majority of the intelligent people of the South insist that the negro was better off in slavery than in freedom, there is in some regions insufficient healthy public sentiment to protect the rural laborer.

Another method widely applied in the South has been put by Senator Tillman in the sententious form: "We shall have to send a few more negroes to hell." This brute method is a deliberate attempt to keep the race down by occasionally shooting negroes because they are bad, or loose-tongued, or influential, or acquiring property; and by insisting that the murder of a white man, or sometimes even a saucy speech by a negro to a white man, is to be followed by swift, relentless and often tormenting death. In every case of passionate conflict between two races the higher one loses most, because it has most to lose; and lynch law as a remedy for the lawlessness of the negroes has the disadvantage of demoralizing the white race, and eventually of exposing white men to the uncontrollable passions of other white men. The usual, tho not the real, justification for lynching is that nothing else can protect or avenge white women. Rapes and lynchings aggravate but do not cause race hostility. Any Southern State might forthwith reduce both the negro crime and that of his white executioners by following a useful precedent of slavery times—by providing a special tribunal of reputable men, not necessarily lawyers, with summary process, testimony behind closed doors if desirable, and quick but civilized punishment for aggravated crimes of violence, committed by whites or blacks.

Another remedy is education. It would be very unjust to leave the impression that the white people of the South as a community approve of solving the negro question by aggravating it. Indeed, the South has made great sacrifices since the Civil War to educate the negro, tho it somewhat exaggerates its benefactions by dwelling on the fact that the negroes pay two per cent. of the taxes and furnish nearly one-half of the school children. One of the most influential news-

papers in the South recently threatened to cut off the funds for negro education if Northern benefactors did not cease giving money to negro schools. In New York and Chicago there is no protest because the people who furnish nineteen-twentieths of the school children pay only one-twentieth of the taxes. The South, however, begins to realize that reducing the present illiteracy in the South among both negroes and whites is not all the battle. Your negro chambermaid may have been through eight years' study in the city schools and yet remain incredibly ignorant and brutish. Still the North also has learned that ability to read, write and cipher will not make model citizens out of the morally degraded. In many ways the most hopeful thing for the negro is the work of institutions like Fisk, Atlanta and Talladega, which aim to train future professional men and women and especially teachers.

Hence the great interest now felt by good people in the South in industrial education for negroes, and sometimes even for whites. This is partly due to the success of Hampton, Tuskegee, Calhoun and other like institutions, which have proven the expansion of mind resulting from the more intelligent forms of handiwork combined with a judicious use of books. In these schools a great part of the good is done by the character of the teachers, and nobody can see the fine body of young, alert minds trained by the best universities of the country which make up the faculty, say of Tuskegee, without hopefulness that they will train as well as instruct. Yet from the Southern point of view their success will raise the same ultimate difficulty as other forms of education for the negroes. Notwithstanding the influence of a few notable men, at the head of whom is Booker T. Washington, the whites in general do not wish to see leaders and organizers arise among the negroes; they distrust the negro preachers and have a contempt for negro professors, lawyers and physicians. If industrial education produces good blacksmiths, carpenters and domestic servants the South will be pleased, tho perhaps the trades unions will have something to say; but the South does not wish to see political and social leaders springing up among the negroes, lest they at-

tempt such organization of the negroes as would give them power over the white race.

A panacea recommended by some people most genuinely interested in the negro race is the so-called "race separation." The phrase does not mean the color line, for that is now so strict that last year a white visitor to a rich negro planter was told by his host that if they both sat down at the family table the house would probably be burned over the head of the owner. No negro by character or good behavior can acquire membership in a white club or the right to sit in the presence of a white man, or association for his children with those who might uplift them, or even a resting place for his dead in the same inclosure with his white neighbor. That, however, is a closed chapter; social equality does not exist, cannot be made to exist, and did not exist when there was a squad of Union troops in every town in the South.

"Race separation," then, means that whites and blacks shall keep up two distinct social and business organizations—that negroes shall deposit in African banks, establish their separate corporation stores, patronize negro theaters. So far this plausible *régime* has made little headway; half a dozen negro banks, a few real estate businesses, one department store, an insurance company or so—that is about all. The idea is in practice unworkable; how can good bankers and organizers and men of property and judgment be developed by contact with the poorest and most ignorant element of society? And the plan instantly runs aground when the white dealer is called on to deprive himself of all negro custom. What would become of the retailers of Charleston if the negro laborers were to withdraw the purchases which their weekly wages enable them to make? And in rural regions, where the negroes most predominate, almost all large plantations and country stores are carried on by white people. Race separation is impossible in the sense of building an invisible wire netting between the two races, for they tread the same streets, read the same newspapers, drink the same water, ride in the same trolley cars and trains, and each is indispensable to the other.

If the foregoing remedies do not seem thorough-going, what else has been seriously put forward by the South? Practically nothing; yet in the deepest grooves of the Southern mind is the conviction that the negro question is to be solved only by Southerners, and that even a suggestion of interest on the part of Northern people is an impertinence. The same feeling permeated the pro-slavery literature of ante-bellum days, and occasionally blazes out as in the remark of a Southern lady to a member of the author's family who happened to mention Harriet Beecher Stowe: "I hope she's roasting in hell now!"

Does any one soberly think it possible for any one section of the United States to settle its difficulties alone? Under the Federal system we are "every one members one of another"—the people of South Carolina through their share in making the Federal Constitution have modified the constitution of Massachusetts; the Congressional representatives of Massachusetts in their turn have to settle questions which deeply affect South Carolina. The United States of America has a character to maintain. If the public authorities of Colorado arrest and deport people in defiance of right and justice, have not the people of the South a right to protest? Does not injustice toward the negro in the South injure the good name of the whole country and thus concern the North? The attempt of the South to muzzle critics of their "Peculiar Institution" melted down once for all in the furnace of the Civil War.

Any remedy for the ills that beset the South must recognize that the condition of the negroes is discouraging; that in forty years of freedom they have made less progress than white people expected; that as a race they have little sense of truth and perhaps of sexual morality; that they furnish great numbers of idlers and many criminals. This dark picture must, however, include also about half the poor whites, who, tho far superior to the negroes in intellect, match them in ignorance and overmatch them in blood-thirstiness. These are the conditions from which the community must extricate itself or admit that it cannot civilize its own people.

It is perfectly true, and we of the

North must candidly acknowledge and appreciate it, that many Southerners are making genuine and self-sacrificing effort to upraise their colored neighbors, by personal interest in their education, by protection of their rights, by example of moderation and respect for law, by appreciation (so far as the color line admits) of their best men. These are the white people who ought to solve the problem if anybody, yet they are precisely the people who see the only solution in a very slow elevation of the colored race, during which many things may come in to accentuate the race problem.

On one side the remedy is the slow uplifting of the negro race, the practice of those homely virtues of industry, steadiness, thrift and habits of saving which have made the Northern communities what they are. The Southern people are right in demanding that the negroes themselves shall discourage and discountenance the criminals of their race, and make it their business to help to bring to legal, orderly punishment the desperate criminals who arouse the most fearful resentment of the whites. The negroes must be taught to respect and honor the best members of their own race and to bring up their children to follow such models. That is the way, and the only way, in which a race can arise.

But how can the negroes be expected to respect and admire what the whites despise? Can the poor white call the thriftlessness of the negro hopeless? Is the negro to set the example of law-abiding to the white man? Are the Southern whites to abjure the duty of the highest in the community to make the standard of coolness, patience and

observance of law? Why does not the white man, who boasts of his interest in and aid to the negro during slavery, do more to educate him now? The other day a South Carolina storekeeper who stepped into a negro school and made a speech of encouragement found himself in danger of mobbing and made an abject recantation. Why not everywhere put cultivated white teachers into the negro schools, such as are employed in Charleston? Why should not negroes of high character be honored by degrees from institutions of learning? Why do not the white people with good will open the door of opportunity to a few places in the public service to negroes whom they recognize as qualified?

The reason is simple; the Southern whites have an unfounded and unformulated fear that somehow white supremacy is endangered; and they see no halting place between acknowledging that some negroes are men of character and "permitting your daughter to marry a nigger." The true remedy for the South is to do with the negro exactly what his brethren are doing up North with the Pole, the Slovak and the Hungarian. Why does he not make the best of a bad job and not the worst? Why not set before the negro every possible inducement to rise, by facilitating the purchase of land, by opening new industries, by granting to the best negroes such scanty rewards as the white man's color line permits? The Southern white community may well ponder the meaning of one of Booker Washington's noblest utterances: "I will never allow any man to drag me down by making me hate him!"

CAMBRIDGE, M.S.S.A.

# The Miracle Maker of Gardens

BY EMMA BURBANK BEESON

[Our readers have been kept aware in our editorial columns of the wonderfully successful experiments of Mr. Burbank, but this is the first signed article we have printed on the subject. As Mr. Burbank does not have time to contribute to the papers, we are glad to get an article from the next best person—his sister.—EDITOR.]

THE hundreds of valuable new fruits, nuts, grains, grasses, flowers and vegetables emanating from the experimental farms of Luther Burbank at Santa Rosa and Sebastopol, California, have made his name a household word the world over, and so marvelous are these creations that men and women everywhere are watching the progress of his work, and seek to know more of his methods.

Varieties of fruit have been produced that are more prolific and hardier, growing in regions where the old varieties

failed; the fruit season has been prolonged several months by early and late bearing varieties; keeping qualities have been developed so as to stand long distance shipment; many years of costly waiting have been saved the fruit growers by precocity in trees; fruits have been made larger, stones removed, thorns eliminated, shells made thinner, flavor, color and odor improved, and entirely new fruits produced. Grains and fodder plants have been made larger, more prolific, more nutritive and to have less waste; cotton, rice and sugar cane have

LUTHER BURBANK

Home of Luther Burbank at Santa Rosa, California

been improved. To flowers have been added beauty, grace, perfume, size and color.

The practical value of this can scarcely be estimated; if wheat, barley, oats and rice yield only one grain more to each head, and corn one more kernel to the ear, the result in the United States in one year would be millions of bushels of these staples, without extra cost or labor; but not alone for one year or one nation are these results; they are legacies that belong to every man, woman and child who shall inhabit the earth. The work of the plant-breeder appeals to all; those who are unable to appreciate the importance of the experiments, or to enjoy the beauty of the flowers, realize something of the value of improved food products.

The sun never sets upon the Burbank creations; in far away New Zealand and in the wilds of Australia they find a welcome; in South Africa are the Cecil Rhodes orchards, from which plums are shipped to San Francisco for the winter market, arriving in good condition after a journey half around the globe; in the

garden of King Edward grows the famous Crimson winter rhubarb, also enjoyed by the Japanese Mikado. One thriving town in California, Vacaville, owes its growth and prosperity to the Burbank fruits, and claims him as its patron saint.

Only a few of the most remarkable productions can be described in this article.

The primus berry, the first recorded instance of a fixed species produced by man, is the result of crossing the Siberian raspberry with the native California dewberry; it is very productive, of a unique flavor, and ripens its fruit before most of the standard blackberries and raspberries bloom.

The plumcot is a combination of the apricot and the Japanese plum, and is a distinct new fruit still undergoing improvement; the fruit is more highly colored than either parent, it has a slight silky down and shadowy bloom; there are many varieties, some clingstone others free, while the seed of some resemble a plum pit, others are more like the seed of an apricot; the flesh of some

is yellow, others deep crimson; the rich flavors of these fruits are a revelation of the possibilities in fruit development.

The new prune has a nutty kernel without shell, and can be easily cut through with a knife; the kernel gives an improved flavor to the fruit. The sugar prune, because of its large size, sweetness and drying qualities, has proved of great value in the prune industry.

By combining the Japanese and American plums, hundreds of new plums have been produced, varying in size, color, flavor and quality; the Bartlett plum has the flavor of the Bartlett pear, the rice seed plum has an extremely small seed, each has its peculiarity, but only those varieties that have demonstrated their superiority have been introduced to the public.

In these enchanted grounds the poppy is now being transformed; last year in a bed of more than two thousand plants no two were alike. A wonderful poppy, the product of a cross between a peren-

nial and an annual, is of rare beauty, and blossoms all the year.

The native California poppy (*Eschscholtzia*) has under his tuition changed her dress from gold to crimson.

The beautiful Shasta daisy, one of the most useful and most popular of flowers, is the result of combining the American with the Japanese and European species, followed by years of skillful selection.

The Australian star flower, a fadeless flower, is another plant now in process of development at Santa Rosa; over a thousand letters and telegrams concerning the flower have been received, and many firms are competing for the exclusive right to handle it, but it is not yet ready to go out into the world.

It is, however, upon the thornless cactus that all eyes are centered; these plants of priceless value have been ten years reaching their present state of perfection, yet they must linger months, perhaps years, before perfected and ready to go forth on their mission, made edible

A Challenge to the Curiosity Seeker

Plumcots

for man and beast, to reclaim vast deserts and furnish food for twice the present population of the world.

How has all this been accomplished? The methods are hybridization, selection and environment, but the work is unique and embraces the

whole life of the man—observation, research, insight, skill and experiment. Allowing no rules or preconceived opinions to deter him or impede the work, no other living man has got so close to nature in the realms of horticulture.

The Improved Australian Everlasting Star Flower  
(*Cephalopterum Drummondii*)

Giant and Dwarf Calla Lily

As a scientist will Luther Burbank have the greatest eminence in coming years.

As yet his work is known chiefly by its practical horticultural results; many of his most remarkable experiments and

of great scientific import, having no immediate commercial value, are unrecorded.

Without financial aid this alchemist in nature's laboratory has produced more changes in plant life than was ever pre-

The Improved Peach Plum, Branch  $3\frac{1}{2}$  Feet Long. Showing Marvelous Productiveness

The Burbank Rose, Which Took the Gold Medal as the Best Bedding Rose at the Louisiana Purchase Exposition, St. Louis, 1904

viously known in the world's history, and while thousands of dollars are annually received from the sale of these creations, it has all been expended in the vast experimental work, so that there has been neither time nor money for the keeping of explicit records.

The trustees of the Carnegie Institution at Washington, D. C., impressed with this fact, have recently made an appropriation of \$100,000, payable in ten annual instalments, in order to facilitate the work and secure accurate records for

and from nearly a million seedling pears no tree worthy of propagation was produced; many other fruits and flowers have been grown on a like magnificent scale.

These experiments are of intense interest to scientific men, and the experiment grounds are a veritable Mecca to scientists, many of whom, from the great universities and experiment stations of every country, find their way there each year.

That his work is not unappreciated is

A Corner of the Cactus Garden, Showing Experimental Plants

science. In a measure emancipated from financial care, it is hoped that he will have time for placing in permanent form some of the facts he alone possesses.

His experiments are on a scale more gigantic than was ever before attempted. Three hundred thousand varieties of plums are now growing on his experiment farm at Sebastopol, each tree grafted so as to contain from one to five hundred different kinds; at one time there were nearly or quite five hundred thousand seedling lilies growing on the place, and twenty-six thousand roses; the thornless blackberry was selected from sixty-five thousand seedling plants,

evinced by the California Academy of Science in 1903 awarding to him, as the man who had accomplished most in the development of plant life, its semi-centennial gold medal, an honor that falls to but one man in half a century. When his name was spoken in the French Chamber of Deputies at Paris every member arose to his feet as a tribute of honor.

He was elected the first honorary member of a possible ten of the Plant and Animal Breeders' Association of United States and Canada, and he is an honorary member of many other scientific organizations. Notwithstanding that he

considers himself a doer rather than a talker, he has recently received the appointment as honorary lecturer to the Stanford University at Palo Alto, California.

He has little time for writing, but the few papers from his pen have been well received and widely disseminated; even his commercial catalogs are used as text books in the universities at Moscow and other foreign cities. The discoveries he is making are of greater importance to humanity than were those of steam and electricity. With more and better food products, weakness and crime will be lessened; more beautiful flowers will bring with them higher ideals, and better conditions for man will prevail.

The social and spiritual import is far greater than the practical and economic. If such wonders can be wrought with plants, what may not be done with man, the most sensitive of all living things to his environment.

An idealist, but not a dreamer, is Luther Burbank; in the humble weed by the roadside he has seen the poetry and beauty of floral wealth, and has wrought it, as can no poet with pen or artist with brush, into the life of the world.

My brother was born March 7th, 1849, in the beautiful and historic town of Lancaster, Mass.; reared on a New England farm, loving nature in her varied forms, he made the best use of all his opportunities.

My father was a man of scholarly tastes and strong convictions, a good business man who gave each child the best example and education in his power; while my mother, possessing a remarkable fondness for flowers, no doubt transmitted the inventive and horticultural tendencies to her son.

Luther's first toys were the plants in the window and in mother's flower garden; he never ruthlessly destroyed a blossom, but loved them as things of life, and a bright flower placed in the baby hand would always stay the falling tears.

A quiet, retiring child, shrinking from notice, Luther spent much of his time with nature; he knew more than any one else about the apples in the orchard, the wild berries on the hillside and in the meadow grasses, the chestnuts and hickory nuts in the woods. He knew where

to find the first blossoms of spring and the brightest flowers of summer. The birds and animals allured him and no rock, tree or cloud escaped his notice. The habit of observation and classification with the power of individualizing which he possesses in such a remarkable degree was early developed. Both in the district school and the Lancaster Academy he excelled in scholarship, and was a favorite with teachers and classmates. Our home was always supplied with good literature, and the town had one of the best public libraries in the State; he availed himself of these advantages, delighting in books of science, yet his reading was not limited to one subject. At one time his thoughts were directed toward the practice of medicine as a life work, and the science of health has always been of great interest to him; with naturally a frail body, of such practical use has been the knowledge acquired that few men have been able to accomplish as much real work in life as he. Utilizing all his powers, physical and mental, at the age of fifty-five years he each morning takes a cold sponge bath and a few physical culture exercises, and is as active as a boy; harmony with nature has kept mind and body young and vigorous.

Another subject of interest to him is mechanics, always keeping in touch with the latest discoveries and inventions; his early experiments along this line were with an old tea-kettle in the backyard. While studying at the Academy winters he spent the summer months at Worcester learning the patternmakers' trade; his letters written to the home folks while there reveal his intense love of nature and to her call he responded, beginning his real life work in the production of the Burbank potato in 1873.

Coming to California in 1875, the letters to the New England home tell how the beauties of the Santa Rosa Valley, afterward to become his home and the scene of his plant transformations, appealed to his enthusiastic temperament:

"I firmly believe this is the chosen spot of all the earth, the climate is perfect, the air so sweet that it is a pleasure to drink it in, the sunshine pure and soft. The mountains which gird the valley are lovely, and the valley is covered with majestic oaks placed as no human

hand could arrange them for beauty. The gardens are filled with tropical plants, palms, figs, oranges, vines, etc. Rose trees climb over the houses, loaded with every color of bud and blossom. English ivy fills large trees and flowers are everywhere even now (November). The birds are singing and everything like a beautiful spring day. I took a long walk to-day and found enough curious plants in a wild spot of about an acre to set a botanist wild."

Since coming to California he has collected plants from all parts of the globe. In recent years he has had collectors in foreign lands, and has been greatly assisted by botanists and explorers. David G. Fairchild, agricultural explorer for the United States, has secured him many rare plants, and loves to visit the Santa Rosa experiment grounds to note their development.

Penetrating into the secrets of nature, finding unknown truth in familiar facts, he has acquired a knowledge of the habits, characteristics, adaptability and latent possibilities of plant life possessed by no other. This has required patient toil, privations and self-denial; often misunderstood, sometimes misrepresented, thwarted and disappointed, but never discouraged or impatient, he has gone steadily on with his experiments.

Life is very simple in the vine-covered cottage at Santa Rosa, with his plants as his only family; the mother, now past ninety years of age, shares his home and rejoices to see her son honored of the world, revered by associates, respected by employees and loved by all.

Very exacting in his work, as each plant undergoing transformation demands his personal skilful care; the supervision of help, a large correspondence and the thousands of callers each year have taken many hours from needed rest.

If a spirit of work pervades the atmosphere, so does the spirit of tranquillity and good feeling which accompanies the work that uplifts, and there is a charm in the association with the great men and women who flock thither.

Strong in his principles and convictions, he uses neither tobacco nor alcoholic drinks, and employs no men addicted to their use; he recently declined to have a new brand of cigars bear his name and portrait. He subscribes to no creed, believing that each to-morrow should

"Find us farther than to-day."

Tender in his nature, he may be seen some early morning in summer as he carefully examines certain plants, to gently open the petals of a poppy where some belated bee, in his task of carrying pollen from flower to flower, had become imprisoned by the closing of the flower for the day; the bee's smothered cry had reached his sensitive ear, and very tenderly he sets the little captive free, watching its glad flight in the bright sunlight. The only secret of success that he claims is honesty with nature. When upon introduction one said: "I believe you are the man who improves upon nature," he rather indignantly replied: "No, sir; I only direct some of her forces."

The public schools of California and neighboring States are making his birthday, March 7th, a "Burbank Day" for the planting of trees and flowers with appropriate exercises. No tribute could be more fitting.

My brother has opened broad fields for development and made earth richer. May his life be a continued inspiration to the young.

He says: "I shall be content if because of me there shall be better fruits and fairer flowers."

HEALDSBURG, CAL.

# Divorce Novels from Three Countries

BY EDWIN E. SLOSSON;

THE question of divorce, or, more strictly speaking, of remarriage after divorce, is now more freely discussed the world over than ever before, and marital relations are in many countries in an unsettled state, in regard, that is, to their theoretical foundations, for there is no reason to believe that mankind is practically any less monogamous than hitherto. The opposing theories of marriage are becoming more clearly defined; on the one hand the priestly conception that marriage is a sacrament and dissoluble only by death, and, on the other, the Protestant conception that marriage is a civil contract dissoluble for various reasons. The question has been brought before the committee of the whole by different causes here and abroad: in this country because the priestly conception has become of late more powerful or at least more vocal, and in France and Italy because the anti-clerical governments are introducing divorce laws. In this polemic many weapons are used, but none more popular and effective than novels and plays, the opposing parties showing the same extravagance in their expenditure of their ammunition as the armies opposite each other along the Sha River.

To consider problem or thesis novels from the purely literary point of view is to do them an injustice. They are not "mere literature." They are not written as such; they are not read as such; they should not be judged as such. Some literary critics would rule out the thesis novel altogether; others consent to consider only its esthetic element, which is as bad as judging a building from the looks of its façade without regard to its rooms or constructive principles. A building is intended for other purposes than to be merely looked at; a thesis novel for other purposes than to be merely read.

The reason for the popularity of such fictional forensics is plain. It is easier to use and more convincing than more di-

direct argumentation. If a lawyer had the privilege of the novelist of selecting his own case, to subpoena such witnesses as he wants and to tell them what to say, of making his own rules of evidence and of writing the speech of the opposing counsel, he would be a poor advocate if he did not win his case. The only disadvantage that the advocate novelist has is that he cannot challenge the jurymen, for any one possessed of negotiable securities to the value of \$1.50 can enter the box; but even this difficulty is not so great as it seems, since those who have a prejudice which it would require evidence to remove voluntarily excuse themselves from serving on the jury by not reading the novel if they know what it is about. Book reviews are useful because they enable people to avoid buying books which they do not agree with and from which, therefore, they would be likely to learn something.

Considering the danger of placing unlimited power in any man's hands, it is greatly to their credit that recent novelists on the divorce question have been on the whole so fair in stating their cases and in arguing from them. This is conspicuously so in the most important novel of the group under consideration, Bourget's *A Divorce*.<sup>1</sup> In this Gabrielle is divorced from a man who is brutal, drunken and licentious. She is left in poverty with a nine-year-old son, Lucien, and marries, of course without a religious ceremony, a good, pure and honorable man, a freethinker, who loves and cares for her and her son in the most devoted and irreproachable way. At the end of 13 years her daughter by her second marriage is about to make her first communion and Gabrielle wishes to become reconciled to the Church that she may go with her. On applying to a priest she is confronted with the inexorable law of the Church which recognizes no divorce and she becomes convinced that

<sup>1</sup> *A DIVORCE. By Paul Bourget, of the French Academy.* New York: Charles Scribner's Sons. \$1.50.

ROBERT GRANT,

Author of "The Undercurrent" and "The Orchid"  
(Scribner)

her life with her second husband has been sinful. The happy home is disrupted; husband and wife are at enmity; Lucien quarrels with his stepfather and goes to his own father, caring for him until he dies. Gabrielle, by the advice of the priest, returns to her second husband for her daughter's sake and he is placed in the untenable position of refusing to satisfy his wife's scruples by consenting to an ecclesiastical marriage.

M. Bourget sketches his characters and states their opinions with great fairness in spite of his fierce detestation of secular education and the laws, customs and sentiments resulting from it. A remarkable admission from such a source is found in the last sentence of the following quotation:

"One of the characteristics of this younger generation is their constant appeal to the conscience. But the execrable Kantian doctrine with which their elders have indoctrinated them leads them to interpret this principle of conscience in the narrowest and most sterile spirit. Under the pretext of applying the famous axiom: 'Act always in such a way that thy actions may serve as a universal law,' these young men are absorbed in the complacent idolatry of their own opinions. They

clothe their individual point of view with all the dignity of an ethical principle and thus arrive at an intolerant anarchism, so to speak, of which the narrow egotism is in strange contrast with the wide culture after which they strive. One virtue they do possess, as it is only fair to point out. Their philosophic principles, pedantically intolerant as they are, make them not infrequently very scrupulous in all that regards the relation of the sexes."

M. Bourget's literary conscience saves him from making caricatures of his characters, and since he represents them all as intelligent and conscientious people, he throws the whole responsibility for the inevitable domestic tragedy upon the law permitting remarriage, and supports his thesis that "divorce is not a release, but a prison." But thus granting that his psychology is sound, all that he proves is that a devout Catholic woman cannot be happy in a mode of life condemned by her Church, a proposition which any one would admit in the beginning without argument, but which is of limited applicability to the question. That the confirmation of her daughter should be the stimulus to awaken Gabrielle to a sense of the irregularity of her position as an ecclesiastical outlaw is natural. We have recently had forced upon our attention from many retailers of literary gossip that under these circumstances Madame Hugo broke off her long liaison with Sainte-Beuve. But this is merely the discipline of the Church exerted through social convention. Gabrielle is not convinced of sin by the revival of religious feeling. In fact, she bitterly repudiates the law of the Church as applied to her peculiar circumstances, and this contention the priest does not attempt to controvert; he bases his argument on authority and the necessity of general rules regardless of apparent, even actual, injustice to individuals.

M. Bourget's use of the antagonism between stepfather and son is justifiable from an artistic but not from a logical standpoint. That the step-parent is always an ogre is a fiction of the fairy tales. The same possibility of domestic jealousy occurs in second marriages where one parent is dead as in cases of divorce, and to avoid it we must become not Catholics, but Brahmins, and that before the English reformed the laws of India by permitting the marriage of

widows. M. Bourget also introduces somewhat surreptitiously the force of filial instinct which draws Lucien irresistibly to his natural father. Now it is obvious that this assumed instinct is purely fictitious, for filial affection is solely built on tradition, social convention, gratitude, home life and the like. No son is so wise as to know his own father by instinct, in proof of which we could adduce many instances from M. Bourget's own novels. Long lost relatives require strawberry marks for identification as much as do disinterested detectives. Blood is thicker than water, but consanguineous blood is not distinguishable from other even by the new serum precipitation test.

The strongest point of the novel is that Lucien and the medical student Bertha, starting with the idea of a *union libre* and working out their own domestic relations without reference to Church, society or Government, are brought by the logic of circumstances to the Catholic view of indissoluble marriage. As for the constant antagonism between the convent-trained wife and the freethinking husband, which in this as in so many French novels destroys the harmony of the home, it is evident that M. Bourget has unwittingly given us, not an argument against divorce, but one in favor of coeducation.

In a long and excellent review of Bourget's *Une Divorce* in *Le Correspondant* M. G. de Lamarzelle rejoices that the side of the Church has found so valiant a champion in the present crisis, but he fears that France will go to the limit of error and moral ruin in spite of such warnings. The Code Napoleon, which for a century has kept the women of France in subjection, is now under revision, and the novelists and playwrights are taking an active part not only in the discussion but in the legal work. If we should read in the morning paper that

"President Roosevelt has appointed our three leading dramatists, Clyde Fitch, Augustus Thomas and George Ade, to draft a bill for a national law regulating marriage and divorce,"

it would create some astonishment, but in France, where dramatists are not mere fun makers, but have a recognized and

responsible duty in the portrayal and criticism of social life, it is natural that their expert knowledge should be called to contribute to the legal solution of social problems. Marcel Prévost, Eugene Brieux and Paul Hervieu, who are serving on a subcommittee to make recommendations for amendments to the marriage code, have all recently produced plays that are real contributions to the question, but which can only be mentioned here. Prévost's *Le Plus Faible* is a demonstration that the "free union," however justifiable theoretically, does not work as well as legal marriage. In *La Deserteuse*, by MM. Brieux and Sigaux, presented last October in the Odéon, a young girl who has been basely deserted by her mother is enticed by her away from the governess, who has replaced her in the affections of the father and in the care for the abandoned daughter. Hervieu's *Le Dédale*<sup>2</sup> (The Maze), which has placed him foremost among French dramatists, is devoted to proving that there can be no real divorce where there is a child. M. Hervieu's proposal to introduce the word "love" into the Code as part of the marriage vow has excited a storm of discussion in France very amusing to us Americans, to whom the idea of love as a basis of marriage does not seem revolutionary.

In Italy a change in the laws in favor of divorce is inevitable in the near future, altho for the present it is shelved because the Liberals must have the support of

<sup>2</sup> LE DEDALE. Par Paul Hervieu, de l'Académie Française. Paris: Lemerre.

GRAZIA DELEDDA,

Author of "After the Divorce." (Holt)

the Clericals in their fight against the revolutionary Socialists, and the nationalization of the railroads is as much as the Government can attend to just now. Consequently the evils of divorce can only be depicted in a novel of 1907 and after. This has been done by Signora Deledda, the Sardinian novelist, who in *After the Divorce*<sup>3</sup> has prophesied the disastrous consequences which would result from even the slightest modification of the stringency of the Italian marriage laws. The particular case considered is a law, such as exists in most of our States, permitting divorce when the husband is convicted of a felony. A Sardinian peasant is unjustly condemned to prison for murder, and his destitute wife gets a divorce and marries by civic ceremony a richer man. But when her husband is pardoned she reverts to him naturally and conscientiously. The opportune death of the second husband solves the problem. As a picture of peasant characteristics and modes of thought it is perfect, and the description of Constantino's life in prison reminds one of the prisons of her distinguished compatriot, Silvio Pellico. If Italy has any other women who can write like Grazia Deledda and Mathilde Serao, the American public should make their acquaintance. It is interesting to note that the realistic novel, which used to be exclusively the weapon of radicals, is now adopted by the conservatives who formerly condemned it so strongly.

Among American novelists Robert Grant has made the most important contributions to the divorce question. Last summer while Bourgel's *Une Divorce* was running in the *Revue des deux Mondes* the reply to it, *The Undercurrent*,<sup>4</sup> was appearing in Scribner's. The two books should be read together, not merely because of their opposing attitudes, but for a comparison of French and American literary methods. Judge Grant proceeds very systematically by the consideration of the cases of three couples: One couple, in low life, pay no attention to the law in regard to either marriage or divorce; a second couple, in high life,<sup>5</sup> take advantage of divorce laws

to change partners at will without regard to ecclesiastical prohibitions; a third couple, of the middle class, desire to marry and the law allows it, but they are kept apart for a time on account of the conscientious scruples of the woman against violating the rules of her Church. The opposing claims of Church and State to the regulation of marriage have never been more interestingly presented than in the debate between the rector and the lawyer in this book.

Judge Grant's new novel, *The Orchid*,<sup>6</sup> is superfluous from the argumentative point of view, for its theme, the abuse of the divorce privilege among the fashionables, forms a part of the preceding novel. The "Orchid" is one of the abnormal flowers of our civilization, like the "Yellow Aster," the "Green Carnation" and other floral eccentricities fashionable a few years ago. Put into bald English, the novel is the story of a woman who, desirous of eloping with a lover, but restrained because he is not rich enough, sells her baby girl to her husband for \$2,000,000 and a divorce. Even the smart set are scandalized by this, and resolve to ostracize her, but she resumes her position in society without a struggle. The lesson of it is that the social boycott cannot be relied upon as a method of preserving public decency.

Judge Grant's characters are like chessmen: they are well defined and they move in a straightforward and logical manner, not in the erratic and uncertain way common to persons in real life, and the still more irrational way of many personages in fiction. This simile does not imply that his characters are wooden, or that the situation lacks complexity, but we are interested in his stories as we are in a chess game, because we like to watch the interplay and outcome of known forces.

This survey would be incomplete without a reference to *Pam*,<sup>6</sup> altho the author disclaims any intention of writing a thesis novel. It is rarely safe to accept at par what any man says of himself, and the rule is no less applicable to women. The novel is not in the least didactic, but is quite as interesting from its logical work-

<sup>6</sup> PAM. By Bettina von Hütten. New York: Dodd, Mead & Co. \$1.50.

THE BARONESS VON HUTTEN,  
Author of "Pam." (Dodd, Mead)

ing out of a problem in social ethics as it is for its strong character sketching and literary style. Pam is the daughter of parents who are shockingly happy and contented in their irregular mode of life, and she inherits a double portion of anarchic independence. But her own experience as she reaches maturity brings her to the conclusion that her parents' theories do not fulfill the Kantian requirement of universal applicability. The plot is therefore much the same as that of Grant Allen's *The Woman Who Did*, which aroused such horror and

execration from the public. The very different reception given to the Baroness von Hütten indicates either that it makes a difference how a story is told or that literary latitudinarianism has made a great advance in the last ten years.

*The Opal*<sup>1</sup> is too exclusively Bostonian to be quite comprehensible to outsiders. The opal woman is common enough everywhere, so also is the managing woman, who, elsewhere as here, turns out to be a mismanaging woman, but her peculiar code of ethics by which she refuses to make such reparation as she can to the man whose life she has ruined must be local, if it exists at all. She is not withheld from marrying a divorced man by the laws of the State or the rules of the Church or public opinion or her own impulses or by any other woman wanting him. The art of a novelist is to enable us to understand and appreciate the characters and motives of the persons in the story better than we can those we meet in real life. Such a flat, foolish and unconvincing creature has, therefore, no reason for existence, at least not in a novel. The man is even more shadowy and unsubstantial than the women.

There are two ways of studying social questions: in the mass by statistics, and singly by examples. The former is the method of the theoretical sociologist and the latter of the thesis novelist. The use of both methods is necessary for clear vision.

## The Sacrament of Spring

BY FRANK CRANE

As when the young priest first comes close  
To altar lights and reredos,  
And lifts his hand to take the cup  
Wherein God's blood is gathered up,  
So stand I, hushed and wondering,  
Before the Epiphany of Spring.

Life! Life! Oh, miracle divine!  
I cannot disbelieve the fine  
Impulsion here. My heart flames out  
And burns the barriers of doubt.

WORCESTER, MASS.

# Literature

## Vambéry's Memoirs \*

THIS might seem a slight book, at first handling, in quality as in quantity, because it is gossipy, desultory, easily written and read, the picturesque product of an irregular talent; but neither life nor literature consists in labor, altho they could not long exist without it and its results, exerted or inherited, but rather in character and manner, education, experience and point of view. Just here, one may well say, this book is strong and increasing in interest, the revelation of a temperament, a human document as good as any, filled with color, crowded with realistic sketches of strangely varied customs and peculiar and unusual situations among persons and peoples far removed from one another and from us. Mr. Vambéry is the link of union, a missing link and not yet recognized as such, between hitherto unrelated provinces of life and learning; a prophet unappreciated in his own country (Hungary) and by his own craft of scholars, for reasons which he pertinently explains and makes intelligible at his own cost.

To one not born a Jew, or reared in the East, the story of the early years of Vambéry must be of absorbing interest. His father, learned in Talmudic lore, a failure in all else that was external and practical; his mother, valiant reverer of her lord, able alone to cope with life, but not when handicapped by the millstones of two successive husbands, Jews both, but both unbusinesslike, despite the exclusive characterization of that race in the West; her nature an amalgam of hard sense and superstition that fitted her to give heroic counsel to her son, yet led her footsore and with fruitless expenditure after impossible cures through almost incredible effort, again for his dear sake; his own strange struggle, from extreme poverty, through lameness and every external disadvantage, to an education; his years of necessary self-support on wretched wages and conditions, sitting in the intelligence office at the tav-

ern until his talents as teacher were sold off by the broker to, one almost says, the lowest bidder, as they board the schoolmistress round in Maine; the passion for information, the rapture in reading, the unremitting acquisition of languages, the wander impulse, the burning desire to visit lands whose languages and literatures he knew or was going to know; his restlessness and rashness throughout life, his extreme imprudence, his neglect even to forgetfulness (beforehand) of money matters, yet his extraordinary faculty for making his way in the world, often a poor way enough and yet arriving at the land of his heart's desire, received by people ill- and well-to-do, and rising in preferment and in reputation to heights unusual for anybody, and most of all a foreigner.

So he went to Turkey, penniless almost from the start, an aimless, dreamed lad, and yet not dreamy in his ways of attaining his end and securing a livelihood meanwhile. He read to the ship's cook and got good food; he met his exiled countrymen in Constantinople and found warm hearts, if a hard floor to rest on; he taught and was taught, got knowledge and got known, told their own tales to the illiterate or idle in cafés and bazars, and entertained the Turks until he became an entertaining and educated Turk himself to all external appearance. And so he rises in position and importance to comfort and to luxury, never forgetting at the back of his mind the hungry little lame Jew boy who made the start to obey his mother's counsels and relieve the crowded home, to redeem the father's name and family fortune; never forgetting either the impassioned ideals of knowledge and experience "under the sun," which finally he compassed in the strange lands of his strange fancy, the Near and Middle East.

Settled and established, to all appearance, prized as a natural mediator between East and West, a friend of either court, he breaks away again, at obvious personal disadvantage and against all common sense, for the roving life he

\* THE MEMOIRS OF ARMINIUS VAMBERY. New York: E. P. Dutton & Co. 2 vols. \$5.00.

loved, and joins a caravan for Turkestan and Persia, a common mendicant dervish, a religious beggar-tramp, momentarily exposed to deadly danger in that land of fierce and pitiless fanaticism, obliged for years not only to know but perpetually to practice all the tedious ceremony and complicated custom of the East, to live with trained detectives and yet escape suspicion. Thus this singular man lived miracles, learned courage (as he tells us), became hypnotically identified with his disguise of dervish, deceived the very elect and in his part even forgot himself, outdid the zealots in devotion to devotions, drank of experience from bead to dregs, passed through hair-breadth vicissitudes of danger and of death, and apparently was only once detected, despite protracted scrutiny, the fixed, suspicious stare of the Oriental and the month-long following of his every move, detected, as a Persian potentate told him in Europe later, by the moving of his foot to music, a thing that Orientals never do. Taught by the officials of the religions, versed beyond the elect in the vernacular dialects and the literary language, modern and ancient, of each race, he read the face of the times and felt the pulse of life, and came home safe, tho one gasp to speak it, the best informed individual alive upon opinion and conditions in the East.

### Constance Trescot \*

THIS is a good story, and when we consider that it was written by a man seventy-five years of age some features of it are remarkable. An old man may have more sense than a young one, and he generally has more wisdom; but he passes out of a certain understanding. He forgets the dominant sensations which control that young life out of which all romances are fashioned. He remembers the receipt for love, but lacks the emotional power of expressing it. He writes it all about the hero and heroine, but he cannot *inform* either the real sense of it or convince the reader that they are living creatures in the Hawthorne hedge of human springtime.

Dr. Mitchell, however, is an exception to the rule. Constance Trescot is not the sawdust darling of an old man's imagination. She is a violent, virtuous, beautiful woman, absorbed in the singleness of love. It is that fever which renders some women so attractive in the beginning, and so wearing afterward to those who happen to be the victims of their affections. Thus, it is apparent that in the course of time Constance would have absorbed the peace of her husband's gentler mind. She belonged to that class of people who burn their way through the lives of others and die disconsolate in their own ashes. They are unscrupulous by instinct, as likely to be dominated by hatred as love, and nobody was expecting to find such a character in an old man's story. Nor is that all. With a skill which could only come from an intimate knowledge of the relation of nerves to morality, Dr. Mitchell changes Constance Trescot's passion of love to that of hate.

The scene of the story is laid in a Missouri town, just after the war. Her husband is killed by Graycourt, a Southern lawyer, who incarnated the sullen, desperate disposition of the times and the section. From this point the woman vendetta begins. Constance haunts Graycourt with her hatred, deprives him of his property and prevents his marriage. And while the idea of revenge is very well developed, it is somewhat antiquated. Formerly the vindictive motive lay like a knife up every author's sleeve, but malice dramatized does not appeal as it once did to the popular imagination. It belongs more particularly to a lower form of mind, out of which we are really progressing. And while it is still a part of life, it ought not to be a feature of art.

The plot is simple enough, and the tale ends logically rather than dramatically. Dr. Mitchell declares that it is not founded, as most of his novels have been, upon what may be called a pathological analysis of character, but the reader sensitive to such distinction will observe that both Graycourt and Constance have dislocated neurons which account for their conduct and the fact that when circumstances almost invite family prayers and the rector into the tale, these two remain perverse, because a nervous shock

\* CONSTANCE TRESBOT. By S. Weir-Mitchell. New York: The Century Co. \$1.50.

has rendered them spiritually insane. And because he did not set this conclusion down in black and white the doctor pretends that he did not make out the case according to this diagnosis. He keeps the rector in his right hand all the time by way of intimating to everybody in the book that they will be held strictly accountable for the deeds done in the body. But really the minister does nothing more effective than discuss the sins of the leading characters. He no more fits into the situation than a chaplain does into an insane asylum. And having finished the story, the reader is likely to conclude that the best of it is the shrewdness and humor with which one maiden woman in it interprets the frailties of a certain old man.

## Religious Education

THE pressing need of improvement and reform in religious education is felt widely. The advance in psychology, which has led to the adoption of new principles of teaching in all secular branches, and the progress of Biblical science, which has revolutionized the attitude of well-informed people toward the Bible, have compelled dissatisfaction with the methods of religious instruction based on different views of the Bible and outworn principles of education. Sunday school workers, teachers of the Bible in schools, and thoughtful parents have all felt the need of new methods and new helps, and it may be said that no problems connected with the religious life are more pressing, and in no field does improvement promise more certain and beneficent results. The vigor with which these problems are attacked, and the interest shown in their solution, are indicated by the increasing number of books upon the subject, some of them of much ability and thoroughness.

Especially to be commended is Miss Chamberlain's *Introduction to the Bible for Teachers of Children*.<sup>1</sup> It is a most admirable elementary course in Biblical introduction, designed to give children of the fourth grade, or about ten years of

age, familiar acquaintance with the various books of the Bible and their varied character, and the ability to use the Bible intelligently. The lessons are well arranged, the suggestions to teachers are clear and stimulating, and the entire work shows diligence and thoroughness in preparation. Any teacher or parent of ordinary ability should be able with this manual to give children of ten to twelve years of age in a year's course of study more knowledge of the Bible than a pupil receives in his entire Sunday school experience under the old methods. Ministers who talk to children would find in these outlines something better than the "bairnly stories" they often use.

Professor Burton's *Studies in Mark*<sup>2</sup> aims to supply a text-book for grades eight to ten, similar to Miss Chamberlain's book for the fourth grade. The text of the Gospel is printed entire, in sections, with explanatory notes and questions.

The problem of a proper curriculum for a thoroughly graded Bible school is handled by Professor Pease.<sup>3</sup> His book presents a suggested course of study, in detail, for all grades of pupils, with justification for the suggestions advanced by means of the principles of psychology and pedagogy. Any one desirous of pursuing independent lessons with a class of any grade would find help in these outlines.

The *Proceedings of the Second Annual Convention of the Religious Education Convention*<sup>4</sup> forms an octavo volume of over 600 pages. "The Bible in practical life" was the general theme of the convention, but almost every topic connected with religious education was touched upon. A good index makes the volume serviceable.

A book whose value and importance are entirely out of proportion to its size is the essay of Mr. McKinley on *Educational Evangelism*.<sup>5</sup> It is one of the most sensible and thoughtful presentations of

<sup>2</sup> STUDIES IN THE GOSPEL ACCORDING TO MARK. By Ernest DeWitt Burton. Chicago: The University of Chicago Press. \$1.00.

<sup>3</sup> AN OUTLINE OF A BIBLE SCHOOL CURRICULUM. By George William Pease. Chicago: The University of Chicago Press. \$1.50.

<sup>4</sup> THE RELIGIOUS EDUCATION ASSOCIATION: PROCEEDINGS OF THE SECOND ANNUAL CONVENTION, PHILADELPHIA, MARCH 2-4, 1904. Chicago: Executive Office of the Association.

<sup>5</sup> EDUCATIONAL EVANGELISM. By Charles E. McKinley. Boston: The Pilgrim Press. \$1.00.

<sup>1</sup> AN INTRODUCTION TO THE BIBLE FOR TEACHERS OF CHILDREN. A Manual for Use in the Sunday Schools or in the Home. By Georgia Louise Chamberlain. Chicago: The University of Chicago Press. \$1.00.

what the spiritual discipline of youth should be, both through the pulpit and in the school, that has recently appeared. The author confesses indebtedness to President G. Stanley Hall, Prof. Wm. James, and others, but he shows himself an original thinker, a man of insight, and a true lover of youth. Clergymen and all others interested in the religious influence of boys and girls from sixteen to twenty will find much that is very suggestive in this essay.

The thesis of Professor Rishell is indicated in the title of his book, *The Child as God's Child*.<sup>6</sup> He discusses baptism and church membership and the teaching of the home and Sunday school from the point of view of one who believes in gradual growth into the religious life.

Several treatises on the study of the New Testament may be grouped conveniently with the foregoing books on the principles and methods of religious education. The elaborate article on Jesus Christ in Hastings's Dictionary of the Bible is now issued separately.<sup>7</sup> Professor Sanday is a thorough scholar and one of the most cautious and conservative men among those who accept unreservedly the principles of historical criticism. His article on Jesus has been recognized as a careful piece of work, but it falls short where one most wants light, in the point of a clear, satisfying statement of Jesus's own thought and belief. The *Outlines of the Synoptic Problem*<sup>8</sup> sets forth present opinion as to the synoptic question, and gives an outline of the life of Jesus and a summary of his teaching, according to the first three Gospels. The *Teaching of Jesus*<sup>9</sup> is one of the excellent handbooks for Bible classes, edited by Prof. Marcus Dods and Dr. Alexander Whyte. It is a brief manual, but carefully prepared, and based on the best recent works, both German and English.

#### The Sabbath School Teacher-Training

<sup>6</sup> THE CHILD AS GOD'S CHILD. By Rev. Charles W. Rishell, Ph.D. New York: Eaton & Mains. 75 cents.

<sup>7</sup> OUTLINES OF THE LIFE OF CHRIST. By W. Sanday, D.D., LL.D. New York: Charles Scribner's Sons. \$1.25.

<sup>8</sup> OUTLINES OF THE SYNOPTIC RECORD. By the Rev. Bernard Hugh Bosanquet, M.A., and Reginald A. Wenham, M.A. New York: Longmans, Green & Co. \$1.70.

<sup>9</sup> THE TEACHING OF JESUS. By Rev. D. M. Ross, D.D. New York: Imported by Charles Scribner's Sons. 60 cents.

*Course*<sup>10</sup> contains a course of study for three-quarters of a year, and a forthcoming volume will complete the scheme. At the end of the course the Presbyterian Board of Publication, Philadelphia, will arrange for an examination for such as desire it, and a teacher's diploma will be granted to such as satisfy the examiners. This first year's course is admirable in every respect. The well selected range of subjects is concise, but sufficiently comprehensive; and even if the book is not used with a view to a diploma, many Sunday school teachers will find it advantageous to make it the ground-plan of private study.

To those who are engaged in Sunday school and Bible class work, even when they possess some knowledge of the technic of teaching, the preparation of a lesson often presents difficulties that are discouraging. Persons in this predicament will find valuable assistance in a very handy volume, *How to Plan a Lesson*.<sup>11</sup> Its four chapters on the spiritual thought, which should be the dominant mental note, the lesson plan, the mode of working out that plan, and the various phases of mind met with in pupils, not only bear the marks of successful experience, but also of a mind thoroughly in harmony with the spiritual tone which the author desires to inculcate.

The teachers of days gone by too frequently fell into one of two mistakes: they either allowed their pupils to read continuously verse after verse of Holy Scriptures, throwing in an occasional word of comment or question, or they lapsed into exhortation, pure and simple, often with a very indifferent audience. Instruction to be real must be concentrated and vivid, must have a special object to be studied in all the bearings which the mind of the pupil can comprehend. For those whose lot it is to take charge of such a Bible class as is met with in Young Men's Christian Associations *Studies in the Life of Jesus Christ*<sup>12</sup> will be found very useful. One

<sup>10</sup> SABBATH SCHOOL TEACHER-TRAINING: *First Year*. Philadelphia: The Westminster Press.

<sup>11</sup> HOW TO PLAN A LESSON. By Marianna O. Brown. New York: Fleming H. Revell Co. 50 cents.

<sup>12</sup> STUDIES IN THE LIFE OF JESUS CHRIST. By Edward I. Bosworth. New York: The International Committee of Young Men's Christian Associations.

advantage of it is that a single Gospel, that according to Mark, is taken as the standard, reference being had to the others when necessary for elucidation. In this way there is a unity of method secured which could not be attained by following what is known as a "Harmony of the Gospels." The annotations, suggestions and applications are such as will enable the teacher to hold the attention of the class and to give vital interest to his instruction.

The same may be said of a very acceptable volume on *The Prophets as Statesmen and Preachers*,<sup>13</sup> and still more markedly about *The Apostle Peter: Outline Studies in His Life, Character and Writings*.<sup>14</sup> The former is drawn up with care, succinctly and clearly, and presents this interesting phase of Biblical study in a form very suitable for the advanced scholars of the Sunday school or Bible class. The latter will form a very suggestive handbook even for the pastor who purposes to give a course of lectures to his flock. It is well arranged and full.

**A History of England: Imperial Reaction; Victoria, 1880-1901.** By J. Franck Bright, D.D. New York: Longmans, Green & Co. \$1.50.

Mr. Bright holds that it is the province of history to note characteristic facts and tendencies; and it certainly cannot be charged against his *History of England from 1880 to 1901* that it gives more attention to tendencies than to facts. The narration of facts predominates; and it is only incidentally that he emphasizes tendencies in English life—mostly in a backward direction—from the beginning of Gladstone's second Administration to the death of Queen Victoria. Many English statesmen and politicians who had their part in making history in the first ten or fifteen years covered by Mr. Bright's volume had died before it was written; and except in about two cases—those of Beaconsfield and Salisbury—their memoirs and correspondence had been published. There is

one indication that Mr. Bright has drawn a little on Morley's "Life of Gladstone." But there are few or no indications that he has used the memoirs of any of the men who were Mr. Gladstone's colleagues in Parliamentary life. There are no footnotes, and no list of sources and authorities; and generally Mr. Bright's history gives one the impression that it might have been written almost entirely from the files of the *London Times*. It has its limitations both as to the authorities used and the subjects covered; but within these limitations it is none the less a most serviceable contribution to the history of England in the last quarter of the nineteenth century. It is all the more serviceable because the likelihood is that we shall have to wait some years for any history of that period which will be full and adequate, which will have more human interest, and which will be more permanent in its value, than the narrative of twenty-one pregnant years which Mr. Bright has compressed into his 295 pages. Mr. Bright's work is a splendid example of condensation; and that is about the best that can be said for it. It is almost exclusively devoted to political movement in England and in the British colonies, and to Britain's relations with her neighbors on the Continent of Europe, and with the United States and the republics to the south of us. Home politics naturally come in for most attention; but at the same time Mr. Bright has not ignored a single international question in which England has been involved. With social England, with industrial England, with religious movements in England, and with the intellectual life of the country, Mr. Bright has had but small concern. Otherwise he would not have dismissed in two or three lines, relegated to almost the concluding page, the new prominence of the United States in the industrial world; and there would surely have been some note of the coming together of the Free Churches. There would also have been some mention of the great changes in the English press; for the Free Church movement and the New Journalism were both manifesting themselves before the reign of Queen Victoria came to an end in 1901.

<sup>13</sup> THE PROPHETS AS STATESMEN AND PREACHERS. Boston: The Pilgrim Press. 30 cents.

<sup>14</sup> THE APOSTLE PETER: *Outline Studies*. By W. H. Griffith Thomas, B.D. New York: Fleming H. Revell Co. \$1.25.

**The New Knowledge.** A Popular Account of the New Physics and Chemistry in Their Relation to the New Theory of Matter. By Robert Kennedy Duncan. New York: A. S. Barnes & Co. \$2.00.

The present time is to the scientist what the period of the French Revolution is to the sociologist. The discovery of Copernicus that the earth revolves

comprehension the ordinary educated man has of the common terms of physics and simple algebraic formulas. But he has accomplished with great success the much needed work of bringing together the recent discoveries in many fields and discussing, tho perhaps too fully and confidently, the startling speculations suggested by them. Old questions, such

as why the comet's tail streams away from the sun, what is the cause of the aurora borealis and what is its connection with sun spots, why the atoms have a definite weight and why their properties vary with this weight, how old is the earth and how long will it last—all have some light thrown upon them by *The New Knowledge*. The old idea that the universe was like a clock wound up in the beginning and running down ever since is apparently giving way to the conception of a self-perpetuating

Photograph by Ordinary Daylight of a Section of Pitchblende, by Sir William Crookes

around the sun and of Darwin that species were not immutable were no more revolutionary or important in their effects upon fundamental conceptions in philosophy and theology than the discoveries in regard to the ultimate constitution of matter now being given so rapidly to the world. Of the extent and significance of these changes in scientific thought the world at large is little aware, partly from general inertness of mind, partly for want of such popular expositions as this book. Professor Duncan has not the ability of a Tyndall or a Huxley to bring a new conception vividly before the mind of the reader. Besides, he does not realize how little real

Photographic Imprint of the Same Section of Pitchblende as it Imprinted Itself in the Dark When Laid on a Plate Enveloped in Black Paper. The White Portions of the Print Are Due to the Bequerel Rays

Illustrations from Duncan's "The New Knowledge." Barnes

and eternal universe. Rutherford has shown that there is enough radio-active matter in the earth to account for its

internal heat without assuming that it was once molten and is now cooling down. Professor Duncan explains in an interesting way such subjects as the new forms of radiation, the electrical theory of matter and the evolution and decay of atoms and of suns, which all should know something about and few do.

**Love Triumphant.** By Frederic Lawrence Knowles. Boston: Dana, Estes & Co. \$1.00.

Mr. Knowles's volume contains some very good verses.

"Helen's lips are drifting dust;  
Ilion is consumed with rust;  
All the galleons of Greece  
Drink the ocean's dreamless peace;  
\* \* \* \* \*

Only one thing, undefaced,  
Lasts, tho all the worlds lie waste  
And the heavens are overturned.  
— Dear, how long ago we learned!"

These are certainly very pretty. But there are also some very bad ones, as thus,

"Burke, Cromwell, Luther, Paul and Socrates,  
Emerson, Milton, Cranmer, Charlemagne,  
Columbus, Tolstoy, Lincoln, Augustine,"

and thus,

"Retribution is but reclamation,  
Punishment remedial, self-redemptive."

The fact is, Mr. Knowles seems to be divided between two loves. Sometimes it appears to be a sort of universal benevolence which he is celebrating, sometimes an ordinary sentimental velleity. To the latter argument belongs the bulk of his best verse; to the former, for some reason or other, the less satisfactory portion of his volume.

**Travels Through the Middle Settlements of North America, 1759-60.** By Andrew Burnaby. [Source Books of American History.] Edited by R. R. Wilson. New York: A. Wessels Company.

Burnaby's *Travels* bears about the same relation to the American revolution that Arthur Young's "Travels" do to the French, but the former was not so acute in his observation nor so profound in his reflections as the latter. Nevertheless he gives a good picture of the condition of the country from Virginia to

Massachusetts, and we have no reason to distrust his truthfulness because of his failure as a prophet, as evidenced by his prediction in 1798

"that the present union of the American States will not be permanent or last for any considerable length of time; that that extensive country must necessarily be divided into separate states and kingdoms; and that America will never, at least for many ages, become formidable to Europe; or acquire, what has been so frequently predicted, universal empire."

**The Temper of the Seventeenth Century in English Literature.** By Barrett Wendell. New York: Charles Scribner's Sons. \$2.00.

Professor Wendell, whose love for England and the English has been often commented upon and even parodied, received what he must have regarded as the highest honor of his life in the invitation—the first ever offered to an American—to deliver the Clark lectures at Cambridge University. And, indeed, we have every reason to feel satisfied with our literary ambassador. To many Americans the temper of Barrett Wendell is more interesting than the temper of the seventeenth or any other century; the Harvard undergraduates at any rate are so entertained by the manner of his lectures that the matter—and whether or not it be true—becomes for the moment of secondary importance. One wishes in reading these discourses that one might have had a place among the English auditors and have overheard their comment as they left the hall. We may be sure that they listened to the foreigner with keen attention, for Mr. Wendell never delivered a dull lecture or wrote a dull page in his life. The title of this book is more philosophical than the contents warrant; instead of obtaining one final impression, we remember the separate remarks—often wise, suggestive and illuminating—on separate authors. Mr. Wendell's books resemble the works of Emerson in one respect; the familiar criticism that in Emerson's essays the whole is always less than the sum of its parts applies very well to our lecturer. He is invariably worth reading, worth our attention; but it is the *obiter dicta*, and not the conclusion, which we value and remember.

## Literary Notes

FUNK & WAGNALLS announce that they have begun the preparation of their "Standard Encyclopedia." This is welcome news for the excellent work done by these publishers in their twelve-volume Jewish Encyclopedia and their Standard Dictionary leads us to expect something of such value and convenience that it will make its own place.

...Bishop Potter's much bruited views on temperance reform find authoritative statement in "The Drink Problem in Modern Life," which is issued by Thomas Y. Crowell & Co. in their useful "What is Worth While" series. (30 cents.) It is the substance of the Charge delivered at a New York Diocesan Convention, which resulted in the establishment of the Subway Tavern.

...We have seen the announcement of the appearance in June of a new bi-monthly to be called *The New York Review* and to be edited by the professors of the Dunwoodie Seminary at Yonkers. It will have a peculiar character and will be a new thing in American Catholic literature, and its aim will be, positively and constructively, to harmonize the ancient faith with modern thought. Its editors will not be afraid of higher criticism and will not be set to confute it, but rather to gather its fruits. We suppose it will thus represent the liberal element in the Church, for its editors tell us that "the strides made in scientific and historical research during the past half century have forced upon us the consideration of new problems and have made necessary the re-statement of many theological positions." Very able men in Europe and America are to be contributors and its future course will be well worth watching.

## Pebbles

*Boston Terrier*: "In Boston we're starting a dog college." *Pug*: "What's the curriculum?"—*Life*.

... "Are you Hungary?" "Yes, Siam." "Well, come along; I'll Fiji."—*National Geographical Magazine*.

... "What is meant by the expression, 'music of the spheres?'" "The clinking of the high balls."—*Yale Record*.

...Our education was so limited that we are unable to tell the difference between ruffianism and college "spirit."—*Atchison Globe*.

...A local poet indited a sonnet to his sweetheart entitled, "I kissed her sub-rosa." The compositor knew better than that, and set it up, "I kissed her sub-nosa."—*Wyoming Student*.

...*John*: "Where is the best place to hold the world's fair?" *Mike*: "Around the waist."—*The Woman's Home Companion*.

...Judging from the doings of women's clubs, the next great war will be between the men and the women.—*The Women's Journal*.

...*Flunkers*: "But I don't think I deserve an absolute zero." *Professor*: "No, sir, neither do I. But it is the lowest mark I am allowed to give. Good day."—*Yale Record*.

... "Can't I go out in the backyard and play in the garden, mamma?" "Certainly not, child. You must stay in and study your nature books."—*Life*.

...An Atchison man refuses to go to church; he says that since the church voted to receive \$100,000 of tainted money, it is not good enough for him.—*Atchison Globe*.

... "Speak to me," she pleaded, and looked into his deep brown eyes. "Speak to me," she repeated, and stroked his soft curly hair. And this he could not resist. "Bow-wow," he said.—*The Princeton Review*.

She meant to kill him with a look,  
Such had been her plan.  
She happened to be cross-eyed,  
And hit another man.

—*Wyoming Student*.

...DOUBTFUL.—*Mayme*: "So you kissed Jack Tuggins the other evening, did you?" *Edyth*: "The idea! Did you get it from him?" *Mayme*: "I don't know; but I hardly think it was the same one."—*Columbus Dispatch*.

...AN ENGLISH JOKE.—There is one kind of rat that we never find deserting a sinking ship—that is, not in Russia. That is the Autocrat.—*Punch*.

Little drops of acid,  
Little grains of zink,  
Raise a lot of bubbles  
And a fearful stink.

—*Harvard Lampoon*.

... "Beg pardon, sir." "What for, sir? What have I done?" "I mean, I beg pardon, sir." "Well, sir, what have you done?" "May I take you apart for a moment, sir?" "Certainly not! You'd never be able to put me together again, sir." "I mean, may I lead you aside for a minute?" "Quite unnecessary, sir; I can walk without leading." "Of course, sir; I mean, would you mind stepping one side?" "Which side?" "It doesn't matter, sir; I wanted to speak to you, that was all." "Oh, then you've changed your mind? Well, good day, sir." "Wait a minute, please; can't I get you to subscribe to the Standard Dictionary, sir?" "No, sir; I subscribed for it some time ago."—*The Critic*.

## The Carnegie Foundation

MR. ANDREW CARNEGIE has added to the long list of his contributions to the cause of popular education a gift of ten million dollars to provide retiring pensions for professors in universities, colleges and technical schools in the United States, Canada and Newfoundland. The fund in its present form consists of first mortgage five per cent. bonds of the United States Steel Corporation of a market value of \$11,500,000. It will be administered by twenty-four trustees, twenty-one of whom are university and college presidents, among them being President Eliot of Harvard, President Hadley of Yale, President Butler of Columbia, President Harper of Chicago and President Jordan of Leland Stanford. These trustees will be incorporated, and the corporation will be known as the Carnegie Foundation.

This is in various respects the most remarkable of Mr. Carnegie's bequests and it is likely to have far-reaching consequences.

In a letter to the trustees setting forth his purpose and the conditions attached to the gift Mr. Carnegie frankly recognizes and declares that professors in American colleges and universities are the most poorly paid of all professional men. He states further his conviction that in many instances educational progress is retarded because it is impossible to dismiss men advanced in years, whose usefulness is practically at an end, and to replace them with vigorous younger men. He believes that an adequate provision for retiring pensions will provide a way out. It will secure higher efficiency in educational service, and will somewhat better the economic condition of the teaching profession.

Such unqualified recognition by a practical business man of one of the most vital facts of our present social order is in itself a long step ahead. It cannot be denied that the life of a professor has become, within the last fifteen years, distinctly less eligible than it was a generation ago. While the incomes of business

men, lawyers and successful physicians have enormously increased, and the scale of living of the well-to-do classes has correspondingly enlarged, the professor's salary has not been appreciably raised. Indeed, if converted into terms of the necessities and comforts of life, the average professorial salary is actually lower to-day than it was ten years ago, on account of the higher general level of prices. In a materialistic civilization, which rates men according to their wealth, the professor, unable to accept social invitations which he cannot possibly return, drops out of "society" and ceases to be an influential figure in the life of the community. This is not good for him, and it means the loss to "society" of precisely that element which makes "society" a cultural influence—something more than time-killing frivolity.

Under such conditions it becomes in the last degree inhumane to dismiss a professor from his office after long and faithful service without provision for a comfortable old age. That the consequent impossibility of promoting younger men to responsible positions is fatal to educational efficiency is a truth that needs no argument to support it.

Very serious questions, however, touching the expediency of the precise kind of provision that Mr. Carnegie has made inevitably arise. Doubtless many professors among the possible beneficiaries of the Foundation, already sensitive, will feel that they are being made an object of charity. A larger number will fear that the creation of so large a pension fund will set back the movement for adequate salaries. Not a few, among both professors and business men, will contend that on sound economic and moral grounds professors, instead of being pensioned, should be paid salaries that would enable them, if sensible and prudent, to make their own provision for retirement and old age.

Whatever force these criticisms may have it must be acknowledged that Mr. Carnegie has done everything that a man could very well do to anticipate and

minimize any possible evil reactions of his benefaction. He has most wisely excluded from the beneficiaries of his gift all State and sectarian institutions. By thus creating a favored class among colleges and universities he establishes a healthy competition. If the pension is in reality an economic gain to the professor, the pension-giving institutions will be able to hold out superior inducements to the best men. This "puts it up" to the State and sectarian institutions to make as good or a better offer, either by a pension system or by raising salaries.

Moreover, the letter of gift contains an ominous paragraph of far-seeing wisdom and broad-mindedness. It reads as follows:

"By a two-thirds vote they may from time to time apply the revenues in a different manner, and for a different tho similar purpose to that specified, should coming days bring such changes as render this necessary in their judgment to produce the best results possible for the teachers and for education."

With such an extraordinary provision as this in the document of gift, coupled as it is with a further provision giving to the trustees absolute power and discretion in financial management and in the investment of securities, there is no real ground for fear, we think, that the Carnegie Foundation will not be in fact what its creator, in a spirit of appreciation and of great good sense, has intended it to be, a vast power for the advancement of the highest educational interests.

## The Gas Business in Cities

CHICAGO is not the only American city in which questions relating to municipal franchise corporations now command the attention of the people. In New York and Philadelphia, however, the corporations that excite interest at this time are not the railway companies, but those which sell gas and electric light. Philadelphia's Council is about to extend for 75 years and upon extraordinary terms the lease of the city's gas works to the United Gas Improvement Company, and in New York a committee of the State Legislature, having completed an investigation of the local gas and electric light monop-

oly, has submitted its report, with important recommendations.

It seems incredible that the people of Philadelphia should consent to the agreement which the local political bosses have undertaken to make with the present lessees of the gas works; but the consummation of this bargain appears to be expected by a loudly protesting press, and the Mayor (for whom the clergymen of the city prayed publicly and in unison a few weeks ago) has conveniently taken a vacation. The present lease will expire in 1927. By the pending ordinance it is to be extended until 1980. Those who control the city's affairs need money. They propose virtually to pawn the city's interest in the present lease and in its gas property for \$25,000,000 in hand, surrendering more than \$100,000,000 in prospective revenue together with concessions of much value for which provision is now made. At present the price of gas is \$1, and there is (by the terms of the existing agreement) to be a gradual reduction until the price shall be 75 cents, in 1918. The people have the right to buy out the lease in 1907 and the right to take the property, free of charge, with all improvements, in 1927. They receive from the property an annual income of about \$650,000, which is growing year by year. A conservative estimate makes the total to be received before 1927 more than \$30,000,000.

It is now proposed that for \$25,000,000 in hand all these advantages shall be surrendered, together with such income as would accrue in the 53 years following 1927. The right to buy out the lease, the right to take the property free of charge in 1927, the progressive reduction of price, the annual income for 75 years, surely exceeding \$100,000,000—all these are to be given up for \$25,000,000 in ready cash. For under the extension the income is to cease, and there is to be no reduction of price until 1927, and thereafter for 53 years the lessee is to have the right to exact 90 cents per thousand.

Only in darkest Pennsylvania would any one interested in municipal reform expect to hear of a transaction like this. In no other American city would the

people permit themselves to be trampled upon and robbed in this way. But a majority of them appear to like it; why, we have never been able to find out. It is inexplicable, like the Pennsylvania worship of the late Mr. Quay.

Gas is now sold in New York for \$1 per thousand feet. The committee of investigation recommends that the price be reduced by law to 75 cents; that the pressure shall not be permitted to exceed  $2\frac{1}{2}$  inches; that a standard of purity and illuminating power be fixed and maintained; that the price of electric current for light, heat or power be reduced by law from 15 cents per kilowatt hour to 10 cents; that the city be authorized to use its water power for a municipal electric lighting plant, and that the whole lighting business be placed under the control of a new State Commission. Action upon these recommendations has been delayed by the opposition of Tammany's men in the Legislature. Tammany leaders entertain a friendly regard for the capitalists who control the lighting monopoly, and have an eye to contracts which these gentlemen must award to somebody.

Interesting facts were ascertained by the investigators. The average cost of the gas, delivered to consumers, is 61 cents, and in projected new works it will be largely reduced. All the companies are under substantially one and the same financial and executive control. The leading corporation has an inflated capital of \$80,000,000, aside from its bonds, altho the actual value of its plant and franchises does not exceed \$30,000,000. It is by no means clear that it has any franchise rights in the city's streets, nearly all of the original franchises (to companies afterward combined or absorbed) having expired. Other franchises are probably forfeitable on account of illegal consolidation. Stock has been issued upon the basis of such franchises, but the assessment of them for taxation has been resisted. One of the constituent companies was required by its charter to give consumers half of all its earnings in excess of 10 per cent. This requirement has been evaded. The value of the property of the electric lighting monopoly is

about \$35,000,000, but the corporation has issued \$45,000,000 in stock and \$40,000,000 in bonds. With respect to the conduits by which this monopoly is maintained, the company has not complied with its obligations to the city, and has sought to mislead the city's officers as to the cash actually expended. The entire cost of current, delivered, does not exceed  $6\frac{1}{2}$  cents per hour, and the city has been required to pay three times the rates given to some favored private consumers. By all the companies the power of monopoly appears to have been called good will, and it has been very liberally capitalized. But with all this inflation of capital the profits have been so large that the gas stock has a market value of more than \$200 a share.

It is by such disclosures, as well as by a prevailing conviction that money unjustly taken from consumers is used to obtain new concessions or to prevent an enforcement of just and legal obligations, that the growth of public sentiment in favor of municipal ownership is stimulated. Philadelphia's memorable experience in municipal ownership of a gas supply is frequently cited in opposition to such ownership. But Philadelphia will submit cheerfully even now to almost anything in the shape of municipal jobbery, and it may be that her people are not fit to be trusted with a municipal undertaking of this kind. With operating ownership, however, they would find it difficult to do worse than they are now doing in this matter of a gas lease. And it does not follow that other American cities whose people have been robbed, and whose official representatives have been corrupted, by public service corporations, cannot reduce consumers' expenses and increase the supply of public honesty by assuming the control and operation of some general utilities, whose present management breeds corruption and is characterized by extortion.

### Iron Rust

IRON is one of the most timid of metals. It has a great disinclination to be alone. It is also one of the most altruistic of the elements. It likes almost every other element better than itself. It

has an especial affection for oxygen, and, since this is in both air and water, and these are everywhere, iron is not long without a mate. The result of this union goes by various names in the mineralogical and chemical worlds, but in common language, which is quite good enough for our purpose, it is called iron rust.

Not many of us have ever seen iron, the pure metal, soft, ductile and white like silver. As soon as it is exposed to the air it veils itself with a thin film of rust and becomes black and then red. For that reason there is practically no iron in the world except what man has made. It is rarer than gold, than diamonds; we find in the earth no nuggets or crystals of it the size of the fist, as we find of these. But occasionally there fall down upon us out of the clear sky great chunks of it weighing tons. These meteorites are the mavericks of the universe. We do not know where they come from or what sun or planet they belonged to. They are our only visitors from space, and if all the other spheres are like these fragments we know we are alone in the universe. For they contain rustless iron, and where iron does not rust man cannot live, nor can any other animal or plant.

Iron rusts for the same reason that a stone rolls down hill, because it gets rid of its energy that way. All things in the universe are constantly trying to get rid of energy except man, who is always trying to get more of it. Or, on second thought, we see that man is the greatest spendthrift of all, for he wants to expend so much more energy than he has that he borrows from the winds, the streams and the coal in the rocks. He robs minerals and plants of the energy which they have stored up to spend for their own purposes, just as he robs a bee of its honey and the silk worm of its cocoon.

Man's chief business is in reversing the processes of nature. That is the way he gets his living. And one of his greatest triumphs was when he discovered how to undo iron rust and get the metal out of it. In the four thousand years since he first did this he has accomplished more than in the millions of years before. Without knowing the value of iron rust man could attain only to the

culture of the Aztecs and Incas, the ancient Egyptians and Assyrians.

The prosperity of modern states is dependent on the amount of iron rust which they possess and utilize. England, United States, Germany, all nations are competing to see which can dig the most iron rust out of the ground and make out of it railroads, bridges, buildings, machinery, battleships and such other tools and toys and then let them relapse into rust again. Civilization can be measured by the amount of iron rusted per capita.

But we are devoting so much space to the consideration of the material aspects of iron that we are like to neglect its esthetic and ethical uses. The beauty of nature is very largely dependent upon the fact that iron rusts and, in fact, all the common compounds of iron are colored. Few elements can assume so many tints. Look at the paint pot cañons of the Yellowstone. Cheap glass bottles turn out brown, green, blue, yellow or black, according to the amount and kind of iron they contain. We build a house of cream colored brick, varied with speckled brick and adorned with terra cotta ornaments of red, yellow and green, all due to iron. Iron rusts, therefore it must be painted; but what is there better to paint it with than iron rust itself? It is cheap and durable, for it cannot rust any more than a dead man can die. And what is also of importance, it is a good, strong, clean looking, endurable color. Whenever we take a trip on the railroad and see the miles of cars, the acres of roofing and wall, the towns full of brick buildings, we rejoice that iron rust is red, not white or some less satisfying color.

We do not know why it is so. Zinc and aluminum are metals very much like iron in chemical properties, but all their salts are colorless. Why is it that the most useful of the metals is the most beautiful in its compounds? Some say, Providence; some say, chance; some say nothing. But if it had not been so we would have lost most of the beauty of rocks and trees and human beings. For the leaves and the flowers would all be white, and all the men and women would look like walking corpses. Without color in the flower what would the bees and painters

do? If all the grass and trees were white, it would be like winter all the year round. If we had white blood in our veins like some of the insects it would be hard lines for our poets. And what would become of our morality if we could not blush?

"As for me, I thrill to see  
The bloom a velvet cheek discloses!  
Made of dust? I well believe it;  
So are lilies, so are roses."

An etiolated earth would be hardly worth living in.

It is the iron in the leaves that enables the plants to store up the energy of the sunshine for their own use and ours. It is the iron in our blood that enables us to get the iron out of iron rust and make it into machines to supplement our feeble hands. In both animals and plants iron is the carrier of energy, just as in the form of trolley wire or third rail it conveys power to the electric car. Withdraw the iron from the brain as indicated by the pallor of the cheeks, and we become weak, faint and finally die. If the amount of iron in the blood gets too small the disease germs that are always attacking us are no longer destroyed, but multiply without check and conquer us. When the iron ceases to work efficiently we are killed by the poison we ourselves generate.

Counting the number of iron-bearing corpuscles in the blood is now a common method of determining disease. It might also be useful in moral diagnosis. A microscopical and chemical laboratory attached to the courtroom would give information of more value than some of the evidence now obtained. For the anemic and the florid vices need very different treatment. An excess or a deficiency of iron in the body is liable to result in criminality. A chemical system of morals might be developed on this basis. Among the ferruginous sins would be placed murder, violence and licentiousness. Among the non-ferruginous, cowardice, sloth and lying. The former would be mostly sins of commission, the latter, sins of omission. The virtues could, of course, be similarly classified; the ferruginous virtues would include courage, self-reliance and hopefulness; the non-ferruginous, peaceable-

ness, meekness and chastity. According to this ethical criterion the moral man would be defined as one whose conduct is better than we should expect from the per cent. of iron in his blood.

The reason why iron is able to serve this unique purpose of conveying life-giving air to all parts of the body is because it rusts so readily. Oxidation and deoxidation proceed so quietly that the tenderest cells are fed without injury. The blood changes from red to blue and *vice versa* with greater ease and rapidity than in the corresponding alternations of social status in a democracy. It is because iron is so rustable that it is so useful. The factories with big scrap-heaps of rusting machinery are making the most money. The pyramids are the most enduring structures raised by the hand of man, but they have not sheltered so many people in their forty centuries as our skyscrapers that are already rusting.

### The Southern Educational Conference

SOUTH as well as North there will be great sympathy for those who suffered in the accident to the special train which carried the Northern party to attend the Southern General Conference at Columbia, S. C. While four of the trainmen were killed, fortunately none of the visiting party lost their lives, altho several suffered very serious injury. The accident was the sad conclusion of a very useful meeting.

This eighth session of this conference of Northern and Southern educators was a magnificent victory of broad fellowship against narrow sectionalism. It met in a State where the leading newspaper has persistently lampooned the Northern members of the company as the "Ogden Caravan," the "Swell-belly Parade," the "extended abdominal pageant," and declared that the people of the South want none of their advice. The invitation to South Carolina did not secure from it any gentler hospitality. But this has afforded another illustration that great newspapers do not always represent the people. The educators of the South came in multitudes. Columbia gave them royal welcome. Governor

Heyward bade them "doubly welcome" for their cause. President Denny, of Washington and Lee University, Virginia, told the conference that in its membership there was "almost nothing unrepresented except provincial narrowness, petty animosity, selfish motive and ignoble purpose," and that leading newspaper knew well that the biting sting referred to its virulent criticism. So that paper replies:

"President Denny may protest, but the fact remains that the 'Ogdenites' are an organized party of strangers who have selected the South as a missionary field. . . . These Northern gentlemen at this time and in this manner came here to tell us that we are objects of commiseration, that we starve for the inspiration of Northern virtue and that we perish in besotted ignorance without their saving hand. . . . We resent it. We refuse to accept the largess of their pious pity, accompanied by the cool assumption of their superiority. . . . The South will educate itself with or without the Ogdenites. The movement surges in the deep heart of the masses. . . . To it the Ogden movement is as a dancing shallop upon a shoreless ocean. Yet this Southern president prates of this Conference as marking an 'epoch.'"

But this sort of bitterness is condemned by the educators and the people of the South. They know that the Southern Education Board has been careful to offend no Southern sensibility and has always sought and secured the support of such Southern men as Curry, Dabney, Dickerman, Aycock, McIver and Murphy. A multitude of Southern teachers approved President Denny's eloquent words, and the intelligent South laments the inhospitable ribaldry of the attacks upon it, as they lamented the accident which befell the Northern visitors before they left the State.

It is only from a Northern mouth that we find words uttered that call for criticism. A gentleman from New York took the liberty, at the closing meeting, to talk of race and suffrage. He said:

"We believe that the so-called reconstruction period wrought more for sectional misunderstanding and animosity than all the bitterness of the war.

"Race integrity is to be assumed in any discussion of the problems affecting our country. This does not mean that in the American people of the future there will not be the blood

of many peoples. But it does mean that the division of mankind into certain great distinct races will continue in America, so far as we can see, for all time.

"This being true, the American ideal must include not only justice to every man, but also justice to every race. So long as the community observes the principle of justice to the individual and justice to the race the community as such is, as it should be, free to decide how and by whom the Government should be administered. In other words, the State has the right to determine what conditions and limitations shall be put upon the exercise of the franchise."

If this language means anything more than general platitudes of justice to all, it means that the constitutional provisions in half the Southern States intended to exclude one race from the suffrage are approved. It accepts a perverse view of the reconstruction period. It talks of races when we ought to consider nothing but individuals, just as the Amendments to the Constitution treat men as men and forbid race distinctions. The "conditions and limitations" "put upon the exercise of the franchise" had just one purpose, to shut out a race, and were undemocratic and unchristian, and no Christian should apologize for them, at least not before a company of Southern educators.

But the great movement is forward, and is rapid. The South needs help as well as sympathy, and this Southern Education Board and its associate, the General Education Board, are doing their part, assisting the larger missionary boards that were earlier in the field. Millions of dollars have gone from the North to the South for education, and the South is increasing, as wealth increases, its own generous contributions to the great cause. Here there should be harmony and good welcome to good work.

## The Bible as Literature

WHAT will there be left to us of the Bible if the profane are to have their way? We have hardly got used to being told that it must submit to historical criticism, and now our dearest faith that its language and style are the unsurpassed model of literary construction is ruthlessly attacked by our most conservative

New York evening journal, which, after condemning its vocabulary, continues:

"More than mere choice of words, however, is involved in the art of composition. The structure of the sentence and the paragraph, the organization of the 'whole'—to borrow a term from the rhetorics—are even more important. In these respects the English of the Bible does not accord with the usage of today. Just as our vocabulary has enormously enlarged, so our sentence structure has developed in three centuries. The first four verses of the first chapter of Genesis, with the clauses loosely connected by *ands*, are examples of how not to make sentences:

"'In the beginning God created the heaven and the earth. And the earth was without form and void; and darkness was upon the face of the deep. And the Spirit of God moved upon the face of the waters. And God said, Let there be light, and there was light. And God saw the light, that it was good; and God divided the light from the darkness.'

"The paragraphs of the Bible are broken and obscured by the verse numbering; but the so-called 'paragraph-Bible' shows at a glance that the structure is primitive and amorphous. Macaulay and Newman are both fond of the biblical vocabulary, but they are removed by ten generations from the 'biblical paragraph.'

The writer then proceeds to assert "as a mere piece of narrative the story of David and Abraham, or even of the Prodigal Son, is by no means incomparable." Doubtless he could tell these stories better. We wish he would take those first four verses of Genesis and tell us how they ought to have been written. Let us see how he would drop out his objectionable "*ands*." Something like this, perhaps:

God commenced his process of creation by bringing into being the earth, and the heavens above it. The earth was primarily a chaotic mass, seething with vapor, through which no light could penetrate, until God caused the current of his breath to blow over the ocean. This prepared the way for the next stage in world construction, when God uttered the sublime creative word, "Let there be Light," when light appeared in response to the divine command; but as yet only God was present to recognize its beneficent nature. So the periods of light originated and successfully faded into darkness, separating night from day.

We had not thought of it before, but we now see that this is a great improvement in style. It corrects the structural conjunctivitis inflamed with the infantile

"ands," and instead of a style artlessly "primitive and amorphous," it gives a compactly articulated synarthrosis, pleasant to the ear as well as easy to understand.

### The Gospel of Good Seed

THE most significant feature in Western agricultural development is the movement of the vast crop-raising area toward larger production and better farming. The "gospel of good seed," as it is called, has swept the crop belt and the results are assuming proportions wonderful in extent and influence. The new fashion was started in Iowa one year ago, when a company of teachers from the Agricultural College was sent over the lines of a railroad system to instruct the farmers how to raise good corn. From town to town the instructors went, describing the best methods of selecting seed, the surest plan for cultivation and exhibiting the College's way of securing the largest crop possible. Never before had a traveling corn college, carrying a full faculty of lecturers, gone over a State. Every farmer who wished to attend the lectures was given a free pass to the nearest point of demonstration. When the corn of Iowa was harvested last fall it was found that it yielded 40,000,000 bushels more than the normal crop, and the people attributed the result to the efforts of the "Corn Special."

During the past winter other Western States have taken up the idea. A "Seed and Soil Special" was sent over the principal railway lines of Missouri. The attendance often was more than 1,000 farmers in a single day. High schools and colleges were dismissed that the pupils might hear the talks on scientific farming. In the territory traversed were found fields where corn has been planted continuously since the virgin soil was broken forty years ago. No fertilizer has been used; the stalks have been raked from the ground each year and burned. The enormous loss of such methods is astounding. The professors told the farmers that land that under such conditions is producing 25 bushels an acre would with proper care and proper seed selection raise 100 or 110 bushels.

It has been the same with wheat. Iowa

persisted in the old method until farms were producing 8 to 10 bushels per acre when they should have had 18 to 20 bushels. The seed wheat talks that have followed the corn specials have had a good effect in correcting the condition. The past winter's work of one party of lecturers has covered 600 stations and included over 1,000 addresses, each of which has been heard by from 100 to 1,000 farmers. It has reached over into Nebraska, and is to be followed during the early spring with talks on potato culture and the care of spring crops. Other States are clamoring for similar courses next winter, and the entire West will eventually be given the advantage of the new teaching.

In addition to taking the instruction to the farmers the agricultural colleges are helping communities by institutes to which are invited the farmers. Three or four days are devoted to practical demonstration of the best methods in dairying and crop production. At some of these gatherings in the coldest days of winter fifteen hundred farmers received instruction, taking back to their homes information that will materially add to their prosperity. These pupils are not alone the young people; middle-aged farmers who have toiled for years in the West sit eagerly drinking in the latest discoveries in their business. When they go home they put them into practice. More than that, they organize seed-breeding associations whose object is to learn how best to increase the yield and to preserve the fertility of the soil.

All this means much for the West. The plains region has wasted its resources prodigally, evidently proceeding on the theory that the lands were inexhaustible and the returns certain to continue abundant. Some older sections have demonstrated already the falsity of both theories and are trying to correct the errors of the past. Other and newer sections realize that it is but a matter of time when they too will fail and are wisely acting in advance.

It has been a favorite theory that when the tillable land became occupied, when the homestead area was all taken—as is practically the condition of to-day—the West would cease to provide the increas-

ing grain and vegetable returns that have for years made it the granary of the nation. But if the Western farmers add to their knowledge of the soil conditions and climatic changes a scientific comprehension of the power and resource inherent in rightly selected seed, we shall have to readjust some of the arguments so familiar in the past.

The Western farmers are in possession of remarkably advanced surroundings. With farm telephones and rural delivery lines covering the plains region even to the foot-hills of the Rockies, with daily papers delivered at their doors with almost the promptness with which the city subscribers are served, it needs but the bringing of the most advanced agricultural education to them to make them masters of the situation to a degree unexcelled by their brethren of the soil anywhere. This last task the railways are endeavoring to carry out, and seemingly with good success. Seldom has a new idea been received with heartier welcome.

The gospel of sowing good seed is a healthy and helpful one in any department of human existence. Its application to the development of farming interests ought to entail a particularly rich train of blessings.

## The Inter-Parliamentary Union

THE organization of the Interparliamentary Union was a stroke of genius. It does for parliaments what the Socialist Congress does for the peoples represented, for it brings nations into common action for a common cause. The head of the movement in this country is Congressman Bartholdt, who has represented a Missouri district for a dozen years. He had the wit to recognize the importance of the peace movement while other men thought it a hopeless counsel of perfection. He will preside over the next meeting of the Union, probably at The Hague. The next steps to be considered at that meeting, at least by the arbitration section of it, are the admission of the South American republics, which have led the way in arbitration; the formation of a model treaty of arbitration, under which certain claims will be referred automatically to The Hague, and, third, a plan for

the organization of an international legislative body which shall prepare an authoritative code of international law, there being nothing of the sort at present which can claim obedience. These are large plans and most important, and, since the creation of a judicial court at The Hague, they ought not to be thought impracticable.

What will be the basis of organization in the proposed International Congress? Mr. Bartholdt, who sails this week for Brussels, where a committee will arrange for the Interparliamentary Union, has suggested the following basis of organization for a Congress of two houses:

"1. An International Congress of two Houses, a Senate and a House of Deputies.

"2. Each nation to have two Representatives in the Senate, and representation in the House of Deputies proportionate to its international commerce.

"3. Each nation to choose and maintain its own Representatives in the International Congress, and to have power of recalling them at any time. The term of office to be eight years, unless otherwise fixed by each nation for its own Representatives.

"4. Each member to have one vote.

"5. Majority to rule in all matters, and concurrence of both Houses necessary.

"6. Each nation to have the right to withdraw at any time from the Congress.

"7. The territorial and political integrity of each nation represented in the Congress to be respected by all nations represented.

"8. Deliberations of the Congress to be confined to matters which directly affect intercourse between nations, and its resolutions limited to the declaration of general rules or principles for the conduct of such intercourse, and these resolutions to be recognized as law by the nations, unless they are vetoed by an agreed number of national Parliaments.

"9. Each nation to treat all other nations on equal terms in matters of commerce, whether they be or be not represented in the International Congress; except that any nation can raise a commercial barrier against any other nation equivalent to such other nation's tariff wall.

"10. While remaining in the Congress, each nation to have the right to arm itself according to its own judgment.

"11. War to remain a lawful mode of action in any dispute, except as the several nations agree to refer controversies to arbitration by special or general treaties of arbitration.

"12. The armed forces of all the nations represented to be at the service of the Congress for enforcement of any decree rendered by The

Hague Court, according to treaties of arbitration."

Some points in this basis will raise discussion, but the general drift of it is sound, and nothing would please us better than that the Executive element provided for in the last paragraph might be added to the judiciary of The Hague Court and the proposed International Congress.

#### A Case of "Tainted Money"

When it was announced in St. Petersburg after the massacres of January 22d that the Czar had given 50,000 rubles for the relief of the families of the victims it was doubtless expected that the act would be recognized as indicating the kind heart and generosity of "the little father," and that it would tend to remove from the minds of the people any disagreeable impression which his methods of maintaining order might have produced. With his customary tact the Czar placed this money for distribution in the hands of Governor-General Trepoff, by whose commands the massacre took place. But it takes two to make a donation and in this case the said party of the second part has interposed an unexpected obstacle to the carrying out of the Czar's benevolent impulses by refusing to receive the money. There have been only seven applications to General Trepoff for assistance from the fund. Relief funds for the same purpose were also offered by the socialists, the Society of Engineers and the Duma, or Municipal Council, of St. Petersburg. The money of the socialists has all been distributed; 1,650 applications have been made for assistance from the fund of the Society of Engineers and 830 from that of the Duma. Yet all money is the same.

#### Have the Russians Lost Port Arthur?

It is commonly believed that the Japanese now have possession of Port Arthur, but if we examine into the question we see that this belief is based on mere newspaper reports, which are so notoriously unreliable that they are not accepted as competent evidence by courts of law or by careful historians. It is upon official documents that the historian of the

future will base his narrative of our own times and when we turn to these we find that they tell quite another story. The March issue of the *Russian Army Register* states positively that certain Russian regiments are still stationed at Port Arthur and Dalny under the command of General Stoessel. The Commission appointed to devise plans for a system of public schools at Port Arthur has presented its report, which has been adopted and put into effect by the highest authority, which surely is satisfactory proof that Port Arthur contains Russian children and that the city is sufficiently quiet for them to continue their studies. The payrolls of the Russian Government show that the civil officers at Port Arthur are drawing their salaries regularly. If any one questions the Russian public documents, his attention should be called to the fact that the British reports confirm the same theory. The British lease of Wei-hai-wei from the Chinese Government expires whenever the Russians leave Port Arthur. Now the British still hold Wei-hai-wei, therefore the Russians still hold Port Arthur. There is a chance for a library full of "historic doubts" on this question.

**Religious Freedom in Russia** It is a great piece of news, if it will only mean what it says, this proclamation of religious freedom for Russia. Hereafter, so the Czar declares, there shall be no persecution for religion's sake, no sending of the Old Believers to the Caucasus, no driving of them to the wilds of Canada. It was reported the other day that the wealthy Old Believers had offered to contribute an incredible sum to carry on the war if they might have religious freedom. That story may be all moonshine, but this is clear, that the resentments that go with religious persecution are deeper than any other. Centuries do not extinguish them. The Bloody Mary is not forgotten. Orange and green still break heads in Belfast. This new promise, if kept, will do much to relieve the bitter feeling toward the Government. But, unfortunately, the relief does not include the Jews;

they are still regarded as foes to be fought and suppressed. As a step this announcement is very important, but chiefly because it is the first step that counts. It implies many more steps before there can be true liberty in Russia.

**Methodist Reunion** The Methodists separated at the time of the Civil War. Two nations meant two Churches. So did the Presbyterians; so did the Baptists. These were great denominations. But so did not the Episcopalians, or, at least, they found it easy, greatly to their credit, to come together after the war. So did not the Congregationalists, for the very good reason that they had never been able to establish churches in the slave-holding States. Now forty years have passed and still the two Methodist, or Presbyterian, or Baptist Churches have not yet been able to come together into one national Church. The Board of Bishops of the Northern Methodist Church and the corresponding Board of the Southern Church have been meeting in Louisville, Ky., and Bishop McCabe, Northern, at a public meeting declared himself eager for reunion. Said he:

"I want to be quoted to the people and the Bishops of the Southern Church who are now in session, only a few squares from here, as in favor of restoring the organic union of the two branches of Methodism."

Why should not all the bishops want it, and all the people? At present in Louisville there are Northern churches set against Southern churches in constant rivalry. This division is a shame to American Christendom.

**Indian Tribal Funds** We have not been able to understand why Bishop Hare and some of the missionary societies should continue to object to the appropriation of the income of Indian tribal trust funds to denominational schools under the very strict limitations which the President laid down in his late letter. We have authority to say that it is the policy of the Indian Bureau to limit allotments to denominational schools to the

proportionate share of those Indians who sign the petition. And, further, it is the plan to allot the trust funds, on the Bureau's books, to the individual Indians in each tribe. Then the interest on each individual share becomes a debt to that Indian instead of a part of the debt to the tribe. He will know just what he has the right to dispose of, and when he proposes to give his income away he will know that it comes directly out of his own pocket, and not out of the common purse of the tribe. This is all in line with individualism and business. At intervals, as the President can be assured that an Indian, full-blood or mixed, is entirely capable of taking care of his own property, as thousands of them are, he will order the release to those Indians of the principal of his fund in the Treasury, so that he can use it for such investment as he desires. From that day the Indian will cease to be an Indian, even quasi, and become simply a citizen. And this is all that we can wish.

The "Bane" of  
Politics

A North Carolina writer who means to be thoroughly fair discusses the factors in the negro problem in *The Hartford Seminary Record*, and makes this general statement:

"Politics has been the bane of the black man, as all begin now to see. He has been made the sport of the demagog, and the habitat of the demagog is not confined to any one section of the land. Reason and conscience are the prerequisites of suffrage. Avoirdupois, age and human nature are not enough. A vote must represent manhood rather than man."

We are aware that this theory of suffrage is much preached now; we do not accept it. It is the doctrine of aristocracy, not of democracy. Men who say they believe in popular government yet distrust the people. They are afraid intelligent people will not be able to control ignorant people. They say knowledge is power, but they deny it in politics. They are the ones who insisted that the native Hawaiians and the Filipinos should have the full vote, and yet refuse it at home to another race. We

deny that all now begin to see that "politics has been the bane of the black man." The Reconstruction history of North Carolina and the Wilmington riot are proof enough that it is not his politics, but the denial of his right of suffrage, that has done the evil. The right of suffrage saved the negro from peonage laws all over the South. It admitted the States back into the Union. It created reformed constitutions. It gave the States a system of public education. Where it worked badly the evil was incident to temporary or local conditions for which others than negroes were to blame. That history needs to be fairly rewritten.

This is the way that "black hands" are organized by the police to massacre the workmen, students and Jews in Russia. They are circulating leaflets, of which the following, from the *Russian Tribune*, is a specimen:

"On the 17th of February, by the hand of a cowardly assassin, fell the Grand Duke Sergius. So another noble soul went to a better world. Consider, Russians, whither we are going! What an abyss! What advantage was there in the death of Sergius? His whole life had been consecrated to the defense of the Russian people against the haughty Jews. With all his might he wished to prevent the Jews from robbing the Russians. He would not allow the holy city of Moscow to become a city of Jews! It was for this that the Jews decided to kill the Grand Duke! They hired a cowardly Socialist to kill him, for the Socialists are all hired by the Jews and the Japanese!"

A handsomer tribute to American missionaries could not be made than that by the British Ambassador, Sir Mortimer Durand, in a letter to *The Churchman*. He was British Minister to Persia, where are our American Presbyterian missionaries, and he quotes and indorses the fullest praise of them in his wife's book, "An Autumn Tour in Western Persia." But he brings out one important consideration, that it is not so much the number as the quality of missionaries that counts. It is the duty of boards to send out none but wise and able men.

# Insurance

## French State Insurance

To the monopolies now enjoyed by the French Government there is strong probability that state insurance will presently be added. According to one French journal, the tone of which is that of an alarmist, not only is state insurance threatened, but the dispossession of private companies is likewise contemplated. A number of signs point in this direction and the state expects to augment its revenues from tobacco and other sources by means of insurance. French insurance underwriters are immediately concerned with this proposed governmental departure, and the struggle in self-defense that is imminent will necessarily be one of much fierceness.

The threatened peril of the dispossession of private insurance companies cannot be lightly cast aside as of a vague, indefinite character, as the consequences of the new plan for increasing revenue may easily be most serious from the standpoint of existing insurance companies. Statements regarded as authoritative that have been printed in the French press set forth that the state proposes to institute an insurance bank against fire, the premium rates to be below those now charged by private companies. The result of such action would be that insurers would effect a considerable saving through patronizing the state form of insurance, which would in addition be able to give them greater guaranties as to security than could any private insurance company.

In the face of such conditions it is not difficult to foresee that the patronage of private companies would certainly decline to the profit and aggrandizement of the state. Large returns are anticipated from the very beginning of state insurance, and estimates made in high official circles contemplate an amount of profit during the first few years of operation as high as \$2,000,000. This sum could be utilized for the purpose of old age pensions. The most energetic and immediate opposition to the scheme as outlined has been counseled by those in opposition to what has been termed "premeditated spoliation." The matter was recently discussed at the French Agricultural Society, and resulted in the

framing of a resolution of protest against the state meddling in insurance matters. The support of French Deputies and Senators is now being sought after both for and against the measure.

But what may be to the disadvantage of the private companies may be a gain to the citizens of France. We rather hope the experiment will be tried, for then the world can learn whether state or privately controlled insurance is of the greater value to modern civilization.

## Reducing the Fire Hazard

AN effort is being made by the National Board of Fire Underwriters to reduce the fire hazard. This board, having a constituency of over one hundred fire insurance companies, has appointed a committee of twenty to further this desirable project. An engineering department, to be composed of men of high professional standing, will be organized, the object of which will be to reduce the danger of general conflagration in districts such as the "dry goods district," as well as elsewhere. The Federal Government will co-operate with the board's committee at least to the extent of the supervision of the reports of each city where investigations are made.

DISPATCHES from Milwaukee state that a very serious question has lately been raised in regard to the insurance upon lake vessels which were damaged by ice in the straits in attempting to force their way through. Aggregations of claims of this character have reached a total exceeding in amount the value signified by the total loss of two of the largest steamers. Considerable doubt has been expressed in insurance circles as to whether claims against the insurance companies for damages arising when boats are deliberately rammed into ice are valid. The contention that a captain has no more right to ram his boat into solid ice, as was frequently done during the season in the straits, than he has to deliberately collide with a rock in the attempt to clear the channel of it as an obstruction seems to have considerable weight. The controversy has become acute and the indications are that the courts will have to settle the point.

# Financial

## The Fall of Bigelow

BIGELOW, the defaulting president of the First National Bank of Milwaukee, robbed that bank of \$1,450,000, plundered estates of which he was trustee, and in all is said to have stolen in a few months more than \$3,000,000. Many who read the story are asking why this stealing was not prevented by agencies designed to protect depositors and others. Bank examiners cannot justly be held responsible for such embezzlement. It is practically impossible for them to trace every item in a bank's accounts and to detect promptly such fraudulent entries as were made by Bigelow and his confederates. It is true that directors sometimes fail to direct and are not sufficiently inquisitive and cautious. But a bank president so prominent, so successful, so highly respected and so trusted by everybody as Mr. Bigelow was can steal large sums from his bank and for a considerable time escape detection, in spite of all ordinary precautions and safeguards, if he has, as this man had, the aid of bookkeepers and a cashier. And at the same time he can steal the money of widows and orphans that has been intrusted to him. The day of detection and exposure must come, but under the conditions we have mentioned the guilty man is safe for a time, and the agencies existing for the protection of those whom he robs are not justly to be blamed for a failure to prevent his wicked acts. Sometimes a man so trusted will go astray after many years of honest and exemplary living. So long as men like Bigelow (last year he was the honored President of the American Bankers' Association) can be induced suddenly to become rascals and to seek their own ruin, no system of safeguards can prevent an occasional defalcation of this character.

The nature of the speculations in which Bigelow became involved, however, and the temptation to which he was subjected do suggest that our great Exchanges and some of our influential financiers are not doing all that they should do to prevent or discourage such operations, in New York as well as in Chicago, as those of the gambling "Western group" with which Bigelow was indirectly associated. The effect of the notorious and reckless speculations

of these men has been not only to ruin Bigelow and many persons of comparatively small means, but also to excite prejudice throughout the country against the legitimate and beneficial functions of grain and stock Exchanges. Our honest and conservative financiers should frown upon and ostracize these black sheep, whether they are cornering the wheat market or manipulating prices on the Stock Exchange by wash sales and otherwise, or promoting a Shipyard Trust, or playing profitably with the surplus funds of a life insurance company. Thus they may commend honest "high finance" to the American public, check legislative tendencies which they believe to be harmful, and prevent the fall and ruin of such men as Bigelow by withholding from them the temptations to which they yield.

F. E. MARSHALL has been elected President of the Phenix National Bank and August Belmont and Daniel S. Lamont Vice-Presidents. Mr. Marshall succeeds Duncan D. Parmly, resigned. J. C. Van Blarcom, First Vice-President of the Bank of Commerce in St. Louis; E. H. Gary, Chairman of the Steel Corporation's board; Lewis Cass Ledyard and D. Crawford Clark (with Messrs. Belmont and Lamont) have been added to the Board of Directors. The bank's capital is \$1,000,000, and its surplus and undivided profits amount to \$265,843.

....The recent remarkable growth of Trust Companies has caused a demand for brief official statements as to the work which they do. Such a statement may be found in *Functions of Trust Companies*, a handbook issued by the Morton Trust Company, of this city, which shows how such a company administers estates and manages property under will and other trusts, sets forth the advantages of such corporate management, enumerates the charges fixed by law, and gives useful information concerning wills, inheritance taxes, etc.

....Dividends announced:

Nassau Bank, 4 per cent., payable May 1st.  
Minneapolis & St. Louis R. R. (Consol. Mort. 5's), Coupons, payable May 1st.  
United Copper Co. (Preferred), semi-annual, 3 per cent., payable May 15th.  
United States Leather Co., Debenture Coupons, payable May 1st.  
Greene Consol. Copper Co., 2 per cent., payable May 20th.

VOL. LVIII

NEW YORK, THURSDAY, MAY 11, 1905

No. 2945

## Survey of the World

### The Railroad Rate Problem

Reports from Washington say that a large majority, if not all, of the members of the Senate Committee on Interstate Commerce (which is still taking the testimony of prominent railway officers) are opposed to legislation conferring any rate-making power upon the Interstate Commerce Commission. The prediction is made by persons who have conversed with members of the committee that the majority will report in favor of no legislation beyond certain new provisions dealing with private car lines and side-track rebates. —Because the President has relied upon Secretary Morton for information and assistance concerning the railroad question, and because the Secretary in public statements some months ago supported the President's policy, some remarks in his addresses last week at meetings of the Railway Congress have attracted much attention. The President, he said, was striving to put an end to private rebates and preferential rates in one form or another. "My own opinion," he added, "is that if all vicious discrimination can be abolished, the question of rates will adjust itself." Some see in this an indication that the Secretary no longer is in sympathy with a policy that demands the legislation of the Esch-Townsend bill, but now stands with the opponents of that measure. He also asserted that "complaints to railroad men of unreasonable rates always receive prompt and satisfactory attention," and that "competition is always a controlling force in rate-making."—In an exhaustive opinion prepared at the request of the Senate Committee, Attorney-General

Moody holds that Congress has power to regulate the operation of interstate railroads and to fix their maximum future charges; that it has a right to delegate this power to a Commission by intrusting to such a body the duty of fixing rates in conformity with a standard already enacted into law; that the rate-making power is not a judicial function and cannot constitutionally be conferred upon the courts; that the courts have power, however, to investigate rates fixed by legislative authority, and to restrain the enforcement of them if they are found to be confiscatory of the carriers' property; and that the constitutional provision forbidding preference (by any regulation of commerce) to the ports of one State over those of another would not interfere with any regulation of land transportation or with reasonable, just and impartial rates determined by legislative authority.

### The President's Vacation

During the last week of Mr. Roosevelt's vacation in the mountains he was storm-bound for about half the time. On Sunday, the 30th ult., he attended religious services at the Old Blue School House, a small school building seventeen miles from Newcastle, riding to the place in his hunting costume, with Dr. Lambert and the guides. There he met an audience of 1,200, the mountaineers and ranchmen for many miles around having brought their wives and children. After a sermon by the Rev. Horace Mann, the President spoke, pointing out that real success in life was attained by doing one's duty, and "by bearing your-

selves so that your children will bless you for having done all that was in your power to bring them up to honor home and State." He had greatly enjoyed himself in the mountains, he continued. "Not only have I been treated middling well by the bears, which treatment has not been reciprocated by me, but the people have fairly outdone themselves in their hospitality." At the close of the services he shook hands with the entire company. "Don't get to 'milling' now," said he, using a ranchman's term, as they pressed forward; "everybody will get a shake." For three days thereafter the hunters were kept in their camp by storms of snow and sleet. Then they started out again in search of grizzlies, but did not find any. On Saturday morning, the 6th, the President and his companions left the camp and rode to Glenwood Springs. His vacation was ended. The hunters had killed ten bears and four bobcats. In a brief address on Saturday evening, the President, speaking from the porch of a hotel, thanked the people of Colorado, praised his guides, and predicted great results for the Government's irrigation projects. On Monday morning he started for Denver.

#### Municipal Utilities in the West

During the recent municipal campaign in Chicago Judge Dunne (now Mayor) expressed the opinion that the present street railways of the city, capitalized at about \$120,000,000; could be duplicated for \$77,000,000. Owing to the results of an investigation made for him by John J. Cummings, he has now reduced these figures to \$50,000,000, for which, he says, the entire existing system could be duplicated, with the improvements that are needed. The city, he adds, is not about to buy watered stock, but tangible property. It will pay a fair price, however, for unexpired franchises.—Chicago desires also to exercise powers approaching those of municipal ownership with respect to gas, and for two weeks past there has been an interesting contest in the Illinois Legislature over bills relating to the gas and electric light supplies. On Saturday last a bill empowering the corporate authorities of Chicago to pre-

scribe maximum rates for gas and electric light was finally passed. In its original form it gave this power to all the cities in the State, and in this shape it was passed by the House by a vote of 111 to 16. Before the final vote was reached, however, the bill's provisions were made applicable to Chicago alone. In that city the gas companies have perpetual franchises, and the price is one dollar per thousand. A leading local newspaper remarks that "the stocks have been watered, re-watered and re-irrigated until they represent the extreme possibilities of dilution," and that the companies must make up their minds to reduce the price to 75 cents. There was also passed on Saturday a bill permitting the city to sell the surplus of the current or power produced in its electric lighting plant when this is not needed for lighting the streets. This was opposed by the electric lighting corporations, on the ground that it would open the door for a municipal supply to all consumers. In the House, on the first vote the majority for this bill was about 5 to 1, but on final passage in concurrence with the Senate there was no dissenting voice.—By the same Legislature there has been enacted a civil service law placing 2,000, or about three-fourths, of the employees of the State under the merit system.—In Wisconsin the House has passed a bill requiring the Bell Telephone Company to permit all independent telephone companies to use its toll lines.—The effect of the recent dissolution of the injunction relating to three-cent railroad fares in Cleveland cannot at present be ascertained. The injunction was obtained by the old street railroad companies to restrain a new one to which a franchise (providing for three-cent fares) had been awarded for an avenue where the old franchise had expired. To the charge that they had offered to sell to the old companies for \$150,000 the officers of the new one reply that the offer was conditioned upon a reduction of the old companies' fares to three cents. The injunction case will go up to the United States Supreme Court, it is said, and the new company is also restrained by other litigation.—In connection with the municipal railway movement in Chicago the *Tribune* of

that city sharply attacks Judge Grosscup, of the United States Court, who has much of the railway litigation in hand and who appointed receivers for one of the companies. It says that he should turn over this litigation to some other judge, because of his own interest, recently acquired, in traction and lighting companies, pointing out his controlling investments in such corporations at Mattoon, Ill., and the association with him in this business of his clerk, one Sampsell, whom he recently appointed a receiver of Chicago's Union Traction Company. The purpose of the attack appears to be to give an impression that the financing of these new interests was promoted by Eastern institutions directly or indirectly connected with the Chicago litigation. Judge Grosscup replies at great length, showing why he made these large investments, defending his clerk, asserting that the transactions were in no way related to the traction franchise litigation and denying that his or his clerk's projects were financed by Eastern institutions having any interest in the Chicago railways.

#### Legislation for New York City

At the session of the New York Legislature which ended last week, among the prominent projects of legislation were several bills relating to municipal franchises and the corporations doing business upon such grants. Against the protest of Mayor McClellan, and over his veto, the power to grant franchises was taken away from the New York City Board of Aldermen and vested in the Board of Estimate and Apportionment, which is composed of the chief elective and executive officers of the municipality. This action was due to the Aldermen's curious treatment of applications for important railway franchises and to a prevailing impression that the granting of such applications depended upon the bestowal of great construction contracts upon contractors representing the ruling powers of Tammany Hall. Owing to an investigation made by a Legislative Committee concerning the gas and electric lighting companies of the city, seven bills were introduced by this committee. These reduced the

price of gas from \$1 to 75 cents, lowered the price of electric light or power by 33 1-3 per cent., provided for a new State Commission with large powers over all gas and electric lighting corporations, and in other ways imposed restrictions for the benefit of the public. Although the House passed the 75-cent bill, it was defeated in the Senate (after the rate had been raised to 80 cents) by a close vote, thirteen Republicans joining the Tammany Democrats in the negative. It is asserted by the Albany newspaper correspondents and by the most prominent and conservative of the city's journals that the rate bill was defeated by corruption. Thus, the *Tribune* says in its editorial review of the matter: "It is virtually impossible to doubt that a great amount of money was corruptly used for the purpose of bringing to naught the investigation so well conducted by the Stevens committee." It does not appear, however, that a reduction of price has been prevented, for the bill creating a Commission was passed, and the Commission will have power to prescribe maximum rates, fix standards of quality, regulate pressure and exercise broad and comprehensive authority over all gas and electric lighting corporations. Other bills passed reduce the price of gas for municipal uses to 75 cents, reduce by one-third the price of electric light and power to consumers generally, provide for a daily inspection of the gas supply, empower the city to fix standards of gas quality and pressure, and authorize the city to utilize for the generation of electricity for municipal uses the power available at the dams of its water supply. It will be seen that in the direction of the regulation and restriction of lighting and power corporations much was accomplished, even if the bill for a specified rate was lost.—The same Legislature refused to pass a Corrupt Practices bill designed to compel publicity as to all political campaign contributions and expenditures and to prevent bribery at the polls. It also declined to repeal the act imposing a tax on the undistributed surplus of a savings bank.—To succeed John McMackin, Labor Commissioner, recently accused of failing to enforce

the laws relating to child labor, the Governor has appointed P. Tecumseh Sherman, an independent Republican of high character and a son of the late General Sherman.

#### Action Against Trust Combinations

It became known last week that for three months the Government had been investigating the affairs of the American Tobacco Company, commonly called the Tobacco Trust, by means of special agents and otherwise, the inquiry being under the direction of Henry W. Taft, a prominent lawyer of New York and brother of the Secretary of War, acting for the Department of Justice. Attention was directed to the investigation by proceedings in court relating to the refusal of the secretary of one of the Trust's subsidiary corporations to answer questions asked by the grand jury. The Tobacco Company is a very large and powerful organization, capitalized at about \$255,000,000 in stock and bonds. It was owing to complaints from tobacco growers that the investigation was undertaken.—George Hinchliff, a manufacturer of bricks in a town near Chicago, has recovered \$15,000 by a suit in the courts of that city against a combination of brick manufacturers. He asserted that he had been driven out of business and ruined by these combined manufacturers, whose persecution of him was made effective by their alliance with a combination of employing masons and builders and with the bricklayers' union.—Dullness prevails in the Kansas oil field, where a majority of the wells are plugged and all the storage tanks are full of oil for which there is no market. Bonds for the projected State refinery have been issued, but the constitutional question upon which their validity depends is in the courts, owing to the hostile action of the State Auditor, and a decision may not be reached until September. Several small independent refineries are in process of construction, but plans for independent pipe lines have not yet come to anything. New wells have been bored, however, and one company, in-

viting subscriptions for an issue of additional stock, advertises the name of Governor Hoch as that of its leading stockholder. The Standard Oil Company is buying only high grade oil, and paying less than half of last year's price for that. Most of the oil carried by its pipe line, which passes through this field, is drawn from the Indian Territory.

#### Political Notes

The Republican majority in the Connecticut Legislature have nominated for the United States Senate, to succeed the late Orville H. Platt, Congressman Frank B. Brandegee, of New London. Thirty-seven ballots were taken, in a session continuing for twelve hours. The contest was between Mr. Brandegee and ex-Governor McLean, who led at the beginning. Samuel Fessenden had withdrawn, and his influence was exerted in behalf of the winning candidate. Mr. Brandegee is a lawyer, forty years old, was graduated at Yale in 1885, has been Speaker of the Connecticut House (as was his father before him) and for several years has represented Connecticut's Third District at Washington.—A Federal grand jury at Jackson, Miss., has indicted 300 citizens of Franklin County for whitecapping, or for intimidating Government homesteaders. Among the accused men are the sheriff of the county (Dr. Newman), a member of the Legislature and every member of the local Law and Order League, of which the sheriff was chairman.—A few months ago four members of the California Senate were expelled for blackmailing corporations. They were a majority of a committee that threatened to subject certain companies to investigation. All were indicted, and one of them has been prosecuted to conviction. His associates are awaiting trial.—In the Canadian House last week Premier Laurier's bill for the new northwest provinces, including the sectarian school provisions which have caused much controversy, was supported on second reading by a vote of 140 to 59. Thirteen Conservatives joined the Liberals in the affirmative.

The Government's majority was unexpectedly large.

#### **The Panama Canal**

Several prominent employees engaged in Canal work on the Isthmus are prostrated by yellow fever, and M. O. Johnson, Chief Architect of the Canal staff recently died of this disease. The weather has been unfavorable, but it is expected that conditions will soon improve. General Davis, Governor of the Zone, has been ordered by Secretary Taft to return at once to the States, because he has malarial fever. The Commission's Executive Committee will start for the Isthmus on the 16th, and the remaining members of the Commission will follow in July, in order that plans may be prepared for submission to the Board of Consulting Engineers. The French member of this board will be M. Cuerard, who has had charge of work in the harbor of Marseilles. General Davis will be a member. For sanitary work in the coming fiscal year, \$636,000 has been appropriated. A new hospital will at once be erected, at a cost of \$40,000, and the salaries of the heads of departments in the sanitary corps will be increased. That of the chief sanitary officer will be \$10,000. Owing to discontent among the employees and the resignations of some of them, the Commission will strive to make the service more attractive by increasing their pay and by providing for social recreation and athletic sports. Newspaper correspondents in their dispatches from Washington assert that certain administrative projects of the Executive Committee (Chairman Shonts, Governor Magoon and Chief Engineer Wallace) were disapproved by the four remaining Commissioners, who felt that they were thereby to be made subordinates of the Chief Engineer, so far as the plans were concerned. They filed a protest, it is said, with Secretary Taft, who restored harmony by stating that all were of equal rank and that decisions were to be made by majority vote of the seven members.

#### **Chicago's Strike**

Throughout last week there was rioting in Chicago's streets, but less at the end than on the first three days. Several

men were killed and hundreds were injured. The police seemed unable to withstand the mob, altho reinforced by hundreds of special patrolmen and assisted by a large number of sheriff's deputies. We have considered on other pages of this issue some incidents and aspects of this strike. Mayor Dunne stedfastly refused to ask the Governor for militia, contending that there was no need of such help and that application for it would humiliate the city. Governor Deneen awaited requests from the local authorities before taking action. Business men of the city sought to convince him that unrestrained lawlessness and crime demanded the presence of troops; labor unions sent messages protesting against the use of them. The President, expecting to arrive in Chicago on Wednesday, had promised to hear a statement from the men on strike. At the end of the week their leader proposed that mediation should be undertaken by a committee of three, composed of the Governor and of representatives of each side.

#### **A Strike at Limoges**

A strike in the Haviland porcelain factory at Limoges caused fatal riots in the streets, which had to be suppressed by the military, much to the embarrassment of the French Cabinet. Employees of the Haviland factory, of which the two Americans, Theodore and Charles Haviland, are the proprietors, struck because their demand for the discharge of the foreman of the factory was not granted. Six thousand men from this factory went out and were joined by other porcelain workers. On the 17th an attack was made by a mob upon the prison to free four of the strikers who had been arrested. They were attempting to break down the doors when they were charged and scattered by the troops. Subsequently the strikers erected a barricade on the street by overthrowing a street car, setting against it a railing of a fence torn from the square, and piling up furniture raided from the neighboring houses. The dragoons charged the barricade, but their horses were tripped by ropes and wires stretched across the street. They

then fired first with blank and afterward with ball cartridges. One striker was killed and six wounded. Eight officers and men were wounded by the strikers. The Municipal Council of Limoges, which is composed of Socialists, issued a proclamation that the troops had fired without provocation on inoffensive citizens. The flag over the building was draped in black and placed at half mast. In the French Chamber of Deputies M. Jaurès attacked the Government for using French troops to defend the property of the American employers, who were to blame for refusing to negotiate with their workmen. M. Etienne, Minister of the Interior, said that he regretted the uncompromising attitude of Mr. Haviland, but that he was within his rights, and that the authorities were determined to preserve order. After the debate the House voted confidence in the Government by a vote of 542 to 129. On April 22d the proprietors and workmen came to an agreement, the former conceding the dismissal of the foreman, whose conduct was the fault of the trouble, but later the strike was renewed and extended to the other porcelain factories of Limoges. The Chamber of Deputies voted \$4,000 for the relief of the families of those who were killed or injured in the rioting at Limoges.

#### Rebellion in Tibet

A nationalist movement has sprung up in Tibet and a revolutionary society was organized at Batang, on the southeastern borders of Tibet, adjacent to China, to free the country from Chinese domination. The Amban Fen-chuen, the Chinese representative at Lhasa, was recently attacked at Batang and he and his entire retinue were murdered. The Viceroy of the Province of Sze-chuan has sent troops against the rebels. The murdered Amban is the successor to the one who signed the treaty with Great Britain when Colonel Younghusband invaded the Sacred City. Tibet and India seem to be able to agree better than their superior Governments, China and Great Britain, both of which found fault with certain provisions of the treaty of Lhasa. It was recently announced at Peking that

the negotiations between the two Powers had resulted in such a modification of the treaty as to make it satisfactory to both, the principal changes being in regard to the customs arrangements and the British occupation of Tibetan territory until the payment of the indemnity.

#### Riots in Poland

The May Day disturbances in Warsaw prove to have been more serious than was at first reported. Over two hundred persons were wounded and 62 are dead as the result of the firing by the soldiers upon the procession of revolutionists carrying red flags as it passed through Jerusalem Street. After several volleys from the infantry, the soldiers and police attacked everybody in the streets with swords and clubs, chasing them into the houses and injuring many women and children. In the evening a bomb was thrown at a Cossack patrol near the Vienna station. It struck the head of a horse and exploded, blowing the horse and rider to pieces and killing three other Cossacks and a policeman and wounding two women who were alighting from a carriage at the station. Numerous attacks have been made on the Cossacks and police in Polish cities during the week, and these have been relentlessly revenged. At Kalisz the soldiers attacked a congregation who were singing patriotic songs in a church, and in the fight that followed a soldier and a woman were killed, and many were injured. The Governor of Kalisz issued a proclamation denying that there had been disturbances in the city, and exhorting the people to be tranquil in order to "avoid further sacrifice of life." The censor at St. Petersburg suppressed all reports of the riots in Poland and compelled all the papers to publish instead a telegram purporting to come from Warsaw saying that there was not the slightest disturbance there on May 1st. At Lodz the Cossacks charged a crowd on the steps of the Church of the Holy Cross and killed seven. A general strike of all Polish workmen has been ordered and begun, but it is not probable that it can be kept up on account of lack of funds. In the streets of Warsaw a Cossack, who had been jeered by a ten-year-old boy,

charged on him and cut him from shoulder to waist with his sword.—In St. Petersburg a bomb exploded in the room of a mining student in an apartment house, and he and a friend were severely injured. According to the police report they were engaged at the time “in a chemical experiment,” a statement not likely to be disputed by any one.

#### Naval Movements

Admiral Nebogatoff's squadron passed Singapore at 5.30 on the morning of May 5th, almost concealed by the haze and darkness. Six warships and four colliers composed the fleet. Just where this division has been for the past week is a mystery. According to information furnished by the Russian Admiralty Admiral Nebogatoff first tried to get through the Straits of Sunda, but found this so well guarded by Japanese cruisers that he went through the Straits of Malacca instead. According to a telegram from Singapore the squadron stayed for a week off Jugrah of the State of Selangor, and were, therefore, in British waters, while the other division was in French. Two of Nebogatoff's transports, formerly German vessels, put into Sabong, on the north coast of Sumatra, for repairs, as their bows had been stove in by a collision. Some of the lighter vessels of Admiral Rojestvensky's fleet are reported to have been damaged by a typhoon which this week swept the coasts of Southern China. This squadron has still kept its position off the coast of French Indo-China, north of Kamranh Bay, waiting for the arrival of Nebogatoff's division and taking on coal and supplies. The vessels have entered various harbors along the coast, but, according to the Russian Admiralty, they have not stayed longer than twenty-four hours at a time in any of them. Nevertheless the feeling of the Japanese that the French were violating the laws of neutrality by granting such long continued hospitality to the ships of her ally has become intense and the Japanese press has assumed a very belligerent tone, recommending Admiral Togo to enter French ports and engage the enemy there if necessary. The Japanese Minister at Paris called twice last week on

the French Minister of Foreign Affairs, M. Delcassé, and demanded the enforcement of neutrality. The French Admiral de Jonquières, about April 23d, advised the Russians to stop shipping supplies and April 25th he sailed north along the coast of Indo-China, and upon his return to Saigon reported that he found no Russian vessels in French ports. It is pretty conclusively proved that Admiral Rojestvensky's vessels spent at least ten days in Kamranh Bay taking on board the supplies from Saigon, which had been stored there for that purpose. The dispatches of the newspaper correspondents telling of the position of the Russian fleet were censored or suppressed by the French authorities.—Four Russian torpedo boat destroyers from Vladivostok attacked the Japanese shipping on the southwestern coast of the island of Yezo, May 6th, and burned one small sailing vessel of 198 tons by pouring kerosene on the decks. All the crew except the captain escaped.

#### Chinese Labor in the Transvaal

The practical workings of the scheme for using Chinese labor in the mines of the Rand are being watched with intense interest by both friends and opponents. There are now some 60,000 Chinese at work in the mines, and further importation will be practically suspended for the present while the plan is on trial. The opposition in Africa and in England has not disappeared, but has assumed an organized form and become a political issue of a definite and permanent character in both countries. The amendment offered in the House of Commons to abolish “Chinese slavery” was voted down by 275 to 214, only the Liberals and Irish Nationalists voting in its favor. Those opposed to the Chinese base their arguments mostly upon the ground that it is undemocratic to make a community dependent upon alien and contract labor of a low type, and that the measure is due entirely to the political supremacy of financial corporations, which are merely exploiting the country and have no interest in its development into a prosperous and progressive community of white men. Some of the specific dangers apprehended, that

whites and the Kaffirs would be displaced and that the Chinese would suffer hardships, have so far proved illusory. In the mines of the General Mining and Finance Corporation 892 white miners are employed, whereas in 1903 there were only 637. The Geduld Proprietary Mines, which were employing only 60 white men before the coming of the Chinese, have now 260. In regard to black labor the same is reported. There are 9,000 more Kaffirs working in the mines now than before the importation of the coolies, and the mine owners declare their willingness to use all that can be got. But, they assert, it is impossible to work the mines on so insufficient and insecure a supply of labor as that afforded by the natives. It is generally conceded that the imported Chinese are not living under any worse moral and physical conditions than they did in their own country. Contrary to expectation they show a disposition to spend their wages freely for luxuries, even such as bicycles, and are adopting the habits of white laborers with a readiness somewhat disconcerting to their employers. Two thousand Chinamen in the North Randfontein mine, near Krugersdorp, refused to drill more than 12 inches a day, and struck for higher wages when they were compelled to. The police were called in to quell the disturbance and a number of the Chinese were injured. Similar strikes have occurred in other mines on questions of wages and the amount of work which should be done in a day. In some of the compounds the Chinese and the Kaffirs have come to blows over the women. Many of the Chinese are of the criminal class, who have shipped for South Africa to escape punishment. The Viceroy of the Kwang-Si province issued last December a proclamation which explained that the inhabitants of the province were so numerous that they were often driven into brigandage and recommending them to go to the Transvaal:

"From the day when they leave their homes to emigrate, they will not be pursued for their past offenses. They can begin a new life. All officials will treat them well, and they will have nothing to fear when they return to China."

James H. Kirkland, Ph.D., LL.D.

Chancellor of Vanderbilt University

Chancellor Kirkland is a native of South Carolina and is forty-five years old. He is a graduate of Wofford College and took his degree of Doctor of Philosophy at Leipzig. After a term of two years as Professor of Greek in Wofford College he resumed travel and study in Europe for about three years, when he was called to Vanderbilt University, Nashville, as Professor of Latin. Seven years later he was elected Chancellor, in 1893. He has done much to develop the institution on modern lines, and has sometimes been seriously attacked for his liberal policy in choosing members of the faculty who are not of the Methodist Church. The recent destruction of the main building of the university by fire has been made the occasion to attempt the erection of a more extensive group of buildings at the cost of \$400,000, of which nearly \$100,000 has been pledged by Southern friends and alumni. Vanderbilt University has taken the lead in the organization of an association of Southern colleges pledged to establish a uniform standard of admission and to keep free of all preparatory or secondary departments.

# The Parliament of Nations

BY RICHARD BARTHOLDT

[Mr. Bartholdt, member of Congress from Missouri and President of the Interparliamentary Union, sailed from New York last week on what may be one of the most important missions ever undertaken by an American. What he hopes to do and the reasons therefor are given in the following article, which we venture to consider of profound significance as coming from a practical statesman and a long tried member of one of the world's greatest legislative bodies.—EDITOR.]

I AM on my way to Brussels to attend a meeting of the Executive Council of the Interparliamentary Union. This Council is composed of two members from the Parliament of each nation having membership in the Union. All the European nations with the Parliamentary form of government have membership in this Union. But the United States is the only American nation represented in the Union, and yet every American nation has the parliamentary form of government.

The members of the Council will determine the subjects which will be discussed when the Union meets for its thirteenth annual session, which will be held at Brussels at a time to be fixed by the Council.

One of the points which I have been instructed by the Arbitration Group in Congress to propose for discussion at the next session of the Union is the admission of South American nations into the Interparliamentary Union. The Argentine Republic, commonly regarded as a small nation, has a territory as large as the United States east of the Mississippi. Brazil is as large as the entire United States. Other South American nations, tho little thought of by our people, are more important than some well-known European nations and have already attained a high degree of civilization. It is but just to say that in the movement for international arbitration South America has led the world, both in being first to conclude such treaties and in having concluded more perfect treaties than those that are now being negotiated in Europe. The population of the South American nations is considerably more than half that of the United States and Canada. Canada also should have representatives in the Interparliamentary Union and in the International Congress when it is organized; for Canada is a nation, with

a national Parliament, and entitled to due representation in all International Unions.

Manifestly these nations have a place in the International Unions, and those Unions will be imperfect until all the South American nations are in their places. It is equally true that no South American nation need have any fear as to the future, provided it takes its place in these Unions; stands for the plans put forward by the Interparliamentary Union and succeeds in meting out good government at home. It is an assured fact that these nations will come into these unions in time, but they are needed in them now, and the best sentiment of both Europe and America will not be satisfied until they are.

South American statesmen, by joining the Interparliamentary Union, could be of assistance in securing general assent to a form of arbitration treaty that is fit for a model because they have concluded treaties that are free from the defects which mar those now being negotiated in Europe. It was these defects, not opposition to arbitration on principle, which caused the defeat of the treaties laid before our Senate this year. They were all modeled on the Anglo-French agreement, which seemed to our State Department to represent the general sense of Europe on the subject. Instead of clearly defining the subjects included, they attempted to include all questions of a judicial order or involving the construction of treaties, and then to except such as involve the vital interest or honor of either of the contracting Powers or the interest of a third Power. This vague exception was equivalent to drawing a curtain over all questions, and leaving it for future decision whether any particular question was included in the treaty or in the reservation. Consequently it was necessary to provide that in every case, after the controversy had arisen,

the Powers affected should enter into a special agreement submitting the same to arbitration. Manifestly real judgment of the question could be exercised only in the giving or withholding assent on these special agreements. That is one of the reasons why the Senate demanded that these special agreements be referred to it for ratification. In this way only could the Senate really pass judgment on what shall and what shall not be arbitrated under a general treaty like the Anglo-French Agreement. Consequently a treaty of arbitration which will satisfy the treaty making Power of the United States must be free from the defects which mar the Anglo-French Agreement. Dr. Tydeman, of Holland, and Mr. Ernest Beckman, of Sweden, pointed out these defects at the St. Louis session of the Interparliamentary Union. They had been pointed out earlier in the columns of THE INDEPENDENT, where it was also shown what points a good treaty must have. A few of these may be mentioned.

The subjects included should be clearly defined, so that no "after judgment" need be demanded by any one concerned.

The Hague Court should be given jurisdiction to try questions of the kind included, and either one of the Powers interested should have authority to set in motion the trial of such questions without securing the special consent of the other. The execution of the general treaty of arbitration should be the only consent needed for questions included in it. Such a treaty would found The Hague Court on solid ground and make it an integral part of the world's judicial machinery. However narrow its jurisdiction, the fact that it had a clearly defined jurisdiction and power of acting in that jurisdiction, as other courts act in theirs, would be the first step in the direction of broadening its jurisdiction and enlarging its powers.

Nations that are very far forward in the arbitration movement and very friendly to each other would put many questions in the treaties between them, while nations that are more backward, or that still harbor bad feeling toward each other would reserve more questions for trial on the field of battle. As they rise in their attitude toward each other and as the Court shows itself worthy of trust,

they would include more and more questions in the treaties subsequently negotiated. Limiting these treaties so that they expire at a stated time, unless renewed by mutual consent, removes all reasonable objection to concluding them in this form. It would, perhaps, be better to have them run until terminated by one of the contracting powers, on, say, six months' notice. This would put the inertia of legislative bodies on the side of arbitration. It might be well also to allow for an appeal to arm from a decision of the Court affecting the independence or autonomy of the nation. It might be well also to insert a provision by which other nations could become parties to the arrangement by mere adoption of the treaty without entering into negotiation with each Power so doing. Holland has tried this in her treaty with Denmark, but that treaty is open to the objection that it binds the contracting Powers to arbitrate all questions, reserving nothing for trial by war. The nations are not all ready to go so far. By providing that each nation may designate the questions it is willing to arbitrate, according to the terms of the treaty agreed upon and that upon this designation the treaty becomes operative for those questions between that nation and *all* others that have or may designate the same questions as arbitrable, you have a simple system, easily made more effectual by individual national action, and without any difficulty of administration.

The second question proposed by the American Arbitration Group is the formulation of a treaty of arbitration which is fit for a model because it gives The Hague Court jurisdiction over questions included in it. Much thought must be given to the subject, however, before the Union meets at Brussels. Hence I suggest these ideas in order that public opinion may crystallize on the subject and guide the law makers in their work.

The other question proposed by the American Group for discussion at the next session of the Union is, the basis for the International Congress. This question bears a direct relation to giving The Hague Court jurisdiction by treaties of arbitration. The right to try questions carries with it the necessity of having principles by which to try them. The

establishment of an International Congress must, therefore, follow close upon the general adoption of a treaty of arbitration, such as I have described. The Court, the Congress and the treaties will make *a system of International Arbitration* which will become more perfect with time. The following is a basis on which an International Congress can be organized:

"1. An International Congress of two Houses, a Senate and a House of Deputies.

"2. Each nation to have two Representatives in the Senate, and representation in the House of Deputies proportionate to its international commerce.

"3. Each nation to choose and maintain its own Representatives in the International Congress, and to have power of recalling them at any time. The term of office to be eight years, unless otherwise fixed by each nation for its own Representatives.

"4. Each member to have one vote.

"5. Majority to rule in all matters, and concurrence of both Houses necessary.

"6. Each nation to have the right to withdraw at any time from the Congress.

"7. The territorial and political integrity of each nation represented in the Congress to be respected by all nations represented.

"8. Deliberations of the Congress to be confined to matters which directly affect intercourse between nations, and its resolutions limited to the declaration of general rules or principles for the conduct of such intercourse, and these resolutions to be recognized as law by the nations, unless they are vetoed by an agreed number of national Parliaments.

"9. Each nation to treat all other nations on equal terms in matters of commerce, whether they be or be not represented in the International Congress; except that any nation can raise a commercial barrier against any other nation equivalent to such other nation's tariff wall.

"10. While remaining in the Congress, each nation to have the right to arm itself according to its own judgment.

"11. War to remain a lawful mode of action in any dispute, except as the several nations agree to refer controversies to arbitration by special or general treaties of arbitration.

"12. The armed forces of all the nations represented to be at the service of the Congress for enforcement of any decree rendered by The Hague Court, according to treaties of arbitration."

The idea in allowing withdrawal is (1) that this would induce the nations to enter into such a Congress much sooner, (2) it would prevent the Congress from

taking any steps not generally approved, thus tending to preserve the Union and to go forward only as fast as all the members are ready to move, and (3) it would prevent war over the desire to go out, if such a desire should be engendered by what was done by the International Court or Congress.

The idea in providing for the veto or nullification of acts of the International Congress by the law-making bodies of the constituent nations is that the Union is worth more than the adoption of any particular law at a given time. If strong opposition to any proposed law for the nations develops anywhere it will manifest itself in some national parliament. And if the opposition is not strong enough to dominate one or more nations the proposed idea deserves to become a law for the nations when adopted by Congress, in which all nations have representatives.

This provision is really a right application to international affairs of the modern doctrine of initiative and referendum. It will prevent the development of a desire to break up the Union.

The idea in providing for armament by each nation according to its own judgment is this: Nations would not yet know how far to trust each other's faithful observance of these compacts, even after they are made. No military or naval power being provided for the International Body, and each nation remaining free to arm as its fears may suggest, there is no reason for delaying the formation of this Union. Once formed on this basis it will immediately begin to demonstrate its trustworthiness and its necessity to our modern life. And as confidence increases armament will decrease, until in due time there will be no fear and no danger of the violation of national rights, and then the armaments will dwindle to a mere international police power.

The idea of providing for war between the members is this: Experience has taught the necessity of doing so. The British Parliament came into being in the thirteenth century. The right of an English citizen to try questions affecting his title to land, by personal encounter with the adverse claimant, remained until the 22d day of June, 1819. Then it was

abolished. The International Congress must come into being and approve itself worthy of preserving the cherished rights of nations before they will consent to the abolition of the right to protect themselves by their own powers.

It took 600 years for the British Parliament to rise to the point of prohibiting violent trial of any question by the citizens. It may take 600 years or only 600 months for a similar development in international government. But it will certainly take some time. Therefore, provision must be made for this as a suitable safety valve.

This Congress being organized on the idea that every nation represented in it has the right to perpetual Home Rule or Local Self-Government, and to due representation in the larger political body of which it has become a member, these rights will be guaranteed to every nation by every nation represented in the Congress. If the guaranty is kept faithfully what more can any nation hope to justly obtain or maintain by its own armed forces? With freedom to go armed against possible treachery, why not accept the guaranty and make a trial of a system of International Arbitration? Every nation has to prepare to protect itself without any such guaranty as things now stand.

With an International Congress organized on this basis there would be a working political Union of Nations, very feeble in power, but rightly organized and sure to grow in usefulness and in favor with the people of all nations. And in due time it would become perfect in

form and accomplish for nations what a Federal Union like ours accomplished for the constituent States.

This would take a long time, but that is not a reason against making a proper beginning. It is a reason, on the contrary, for making the earliest possible beginning. For the sooner the work is begun the sooner it will be ended, and neither peace nor real prosperity can permanently come to any nation until this work is ended.

It required a century and a war for the United States Congress to find its proper place among the political institutions of the world. As the day came for its creation, so the time has now come for creating the International Congress. As the one grew, so will the other. The business of the men of to-day is to form the one while they are doing what they can to bring the other to perfection. Surrounded as we are by the conflicts which fill the world with terror and resolved to do all that is possible to change this chaos into law and order, we can get strength for work that lies immediately before us by looking up to the heights of these great things fully brought to pass. In this way we get light on the path immediately ahead. This reveals also the significance in the great plan of the action we are called upon to take now, whether it seems great or small. The supreme question becomes, Is it in the right direction? If so, be it a small or a great step, it must be taken. The step now to be taken is to stand for this as the final outcome and to stand steadfastly for it until it is accomplished.

NEW YORK CITY.

# Russian Literature and the War

BY SOPHIE WITTE

[Miss Sophie Witte, author of "My Romance" and other brilliant stories, is the sister of the eminent Russian statesman, Sergius Witte, President of the Council of Ministers and ex-Minister of Finance. Herman Bernstein (author of "In the Gates of Israel" and the translator of Chekhov's and Gorky's stories), to whom the following letters were written, has made the translation for THE INDEPENDENT, and we print immediately following Miss Witte's letter to Mr. Bernstein the article that accompanied it.—EDITOR.]

. . . I have not written to you all this while because I felt completely crushed by all the grave calamities that have befallen poor Russia. . . . The heart is aching, one does not feel like thinking of anything, one does not feel like doing anything. I am sending you a letter devoted mainly to Leonid Andreyev's new story, "Red Laughter." This is a remarkable story. . . . The title, "Red Laughter," refers, in my opinion, to the bloody irony of war over all human ideals. . . .

I shall write you of Gorky's new play, "The Cottagers," in my next letter.

Stagnation has been felt in our literature of late. This is to be explained by the strange and terrible period which we Russians are going through at present. Moral repose is absolutely essential to mental work, and there is just such chaos in the soul of every Russian as in Russia itself. No one knows what the next day will bring. All thirst for peace, and yet all expect war. . . . Such heavy clouds have come over Russia that we do not know where to look for light. . . .

**D**URING the past few months there appeared in Russian literature several interesting productions of well-known authors, who have dared to fight against the sword with their pens. Of all these works, Leonid Andreyev's short story, "Red Laughter," produces a particularly powerful impression. What a strange title and what a terrible story! The reader's eyes see nothing but red, and it seems as tho it was written not with ordinary ink, but with real human blood, shed in such monstrous measure in Manchuria, where Leonid Andreyev wrote his story.

This story is composed of a series of brief scenes, made up of fragments of the impressions of an artillery officer.

The first fragment of the first impression begins thus:

Madness and Horror: . . .

The officer is seized with this sensation

The work of my brother is meanwhile only the work of Sisyphus. The saying that "One man alone on the battlefield is not a warrior" (One man cannot make headway against many) is perfectly true of him at present. But, of course, a thunder may crash suddenly from beyond the clouds and turn over completely the present situation.

Russian society looks with suspicion upon the present promised reorganization. Upon the conferences of the Council of Ministers it looks as upon Penelope's rug with which she held back the impatience of her suitors demanding from her an answer. Even as with Penelope's rug, that which is done by the Council openly is later undone secretly. This is the opinion of Russian society.

The rumors to the effect that my brother is to retire are without foundation whatever. So long as there will be strength in him for struggle he will struggle for the good of his fatherland, which he loves passionately.

SOPHIE WITTE.

of madness and horror at first during the retreat of the Russian army from Liao Yang. The army marched for ten hours in succession without stopping, not even to pick up their fallen comrades. It was terribly, hopelessly, painfully hot. The sun was so immense, so fiery and so terrible, as tho the earth had come near it and begun to burn with a terrible, merciless fire. The immense, near, terrible sun lit upon every barrel of the guns, upon every metallic shield, thousands of small, dazzling suns; and from every where, from both sides and from below, they flashed into the officer's eyes, fiery-white, sharp, like the point of white-hot spears. And the burning heat penetrated the very depth of his body, his bones, his brains, and sometimes it seemed to him that it was not his own head that shook upon his shoulders, but that it was something strange and terrible—a strange

heavy globe. All were silent, as tho an army of mute people were moving, and when some one fell, he fell silently, and others, stumbling over his body, also fell silently. Some rose, and, without looking around, marched on, as tho these mute people were also deaf and blind.

And here, amid these strange, terrible surroundings, the officer suddenly recalled his home; the cozy corner in his cabinet, a piece of light blue wall paper, a bottle of cold water on the table. In the adjoining room were his wife and son. . . . Recalling this he felt like crying out, but instead of this he merely lifted his hands in silence and started off running, not knowing whither and wherefore. Unexpectedly he found himself upon a rock. And there, sitting upon the rough and hot rock, exhausted from the heat and from fatigue, he realized for the first time something very important and very terrible; he realized that he was a madman, and that all these thousands of people, marching past him in silence, dulled from fatigue, were also madmen.

Of the later impressions which influenced the officer's mind the following is the most characteristic:

Not leaving his battery for a moment during three days and three nights in succession, he dozed off standing on his feet. He dreamed of his house, of the piece of light-blue wall paper, and, on the table, instead of the bottle of water, stood a lighted lamp with a green shade. . . . Soon he would see his wife and his son. . . . But at this moment he was awakened by something and he opened his eyes. Before him stood a young volunteer, with an unusually pale, beardless face. The officer was interested by this unfamiliar face, which was so pale, so frightened, yet smiling. "Are you afraid?" asked the officer, gently. Instead of replying the young volunteer only laughed, forcedly, evidently attempting to conceal and to drive away from himself by his laughter his mad fright; and suddenly something inexplicable, something monstrous took place: the officer was swung aside—and that was all—and before his eyes, in the place of the frightened, pale face, lay something short, blunt, red, and from it blood was gushing as from an uncorked bottle. And in this short, red, streaming object there was still heard the laughter

—red laughter. . . . And since that minute the officer seemed to see and hear *Red Laughter wherever he saw blood.*

The sensation of madness and horror seized upon the officer with particular power on that terrible night when a physician took him away, almost by force, to pick up the wounded that remained on the battlefield after the battle of the day before. Upon this field, which was strewn with the bodies of the killed and wounded, stood an even, unbroken moan.

This moan reminded one simultaneously of the crackling of grasshoppers on the summer meadow, of the hopeless crying of children, and of the squealing of castaway and freezing puppies. The officer had heard many moans and cries, but this moaning was unlike anything he had ever heard. It seemed to him that the earth itself, soaked with blood, was moaning, that the sky was moaning, that the air was moaning, that the terrible night was moaning, with each particle of its being.

The wounded were swarming and crawling over the field like sleepy crabs let out from a basket. Some were voiceless and obedient, others howled, cursed and shouted. A train was filled with wounded, and all the clothes of the officer who helped the physician and his assistants to carry them into the train were soaked with blood, as tho he was standing for a long time in a bloody rain. The train went away and the officer remained alone on the field. The moaning did not subside. It came from everywhere to the officer, and like a sharp, icy, endless needle it entered into his brains and moved slowly back and forth, back and forth. . . .

Later, during a very strange battle, when, through a certain inexplicable fatal error, the Russians fired upon their own, both of the officer's legs were shot off. While he lay in the lazaretto he despaired and bewailed bitterly his legs, "his dear legs, which were so swift, so strong. . . ." But gradually his feeling of keen despair gave way to a profound and constant sense of unbearable longing—longing for home:

"I want to go home. . . . I want to go home," . . . he was

forever repeating by day and by night.

At last he is at home! Here his joy of returning to his family is darkened because his family does not share this joy. He feels so happy to sit at home, before a real *samovar*, surrounded by his nearest and dearest people. He talks without pausing; he laughs, jests, and these dissatisfied people maintain silence and smile only forcedly. And their faces are all pale, strange. All this upsets the unfortunate, psychically deranged cripple; he grows very melancholy. But joy returns to him when they begin to make his bed, a real, beautiful bed, which he had bought before his wedding. They put down a clean sheet, then they shook the pillows into proper shape turned up the blanket; he looked upon this solemn ceremony, and in his eyes stood tears from joyous laughter. Here an unexpected, terrible mad scene took place. It began when the officer's wife screamed as they scream only on the battlefield. She fell down near her husband, hiding her head at his cut off legs, now withdrawing from them with horror, now again clinging to them, kissing the fragments of his legs and crying:

"You were so handsome, young! . . . How cruel people are! . . . What for? . . . Who needed it?" Her screams brought everybody else into the room—his mother, his sister, his brother and the nurse. And all were talking, rolling on the floor, and weeping. . . . His brother cried out: "We'll all lose our minds! We'll all lose our minds!" The mother crawled at the son's armchair; she was no longer weeping now; she cried hoarsely and beat her head against the wheels of the chair.

And there stood the clean bed, with the blanket turned up—the same bed which the officer had bought before his wedding.

Leonid Andreyev's story ends with his hero-officer, who returned from the war a cripple and psychically deranged, losing his reason completely and then dying. Before the war had broken out he was a literary man, and now, having lost his reason completely, he continues diligently his former, favorite work. For many

hours in succession, by day and by night, he is writing his new work. He writes with a dry pen and the sheets of clean paper remain clean, but by their ominous emptiness they speak more of the *madness* and *horror* of the war than all that has been written about it by the wisest men.

Of several other new literary productions calculated to call forth in Russian society a protest against the war, two stories stand out prominently for their artistic qualities: "The Secret," by the gifted young writer, Chirikov, and "Penitence," by Olga Shapir, a writer long known in Russia.

In "The Secret" Chirikov tells how people are hiding from a certain poor woman the fact that her only son was killed in the war. The son was buried long ago, and the mother is completely occupied with worry over him. She thinks of nothing else. She speaks of nothing but of her son; she is worrying that perhaps he has not enough tea, sugar, cigarets. She writes to him every day. These letters are full of tenderness and of touching anxiety. She is forever saying mass for his health, and she often passes the whole night in prayer, kneeling before the images, which are dimly illumined by a flickering oil lamp. The prayers of the poor mother for the preservation of the life of her only son, who is already dead, are sincere and passionate.

What can be simpler than this? And yet by its truthfulness and lifelikeness it produces a most powerful impression and moves the reader to tears.

Olga Shapir's story is altogether different. It cannot move the reader to tears, but it must surely set the reader thinking.

A young ensign, starting out to the war with his regiment, stops on the way at a remote friary, where his older brother, Maxim, was sentenced to stay and do penance. At the time of the meeting of the brothers in the friary a painful and very stormy scene, on account of the war, ensues between them. The ensign considers war as a sacred and noble affair, and Maxim proves that war is a sin and a crime. The ensign imagines himself a future hero, and Maxim calls

him a future murderer. The youthful warrior cannot bear such an insult, and in his vehemence he exclaims:

"You are a murderer! You; not I." Maxim had a few years ago, indeed, killed a woman out of jealousy, for which he was put into the friary for repentance. "And I will fight for my fatherland, for its honor and glory, I will do only my moral duty!" "Every one who kills is a murderer; it makes no difference why and whom he kills," replies Maxim to his brother, and then in vehement and convincing terms he proves to him that all words of honor and of duty in this case are a lie, with which people are trying to deceive themselves. It is either life or death. Where there is death, there can no longer be any life. He who killed another has also killed himself.

Maxim suffers terribly because of the crime he had committed, and he warns his brother from committing a still more terrible crime. He had killed one woman who had done him so much wrong, and his brother would kill scores, hundreds of innocent people:

"You will also kill a young, handsome, happy and noble young man like yourself—one who, like you, is also the

favorite of his mother, who lives but for him alone."

Maxim's words filled the young ensign's soul with chaos. His feelings and his thoughts become confused. He knows no longer where falsehood is and where truth is. Hero and murderer, heroism and crime suddenly blend into one another. The officer, confused and disconcerted, goes to church to attend mass before starting off, and there, instead of praying for his well being and health, he weeps and prays to God to send him death, because his death would save the lives of scores of those people of whom Maxim spoke to him—and it would free him from a life made unbearable by the consciousness that he took other people's lives.

Literary productions have always exerted a great influence upon Russian society, and let us hope that now the energetic campaign against the war, started by the best literary powers in Russia, will produce the desired effect, and will compose a unanimous chorus of the separate voices shouting bravely:

"Down with the war, down with the 'red laughter!'"

ODESSA, RUSSIA.

## The Metamorphosis of the Valentine

BY HARRIETTE R. SHATTUCK

IN times of old, when ladies frail and fair  
Were wooed in castle halls by warriors brave;  
And every man, they say, was beauty's slave,  
And many a maiden died of love's despair,  
Then Valentines were born—("’twas in the air!")—  
Then rime and rhythm united message gave:  
"I love;" "my dove;" "ah me!" "’tis she!" they rave,  
"Mine, thine;" "go, wo;" "save, grave;" "her golden hair!"

But now, for *women*, no more "ladies frail,"  
The twentieth century asks its valentine;  
And rime and rhythm must tell another tale;  
No use have *we* (they say) for "mine and thine,"  
Instead of lover fond, ’tis "friend" or "brother,"  
But, sisters, there's one gain; we *now* love one another.

MALEDEN, MASS.

# Bryn Mawr and Harvard

BY ZILLAH M. SHERMAN

[Our readers will remember an article we printed a year or two ago from Miss Sherman, entitled "A Seminar." While any university graduate of our Eastern institutions of learning will discover the truth beneath the satire of the article, we are not yet ready to believe the types of college "atmosphere" here portrayed are prevailing, certainly not in our Western State Universities.—EDITOR.]

"J AMES, a letter from Agnes." Mrs. Leon tried to penetrate the newspaper bulwark protecting her husband between swallows of his morning coffee. "Will you hear it?" With a lingering look at the quotations of the stock market, Mr. Leon vouchsafed the somewhat ungracious assent:

"Oh, I suppose so—what's she want now—money? That's usually the burden of that scapegrace Harry's communications—why," glancing over the mail, "here's one from the boy now, but it can wait—sail ahead, Helen."

"BRYN MAWR COLLEGE,  
MERION HALL.

"MY DEAREST MAMMA:

"How I should like to step in for a moment to-night and see you, but, tho I miss you so much, yet I'm so busy that I haven't really the time to be homesick; for, indeed, I am just rushed with my college duties. I wish you could see my rooms, they're just sweet, and all the time I like my roommate better. She's been at Bryn Mawr nearly two years and knows all about college life; and Alice says that I take to it quite naturally. I hope papa will not think that I've been extravagant in fixing up my rooms, I tried to be economical. Alice calls them bachelor girl's quarters, and I've made up my mind that I shall always live in this way. Alice says there is no reason why girls should not live in this independent, free manner.

"And to think, mamma, that I'm actually here at Bryn Mawr! Oh, I feel so dignified and scholarly in the cap and gown! It's just lovely to wear this student's uniform, different from the rest of the world. But it makes me feel sad that every one cannot be students, but Dr. Haines says—and, oh, she's such a brilliant woman, she's Professor of Greek, you know, and has degrees from

all over the world—that there must be some people to do the common work of the world so as to release scholars from its slavery, thus enabling them undisturbed to pursue their elevating line. But what spare time I can get from my studies I'm going to devote to the College Settlement, for I realize that it must be of great benefit to these poor creatures—oh, I feel so sorry for them—just to come in contact with those who have studied. And isn't it unselfish in college bred people to go down into these mean districts? And Dr. Haines approves, too, of this idea of elevating the poor, for, she says, if left to their own short-sighted notions they might band together and destroy all the colleges and universities, so I intend earnestly to try to make them see the advantages of education.

"Now, mamma dear, don't worry about my health. Of course, I study very hard, the scholarship at Bryn Mawr is real! But I have a walk every day, besides spending an hour in the 'Gym.' Dr. Mary Horner, who has charge of it, says that we Bryn Mawr girls should show in every way, physically as well as mentally, that we can compete on equal terms with our brothers. As for Alice, she can do anything in the 'Gym.'

"But you should see how the girls work here. And at any rate they say the examinations at Bryn Mawr are as difficult as those at Harvard—doesn't that show whether the brain of a woman isn't just as good as that of man? The other day a lot of us girls were comparing some Harvard questions with some of Bryn Mawr's, and we concluded that ours were even more severe—wonder what Harry would say to that!

"Such an inspiring thing is it to see the girls in cap and gown passing back and forth to the lecture rooms. They look so earnest and studious. It all fills

me with such an ambition to be a scholar, and do you know, mamma, that I'm even thinking of a Ph.D.! Yes, far off, seeing that I've just begun working for an A.B. But Dr. Haines is my ideal. I confess to being a little afraid of her. She is so absorbed in her work that she doesn't seem to live in the world at all. When she comes into the lecture room she doesn't seem to see any of us. She is a great specialist. But, never having been to college, you perhaps don't realize what that means. Poor, dear mamma, you've just had a home life, haven't you? Alice and I have decided that we shall never marry, but we are going to study all our lives, and give our whole attention to higher things. This morning we spent the whole Greek period over one disputed line of the text, and it sounded so learned to hear this one and that one quoting her scholarly authorities, French, German, English, etc., for various readings of this passage. I begin to see the more uncertainty there is in regard to a text, the better chance is there for collegiate work.

"And there are so many graduate students here, some working for A.M.s and some for Ph.D.s. And Dr. Haines says that one really has no pretensions to scholarship until one has a Ph.D. You see, mamma, here the ideas of scholarly work are very serious and earnest, and I guess that a Ph.D. from Bryn Mawr would entitle you to a position anywhere. Oh, I'm so glad I came to Bryn Mawr, perhaps if I hadn't I should never have known the real meaning of scholarship! It's such a wonderful thing to be a scholar, and I am going to live for that!"

"What do you hear from Harry—bad boy, not a word have I heard from him, tho I've written him twice in spite of all the study I have to do. How I should love to see him make a good record as a student, but I am afraid that he's a little frivolous, not quite as earnest about study as he should be.

"Now, my dearest mamma, I am looking forward to the time when you will visit me here, and then you can see for yourself what a scholarly place Bryn Mawr is. Alice says she is dying to know you, for she thinks your picture is just the sweetest thing, and I told her it was just like you. Now, mamma dear,

you and papa will understand if I fail to write sometimes it is owing to the fact that I have so much studying to do, and, of course, you realize that it cannot be neglected for ordinary things. Well, it is nearing ten and I must to my Greek, so adieu,

"With love to papa and yourself,

"AGNES HAMILTON LEON."

"Ha, ha," laughed Mr. Leon, "now let's hear what the boy has to say."

"HARVARD.

"DEAR FATHER:

"Why didn't I write home last week—thought I did. Mammy needn't worry about me; never better in my life; am getting an awful chest on me, full a quarter of an inch larger. Of course, I'm 'improving my opportunities. And I'm not so slow, either. Sailed through my exam. all right—course I was coached a little, lots of the fellows are, save some of those tiresome grinds. "Wasting my time," now don't you think it. I am not particularly stuck on flunks myself, and Gee! didn't I have to study at Exeter. But down there the profs. were strict. But here they put a man on his honor. Oh, by the way, I wonder if mammy knows that Bess London is here at Radcliffe—girls better go to their own colleges, they ain't wanted here. Agnes seems to be jollily happy at Bryn Mawr. I am looking forward to the great football game Wednesday between Harvard and Pennsylvania. I'll bet on Harvard every time; mighty strong captain that of our team; that Campbell played last year at right end and was shifted to left end; he weighs 168 pounds, stands 5 feet 7 inches in hight, and has a dandy record, and the coming game with the Penn team will be immense. I don't take a back seat myself in football, and with practice I shouldn't be surprised if I got on the team before I graduate—I am willing to work to get there, I tell you. Great time Wednesday, better run down, pap, and see it. Wish mammy would send me some more pillows and any little fixings she happens to think of; my rooms are great. Oh, by the way, send me another 25 right away quick, will you?"

"Lots of love to mammy,

"HARRY."

PHILADELPHIA, PA.

# Why I Returned to the Ministry

BY A SOCIALIST

THE editor of THE INDEPENDENT asks me to be personal. I will be so and state that I was a clergyman in a small liberal church in the Far West. I became converted to the Great Hope. The Church seemed to me a rich man's tomb in which was buried a crucified Christ. I believed there would be a resurrection, but not from inside the tomb. I believed—I believe now—that a Power from without and from above must roll away the stone. I left the Church to preach Socialism. I went into Socialist politics and succeeded. All through the West and on occasional campaigns in the East I harangued and preached, usually to large audiences, sometimes in opera houses or ordinarily in lecture rooms, small or great, frequently in churches, more than once in halls of legislature, repeatedly in schools and colleges, once in a Hebrew synagog. I had a ready hearing. I was the Wandering Light. I certainly wandered, and my heart, if not my audience, was filled with light. Those years—they were more than ten—were my *wanderjahre*. I did not end them because I failed. I became to an extent a master workman in words, words, words. I could talk more times a day than I could eat. It was cheaper. I made many converts. And by very strenuous work I kept myself and my small family out of need.

But notice this effect upon myself and upon others. I was, in every sense, except that of thought, uprooted. I had a deep thought-root, going back through Karl Marx to Moses and to Plato and to "Lord Christ." But I had no other earth-root.

I had no economic root. I paid my bills and my family's bills—that is more than all Socialists can say—but I had to

do it by continual change of base. The Socialist lecturer must ever away and away "to fresh woods and pastures new." He plays usually at one-night stands. I know of no Socialist audience which continuously supports a lecturer. And this, unfortunately, was the least evil. Socialism is not a scheme, but a philosophy; yet it gives birth to a thousand schemes—nay, to as many schemes as there are Socialists. There were cast last year in the United States 408,230 Socialist votes. There are probably half a million Socialist schemes hatched in the United States each year. This is a conservative estimate, because it does not sufficiently allow for the women. Socialists' wives usually spend their lives restraining their husbands from risking all the family living upon these schemes. Man, not woman, is the creator. Woman is the destroyer of Utopias. Nevertheless, the true Socialist, man or woman, will scheme. Now most of these schemes are of *necessity* schemes for making money. This is not so much for self as for the cause, the party, the family (often put third). The Socialist is a born optimist. But he is rarely a born opportunist. Most of his schemes fail. This is a conservative estimate, and the cure for his bad schemes is more schemes. Consequently change of base, if one has no economic root, means almost inevitable change of scheme. To the Socialist lecturer who has not inherited, made or married money this is a necessity of the situation. I changed my plans, not because I was fickle, but of compulsion. To most of them I held on too long. When head winds blow he who would reach his destination must continually tack. The Socialist usually sails against the wind and therefore changes

his course. The easy people who sail with the wind do not change their course and win the reputation of being steadfast. Most rich men and comfortable people are very steadfast. I won the name of being changeable. I doubt if many of those who criticised the changes have stuck to their main end more steadily than I. Not many have sailed closer to the wind.

But lack of economic base was not all. I had no *home* base. My home was the car, and I could not always afford a Pullman. The world was my home; to do good was my religion; but I had no chimney-corner for a rainy night. I owned no plot of ground recognized as mine, save one little bit of earth, three feet by two, in a field where they bury strangers.

Nor had I a *family* root. My wife upheld my theories, criticised my schemes and consented to my practice; but most of the time I was away from her. They who live to talk must talk to live. Often through those ten years I had to speak thirty nights a month in order to pay board bills for thirty days. I did it, but habitually I was away from my family. One day my little daughter said to her mother: "Mamma, we have a husband, but nobody would ever know it." That was the beginning of the end of my lecturing.

I had no *professional* root. Talking in a hall and then passing the hat—something like the monkey which passes the hat after the organ has ta-ra-ra-boom-de-ayed in the streets—can scarcely be called a profession, tho it is quite as honest as the man who gets \$5,000 per year for talking in a chair, or \$50,000 for talking in a pulpit, or \$500,000 for talking to a bench. Still it is not recognized as professional. Almost above all else, I had no *deed* root. What could I *do*? What can any Socialist lecturer *do*? I could not nationalize the railroads. I could not municipalize gas. I could not employ the unemployed. I could scarcely render help. Even my charity had to be talk. I could not start a co-operative colony. Nor did I desire to. I have not at least that sin upon my shoulders. Socialism is not the dragging of enthusiasts out of the ordinary life into doubtful experiments. Socialism is the development of

the communal life of communities as they are. Colonies, at the best, are but co-operative individualism. What could I do? How could I "go do great deeds, nor dream them all day long"?

I am not underrating the power of words. Many a man's words are as good and as useful as his deeds. A true word bravely spoken may be a veriest deed. The Socialist lecturers of the world are making history and changing the course of empires. Nevertheless, deep within me has grown the belief that he who speaks must practice what he speaks, that the power of a speaker's words are measured first and foremost and invariably by his life, and that while the deed is not the life, the deed must spring from the life or the life be void; that he does not live nor teach who does not at least make some symbol of his heart's faith. I longed to be back in the ordinary ranks, doing something well in the ordinary run, making something—I cared little whether it was shoes or sermons. But I had been trained to be a sermon maker, not a shoemaker. So I determined to stick to *my* last and become "ordinary."

One day a little Western country church asked me to become its pastor. I said "Yes," and here I am an ordinary—very ordinary—minister. Even as a city man, if country bred, will sometimes late in life return to the country, and weary of the hurry and turmoil and artificiality of his city life, will, it may be, stretching himself upon the green grass, stoop down and kiss the sward over the red soil—mother earth—so I, through with my harder jaunt, came back to mother Church. For let us not forget that, after all, for most of us, be we socialist or individualist, orthodox or freethinker—for most of us the Church is mother of us all. Certainly she is the mother of Socialism. She is world's first Great International—aye that, even tho money crazed she has driven out some of her children, or tho grief-frenzied many of them have thrown stones at the old home.

And now in the old homestead am I able to practice Socialism more than I did? Yes, in the sense of being more one with the great mass, one with the whole, doing my daily work and helping on as best I can the development of the communal life.

Is the Church no more to me a rich man's tomb? I think I have not changed my opinion on that point. I am under no delusions; I have no false hopes. I hope little from the Church till the great change come, and I say this even while I believe that the change will come and that the gates of death shall not prevail against it.

Can I with intellectual honesty and soul-faith accept the creed of the Church? This is another question and worthy of another article; I can only say that for myself—I belong to a very liberal denomination—my trouble has never been with the Church's creed but with its practice. Christianity would be well enough were it not for the Christians, even exactly as Socialism would do very well were it not for the Socialists.

In the Church I am not always free to do or to say what I would, but in my experience a clergyman is at least as free as the attorney dependent on corporation practice, or the teacher in a millionaire-endowed college or in a public school dependent on the consensus of a million votes. I believe he is more free than the workman employed by a great company and much more free than the so-called "independent producer" ground between competition on the one hand and the Trust and the Labor Union on the other. Even the Socialist must serve his party, subject to recall. Few orators sway an audience unless they are first swayed by it. The truth is that no man is self-sufficient, independent. The man alone is what the Greeks called him—the *ἰδιώτης*,—the idiot. Certainly I am freer in the Church than I was out of it.

I am freer because I have a root, a simple living, a home, a family, a peace, *pou sto*. I do not have to keep changing. Hence I can accomplish more. I can do more for Socialism.

I do not lecture as much as I did in quantity, tho I still lecture. But I write more. I think I reach more people who are new to Socialism—more ordinary people, and these are the people whom we must reach if ever we are to have Socialism. The trouble with the Social-

ist lecture is that usually to it mainly the Socialists come.

Do I advise everybody to become ministers? No. If I could make better shoes than I do sermons I would make shoes, but I think few would care for the shoes I should make; a few people do care for my sermons. They say that even the shoes that Tolstoy makes are none too good—not so good as his novels. I believe that every man should make what he can make best, be it sermons or shoes or novels.

Only my point is that every man—especially every Socialist—can best serve his day and generation by sticking right to his work, whatever it be, and growing from that and by that into what he may. The purpose of this article will be at least in part accomplished if it deter any young clergyman or any young cobbler from giving up his regular work to preach Socialism. Preach it by all means—if it be a true Socialism and it be your gospel—but preach it from the pulpit or the bench. The lectures such men give are usually the best lectures.

But would not Socialism suffer, would not the cause receive a setback, if all Socialist lecturers should do this, if all those who are now giving all their time to Socialism, going up and down the land talking, lecturing, working—if all this were stopped would reforms come? Yes; if all work were stopped, but we do not propose this. We believe in thirty years in the carpenter's shops and three in the public ministry. Let the Word follow the Deed. Let the Deed be the Word Incarnate.

The editor has asked me to state facts. The cry of my little girl I must therefore state had much to do with my recall to the ministry. But was it not a call from God? It called me to myself. It made me, I think, a better and, I believe, a more useful Socialist. Socialism is the March of the People. If we would march to victory it must be shoulder to shoulder, all together, not by breaking ranks and going round by ourselves shouting to other people to be Socialists. I returned to the ministry because I became converted to the *practice* of Socialism.

# The Indeterminate Sentence for Crime

BY EUGENE SMITH

[Mr. Smith is a lawyer who has taken an interest in prison reform for many years. He is an officer of the National Prison Association since its organization and was secretary of the New York Prison Association for over twenty years, until this year, when he was made its president. He has read many papers on prison reform topics before these bodies, notably one on "The Cost of Crime," which was widely noticed.—EDITOR.]

UNTIL quite recent years the criminal law has undergone no essential change during many ages. Penal statutes and codes, from time immemorial, have consisted of definitions of prohibited acts and have prescribed in each case a definite penalty. As the crimes and misdemeanors so defined differ in gravity, the aim of the codes has always been to so adjust the punishment to the estimated enormity of the offense that the graver the crime the heavier shall be the punishment. To preserve this equilibrium in the apportionment of punishment to offense has always been the underlying principle in the development of the criminal law. Exact retribution has been accepted as the ideal of justice and is the basis on which has rested the entire penal system for the treatment of crime.

The attempt to realize this ideal has been far from successful. The widest variance has resulted in gauging the relation of penalty to offense. Thus, for example, the highest penalty for the very common crime of larceny is imprisonment for two years in Louisiana and for twenty years in Connecticut; for perjury it is five years in New Hampshire, imprisonment for life in Maine, death in Missouri, while in Delaware perjury is punishable only by a fine of \$500 to \$2,000, without any imprisonment at all. The severest punishment for forgery is three years' imprisonment in Delaware and imprisonment for life in New York. The average sentences for arson range from two years in Arkansas to seventeen and a half years in Rhode Island; for burglary, from one year and six months in New Mexico to eight years and four months in Georgia; for robbery, from one year and nine months in Delaware to twenty-two years in Alabama.\* This

diversity of penalties for the same offense extends through the entire catalogue of crimes; it shows that the theory of retributive punishment is not a practicable theory, but is one that effects unequal and grossly unjust results and thus seriously weakens the moral force of the criminal law.

The attempt to adjust the penalty for a defined crime to the guilt of the offender is not merely difficult; it is absolutely impossible of accomplishment. The crime is doubtless susceptible of exact definition, and such definitions are essential in every penal code; but the degree of guilt in the person committing the crime is not susceptible of definition or of human admeasurement. There are a thousand facts and circumstances, relating to the degree of provocation or temptation, the habits and natural temperament of the offender, the motives that controlled him, the environment of his past life, the extent of his intelligence, his inherited qualities, and countless individual incidents, every one of which goes to aggravate or to palliate the guilt of that particular crime. The problem, from the very nature of the case, is insoluble; it is beyond the compass of human intelligence.

The absolute necessity of providing for the differences of individual cases demanded some elasticity in the retributive system. To prescribe a fixed and uniform penalty of eight years' imprisonment for assault with intent to kill, for instance, applicable alike to every case coming within the definition of that crime, regardless of the provocation or lack of provocation attending the assault, would be too revolting to common instincts of justice. The device was long since adopted of softening the rigidity of a uniform sentence by enacting a minimum and a maximum term of imprisonment for each crime punishable by

\* See "Possible and Actual Penalties for Crime," by F. H. Wines.

imprisonment—"not more than ten nor less than five years," "not more than one year," "not more than three years and not less than six months." Expressions like these are found in almost every penal statute. They are designed to cast upon the judge conducting the trial the duty of measuring the prisoner's guilt and of pronouncing a just sentence, the duration of which, the law decrees, must lie within the limits named. This imposes upon the judge a cruel responsibility. He is required to form an estimate of guilt which involves a probing of the prisoner's motives, character, training, temperament, opportunities—that lie open to omniscience alone—and that, too, on the most slender and inadequate data, for on a criminal trial these determinative facts and circumstances are not (and cannot be, except in the most superficial way) the subject of judicial investigation. And so the most conscientious judge is compelled to make a haphazard guess, based upon the appearance and bearing of the prisoner and the scanty facts established by the testimony, and so pronounces sentence—five years, or, it may be, twenty years.

Besides this inherent difficulty of making bricks without straw, the commitment of the length of the sentence to the discretion of the judge introduces another personal equation into the case. The judge has a temperament as well as the prisoner. He may be constitutionally inclined to mercy, or, on the other hand, he may be habitually severe and even harsh in his judgments of men; his sympathies may be easily moved, or he may have an irritable, moody, stern temper. A prisoner arraigned before one judge may receive a sentence of two years, when it is certain that if tried before another judge he would have been condemned for twenty years. All these inequalities and uncertainties effect injustice; they cast discredit on the law and greatly impair its efficiency.

It is the logical consequence of the retributive theory that when a convict has duly served his sentence he is said to have atoned for his offense; so far as the State is concerned he is purged of his crime and is entitled to regain his freedom as if he had never violated the law. This right to a discharge is an absolute

one and wholly irrespective of the convict's character or purposes. It may be morally certain that he will immediately return to a life of crime; he may even avow openly his plans and intention to do so; still, the law has no provision for his further detention and, by the expiration of the term of his sentence, he becomes *ipso facto* a free man. This is practically the most dangerous feature of the retributive system. Discharged convicts now constitute by far the most hardened and desperate class of criminals; they are the experts, the instigators, the skilled leaders in criminal enterprises. And whenever a crime of unusual enormity shocks the public, investigation is generally sure to prove that the crime was planned and executed by ex-convicts. Not less than ten thousand felon convicts are discharged from the prisons of the United States every year. By this vast army the retributive penal system is constantly replenishing the criminal class, renewing its strength, stimulating its energy and supplying it with experienced leaders.

The defects in our penal system thus passed in review are the logical results of the retributive theory of punishment. Let the theory be subjected to a closer analysis: When a criminal is found guilty, *why* does the State condemn him to imprisonment? What justifies such imprisonment and what is the object to be attained by it? The State confines a convicted criminal in prison, according to the theory of retributive punishment, in order to make him suffer; the suffering is the penalty of his crime, and when it has been prolonged to a degree commensurate with his guilt the prisoner is held to have paid the penalty and to be purged of the crime. Justice is then said to be satisfied and the incident is closed. The State, on the other hand, is held to have discharged its full duty when it has thus forced the prisoner to make atonement for his crime.

This is a very narrow view of the relation of the State to crime, and a very false view of the ends of government by law. The State is justified in imprisoning a convict on precisely the same ground that it is justified in confining in an asylum a lunatic who is suffering from violent mania, or in forcibly placing

in a hospital a smallpox patient who is at large. The reason for the enforced restraint in all such cases is the same; it is not safe for the community that these persons should have their freedom. The motive properly governing the action of the State, the end to be attained, are in each case the same, namely: *the protection of the public*. Not retributive punishment, but public protection, is the legitimate aim and the sole end of government in the treatment of crime and of criminals.

The acceptance of this substitution in the fundamental aim of the whole criminal law involves a revolutionary upheaval of its entire structure relating to penalties. The question is no longer one about penalties, whether the prisoner shall suffer, how much or how long he shall suffer, when and how he shall atone for his crime. The only practical question is, What method of treating the convict will best serve the protection and well-being of the community?

To sentence a burglar at the time of his conviction to imprisonment for the term of five years is as irrational as it would be to send the lunatic to an asylum for the pre-ordained time of five years, or the smallpox patient to a hospital for exactly three weeks. The lunatic and the person afflicted with contagious disease must be confined until they are cured—until it is safe for the public that they be discharged. The same course is the only rational one to adopt for the criminal. To grant liberty to a convict without any reasonable ground of assurance that he will lead a law-abiding life is an act of suicidal folly; it is itself a crime committed by the State against all its citizens.

The indeterminate sentence has been devised in recognition of the principle of public protection as opposed to that of retribution. By this sentence a person convicted of crime is sentenced to imprisonment—not for any fixed or definite term—but to imprisonment simply. The imprisonment is to continue until the prisoner shall have undergone such a change in his character, habits and purposes as to render it safe, in the judgment of a competent tribunal, to restore him to freedom.

(Of course, the indispensable concomi-

tant of the indeterminate sentence is a reformatory system of prison treatment. Confinement in prison affords protection to the public only while it lasts. Effectual and permanent protection can be secured in but two ways: either the prisoner must never be restored to freedom, or else he must be so reformed that he can, with safety to the public, be set at liberty. The latter alternative is not only the more humane; it is also the more economical, and on both grounds the protection and well-being of the public demand the reformation, as much as they demand the imprisonment, of the criminal. There is hardly any other branch of science in which such useful and demonstrable results have been accomplished within the last thirty years as have been achieved in the science that deals with the administration of prisons. It has been fairly demonstrated that a large percentage, much more than a majority, of all convicts can be so transformed, through prison discipline and training, that they can safely be intrusted with freedom and that they will abstain from crime and lead industrious and honest lives. What these reformatory methods are in detail, how they are applied and how they effect their end constitute a most interesting study. It is possible within the limits of the present article only to refer to one feature of them which closely bears upon the indeterminate sentence:

A cardinal principle of the reformatory system is the individual treatment of prisoners. Every effort is made to gain and to record all available information regarding the past life of each prisoner. His life while in prison passes under close scrutiny, and the results of such observation are minutely recorded. Every convict is subjected to special treatment adapted to his capacity and having reference to his points of strength and of weakness; in numberless ways he is subjected to tests, and his successes and his failures are carefully noted in his record. By these methods the inmost character and purposes of the prisoner become unfolded to the prison officers; the system is so searching that shams and deceit are unavailing and are well-nigh impossible. Moral, industrial and educational agencies are constantly em-

played in the effort to develop in the prisoner habits of industry and thrift, principles of honesty, worthy aspirations and correct views of life. When it comes to the question of his fitness or unfitness for freedom the record of his life in the prison yields ample data upon which to found a judgment regarding his capacity, his power of self-control, the strength of his moral purposes—in a word, regarding his intention and his ability to lead an honest life. The decision can safely be intrusted to a board of experienced men acting in co-operation with the officers of the prison, and the judgment arrived at can be formed with as much confidence in its correctness as, for example, in the decision of a body of physicians that an insane patient has recovered his sanity.

It is the vital principle of the indeterminate sentence that no convict should be discharged until he is fit for freedom. This principle is of inestimable value and is beneficent in the protection it gives not only to the public but to the convict himself. However degraded or desperate, the criminal is still a weak human being; he needs restraint and uplifting influence from without; if left to himself he is sure to sink deeper in degradation and vice until he accomplishes his destruction. The worst fate that can befall such a being is to be turned adrift to wallow in the mire.

The indeterminate sentence reverses the attitude of the State toward the criminal. Under the retributive theory the State presents itself to the wrongdoer as an avenging fury, pursuing him in order to inflict suffering upon him and, when it has wreaked its vengeance, casting him forth with nothing but threatenings for the future. This view of the State—and is it not justified?—serves to embitter the criminal; he regards society and all government embodied in the State as his worst enemy, to be defied and defeated. By the indeterminate sentence, on the other hand, the State presents itself to the criminal as a beneficent power, seeking his amelioration and aiming to rehabilitate him and restore him to manhood.

In another way the indeterminate sentence is a most potent instrumentality toward the reformation of the convict:

Under this system the duration of the convict's imprisonment is dependent upon the convict himself. None of the reformatory agencies can be effective without his active co-operation. The instinctive love of freedom, the longing for release, constitute the strongest motive that animates the prisoner. And when he is made to realize that he has to work out his own salvation and that the length of his imprisonment depends on his own exertions, the strongest possible stimulus is applied to him to surrender himself to the reformatory influences that surround him.

The indeterminate sentence is not properly applicable to every offense. Capital crimes, which incur the sentence of death or imprisonment for life, ought to be excepted from its operation. Such crimes import so frightful a danger to the community that the risk of their repetition by persons once convicted of them cannot safely be incurred. If peculiar circumstances can in any case justify the release even of a convict guilty of a capital crime, the power to pardon vested in the Governor is plenary. It is also a question how far this form of sentence can be successfully applied to petty misdemeanors. But for the great body of crime lying between the extremes at each end of the scale the indeterminate sentence is the most effective measure of public protection and the most useful instrumentality toward the convict's reformation that has ever been devised.

The indeterminate sentence is no longer a mere doctrinaire's theory. It has now become firmly imbedded in American criminal jurisprudence. In modified forms, all of which, however, embody its vital principle, it has been incorporated in the statutes of various States of the Union, notably New York, Massachusetts, Connecticut, New Jersey, Ohio, Illinois, Indiana, Minnesota and Colorado. In most of these States the indeterminate sentence is agglutinated to the old penal codes by the provision that the term of imprisonment under it shall not be less than the shortest, and shall not exceed the longest, term prescribed by the codes for the offense committed. Such limitation between a minimum and a maximum term is not logically defensible, but until the system of reforma-

tory treatment (which is the necessary complement of this sentence) shall have become more fully matured and universally adopted the limitation is probably a prudent one.

Another essential concomitant of the indeterminate sentence is the feature of conditional release on parole. When a convict is deemed fit for release a situation where he can have employment is procured for him through the efforts of his friends or through the agency of the State and he is sent there on probation. He remains for a term (generally six months) a ward of the State, still under sentence and under official supervision. If he falls into evil ways and seems to be gravitating back toward crime, he is re-arrested and returned to prison for further treatment. If he passes the probationary period leading an honest life and demonstrating his intention and ability to abstain from crime, he obtains a final and absolute discharge.

The indeterminate sentence is distinctively an American institution. The State of New York has the honor of first incorporating this form of sentence in effective legislation. In the New York State Reformatory at Elmira Z. R. Brockway developed the system and exhibited to the world a demonstration of its value. Among the States that have since adopted it are those which stand foremost in power and influence, and there is reason to believe that the indeterminate sentence will ultimately become a fundamental element in the criminal jurisprudence of all the States and of the Federal Government.

In the universal adoption of the indeterminate sentence, with all that it logically involves, rests the strongest hope for final victory in the contest, which has hitherto been a losing contest, for the suppression of crime.

NEW YORK CITY.

## Parliament and Persons in England

BY JUSTIN McCARTHY

THE House of Commons has during the last two or three years been passing through a new and curious phase of its existence. The policy of the Government, or perhaps it should rather be said, of the Prime Minister, has been apparently to impress on the representative chamber the lesson that the leaders of the Administration do not really care one way or the other about any decisions which the House may amuse itself by adopting. The Prime Minister, Mr. Arthur Balfour, has got into the habit of absenting himself from the House altogether during the greater part of each sitting, and when he does enter the chamber appears to take little or no interest in its proceedings. Several important resolutions have lately been passed by the majority of those present in the House, while the greater number of the Government's supporters have taken no part whatever either in the discussion or in the consequent division. In other words, certain resolutions op-

posed to the policy of the Government have been passed by a majority, which majority must have been converted into a decided minority if only the regular supporters of the Administration had come to the House and recorded their votes. Now it would, of course, be impossible for any one to believe that the supporters of the Government would not have taken good care to show themselves in the division lobbies if the Government had not given them clearly to understand that there was no occasion for them to take the trouble of coming to the House and giving their votes. Never before, so far as I can recollect, has the House of Commons been treated to the curious sight of a hostile resolution carried after full notice by the opponents of the Government when everybody knew full well that the resolution must have been defeated if the Government had only bidden their supporters to attend to their duty and take part in the division.

All manner of theories have been

started to explain this extraordinary inaction on the part of the Ministerial authorities. One theory is that the Government are determined to make an early appeal to the country by a General Election and meantime do not care in the least about anything going on in the present House of Commons, and are therefore quite willing to give their supporters as easy a time as possible in the interval. Another theory maintained by many on the Opposition side is that Mr. Balfour and his colleagues desire to show their utter contempt for the Liberals and seceding Tories by declining to take any notice whatever of the hostile resolutions which the Opposition may think fit to bring forward. Then again comes the suggestion, also from the Opposition side, that the Government have been reduced to utter despair; that they know the next General Election can only end in their complete defeat, and that meanwhile it would be useless to worry themselves or their followers by any preliminary and futile trials of strength. It is certainly an entire novelty for the Opposition in the House of Commons to find itself treated by the Government as a pack of children might be treated by their parents who do not think it worth while to interfere with any game of romps which does not involve any actual harm or danger to themselves or others. Mr. Balfour is certainly a man endowed with a large gift of humor, and I can hardly doubt that, whatever may be his underlying policy, he must often find a refreshing amusement in the sight of the great representative assembly thus making preparation for battle again and again and winning a nominal victory for the mere reason that no enemy came into the field to oppose them.

Meanwhile the Chancellor of the Exchequer, Mr. Austen Chamberlain, has brought in his Budget. The principal ingredients of his financial scheme are that there is to be a slight reduction in the duty on tea and, contrary to general expectation, no reduction of the income tax. This latter proposal has, of course, created great dissatisfaction almost everywhere, while the reduction of the tea duty is only a benefit of serious moment to the poorer classes, who certainly do not make the great bulk of a Tory

Government's supporters. Mr. Austen Chamberlain has been severely criticised even by some of his political supporters, and most of his newspaper critics have disparaged not only his scheme, but also his own manner of expounding it to the House. Without committing myself to any criticism as to the nature of the scheme itself or to any expression of my own views as to what a heaven-born Chancellor of the Exchequer might have done, I may venture to say that I thought Mr. Austen Chamberlain's speech was on the whole a well reasoned and a gracefully expressed piece of argument. I have a higher opinion of the younger Chamberlain's intelligence and parliamentary capacity than seems to be entertained even among the majority of his own supporters, and my readers will easily understand that I am not led to my estimate of him by any sympathy with his political opinions. He had a very difficult part to accomplish in preparing a financial statement under such conditions of uncertainty and confusion as those which now surround our Chancellor of the Exchequer, and I think he made out an ingenious case for the propositions which he had to offer to the House of Commons. The style of the speech, too, seems to me to have been in good parliamentary form and to have been that of an educated and capable man well qualified to win a distinguished position in the House of Commons.

*Punch* has an amusing and a suggestive cartoon illustrating the relative positions of the father and the son in the present political crisis. Austen, the son, is pictured as a jockey who has just ridden for the Budget Stakes on the horse "Surplus," in which the other competing horse, "Trade Depression," has been left nowhere. The winning jockey is met by Joseph, the father, who congratulates Austen on having done so well, but adds that "it would have suited your old dad's book better if the other horse had won." Joseph, as my American readers will remember, has always been contending of late that England's existing financial policy was bringing about depression of trade.

Many Americans who are acquainted with London must have joined in the general regret felt here at the death of

Sir Francis Jeune, President of the Probate Divorce and Admiralty Division of the English law courts. Sir Francis Jeune had shortly before his death been created Lord St. Helier, when, owing to his increasing ill health, he resigned his official position. Sir Francis Jeune had had a brilliant career at the bar and won added distinction by his great services on the bench of justice. He was a man of high education, much travel and great love for letters and art, was very popular in society and most hospitable in his home. His wife, Lady St. Helier, who will ever be best remembered as Lady Jeune, was one of the most delightful hostesses in London. For many years both before and since her marriage to her late husband—she was a widow when she married him—she had maintained a *salon* in London which would have done credit in every sense to the most distinguished Parisian hostess in the bright days of the famous age when the *salon* was a characteristic French institution. Every one distinguished in politics, science, letters or art was sure to be met with at Lady Jeune's home during the social seasons. Her occupation was not, however, merely

that of keeping up a *salon* and entertaining guests, for she devoted a great part of her life to works of charity and beneficence, to the care of the sick and the poor, to the education of children in the humbler walks of life and to the spread of education among the lowly born. I can speak with some confidence as to the part which Lady Jeune held in the life of London, for I have had the honor of her personal friendship, as I had that of her late husband during many years. The deepest sympathy of countless friends here and abroad is with Lady Jeune in her recent afflictions. For the death of her loved husband was not her only recent calamity. It had been preceded not long before by the death of their dear and only son. Lady Jeune, or as I should now call her, Lady St. Helier, has two daughters living, step-daughters of Lord St. Helier, one of whom is married to the Right Honorable St. John Broderick, Secretary of State for India, and the other to Mr. Allhusen, a member of the House of Commons.

Literature has given us some welcome volumes lately. One of these is the third volume of Mr. Herbert Paul's work, "A History of Modern England," published by Messrs. Macmillan & Co. Mr. Herbert Paul is one of the most distinguished among the rising English men of letters at present. He is all the better qualified for his task as historian because of his training in the world of journalism and also in the world of practical politics. He was for many years a writer of leading articles on the *Daily News*, and is still a contributor to many journals and reviews, and he was for some time a member of the House of Commons. In that House he was rapidly rising to distinction and only failed to secure re-election because he utterly refused to accommodate his political principles to the passion of Imperialism which was for the time sweeping through the country. He is sure, if his inclinations still lead him that way, to find a seat again in Parliament before long and to win new success there. He writes a brilliant style, is a master of telling phrases, a close student of history and a keen, independent critic of public men and political parties. The "History of Modern England" which Mr. Paul gives to the world has to do with events

SIR F. JEUNE

occurring since the late Queen Victoria came to the throne, and it shows at once a most profound and accurate study of the events which belong to all preceding periods of the national development. Mr. Paul is very careful and precise in his statement of facts, and in this sense might well satisfy even the driest and most prosaic student of historical narrative. But he has many qualities which are not usually to be found in association with the faculty for a faithful and rigid record of facts and dates. He has a remarkable and an artistic skill in portraiture, and the figures which he describes in his pages present themselves to the mind of the reader as living realities. Then he is always the literary man as well as the politician; he can appreciate to the full the many and peculiar developments of literature which took place during his period of modern history and, in fact, all the various influences which contribute to the character of that era are shown in his volumes as they blend into a harmonious whole. There are two other volumes to be issued before the work comes to its close, and I cannot doubt that the series will find its reading public in the United States as well as in the British Empire.

"The Bell and the Arrow" (T. Werner Laurie, publisher) is the title of a novel—"an English love story" as it is described by its authoress, Nora Hopper—Mrs. Hugh Chesson. Nora Hopper—such was her maiden name—has made her literary reputation thus far and it has been a reputation of genuine distinction as a poetess, and "The Bell and the Arrow" appears to be her first novel, altho she has, I believe, written short stories for various literary magazines. She has indeed been a very prolific writer, and altho she is still a young woman, can look back upon a long and successful literary career. She is the wife of Hugh Chesson, himself a literary man of some distinction, son of Frederick W. Chesson, whose name will be still remembered by some of my older readers in the United States as that of one who showed himself a devoted friend of the cause represented by the North during your great Civil War at a time when that cause had not too many friends in England. The elder

NORA HOPPER

Chesson and I were associated then in the editorial work of *The Morning Star*, the London daily newspaper representing the principles of John Bright and Richard Cobden, a newspaper which was the steady advocate of the Northern side in that great crisis. "The Bell and the Arrow" is a very fascinating and also a very peculiar story. It is decidedly original not only in its conception, but in its treatment. It creates romance out of what might be regarded as the ordinary influences of everyday life and evokes thrilling interest from commonplace elements. It is all through a study of human character rather than of incident, but every touch of human character becomes an important incident for the reader. Everything in the story ends very much as it might have been expected to end in the ordinary course of things, and yet we know when the story is done that a change has taken place in the feelings and even in the lives of the principal characters and that new possibilities have been opened up for these four personages of the life-drama set out in this novel.

LONDON, ENGLAND.

# The Underfed Children in Our Public Schools

BY JOHN SPARGO

[Mr. Spargo has made an investigation of the sensational charges recently made in the daily press of the city that large numbers of children go to school with insufficient food, and presents the results of the investigation in the following article.—EDITOR.]

“**A**FTER Bread, Education is the Great Necessity.” So runs the inscription upon one of the most famous public monuments of Paris. That education is a social necessity is no longer seriously questioned. But the other idea of the French motto, that education must come after bread—that it is alike foolish and cruel to attempt to educate a hungry child—is often lost sight of. In the early days of the public agitation for free and compulsory education it was not infrequently urged that before the State should undertake to compel a child to attend its schools and receive its instruction it ought to provide for the adequate feeding of the child. That argument, happily, did not prevent the establishment and development of public education, but now that the latter institution has been firmly rooted in the soil of our social system, there is an increasing belief in the inherent wisdom and justice of the claim that the State has no moral right to attempt to educate an underfed child.

Apart from the question of moral right is the unwisdom of such a policy. All practical educators agree that the money and effort spent in the endeavor to instruct hungry or underfed children are largely wasted. Few, if any, will disagree with Superintendent W. H. Maxwell, of the New York Public Schools, when he says: “Education, whether physical or mental, is seriously retarded, if not practically impossible, when the body is improperly or imperfectly nourished.” That mental under-development commonly attends physical under-development is a physiological fact too firmly established and too obvious for argument.

Our national complacency has received a severe shock, or a series of shocks, in the form of the revelation of a growing

and menacing poverty problem of vast dimensions. The terrible, sinister, challenging phrase, “ten millions in poverty,” alarms us. Some phases of the poverty problem we have studied and familiarized ourselves with, but its relation to our future citizenry, the children upon whom we lavish so much money and effort for their education, we have neglected. In this respect we are far behind other nations, notably France, England and Germany. They have given it most serious attention and studied poverty in relation to the efficiency of their educational systems, public morality and the development of their children physically and mentally.

Mr. Robert Hunter’s estimate that in New York City alone some sixty to seventy thousand school children suffer from underfeeding has caused something of a sensation. While no serious attempt has been made to dispute that estimate, or the data upon which it is based, there is a wide divergence of opinion, naturally in the absence of comprehensive and carefully collected facts. On Mr. Hunter’s side are some of the most prominent and experienced officials of the great charitable societies, some of whom think he has understated the extent of the evil, and many of the most experienced medical men of large practice among the poor. Others there are, of course, who regard it as a wild guess, unwarranted by facts. But they do not offer any evidence in rebuttal of Mr. Hunter’s statements. They give only bare denial.

It is unfortunate that so much attention should have been directed to the statement about the condition of the children in New York City schools. It has tended to obscure the most important fact of all, that the poverty problem is national in its scope. It is not a question of sixty or seventy thousand under-

fed school children in New York, but of nearly three million children in the United States underfed, and suffering in consequence from under-development physically and mentally. Boston, Philadelphia, Cleveland, Chicago, Jersey City, these and scores of other cities are equally, in proportion to their size, confronted by this grave problem.

Statistical data upon the question of underfeeding are scarcely obtainable, as no systematic inquiry has ever yet been made in the public schools of any American city. During the past two months I have made a somewhat careful and detailed investigation of this problem, approaching it from various sides. I have personally visited many of the largest public schools and gathered the experiences of the teachers and principals; I have gone over several of the schools, noting the individual children, learning their histories—often from their own lips—and backed these direct observations and inquiries by investigations at the homes of the children, made by trained investigators. In addition to these observations in the schools I have the testimony of physicians of large practice amongst the poor, heads of large hospitals and dispensaries, visiting nurses and others, whose collected testimony is based upon personal observations of many thousands of cases every year.

Miss L. S. Bainbridge, head of the Woman's Branch of the New York Mission and Tract Society, says: "The general experience of our thirty or forty workers is that two-thirds of the children in the tenement families are not sufficiently nourished to do good brain work in the school. It is the constant experience of our trained nurses that their services are asked for children who need a bowl of soup or a good dish of oatmeal with milk on it rather than medicine."

The head of the Babies' Hospital, Miss Marianna Wheeler, gives underfeeding through poverty and improper feeding through ignorance as the causes of the great majority of children's ailments treated. Sometimes underfeeding and improper feeding are not distinguishable. A mother too poor to buy milk may give her child tea and bread. Such a case will often be regarded as one of improper feeding through ignorance, when, in fact,

it is one of underfeeding due to poverty. A classification of the cases entered in the Babies' Hospital for a single day, sixteen in number, gives eight cases due to absolute underfeeding, five to improper feeding and only three in which these causes did not appear as primary factors.

The Presbyterian Hospital reports a majority of its patients suffering from under-nutrition. The Superintendent, Miss Maxwell, says: "Of the 1,359 cases of pulmonary tuberculosis visited by our district nurses we are convinced that one-third of that number are suffering from insufficient and improper food. Of the 653 acute medical cases, one-sixth of the number suffered from marasmus and one-ninth with rachitis." Both these diseases are essentially due to under-nutrition.

At one large dispensary where they treated more than 4,000 children last year, I was told that quite 50 per cent. of all the cases were due, wholly or in large part, to underfeeding or improper feeding. Taking only the absolutely underfed, the Registrar told me that 33 1-3 per cent. would be a conservative estimate. Fifty per cent. underfed was the estimate of the Superintendent of another of the large dispensaries. Not less emphatic is the testimony of those principals and teachers in the schools who have given the problem their attention. I have heard teachers tell of children fainting from exhaustion and hunger. In many more cases I have been told of backward, deficient, drowsy children, whose condition is directly traceable to underfeeding. The average citizen, who is inclined to doubt the wisdom and perhaps also the need of providing food for the children in our public schools, would be surprised to know the extent to which the teachers, out of their generally too slender incomes, provide suffering children with food, and sometimes with shoes and clothing.

Investigation in the schools is a difficult task. Even where the teachers are observing, sympathetic and tactful the natural sense of the shame of poverty in the child is hard to overcome. And not all teachers are blessed with the gift of tact. I have more than once had inquiries made with the result that in the

same school, in two classes of children of about equal age—and coming in many cases from the same homes—the reports have given from 10 to 50 per cent. underfed in the one class and absolutely none at all in the other. In such cases careful inquiry has shown that the one teacher had sympathetically and privately questioned the children individually, while the other had simply taken the class collectively and gone through some such formula as this: "Is there any child here who does not have enough to eat at home and is hungry? If so, please show hands!" I have gathered record upon record of such "investigations." Even so, with such unintentionally brutal methods, not a few cases have been revealed where children were in absolute want.

Where careful, private inquiry has been made by the teachers the results have been alarming. I have before me the letter of the principal of a school giving the results of an investigation made in two classes, one of boys, the other of girls. When I visited the school the principal told me that there were "quite a number of underfed children." In her letter written to me later she says that one-tenth of the children in the girls' class were reported as underfed and one-fifth in the boys' class. In the boys' class subsequent inquiry showed there were two boys very weak from lack of food. Another teacher in the same school said that quite 50 per cent. of her class are underfed. In another school I was told by the principal of children fainting in school from lack of food. Of one thousand pupils I was told "at least one hundred are badly underfed. Careful inquiry would probably show that the number was much larger." This, by the way, is one of the schools in which a good deal of personal charity in the shape of food and clothing is given by the teachers. In another school of some fourteen hundred children the principal, a most humane man, assured me that there were "not five cases in the whole school" of necessitous children. He undertook to have his teachers personally and privately inquire of every child in order that he might show how "absurd" the estimate of 10 per cent. underfed children was. Of nine hundred and nine

children whose cases were reported by the teachers one hundred and four had had no breakfast that day, while fifty-four children had had insufficient and were hungry. In most cases they had had only bread and tea. Thus, the result shows 17 per cent. of the children examined to be underfed. Of course allowance must be made for those children who went without breakfast from causes other than poverty, such as lack of appetite, fear of being late, etc. Tho, I must add, that in many cases children who miss their food for the latter reason are poor children, whose mothers are away at work and who must, therefore, shift for themselves. For many such children going without breakfast, and even without lunch, is so common as to be almost a chronic condition. The teacher's written report from one class in this school shows that of forty-three children present no less than thirteen had had no breakfast, while twelve were classed as having had very little. When that report was sent back to the teacher with instructions to find out the reason why the thirteen had come to school without food, it came back with postscript, "There was no food for them to eat."

Principals and teachers have told me of children giving out, fainting from hunger, and when they were given wholesome and nourishing food, which they ate ravenously, being nauseated because they were not used to it. In one school, where there is a special class of backward, defective children, provision has been made for feeding them. A fund has been created by the teacher, to which the children contribute their pennies, the balance being made up by the teacher and the principal. Every day at ten o'clock the children get a cup of hot milk each, and three times a week they get the products of the Girls' Cooking Class. Only after feeding them could the teacher begin to make progress with these defectives. She assured me that careful study and inquiry had led to the conclusion that there was generally, if not always, under-nourishment and consequent physical under-development to account for the mental under-development of the children. Experiments in Boston have shown similar results.

Aside from the question of underfeeding, tho often inseparable from it, is the broader question of improper feeding. This often is a result of the ignorance of the parents—and such ignorance is not confined to the poor, tho most prevalent among them. I have heard of babies less than a month old being fed upon cabbage! But there is a phase of the evil of improper feeding which I have found generally prevalent. Many of the mothers of the children go out to work in order to supplement the wages of their husbands. In many of these cases the children are given a small sum of money, generally from three to five cents, with which to buy lunch. There is not the absolute lack of income associated with destitution, but an industrial condition which prevents the mother giving her attention to the children. Judicious expenditure upon wholesome food in these cases is the exception. The children buy candy, apples, often unripe, covered with a coating of highly colored sugar (from which so many cases of ptomaine poisoning have been recorded), or pickles, sometimes the latter with a “hunk” of bread, but oftener without. I know of scores of cases of children having bought pickles day after day. Sometimes, especially among the boys, the game of “craps” is responsible for one having no lunch and the other having a particularly big, unwholesome “blow-out.” Many teachers have pointed to this lunch question as the most serious of all, and expressed an earnest wish that some means could be devised whereby the parents could insure the wise expenditure of the children’s pennies upon decent, wholesome food.

That the evils of underfeeding and improper feeding due to the destruction of the best features of home life by our industrial conditions are terrible in their magnitude and far-reaching influences is certain. Something must be done. But the first step which should be taken is an investigation of the problem itself. It is to be sincerely hoped that the committee appointed for that purpose by the

Board of Education in New York will cause an expert investigation to be made upon the following points: (1) The extent of underfeeding; (2) its physical effects so far as they can be ascertained by weighing and measuring the children in various districts and comparing the results; (3) its mental effects as seen in the relative receptivity and efficiency of the underfed and the wellfed; (4) the improvements noted in children’s homes, etc., as a result of properly feeding hitherto underfed children; (5) methods, cost and results of various experiments in the public schools of Europe. Moreover, it is to be hoped that the school authorities in other cities will cause similar inquiries to be made. For it cannot be too often repeated that this is a problem which exists in every industrial and commercial center of the nation. While my recent personal investigations have been confined to New York, yet I have heard from teachers and others of similar conditions prevailing in other cities, notably Boston, Philadelphia, Chicago and Cleveland. Child labor investigations in Pennsylvania have shown that it is the underfed, undeveloped and backward child who is most often taken from school and sent to the factory or the mine. Thus the work of physical deterioration and ruin begun ere the child leaves its cradle, aye, often ere it leaves the womb of the mother, is completed.

It is trite to say that no nation can afford to allow its children to go underfed. That means national peril and decay. There is no greater “race suicide” than that. To those who cry out that any attempt on the part of the municipality to provide against this evil will mean “pauperization,” it should be sufficient to point out that our public school system itself has grown out of “pauper” beginnings. And to those who take refuge behind the old idea of the “survival of the fittest,” I suggest that to make as many as possible fit to survive is the better basis for civilized statesmanship.

NEW YORK CITY.

# Making a Country Home

BY E. P. POWELL

AUTHOR OF "OLD FARM DAYS" "THE COUNTRY HOME," ETC.

SOME two years ago, while writing for THE INDEPENDENT a series of articles on making country homes, the queries and comments came in faster than they could be considered. It seemed best at the time to lay over some of these for future discussion. I propose now to heed and to answer the more important. A letter which peculiarly interested me at the time came from a Philadelphia teacher. She wrote:

"Will you please, before you drop this discussion of country homes, consider the case of a teacher who has a strong love for the country and is very tired of teaching. You must not think that the great increase of women teachers, in proportion to men, means that we are quite happy in our position. We have been breaking loose from old lines of living and working and have somehow got hold of the schools of the country. The proportion of men teachers to women teachers in 1870 was about equal, but in 1902 it was four to five times as great in number. But bear in mind that meanwhile the wages of men teachers has gone up, from an average of about forty dollars to an average of fifty, while *our* pay remains what it was thirty years ago—or very near that sum. We are doing the hard work of the schools of the United States, and we are not getting the pay. It seems to some of us that farming is beginning to open a great field—that is, some departments of farming. I for one have noted with intense interest what has been said in THE INDEPENDENT and elsewhere about women as bee-keepers, as small fruit growers, as managers of dairies, etc. I want to know what is the minimum cost of a small country home. I do not know how to state this case accurately, simply because I do not know what I can do; and others are situated like me. Can you suggest to me any way in which, with a small capital of \$2,000, I can get a country home and make a living on it? What I really wish to undertake is the growing of violets, roses, lilies, etc., and the management of a greenhouse. With this work I see no reason why I might not grow a pretty good garden of berries and have an orchard of small fruits besides. Tell me a little about the cost, and then indicate as far as you can the running expenses for two or three years. When will I

begin to get some profit? Will it pay to borrow money to aid in starting such a movement? You see I am a good deal mixed up in my plan, and I presume I will mix you up a good deal in your estimates of what I want. Perhaps what I most want is independence."

There is no such thing as a minimum price for a country home. An old homestead of a few acres should be procurable for a sum not to exceed \$600 or \$800. Repairs would cost \$200 or \$300 more. Then you have your greenhouses to erect, and you will have very little capital left over. I take it for granted that you intend to raise your own garden produce, as well as your small fruits and your orchard fruits. To do this would not require more than two or three acres of land. You might even get on with a single acre, altho you would have very little room for orchard trees. You should locate, if possible, near a market or a depot—perhaps a trolley would serve you. This should not enhance the price of the land very largely. In localities there is occasionally a speculative turn which keeps places such as you desire, for a while, at a larger figure. You will, of course, choose a sunny and bright location, and one that is well protected from severe winds. But even after that you will need your hedges and your own windbreaks. I will not advise any one to take up a country residence without this as a first proviso. You will rarely find a properly protected piece of property in the market. Nine farmers out of ten leave their lands to be wind-swept and storm-swept. You must first of all look out for this, altho the larger part of your culture may be under glass.

So far as I can observe the very great increase of greenhouse work has not glutted the market. The call for violets and similar plants and flowers, as well as roses and lilies and carnations, is enormously on the increase. You probably expect to begin on a small scale and

work your way upward and outward. You have, of course, your market to secure and your experience to accumulate. Just at this point a friend suggests that no department of glass house work is more important than growing lettuce. You can also make a specialty of other vegetables, such as spinach and rhubarb. I am not qualified to answer one of your questions—that is, the running expense of such a place as you propose—for one or two years. I think I can safely refer you to a little set of books published by Henry T. Coates & Co., of Philadelphia. One of these little volumes is entitled "Farming by Inches," and it will give you all the information concerning garden planting and growing vegetables for market that you can get out of a book. The second is entitled "My Ten Rod Farm, or How I Became a Florist." This volume recounts the story of a woman who was left poor and with children on her hands, but who developed into a skilful florist on a very small capital. The trouble with all these books, however, and with nearly every other that undertakes to give aid to one seeking a country home, is the emphasis placed on strawberries. No other small fruit makes one-half the trouble, and with no other will you run anything like the risk of serious loss. At all events do not put a large amount of capital into growing one kind of berries, or one kind of flowers, until you have thoroughly sounded your market. We must always do what circumstances demand of us. The person who fails is the one who refuses to adjust himself to the conditions that surround him. The strawberry market is a very difficult one for those who only grow a few dozen crates. It is dominated by those who grow hundreds of bushels.

You have asked whether it will pay to borrow money to aid in starting a country home—that is, a home intended to pay its own way and without other resources than what may be produced from its soil. I do not like to answer this question, because sometimes it is necessary to borrow and occasionally it turns out to be advisable. But for my part I dread debt, and cannot work as well while I am owing anything at all. So far as I have observed those who borrow money do not generally use it

wisely. A person who secures in a lump five hundred or one thousand dollars imagines that he has all the capital he will need for a long while to come. He will let his money slip out of his fingers much more readily than if he had to earn every dollar, cent by cent. The fast life of the past fifty years has altogether too much tended toward readiness to incur debt, and responsibility is less felt. If you mean, however, that you think of borrowing enough capital to purchase a large homestead, or to build large greenhouses, I should say you will make a blunder. But really, so much depends on persons and on conditions that we can only repeat the general advice: "If you wish to get out of debt, stay out of debt." "Owe no man anything" is good religion, because it is good social philosophy.

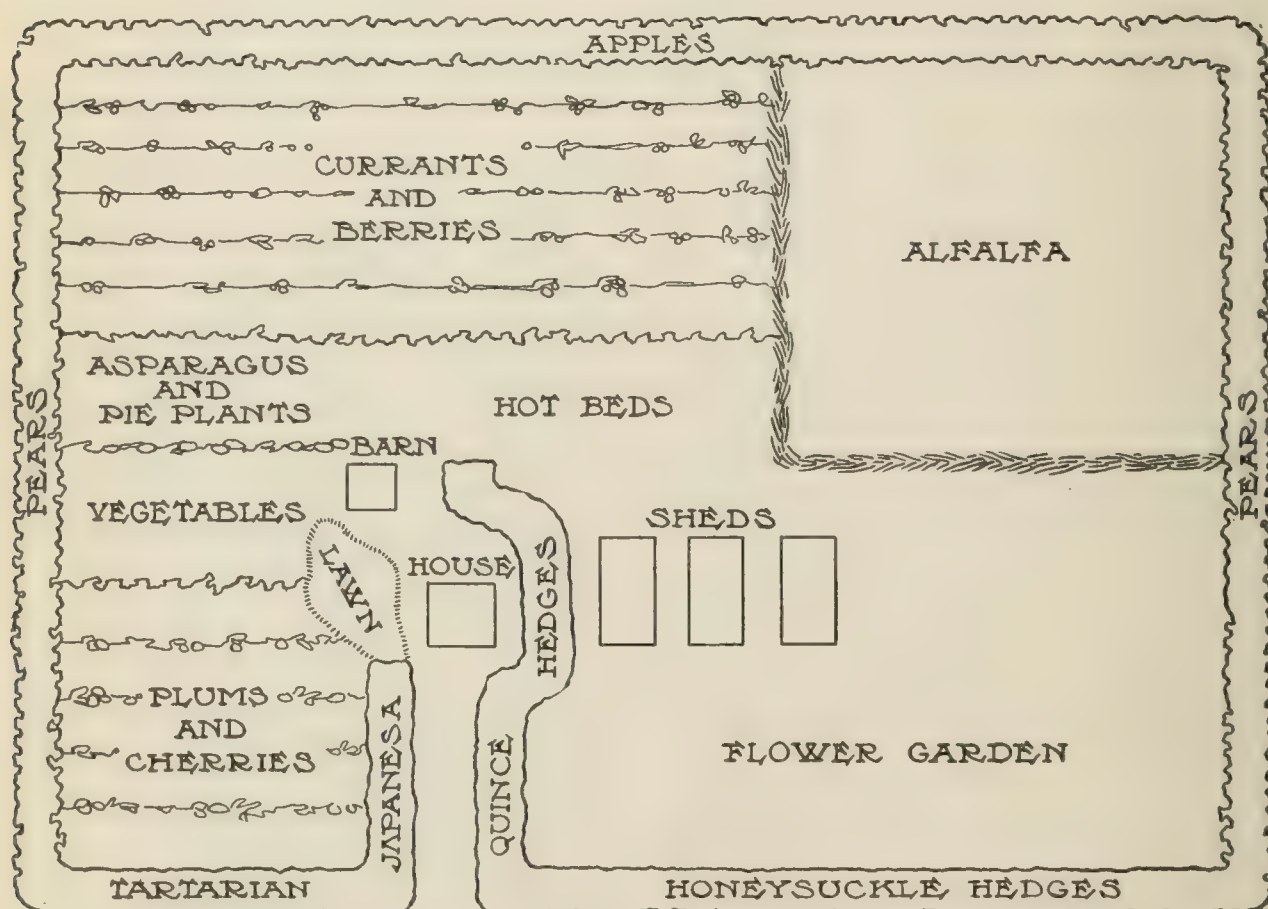

But if your taste for greenhouse culture and floriculture is not too pronounced, the other industries you name are as open to any woman as they are to any man. I believe, so far as I have seen, that most dairies that succeed do so from the energy, tact and executive talent of women. This is a good deal less a fact than when dairying was a home employment—before milk was taken to the factory. I know women who successfully run dairies. Their barns and barnyards are cleaner than the average, and their cows give more milk, because they are cleaner and happier. A miserable cow, in a barnyard slough, or a dirty stall, is a diseased creature, which cannot be of high value to her owner. In France the women do all the dairying, and in Holland they do the milking as well. We have a mean little prejudice against such work for women; but none against a hundred meaner things, which they are compelled to do under the head of household work. If you go into dairying do not do as most men do, get a lot of scrub stock because it is cheap, or buy any more than you can keep up to high grade. This is the cause of nine failures out of ten. Any one on a small farm can make more money with ten good cows, cared for to the finish, than with twenty that are off on quality and quantity. A few others collapse on fancy dairying—buying at bankrupting prices registered stock that can be equaled by

selected animals out of common herds.

As for keeping bees, you had much better combine it with small fruit growing; for bees are essential to success in the orchard. For five acres keep ten hives of bees; for ten acres keep twenty hives. If it is a neighborhood where bees can easily get food and collect honey the number of hives may be increased. I have seen eighty hives doing good work on a farmer's stands. Of course, this adds to your study as well as to your work, but nothing can be done profitably or pleasantly that is not well understood.

not know that I am one of these; I do not ever expect to find out—there are enough other problems. Bees take especial prejudice against some persons, and these people may as well not undertake their management. These, however, are extreme cases; and you will probably develop not only a capacity for their care but a real friendship for your pollenizers. They ought to have a few basswood trees to work in; and these it would be wise for every farmer to plant—in place of maples. Along our streets we might grow more lindens (or bass-

Summer care and winter care of bees must be exact and intelligent. In order to make it profitable you must comprehend the work as a science. A little carelessness will undo the whole year's profit. Your supers must be put in early; and your hives must be carefully guarded from moths and mice. There is something about bee-keeping to which a woman naturally takes, and the study of the subject is fascinating to young people—if not the work. The handling of bees is not a serious affair with modern protective head-nets. Some people can handle bees with impunity. I do

woods), and so our street trees would serve a double purpose. The bees are so fond of this tree that they will stay in it all night. It is not true that they make a great deal of clover honey, provided they have an abundance of food from other quarters. They will collect very largely from your raspberry fields. The mountain ash is also an excellent bee tree; and it also furnishes a large amount of bird food.

Why not combine your ideas, and around your greenhouses and hotbeds have small fruits growing—especially raspberries, with cherries and plums; and

keep enough bees to add a few hundred pounds of honey to your marketable produce? You must bear in mind also that the apple orchard not only needs bees, but also feeds them, and very generously. If your acreage is limited you can grow dwarf apples instead of standards, and they will furnish your bees about the best possible grazing ground. At any rate I cannot do any better than to assume that you intend to adopt some such plan.
